Secretary Daniels has made the naval service an institution attractive to any clean cut, self respecting American youth, and by raising the standard of its personnel it is evident he has also increased the efficiency of the navy in the same proportion.

So, again, do I say to the critics: Give credit where credit is due and use your little hammer with more discrimination. The present administration is doing all it reasonably can to keep the navy abreast with the ever increasing demands of efficiency and adequacy. We lack battle cruisers, it is true, but this is due to the shortsightedness of former administrations. With this single exception our navy today is excelled by no other navy so far as number of ships, organization of fighting units and the esprit de corps of its personnel is concerned.

It is well, therefore, not to take too seriously irrelevant statements made about the unpreparedness of the navy by men who have their own axes to grind and who seem to delight in embarrassing the administration at a time when it should have the backing and support of every patriotic and loyal citizen.

AT LEAST 44,000 MEN LABOR IN KRUPP'S WORKS.

Mightiest Organization of War in the World Built on Trade Secrets.

Krupp's is more than the greatest war factory in the world. It is the mightiest single industrial organization that has ever existed. Never in any industrial center has there been anything like the stupendous concentrated activity that now reigns in Essen, the Westphalian city that has grown up round the great works, says Reynolds Weekly of London. Essen is Newcastle and Sheffield and Barrow-in-Furness rolled into one, and more.

Before the war the company employed more than 70,000 men. About 40,000 were engaged in the gigantic steel works at Essen, where the 42 centimeter monsters come from, and where daily there streams forth a tremendous volume of guns and munitions for Germany's armies. Ten thousand men were digging for coal in their mines in Germany. Fifteen thousand toiled at their rolling mills at Annen and Grusen and the blast furnaces of Rheinhausen, Duisburg, Neuwied and Engers. An army of 7,000 was engaged in their shipbuilding yard at Kiel, and 5,000 miners dug ore in Spain.

Day and night in Essen work goes on without ceasing. In the great works spread over 1,200 acres, 225 of them under roof, at least 44,000 men toil in shifts of eight hours each. Some sixty factories make up the organization. Forty miles of standard railway link them together and carry their products out. Thirty miles of narrow lines are required as auxiliary for the shops.

More than 450 miles of cable and wire and over 600 telephone stations and twenty telegraph stations are needed to facilitate communication throughout the works. There are more than 300 steam boilers to generate the steam for the 7,200 different machines and 2,224 electric motors at work.

And the whole gigantic concern has sprung from a humble cottage factory with six workmen. Essen was a filthy, poverty stricken little hole of a town a century ago, when the Krupp firm was in its beginnings. Today it has more than 300,000 inhabitants and is one of the finest towns in Germany.

21, YET HE'S A CHILD.

A. M. Ross Married Girl He Met on Three Day Furlough From Asylum.

Alexander M. Ross of New York, who, although twenty-one years old, has the mentality of a child of twelve, was adjudged incompetent by a sheriff's jury.

The purpose of the inquiry was to have a committee appointed to manage the young man's property, valued at more than $300,000, which he received from his late father, Alexander M. Ross.

It was held on the petition of the incompetent's mother, who told about her son marrying a young woman on a short acquaintance, having met her while he was on a three days' furlough from Bloomingdale asylum, where he had been an inmate for three years. The marriage was annulled. Dr. William L. Russell, superintendent of the asylum, testified that Ross' mentality would not develop.

NEW BRITISH LIQUOR RULE BARS TREATS AND CREDIT.

Besides limiting the hours during which liquor may be sold in towns where the English government has taken over control of the sale of liquors, the board of control appointed to deal with the munitions areas has ordered that there shall be no treating and has prohibited the giving of credit for liquor.

The sale of liquor in licensed houses is permitted only between the hours of noon and 2:30 p. m. and between 6 and 9 o'clock in the evening. No orders may be given or accepted for spirits to be consumed off the premises on Saturdays and Sundays and only between noon and 2:30 p. m. on other days.

The penalty for contravention of the regulations is fixed at six months' imprisonment and a fine of $500.

SEES PERIL OF FAMINE THREATENING AMERICA.

Botanist Says Population Is Outgrowing Food Supply Twenty to One.

There is grave danger that a famine will descend upon the United States some time in the near future, according to Professor John M. Coulter, head of the department of botany of Chicago university. Population is increasing twenty times faster than the food supply, he finds.

"We ought to have enough foodstuffs in this country to feed the world," said Professor Coulter. "Instead we soon shall not have enough to feed ourselves. This growing discrepancy between food production and population is the basis of the high cost of living.

"Four remedies present themselves to prevent famine in the United States. First, we should develop scientific methods of soil cultivation. We must manipulate the soil properly and farm intensively, as the Europeans do. By scientific treatment of the soil crops can be increased 800 per cent in the United States.

"Second, we must plant on every area the crop which will give the maximum yield in that section. Stop planting wheat in corn land, and don't try to raise potatoes in swamps. Too many farmers plant their crops without knowledge of what their land is suited for.

"We must, in the third place, develop drought resisting crops. This is the work of the professional botanist and is to be accomplished through experiment.

"Then, at last, we must produce disease resisting crops, for plants, like animals, are subject to ills of the flesh. This, too, is the work of the botanist.

"If these suggestions are carried out with reasonable thoroughness the high cost of living will vanish as concerns foodstuffs."

Understanding.

The visitor claimed to be a good pianist, with unusual ability in reading music at sight. Seeing a sheet of music on the piano rack, she sat down and began playing, pounding the keys with little regard for correctness or time. Observing the small daughter of the household watching her earnestly, the would be admired player pressed harder on the loud pedal, lifted her hands higher and ended with a flourish.

Whirling around on the stool, she bestowed a patronizing smile upon the child, who looked up and naively remarked, "I can't play that either."—Woman's Home Companion.

Colors and Complexions.

Light blue makes blond complexions look ashen.

Dark blue sets off a blond complexion in high relief by supplying a suitable background.

Blue is unbecoming to a brunette unless her cheeks be florid. If she be sallow it makes her face look tawny.

Green has the same effect as blue upon brunettes, but makes the cheeks of a fair face look pinker.

Red heightens the effect of pale brunette beauty.

Yellow is highly becoming to a pale brunette, especially in artificial light. It softens an olive skin and gives it a creamy tint.—New York World.

The Scrap Book

As the Guide Told It.

I tell you, mister, it was a day to make a man feel tickled to death with himself and everything else in creation—that is, it started out by being that sort of a day.

J. Esterbrook, he felt it too. He was up forward, sitting straddle of the bow and waggling his head around at the mountains and things. Bimeby he came working his way aft, hanging into the gunwale, and set down on the starboard locker that run along the 'cockpit.

"Don't you feel the subtile urge of nature?" says he to me.

I see he wanted to chin with me, and I felt like mebbe that was part of what I was paid for, so I says to him:

"No, I can't say I feel no urge. I feel just like a cat with a sasser of cream in front of me. They ain't nothing I want what I ain't got."

"Strange," he mutters to himself. "The intellectual processes of the proletariat seems to be the reverse of those of the higher social strata."

I kind of suspicioned his remarks wa'n't exactly favorable to me, but I didn't say nothing. Five dollars a day is $5 a day. Anybody can call me a proletariat for that if they don't say it in a mean tone of voice.—William Merriam Rouse in Countryside Magazine.

Nature.

As a fond mother, when the day is o'er,
Leads by the hand her little child to bed,
Half willing, half reluctant to be led
And leave his broken playthings on the floor,
Still gazing at them through the open door,
Nor wholly reassured and comforted
By promises of others in their stead,
Which, though more splendid, may not please him more;
So nature deals with us and takes away
Our playthings one by one and by the hand
Leads us to rest so gently that we go
Scarce knowing if we wish to go or stay
Being too full of sleep to understand
How far the unknown transcends the what we know.
—Henry Wadsworth Longfellow.

TODAY'S FASHION NOTE

Cleverly evolved in blue and white striped foulard is this frock for afternoon wear. The full circular skirt is gathered about the raised waistline and trimmed with graduated tucks, while the simple waist buttons over a guimpe of net. It is trimmed only with narrow braid. The frock in medium size required 6 yards 36-inch silk, with 1 yard 36-inch net.

Pictorial Review Waist No. 6242. Sizes, 32 to 42 in. bust. Price, 15c. Skirt No. 6102. Sizes, 22 to 32 in. waist. Price, 15 c.

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.

A Family Jar.

"Providence intended me for a leader of fashion."

"Providence intended you for a fool."

"Well, whether Providence did or not you got me."—Houston Post.

The KITCHEN CUPBOARD

RECIPES NEW AND OLD.

Chicken a la Newburg.

MAKE a sauce of four tablespoonfuls of butter, mixed smoothly with one tablespoonful of flour. Add one cupful of cream and heat in a double boiler or chafing dish. When thick and free from lumps add one pint of cold chicken meat in small pieces and the hard boiled yolks of two eggs mashed to a smooth paste with one tablespoonful of cream. When hot stir in one-quarter of a cupful of sherry and season with salt and pepper.

Stuffed Round Steak.

Two pounds round steak, two ounces suet, three ounces of breadcrumbs, six olives, one dessertspoonful of chopped parsley, pepper and salt, two eggs. Peel and chop the olives small; chop the suet; put into a basin with the crumbs, parsley, olives, suet, pepper and salt; mix well with the eggs; spread the mixture on the steak, roll and tie securely; place in a greased paper and roast about three-quarters of an hour.

Tuna Fish Salad.

One can tuna fish, a stem or two of finely cut up celery and parsley and mix with salad dressing.

Deviled Eggs.

Boil hard one dozen eggs, put in cold water and peel, cut in halves (lengthwise), take out the yolks and mash fine, put in a lump of butter size of a hickory nut, salt and pepper to taste, a little mustard and enough vinegar to mix all together well; fill the whites and serve cold with or without salad dressing.

Stale Bread Pudding.

Soak a loaf and a quarter of stale bread in water. When soft squeeze it out and put into a pudding pan. Then add one box raisins, one quart milk, two eggs, one tablespoonful of vanilla, one teaspoonful salt, two cupfuls of sugar. Mix together. Before putting into the oven lay little pieces of butter all around the top. This will make it a rich crisp brown.

Children Cry
FOR FLETCHER'S
CASTORIA.

Care of the Baby In Summer

Artificial Feeding.

[Prepared by the children's bureau, United States department of labor.]

When a baby is deprived of breast milk altogether and fed entirely from a bottle this method is called artificial feeding.

If he is partly nursed and partly fed from the bottle this method is known as mixed feeding. In both of these methods the preparation of the bottles and the amount and kind of food to use are questions of vast importance to the baby. Many thousands of bottle fed babies die every year because they do not have breast milk or because of some mistake in feeding or because they cannot adapt themselves to a strange food.

Artificial feeding is not only hard on the baby, but imposes no slight task upon the mother. To bring up a baby on the bottle without mishap requires unremitting daily attention to a multitude of petty details which can only be neglected at the risk of making the baby sick.

The milk must have special care from the moment it is delivered at the house until it is fed to the baby.

The utensils used in the preparation of the feedings and the bottles and nipples must be kept scrupulously clean. The strength and quantity of the food must be increased or decreased in accordance with the baby's varying needs as indicated by his age, his weight, the condition of his bowels and other things. All this necessarily makes such demands on the time and strength of a mother that she will not undertake this burden if breast milk can possibly be had. Even a little

MOTHER AND BABY.

breast milk is far better than none, as a baby frequently thrives very well on mixed feeding.

After the first month the average healthy bottle fed baby requires one and one-half ounces of milk in twenty-four hours for every pound of weight. Thus, a ten pound baby requires fifteen ounces of milk in twenty-four hours, increased by the proper amount of water and sugar to suit his age.

It is impossible to give complete directions for milk mixtures in a brief article. As far as possible the feeding of a bottle baby should be under the direction of a good doctor. City mothers may take their babies to the nearest infant welfare station for the advice and help they need.

Country mothers who are far from the doctor will need to have some book giving directions for the feeding of the baby. There are several good books of this kind which may be bought. The children's bureau of the department of labor at Washington will send free to all who ask for it a little pamphlet called "Infant Care," which gives some simple rules for feeding.

VALUABLE HINTS.

Tuck For Shrinkage.—When making up wash material to allow for shrinkage before turning the hem the first time take a tuck on the inside before turning and stitch down at the second time. This can be easily let out and the result is most satisfactory. This is especially good for growing girls' dresses.

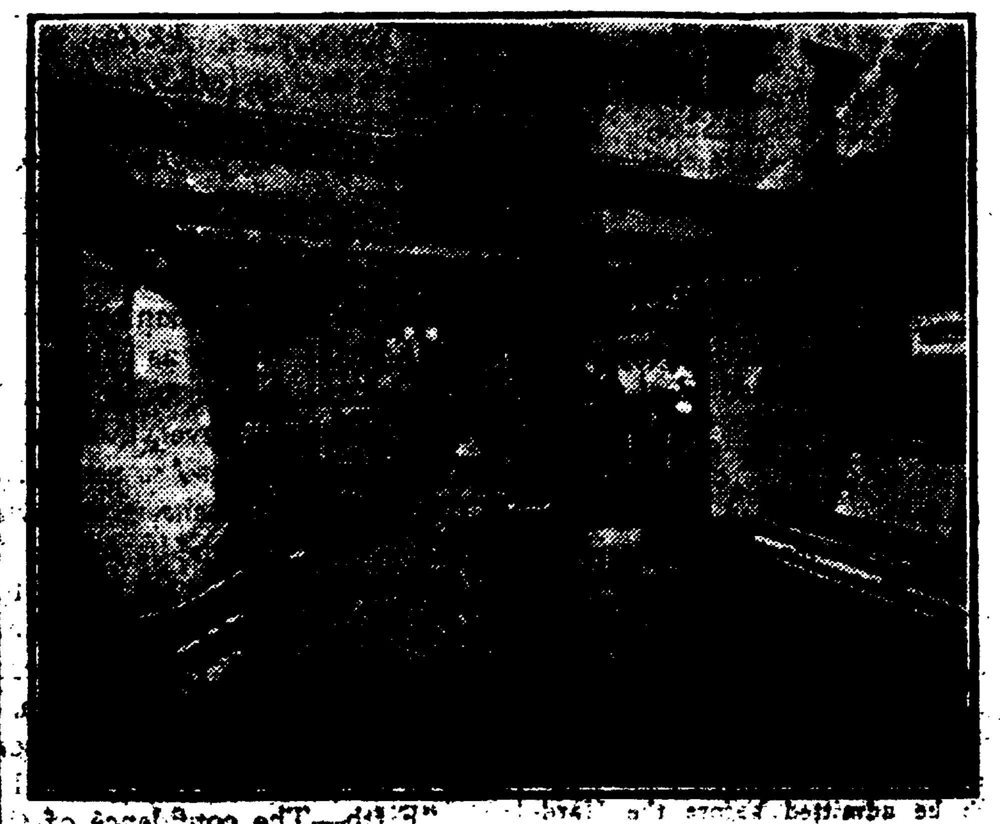
To Make Gas Mantles Last.—When lighting the gas do not turn the key on full, but only four-fifths of the way and see that sufficient air enters through the air passage. This will eliminate the hissing and give proportional flow of air and gas. When the mantle gets black throw a little ordinary salt in the same from the top, which will consume the carbon and make your mantle clear and white. It also adds a thin coating to the mantle which makes it last much longer.

A Cure For Runners.—I had such a time with runners in my silk stockings, and after trying many plans to prevent them I finally hit upon a satisfactory one as a final experiment. Buying two inch satin ribbon I put it around the top, catching it in the garters to hold it. Since I have not a single runner, and so I feel that for me the luxury of silk stockings is no longer one I must be denied.

LIVING ROOM OF MUCH BEAUTY.

Design 1060, by Glenn L. Saxton, Architect, Minneapolis, Minn.

PERSPECTIVE VIEW—FROM A PHOTOGRAPH.



INTERIOR VIEW—LIVING ROOM.

Note in this design the artistic living room, extending across the entire front of the house, with abundance of wall space left for the piano and other large furniture. Special attention is called to the beamed ceiling, only cross beams being used. There is a splendid large fireplace at the end of the room, with built in bookcases at each side and art windows above, affording light and giving a general decorative effect. A large window on the long side furnishes all necessary additional light. This beautiful room corresponds with the artistic exterior of this fine home, which is 26 feet by 28 feet deep over the main part. Cost to build, exclusive of heating and plumbing, [illegible].

Upon receipt of $1 the publisher of this paper will furnish a copy of Saxton's book of plans, "American Dwellings." It contains 250 designs costing from $1,000 to $6,000; also book of interiors, $1 per copy.

MOTOR COAT AND TAM.

Plaid Woolen Mixture Makes Warm and Useful Garment.

FOR THE SPORTS WOMAN.

Motor coat of plaid woolen mixture, built on ample, roomy lines, loosely belted and with deep pockets at the sides. With the coat is worn a tam-o'-shanter of knitted silk plaid.

Mamma's Swell Blowout.

"Mamma give a swell dinner the other day," little Jacky was telling Uncle Bob, who had dropped in to pay his sister a short visit.

"What sort of a dinner was it, Jacky?" Uncle Bob asked, looking up admiringly toward Jacky's mother. "One of mamma's real swell course dinners?"

"I dunno," said little Jacky reflectively. "Uncle Bob, they kept bringing it in for over an hour, and there was a little recess in between every time you eat sumpin."—Exchange.

How to Utilize Your Lace Flounces and Allovers.

Lace flounce dresses in black or in the various lace shades, ficelle, biscuit, cream, a silvery white which is very delicate and pretty, and a dull gold tint may have the fashionable little jacket as an accompaniment. Such a jacket, seen the other day, made of tete de negre brown satin with a very narrow edging of string colored braiding at the edge, was seen to be opened over a folded kerchief of dull gold lace something like a waistcoat and brought to a couple of points beneath the waist. The skirt had one deep flounce and another beneath it half the width, and still there was room to discern the dark brown satin petticoat upon which the lace was posed. The flounces were wired at the hems to make them stand away from the petticoat, which was just a sheath with the narrowest hem of braiding to finish it.

How to Drive Away the Moths From Rugs and Carpets.

If you fear moths in carpets or rugs scrub the floor with strong hot salt and water and when sweeping the rugs each week, or the carpet, sprinkle it first with salt. This salt and water treatment could hardly be applied to a nicely finished floor, but moths seldom get in rugs laid on a shellacked or waxed hardwood floor. If they do the rugs can simply be taken into the air and thoroughly cleaned, with salt sprinkled on them before the sweeping or beating, and then they can be held over steaming water. The steam kills the moths.

How to Utilize Burned Out Gas Mantels as Polisher.

Gas mantels should not be thrown away when broken. Instead, crumble the white, net-like material into a small box and keep it to use in polishing silver. It is also a good jewelry cleaner.

If it should prove true, as Dr. Sargent, the athletic expert says, that women can bear arms as well as men will mothers raise girls to be soldiers?

MAKING THE BEST OF IT.

To make the most of all the dull hours, to make the very best of dull people, to like a poor jest better than none, to wear the threadbare coat like a gentleman, to be outvoted with a smile on your face, to hitch your wagon to the old horse if no star is handy—that is wholesome philosophy.—Bliss Perry.

FURNISHING VERANDA.

Hammock, Willow Armchairs and Paint Among the Possibilities.

Every well appointed country house has a veranda, terrace or gallery that is practically an outdoor sitting room. Unfortunately, however, the best appointments for these are still expensive at the select shops, being classed as novelties or specialties. Willow armchairs and Gloucester hammocks have been greatly reduced in price, but tables, garden seats, settles, etc., of good design are still high.

On the other hand, it is possible, with a little skill and a great deal of paint, to furnish a veranda very attractively with little money.

A charming breakfast porch can be equipped entirely with kitchen furniture painted and decorated like the expensive peasant and cottage sets which are in vogue at present. One of the heavy, plain ironing tables that can be converted into a settle is the best type of table to buy, and the chairs should be of the plainest. Get your furniture in the natural wood and paint it any color you wish, though green, on the whole, is most satisfactory. Make or buy a stencil of some simple design; conventionalised flowers, like the decorations on the Swedish or Hungarian pottery, are good. Stencil a border of these around your table and on the backs of your chairs. Paint it in bright peasant colors, and when these are dried go over the decorations with a waterproof varnish.

This is not work that demands any great skill, but it calls for time, patience and extreme neatness. The effect is well worth the trouble, for with the outlay of a few dollars you will have a set of furniture that you could not buy for five times that amount.

Dairy benches and stools decorated in the same way make very attractive garden furniture.

For Sore, Tired Eyes.

One of the simple home remedies for troubled eyes is hot water. Hot water applications can be managed by soaking two soft cloths in very hot water. Place one cloth over the eyes as hot as can be endured while the other is heating. Apply a fresh cloth as soon as the first cools.

Boracic acid, a quarter of a teaspoonful added to a glass of warm water and permitted to cool before using, makes an excellent eye lotion within the reach of all.

For the Army Worm.

Spray heavily with arsenate of lead for the army worm. Spray the lawns and all plants and shrubs. Do not wait until the insects arrive, as that will be too late. Spray at once and keep all foliage well covered with the spray.

Polish For Steel.

Sweet oil, one tablespoonful; turpentine, two tablespoonfuls; emery powder, one tablespoonful.

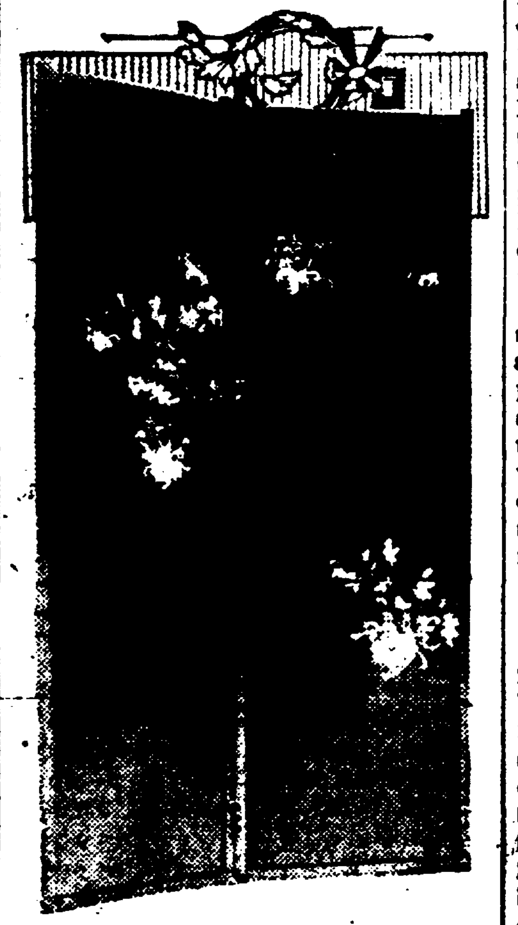
Military Tactics.

So far as history gives us any information on the subject, the father of "tactics," in the military sense, was the great Theban General Epaminondas, who at the famous battle of Leuctra, B. C. 371, fought between the Thebans and Spartans, for the first time introduced the scientific mode of fighting. Prior to that time the universal rule was for the opposing armies to face each other and fight it out by sheer brute force and bulldog tenacity without any particular regard for scientific principles.

JAPANESE SCREEN.

Black and Rose Is the Color Scheme In This Article.

Black Japanese silk was used in the making of this beautiful screen. It is richly embroidered in pale pink and



HANDSOME HOUSEHOLD FITTING.

rose chrysanthemums and the casings are of ebony. There are four leaves in the screen proper, only two of which show in the illustration.

Cooling Process.

To keep milk fresh in warm weather or to cool any liquid in a bottle dip a cloth in cold water, wrap the cloth around the jug or bottle and leave in a cool place, preferably in a draft. This method of cooling is much more effectual on account of the evaporation produced than if the jug or bottle had been placed in cold water.

Woman's World

Queen of Montenegro Most Successful Mother-in-law In Europe.

QUEEN MILENA.

Queen Milena of Montenegro, though somewhat overshadowed by the aggressive personality of King Nicholas, enjoys a unique distinction, that of being mother-in-law to more royalty than any other woman in Europe.

"Sire, I have noticed that Montenegro has no exports," once remarked a distinguished foreign traveler to King Nicholas.

"Monsieur, you forget my daughters," wittily retorted the reigning monarch.

The retort was justified, for queer little Montenegro has supplied two monarchs and three other important royal personages with wives. One Montenegrin princess is the present queen of Italy, and another now would be queen of Servia but for her premature death, while three other daughters of Prince Nicholas are the Grand Duchess Militza of Russia, the Duchess Anastasia of Leuchtenberg and Princess Anna of Battenberg.

The number of brides that Montenegro has supplied to the courts of Europe is altogether disproportionate to the size and importance of the little country. Montenegro has an area of 3,500 square miles and a population of a quarter of a million. The capital, Cettinje, is a village with a population of 3,000. The princely palace in which so many distinguished royal brides were born and brought up is a modest structure, in which a moderately successful American tradesman would never condescend to dwell.

But in these modest surroundings the princesses of Montenegro grew up to be splendid specimens of womanhood. As children they enjoyed the greatest liberty and escaped the restraints of court etiquette, which are the curse of most royal boys and girls. In the severe winters which are experienced in the country of the black hills, as Montenegro is called in the Balkans, the princesses were encouraged to harden their constitutions by sleighing, running in snowshoes, skating and indulging in other cold weather sports and pastimes. At the warmer seasons of the year they made long excursions into the wooded and mountainous interior and paid frequent visits to the prince's villa on the shores of the Adriatic sea. By the time they were in their teens they could ride a bareback horse, drive a four-in-hand, hunt and shoot, swim and sail or row a boat to perfection.

While thus enjoying childhood to the full, the royal girls were educated by French and German tutors and governesses, who polished off the roughness which might otherwise have become apparent in their characters. Prince Nicholas allowed each of his daughters to run wild in Montenegro until sixteen years of age, after which the princesses were sent to Vienna and Paris to gain a knowledge of the western world, with its totally different manners and customs. After attaining her seventeenth birthday each princess spent six months of the year abroad and six months in Montenegro, and this plan proved to be an effective conclusion to an excellent scheme of education. The Montenegrin princesses developed from tomboy girls into women of unusual grace and beauty, of exceptional personal distinction and of remarkable talent in many directions.

A Suffrage Exhibit.

One of the exhibits which are attracting much attention in the suffrage booth at the Panama-Pacific fair is made of tiny imported dolls representing all the voting and nonvoting countries of the world. The nonvoting dolls stand behind a wall, "symbolic of the conservatism, inertia and self interest which keeps women from the ballot," the Empire State campaign commission announces. The costume of each country is carefully presented, except that midgets from the unenfranchised countries are dressed in mourning.

Another effective exhibit is a framed copy of the record of the Sixty-third congress, giving each representative's vote on the woman suffrage amendment.

When She Talked.

Patience—I understand his wife is a great conversationalist.

Patrice—Yes, she is. You just ought to hear her play bridge whist!—Yonkers Statesman.

Czar's Troops Fight Desperately to Avert Dreadful Disaster

LONDON, August 2.—In the judgment of military observers here the greatest danger that now menaces the Russian retreat to the Brest-Litovsk line is Field Marshal von Mackensen and his hard fighting army. While the rearguards north and northeast of Warsaw have succeeded in holding the Germans in check along the Narew, the front between Ivangorod, on the Vistula, and Cholm, on the Bug, seemingly has disintegrated.

General Ivanoff, falling back from Galicia, made his first stand in two months on the heights ten miles south of the Ivangorod-Lublin-Cholm Railway. Here the Austro-German armies exhausted themselves in assaults that in five days failed to move the Russians an inch. Reinforced with men and ammunition, Field Marshal von Mackensen made a fresh attempt and after ten days battered General Ivanoff until his army rested just in front of the railway. There the Russians dug in their heels and stood against a wave of Austrians and Germans that beat against them incessantly twenty-four hours a day for ten days.

But the most indomitable troops could not withstand such punishment indefinitely. They held their ground long enough to permit the greater part of the Ivangorod garrison and the bulk of the army defending the Vistula-Viepriz junction to join them and pass beyond toward the Bug and then their power of resistance broke. Archduke Josef Ferdinand, with his Austrian corps, first got astride their line and captured Lublin. Then Field Marshall von Mackensen pierced the front where the Viepriz crosses the railway.

Those two actions expanded east and west. A general retirement was ordered. The von Mackensen armies ntered Cholm and passed through on the heels of the retreating Russians. Last night's advices indicate that the great German effort to bag the whole Russian army is being expended now in the pursuit north from Cholm.

Apparently the Germans have been checkmated in their intention to enter Warsaw on the anniversary of the beginning of hostilities. There was no indication in the last reports that the actual possession of the coveted city has passed to their hands. On the other hand, the Russians left in this sector have been delivering some sledge-hammer blows in the way of counter attacks that have forced detachments that had crossed the Vistula soth of the city to take refuge on islands in the river. They have prevented, too, the expansion of thee force east of the Narew near Pultusk and they are keeping open a small railway running to the northeast behind the Narew that shoulld prove to be a valuable asset when the last units are ordered to leave the field.

The Russians, according to Petrograd, have stopped General von Buelow's advance in Kovno province toward the Vilna-Petrograd railway. If Grand Duke Nicholas is to hold the Brest-Litovsk line it is regarded as absolutely necessary that General von Buelow's offensive should be arrested, for should he reach the railway he would seriously interfere with the system of communications.

In every direction the Austro-Germans have moved up strong reinforcements to hasten their encircling movement. The appearance of fresh troops also suggests to observers here that the German staff will not be satisfied with the capture of Warsaw or even the destruction of part of the Tsar's army, but, should this be accomplished, will attack the Brest-Litovsk line and endeavor finally to crush the entire Russian forces.

LITTLE VIRTUES.

Do not be troubled because you have not great virtues. God made a million spears of grass where he made one tree. The earth is fringed and carpeted not with forests, but with grasses. Only have enough of little virtues and common fidelities and you need not mourn because you are neither a hero nor a saint.—Henry Ward Beecher.

The Open Question.

Many, many years ago the Stork and the Wolf met at the door of a human habitation.

"After you!" they exclaimed simultaneously.

And since then scientists have been unable to determine whether poverty or population came into being first.—Philadelphia Ledger.

DUTY.

Let us do our duty in our shop or our kitchen, the market, the street, the office, the school, the home, just as faithfully as if we stood in the front rank of some great battle and we knew that victory for mankind depended on our bravery, strength and skill. When we do that the humblest of us will be serving in that great army which achieves the welfare of the world. —Theodore Parker.

How It Turned Out.

"Did Blabson's love affair have a happy ending?"

"I presume so. I saw his former fiancee the other day, and she must weigh at least 200 pounds."

"Do you suppose that makes Blabson happy?"

"At least it doesn't make him unhappy. You see, she didn't marry Blabson."—Birmingham Age-Herald.

OUR WASHINGTON CORRESPONDENCE

News Mostly of a Political Nature From the Nation's Seat of Government for Times' Readers.

WASHINGTON, August 1.—(Special Correspondence). New business methods, manners and morals for the American Sugar Refining Company. Such is the promise of Earl D. Babst, recently elected president of the sugar company. Mr. Babst has declared his intention not only to reorganize, but, wherever it may be needed, to reform the company. It is a consummation devoutly to be wished.

For a quarter of a century the American Sugar Refining Company has been at constant odds with the Federal Government, and with various state governrments. At different times it has been involved in dissolution suits, conspiracy charges, bribery, fraudulent operations, and other forms of irregularity. Fraud to them urder of the American sugar industry as a means of swelling profits.

The apothesis of this company was coincident with the elevation of the Democratic party to power, the consequent defeat of the beet sugar producers, and the lowering of the duties on sugar, which is scheduled for the free list after May 1st, 1916.

For a long time before the Underwood-Wilson tariff law was even in process of formation, this corporation, in conjunction with the Federal Sugar Refining Company, hired a publicity man in the person of Frank C. Lowry to conduct a campaign for free sugar. Lowry posed as the secretary and treasurer of the Committee of Wholesale Grocers, but under oath he admitted before the Hardwick Sugar Investigating Committee that this association had never had a meeting, even of two or more members; that it had never paid a single penny of duees, or anything else in the shape of money; and that he elected himself secretary and treasurer of this fictitious association. Labels were stuck on barrels of sugar going out from these companies calling on buyers to demand of their congressmen free sugar legislation, and promising them a marked reduction in price should such a measure be adopted.

When, by special decree, all representatives of business interests in Washington, seeking in vain to preserve some remnant of a protective tariff, were branded as pernicious lobbyists and denied admittance to the sanctum sanctorum of the free-trade high priests, the agents of these sugar refining companies were among the elect to be accorded admittance. Their lobbying was of the most flagrant sort, but they spread a propaganda in consonance with Democratic doctrine.

To the American Refining Company free sugar meant two things: The destruction of the beet sugar industry in this country, which for three or four months of the year controlled the market; and the importation of raw sugar free of duty, to be refined by the company. This duty was promised to the consumer in thes hape of low prices, but it has been, and will be absorbed by the company itself.

Mr. Spreckles, testifying before the Hardwick committee, when asked by Congressman Hinds if he was in favor of free sugar, replied, "Absolutely." Charles R. Heike, secretary of the American Company testified that free trade "would destroy the industry absolutely in this country, and I would approve of that."

In the face of such testimony as this, and ther ecord of the American Sugar Refining Company, the Democratic party cuddled the sugar trust to its bosom and gave them the pap for which they cried. It was perhaps the most bitterly fought measure in the history of tariff legislation, but the Captain of the Team had demanded free sugar, and his wishes hadto be respected.

The effect was immediate. In July, 1914, before the outbreak of the European war, 43 large plantations in Louisiana went out of business, and many were disposed of at forced sale. Some mills were dismantled and the machinery sent to Cuba or Central America. It wa estimated that the reduction in acreage in beets and cane was 25 per cent, but sugar remained at the same old price. The war has temporarily saved the industry.

German Statesman Says War Can Be Waged Indefinitely

BERLIN, August 2.—Dr. Karl Helfferich, Secretary of the Imperial Treasury, has prepared for the Associated Press a signed statement on German economic and financial affairs as he views them at the end of the first year of war. His statement follows:

"Theeconomic and financial features of the first year of the war are, in my opinion, the following:

"First—The British starvation war has failed. Once and for all it has been proved that our domestic production of foodstuffs, bread card system and maximum prices assure even the poorest the necessary supply of food, and that at prices lower than prevailing in Great Britain.

"Second—Nor can we be 'starved out' in raw materials. The difficulties cast in the way of the importation of raw materials, in violation of international law, are unpleasant for us, but are not fatal. We havei n our own country an ample supply of the most important raw materials—coal and iron—and of others we have on hand, unmanufactured or manufactured, great supplies which, with the economical employment thereof insured by our methods of organization, are virtually inexhaustible.

"Thirrd—the spectre of unemployment has been banished. There is more work than workers. The war has proved itself to be a greater employer of labor than our export trade was.

"Fourth—So far as finances are concerned Germany will carry the war through for an unlimited time. We produce in our own country practically everything needed for war. Thus expenditures for war purposes resolve themselves into savings. These again are at the empire's disposition, as payments on the war loans and deposits are flowing into the banks and savings institutions more plentifully than in times of peace. The total of deposits today, after more than $3,000,000 has been paid on war loans, is higher than at the beginning of the war. The gold reserve of the Reichstag bank has almost doubled since the war began. Notes and deposits in the Reichs bank covered by gold are 33½ per cent. as compared with 26.7 per cent. in the Bank of France and 21.7 in the Bank of England.

"Fifth—The confidence of the German people in our financial strength is as unbounded as their confidence in our military superiority. After twelve months of war Imperials 3's are quoted at 70, which is eight points below the quotation in March, 1914; the minimum price of British consols, 65, is eleven per cent. below the quotation in March, 1914; three per cent. French rentese, at 69, are nineteen per cent. below March, 1914.

"Work, skill, discipline, organization, economy and, last but not least, the categorical impeerative of patriotism have upheld Germany in the first year against world enemies, and will help us further to win the war.

(Signed) "HELFFERICH."

MUNICIPALITIES MUST HUSTLE FOR SUCCESS.

It is a time of sharp competition and villages and towns as well as cities are compactly organized. Active, well equipped and well financed commercial bodies are alert in every community. They are striving for self advancement and are overlooking no opportunity. Superior advantages do not count for full value unless presented forcibly. * * * To improve our opportunities, to enjoy fully our natural advantages and our work of preparation, we must fight as other citizens are fighting, only harder, to prove to the stranger what we know is true.—Augusta (Ga.) Chronicle.

FOR QUICKER ACTION.

Keokuk Industrial Organization Reduces Red Tape and Saves Time.

Under a new form of organisation the Keokuk Industrial association has aimed to reduce the amount of red tape usual in commercial organisation work and to minimize the time required for the various committee meetings, thus hampering the private business affairs of each committee member as little as possible.

The executive committee as reorganized is made up of five members, these being the officers of the association. This is the quick acting body of the organization. Five departments were created for the consideration of the five main divisions of activity—viz. industrial affairs, city affairs, financial affairs, public relations and association affairs. Each member of the executive committee was assigned to one of these departments. The usual committees of the organization were continued, but were distributed among the above departments, the basis of distribution being the nature of the committee work.

The department heads have authority in conference with the manager of the association to take such action as may be deemed advisable in handling the different items of business which come up for consideration. A meeting of the executive commitee resolves itself into a cabinet meeting for the consideration of policy, reports and results. The general policy of the association, all appointments, all legislative matters and the final indorsement of all efforts are handled by the board of directors.

Specific items of business are discussed and handled by the head of a department without leaving his office. The manager of the association takes to him the correspondence and other necessary information. They go over the matter in detail, and the manager makes his recommendations. After conclusions are reached the manager is authorized to handle the matter as agreed upon or to instruct a committee in that department to do so. This plan saves fully one-half the time formerly occupied by members of the executive committee at the committee meetings, has greatly increased the volume of work accomplished and assures immediate dispatch. Under this plan it is also said to be increasingly possible to keep all the members of the organization active, the different committees being kept more busy than ever handling the work assigned.—American City.

PREVENTING SLUM AREAS.

A City Should Control the Layout of Streets Beyond Its Borders.

One of the most important powers a city can have if it is to prevent the development of slum areas in the future, urges the Bulletin of the National Housing Association, is that giving it the right to control the layout of streets beyond its borders. The size of blocks and the width and arrangement of their boundary streets often exercise a determining influence on the character of the housing.

If the street is too wide and expensive land overcrowding and the erection of tall dwellings to carry the burden are almost inevitable. On the other hand, if the streets are too narrow, or if no main arteries are provided, or if the lot units are too small, the speculators may make quick sales to small buyers, but the city will have a long future full of trouble when it absorbs the new, misfit development.

Toronto has provided against all these difficulties by securing a city and suburbs planning act, which gives it the power to control all subdivisions within five miles of the city limits with respect to the width and number of streets and the direction in which they run and the width and depth of lots. Pennsylvania has a similar law for cities of the third class, giving them jurisdiction for three miles beyond their borders.

Wonders of Nature.

"Nature provides," declared the editor of the Plunkville Palladium.

"What's on your mind?"

"The horses used to eat the grass that grew in our streets. When automobiles came we thought the grass would get the best of us, but the gasoline drippings kill it off."—Louisville Courier-Journal.

ALL EXPORT TRADE SHOWS BIG GAINS

May Shipments of Products to Europe Were Large.

MUCH GOLD COMING HERE.

Statistics Show That $26,500,000 Worth of Iron and Steel Was Sent Abroad During One Month—Bill For Oil Amounts to $12,800,000, For Flour $9,800,000 and For Leather $8,500,000.

Official figures of foreign commerce for May tell a story with which the American business man has become very familiar during the past six months.

There has been a large increase in exports of all lines of goods that are required as war supplies, such as iron and steel products, packing house stuffs, woolen goods, chemicals, cottonseed oil and cake, all metal goods except copper, leather goods, automobiles and trucks, cotton goods and refined sugar. Some of these articles, as sugar, for instance, are not classified strictly as war supplies, but are in demand because of the shutting off of German, Austrian and Russian supplies from countries like England and Turkey that import all the sugar they consume.

The falling off in foreign trade during May appears directly in pig copper, which is 15 per cent less than in April; boards and planks, 50 per cent less; agricultural implements, 30 per cent less; electrical apparatus, 10 per cent less, and naval stores, 30 per cent less.

The principal increases, as shown in round figures, are given in the following table, the comparison being with the exports of May, 1914:

	May, 1915.	May, 1914.
Iron and steel manufactures	$26,500,000	$10,700,000
Refined mineral oils	12,800,000	12,600,000
Flour	9,800,000	4,300,000
Explosives	6,000,000	400,000
Leather	8,500,000	2,000,000
Cotton goods	6,200,000	4,000,000
Commercial automobiles	6,000,000	100,000
Passenger automobiles	4,000,000	2,100,000
Brass	4,100,000	500,000
Cars and carriages	3,400,000	1,100,000
Cottonseed oil	2,400,000	1,000,000

The volume of gold coming into the country during May was $31,136,000. In May, 1914, it was $1,755,062. During the past May gold came in at New York to the amount of $13,408,935, and at Ogdensburg to the amount of $13,516,806. The receipts of gold from Canada during the eleven months ended with May were $62,740,122, and from Great Britain in the same period $1,963,746. Canada's transfer of gold to this country during May was $14,494,536, as compared with $1,045,917 the same month last year. France sent us in May, this year, $11,500,000 of gold, having sent us in the preceding ten months of the fiscal year but $52,926. Our export of gold to all countries in the eleven months ended with May was $631,720. The total import of gold from all countries for the eleven months of the fiscal year ended with May was $119,227,015.

The grand balance of trade for the eleven months ended with May, 1915, is of interest to those who desire to take a broad view of the trade situation. The total exports for the period named were $2,500,041,924 as compared with $2,267,507,101 for the eleven months ended with May, 1914. Imports were down to the end of May, 1915, $1,516,475,600 and for the same months the previous year were $1,736,396,207. The total of exports and imports for the eleven months ended with May this year was $4,016,516,524, and the total of exports and imports for the same months ended with May, 1914, was $3,943,903,308, giving an increase for this year over last in the grand total of foreign trade, including both exports and imports, of $72,613,216. While this year exports have increased by $292,534,823 in the eleven months, imports have fallen off by $219,921,607. At the same time the balance of trade for the eleven months ended with May, 1915, had reached the enormous amount of $983,567,324 and, as is well known, with the balance for the following month of June, passed the billion mark for the first time in the history of the country.

COPS TO MEASURE SKIRTS.

Atlantic City Bathing Dresses Must Come Within Three Inches of Knees.

One thing of the utmost importance for the future guidance of summer girls in Atlantic City has been settled definitely and beyond recall. It relates to the minimum length of the bathing skirt. Chief Surgeon Bossert, director of the bathing beach, promulgated an order so explicit that neither summer maids, propriety police nor beach guards can fail to understand precisely what it means.

"Every bathing skirt worn upon the Atlantic City beach must not be shorter than three inches above the knee of the wearer," says the ukase.

It applies with equal force, Beach Director Bossert said, to tall girls and short sisters. A tape measure has been added to the equipment of beach headquarters.

Her Peanuts Were Dope.

The mysterious "plumed lady" of Cleveland, who handed peanuts to friends she met in her strolls, has been sent to the workhouse for distributing cocaine in peanut shells.

John S. Knox Sees in Commission Government Real Democracy. He Witnessed Workings of the Plan in Springfield, Ohio; Congratulates This City Upon Its Activity to Bring About a Change

"Commnnity Suicide" Consists of Spending All Moneys Out of Town, Said Mr. Knox, Who Advocated Also Cash Transactions Only

The largest afternoon audience of the Fulton 1915 Chautauqua listened with close attention yesterday to the address by J. S. Knox, business efficiency expert, on "Community Building," during the course of which Mr. Knox touched on several subjects of vital interest to his hearers. A compelling personality, a rapid, distinct delivery and a wealth of original and practical reasons for the great interest shown by all present in the speaker.

Dr. Knox began by mentioning the campaign for commission government, recently inaugurated here, and said: "It is with great pleasure that I learn you are now attempting to get commission government in this city, and I want to congratulaate you on your success thus far. Only recently I spent some time in Springfield, O., which has lately adopted that form of government and I have heard nothing but praise of the plan in that city. The [illegible] ideas incorporated in the plan cannot help but work for greater municipal efficiency and for the eradication of politics in city government. Of course, there are in this city, as in other cities, those who oppose this plan, and they have reasons. Many of the opposition, you will find, are those who do not believe in any democracy, who have always governed and feel that they alone are fit to govern. They will knock the plan and fight it, but persistence and co-operation on the part of the men in this community who want efficiency in the city government will eventually win out.

"A knocker is a man who doesn't understand. You will find them in every community. Most of them knock because they don't understand the idea or plan or person they are knocking. We are naturally suspicious of everything we do not understand.

"Every city is divided into factions, a religious, political, social, fraternal and others. What a community needs is concentrated effort in one direction without the injection of any factional spirit.

"Speaking of the business and industrial conditions of today, Mr. Knox said: "This country isn't in bad shape as some people seem to think. Right here we meet a vital problem for the retail merchant,—the mail-order houses. Business in this country is all right but the mail order houses are getting it. Do you know that 12,000 retail merchants failed in this country last year? And a little more than 11,000 failed in 1913? And unless the retail merchants adopt different methods very shortly there will be a larger increase in failures each year until they do.

"The mail order houses win out for several reasons, but some are:—greatest efficiency, an up-to-date accounting system, and cash sales. One mail order house in Chicago sends out twenty-five million catalogs each year. One to every four people in the United States. Before the parcel post was inaugurated the postage on each catalog cost the mail order house twenty-nine cents. Now it costs them less than nine cents and they save five million dollars on postage alone.

TWO COMMISSIONERS, IN SPITE OF PROTEST, VOTE TO WIDEN E. FIRST ST.

The Board of Public Works met last night in regular session with Commissioners Stevenson and Garrett present and Commissioner Wiltsie absent. The following bills were audited:

Wells Fargo, .74; E. O. Baker, $3.25; W. E. Gayer, $7.00; E. F. Jones, $14.95; F. H. Rumsey, $15.00; Guy Garret, $48.00; N. Y. O. & W., $126.32; N. Y. O. & W., $188.76; Hart Coal Co., $220.14.

Light Fund—Fulton Light Heat and Power Co., $1008.09.

The question of paving First st. between Rochester st. and Broadway, was taken up once more. but now the Board has decided to start all over again and last night a resolution introduced by Commissioner Garrett announced the Board's determination to pave the street 38 feet wide, with the addition of four feet to the present width of the street. The Board announced August 23 as the time it will meet to take definite action and ordered the notice inserted in two issues of the official paper.

From conversation at the meeting last night it appears that Frank Massaro, the contractor who bid in the construction of the tow-path sewer for $2,445 some two months ago, did other work which entitles him to extra money to the extent of more than $800. While no bill from Mr. Messaro could be found among the minutes of the meeting furnished by the City Clerk to a reported this morning, Mr. Messaro stated at the meeting last night that he had received $1,654.88 thus far, and that the balance amounted to $1,625.79, in other words, the total cost of the work was $3,280.67. Just what the extra work consisted of was not stated. The original contract called for a storm sewer from First st. to a point opposite Ontario st., where the sewer was to dump into the Hunter tail race.

Dr. Park Lewis, Who Fought Buffalo's Fight, Sees Light

Yesterday's Buffalo Times says:

"Dr. F. Park Lewis led the fight for the establishment of the [illegible] responsibility in its success.

"Dr. Lewis has just returned from an extensive trip through the West, visiting commission-governed cities, where he viewed with some dismay the unhappy condition of Denver, occasioned by reason of the failure of their commission government; and he learned with satisfaction by observation of the triumph of the same form of government in Lincoln.

"He returns to hear that Nashville, after electing a leading banker for Mayor, and other reform officials to the other commissionerships under a new commission charter, has broken down entirely and now is hoping in and out of a receivership.

In the light of his experience and the knowledge his travels have brought him, Dr. Lewis says:

"We are at one of the most critica periods in the history of Buffalo. It is vitally important that we secure for our commissioners, as the Seattle Post-Intelligencer says: 'Men who have the capacity and judgment to administer public business in a business way, and the courage to assume responsibility for their acts.' We are going to fail in doing this unless we can succeed in having those who influence public sentiment pull together."

That is a fair statement of the situation. Commission government is going to fail worse than any other form of government, if fail it does, because of the greater powers for evil as well as good that officials have under it, unless, as Dr. Lewis has shown, we get real administrators to administer it. Here is the way Dr. Lewis would go about this task:

"Would it not be possible," he says, "to have a committee of about 50 that would be fairly representatives of all sections of the city, to be actually representative? Those on such a committee should come from all political parties as well as those of the different races. It should represent the labor and the Socialistic element, the Protestant and Catholic, in a word all of those who stand for good government. Such a committee should be able to agree upon eight men who will be fairly representative of the best interests of the city, and the men who would accept commissionerships if they were elected."

"As we understand it, some such suggestion as that also, has been advanced by former chairman Fitzpatrick of the Democratic

(Continued on Page Four)

Mail Order Houses Succeed Because They Adopt Efficiency Methods in Buying and Selling; Spend Millions of Dollars for Postage

"A university professor once decided to investigate the mail order system and see if a mail order house could sell goods cheaper than the retail merchane. After working in several mail order houses for some time, he found that it was economically impossible for the mail order house to sell goods cheaper than the retail merchant.

"One merchant, whom I know, sells bolts. He happened to look into a mail order catalog one day and found the same bolts he was selling for 22 cents, listed at 48 cents in the catalog. A man down here in Carthage last week, said to me, 'I make an article for a mail order house in Chicago. They pay me $27 for this article and they sell it for $48.' This will give you some idea of the margin of profit the mail order house makes on certain articles. On the other hand, it cuts the price on many articles of lesser importance. A man went into a store in Kansas to buy a saw. The merchant showed him a saw that retailed for $1.60 and the man said, 'I can buy the same thing from a mail order house for $1.35.'

"'All right,' said the merchant, 'I will sell you this saw on the same basis a mail order house will. Give me $1.35. Now give me 25 cents for freight or express. Now give me five cents for a money order. Now 2 cents for a stamp.'

"'Cut out this foolishness now and give me the saw,' said the farmer after he had handed over the money.

"'Wait a minute,' said the merchant. 'You forget that I'm a mail order house in Chicago and you're way out in Kansas. Now you will wait two weeks before you get the saw.'

"And that brings us to the point of service. What is service

(Continued on Page four.)

GERMANS FAIL TO MOVE RUSSIANS FROM BEFORE WARSAW'S STRONG GATES

London, August 3.—The Germans announced the capture of Mitau, capital of Courland province, twenty-five miles from Riga.

Field Marshal von Mackensen is maintaining his rate of progress north from Cholm, estimated at five miles a day, against a stubborn Russian rear guard.

These two fields comprise the only concrete successes won yesterday by the Austo-German armies that are struggling to entrap the great Russian force in the Polish salient.

"The situation is unchanged on the Warsaw front," said yesterday's official German announcement.

This situation in the immediate vicinity of the beleaguered city is interpreted in two ways by the military observers here. One version is that the Russian defense is impregnable and that the line can be held until the general order for retreat is issued and the capital is left to the captors uncontested. The other view is that the Germans are exerting just enough pressure here to engage the attention of the strongest Russian force available, but are making no serious effort at this time to enter the city. In the opinion of writers who accept this latter interpretation Field Marshal von Hindenburg prefers not to seek an end to his campaign until other German armies are in a position to intercept the retiring Russians.

In view of the many reports of a serious difference between Russia and her western allies due to the failure of the France-British armies to launch a general offnsive as a means to distract German attention from Russia, Petrograd has taken the opportunity to re-emphasize her devotion to the allied cause. Pronouncements in the Duma at Petrograd and by the Russian Ambassador at London indicate

Opinions

Mrs. Becker Badly Advised.

Sympathy with a woman in the hour of her sorrow cannot be permitted to prevent condemnation of the action of Mrs. Becker in placing upon the coffin of her dead husband the words "Murdered by Governor Whitman." The statement is not true—by no stretch of even a prejudiced imagination can it be conceived to be true.

Charles Becker's fate was determined not by Mr. Whitman as District Attorney or by Mr. Whitman as Governor, but by two juries of Becker's peers. His life was taken by the state in accordance with the solemn decision of its courts.

Because of Governor Whitman's connection with the case in the courts he was placed in a trying position. There could be no better evidence of his own absolute conviction that Charles Becker was guilty than was furnished by the Governor's refusal under the peculiar circumstances to grant a reprieve or otherwise interfere with the decree of the courts.

Mrs. Becker's action will work no harm to Governor Whitman.—N. Y. Herald.

MADE IN AMERICA, ANYHOW.

When the statistics fiend gets to work he rarely knows when to stop. One of his latest exploits is to show the extent to which the people of the United States eat candy. That this is the greatest sugar-consuming country in the world is of course well known. Without going into the economic details of the case, the fact that we are big consumers of the saccharine substance may help to explain the wrath that has swept over thel and because of the "free sugar" trick the Democrats perpetrated in enacting that Tariff.

Many worthy Americans actually believed this meant that sugar would be more abundant and cheaper. To find that they do not benefit in this way and that sugar clings to its old custom of going up just when canning season begins creates in the breast of many a housewife a feeling that she has been bunkoed. Be that as it may, the consumption of candy goes right along.

The statistician mentioned shows that we eat $500,000,000 worth of candy a year. Those are impressive figures. They certainly prove the extent of our "sweet tooth," and may suggest other possibilities. But it is said that most of the candy consumed here is "made in America," that the confectionery business is a big and important one, furnishing employment to many skilled workers, and that nowhere can there be found more delicious products than those of the United States.—Troy (N. Y.) Times.

PRESS COMMENT ON THE BUSINESS OUTLOOK

"Future Bright."

Wheeling Register:—"With bumper crops, increased railway earnings and great activity in the steel trade, which is considered a business barometer, the future of American industry looks exceptionally bright."

"Iron and Steel."

Cleveland Leader:—"The iron and steel industry of the United States seems assured of good times for several years to come, and Cleveland and the Cleveland district will enjoy a liberal share of the prosperity which this implies."

"War Orders."

Indianapolis News:—"It is not necessary to deny that war munition orders in the United States have been large in order to point out that after all they play a very small part in the total business activities of the nation."

"An Indication."

Chattanooga Times:—"The report fo the United States Steel Corporation for the quarter will be construed as an assured indication of the early coming of better times."

"Money Plentiful."

Philadelphia Press:—"Money is very plentiful, industries are active and it is quite possible that either this year or next some large industrial combinations will be accomplished, as some lines of business can be handled to greater advantage when conducted upon a large scale."

"The Steel Mills."

Seattle Post-Intelligencer:—"Taking present trade and future prospects, it is absolutely certain that the output of the steel mills of the country for the remainder of this year, and probably for more than a year to come, will reach a stupendous total."

"Before Year Closes."

Buffalo News:—"It may easily be anticipated that before the year closes we will find business conditions in this country in their usual flourishing normal condition."

WHY NOT MEDIATE?

The Evening Times is in receipt of a letter which was written by a gentleman whose intense interest in the city's welfare has prompted him to devote a considerable amount of space to criticism. The Chamber of Commerce and its officers have come under his observation, and consequently the movement fostered by the Chamber of Commerce for an improved condition of local government is an object of attack.

Another observation made by the writer of the same letter relates to the twelve reasons why one should "Trade at Home,' which had their run in the columns of The Evening Times some time since the new Chamber of Commerce came into existence. In this one respect The Evening Times quite agrees with the writer, who by the way, subscribes himself as "Well Wisher."

It is apparent that before writing the letter Mr. "Well Wisher" secured the information that certain ones who serve the Chamber of Commerce as directors and ordinary members are guilty of patronizing the mail order houses. It is also apparent to many of us that "Well Wisher" did not err in making his accusation. It is the truth and nothing but the truth, but what of it? What are we going to do about it? Who is to receive the punishment for this and many other offenses against the welfare of our town? Is the Chamber of Commerce as a body responsible for the derelictions and transgressions of a member or set of members? We think not. Has the Chamber of Commerce as a body the right to step between the man who patronizes the mail order house and the house itself? Surely not.

Without a doubt money is going out of this city that should stay here. It goes out in payment of advertising and merchandise, but is not the citizen as an individual to blame for this condition? Come, now, Mr. "Well Wisher," acknowledge the truth.

Most of us think we have cause for carrying around with us a grouch—for banging things right and left. Most of us have been handed something which we had to either swallow or perch upon one shoulder for the fellow with the punch to knock off, but how much better it is for us to ourselves become mediators. The world applauds mediators and we believe that God blesses them. Mediators are not Mollycoddles. Abraham Lincoln was the greatest of latter-day mediators, and he will be applauded forever. If ever a man had cause to carry around a grouch that man was Lincoln—when the states were no longer united; when the press, the pulpit, the platform and a part of the people of the North were criticizing, condemning and clamoring against the man in the White House it was Lincoln who was great enough to simply say, "I would save the Union."

The Chamber of Commerce is made up of units who are human beings who may have erred. That they may err again is a foregone conclusion, but where is the man in the church, in the club, in the lodge, in business, who has not erred? We do not assume that because a man belongs to the Chamber of Commerce he wears a garment whose hem is whiter than snow. We do not believe that membership in the organization bespeaks for a man thorough cleansing of his misdeeds in the past or absolution in time to come, but we do believe that the principle—and principle counts—of the Chamber of Commerce is the only foundation upon which can be built a better structure than this city has ever known.

Good criticism is good; mediation is better, as it was Lincoln's welding that made this country the United States of America.

Let's think what can be done to correct the errors.

COUNTY CLERK'S OFFICE RECEIPTS FORGING AHEAD

Oswego, Aug. 3.—The receipts of the County Clerk's office for the month of July were the largest in several years. The amount totaled $858.37, which is $200 in excess of last year. The ordinary business of the office was augmented by numerous certified copies of documents for the state. The big receipts made the office more than self-sustaining for the month.

The sad plight of England in raising a volunteer army to go against the finest troops in the world is not without wholesome effect in this country. Several large employing concerns have offered liberal inducements to members of the national guard to respond to the call to drills and instruction camps. The employers take the ground that they, too, are serving the country by helping guardsmen in their employ to prepare for the national defense and at the same time maintain their positions in the industrial field. Not very long ago it was not unusual for employers to warn guardsmen in the service that absence could not be excused on account of military duty. If the defense of this country is to be wholly or practically so in the hands of the "citizenry," then all citizens should contribute in some way. The burden should not fall entirely upon young men, most of whom have their way to make in the world. To put all the burden upon the strictly military element would be to penalize youthful manhood and youthful enterprise and ambition. That system would be no more democratic than the odious conscription system of continental Europe.

There are still in this country settled districts remote from the reach of the telegraph. People so situated, even if the gap is only fifty miles, can imagine what the situation was before the coming of the "wire." After its general introduction gaps of hundreds of miles were common. But the greatest gap was between Europe and America. Fifty years ago this time Field was trying to bridge that gap with his cable. Starting from the other end, news of progress was wired back to Ireland, then came to America by steamer. Finally, when the western world was all expectation, messages ceased, and anxiety lasted for weeks. Then news came that the cable had parted in midocean over three weeks before. For another year Europe was ten days away from us.

The European war may bear a blessing for the western world in the shape of closer and firmer relations between this country and South American states, notably the more distant, like Brazil, Argentina and Chile. As a rule we have cared little about those countries except to enjoy their trade. This is a time to realize the importance of studying the people themselves, their modes of life and thought—in fact, getting neighborly with them on a broader basis than merely barter and sale.

Among the innovations brought on by the war is the establishment of a permanent passenger and freight line to bring Europe and America together by way of the Pacific ocean. Absence of German submarines in the Pacific is probably one of the reasons for the new Vancouver to Vladivostok route. It will take many days to reach Paris from Vancouver, but what is time in comparison with the danger and uncertainty of traversing the war zone?

General Gorgas speaks in favor of the midday dinner. He was considering health and mortality problems in the Panama canal zone. A heavy meal at midday generally goes with a long rest, and the rest is not the least of the benefits. Where the workday begins at 6 or 7 o'clock and lasts till evening a long midday rest spell is fairly earned and is also good economy.

Sporting experts say that tennis, once derided as "an old maid's game," has become second only to baseball. Public park courts and club courts in many sections of the country are inadequate to fill the demands made upon them notwithstanding the numerous private courts. Among the elements of its popularity are cheapness and the fact that the game is open to all ages.

That machine tiller of the soil which Mr. Ford promises will be as great a boon as the revolutionary cotton gin and spinning machine. If the pushing and pulling which the farmer has to do somehow could be simplified 50 per cent it would bring farming "within reach of the poor."

The international congress of navigation postpones meetings indefinitely on account of the war. Time enough to discuss navigation problems after an international law congress has tinkered up a new naval program.

More and more the autos speed Uncle Sam's mail to the interior, which is all right for the letters one wants in a hurry, but also unwelcome missives get there just the same.

Those who do not get a fair share of the music which is costing this country $600,000,000 a year probably get more noise than is coming to them.

About time to spring a list of "favorite sons" for 1916 so that they can retire to the woods while their prospects and merits are in the public eye.

Take it from European exhibits that it costs something to make the flag we live under worth while.

Expert Advice for the Automobile Owner

Queries and Replies Covering Matters of Importance to the Man Who Runs a Car

In using denatured alcohol as a carbon remover, how much should be used in each cylinder, and should it be allowed to stand for twelve hours or so before using again?

The piston of the cylinder should be on top, dead center, and both valves closed. The cylinder should then be filled to capacity with the alcohol. This should remain in the cylinder at least six hours and preferably twelve hours. The cylinders should be hot when the alcohol is poured into them.

What advantage is gained by placing a plate on the pistons to obtain higher compression? Will it cause an excessive vibration in a motor running 2,000 revolutions per minute?

Many owners have fastened plates to the piston tops in order to increase the compression and gain power and speed, but the construction is not advised, as the results obtained are not worth the expenditure in time and money. All depends upon the weight of the plates as to whether the vibration will be high.

How long will a magneto run without remagnetizing it and overhauling it in general?

Magnetos will run for five years and upward without remagnetizing if a good job has been done in the first place and if the magnets employed have the proper degree of retentivity. The exact time cannot be stated, but the service which you can secure from a magneto before it needs recharging will extend over an indefinite period of years.

There is a knock in the cylinder of my car which I can stop only by retarding the spark lever as far as it will go and keeping it so, no matter at what speed the car is going. What is the matter?

You have not said whether you are obliged to retard the spark so far that the power is reduced. It may be that the spark linkage is connected up so that the spark ordinarily occurs too early and that the lever must be retarded all the way before the spark occurs in the proper place. If this is the case change the setting of the spark linkage so that when the motor is cranked slowly the spark occurs at dead center with the lever retarded.

Vary the adjustment of your carburetor with the lever halfway advanced, and then note whether the knocking continued. Crank the motor slowly, and note which cylinders offer small resistance to the pull of the crank. If all are strong then there are no leaky valves, pistons or rings, but if one or more are weak you should take your car to a repair shop and have the trouble fixed.

Remove the radiator cap while the motor is running, and note whether the circulation of water seems free; also feel the various parts of the system and see whether there are any wide variations in temperature or whether the temperature is fairly uniform all over the radiator and piping. Big differences in temperature would indicate lack of circulation, caused by sediment in the water jackets, loose pieces of hose in the passageways or dirt in the radiator. A thorough flushing of the system should be sufficient to put it in good order, and if it is not the car should be intrusted to a repair man. A heavy coating of carbon on the cylinders will cause a knock, and the remedy is to remove the carbon. Defective ignition, if it causes a knock, should also cause a miss. Worn insulation, loose connections, poor adjustment of the vibrators, incorrect spark gap, dirty plugs and cracked porcelains are the principal ways in which the ignition may give trouble.

What are the advantages of a floating rear axle?

In the floating rear axle the shafts are relieved of all stresses but torsional ones, which is quite an advantage. The shafts may be removed without disturbing the wheels, and with a sufficiently large plate in the differential housing the differential itself may be removed for inspection. In this type of axle the shafts carry no weight and hence do nothing else but turn the rear wheels.

What is the average life of a spark plug?

The average life of a spark plug is two seasons. Some makes of plugs which are more costly and which have a better composition of nonburning material in their electrodes will last much longer than the cheaper plug. The average of two seasons may be taken as the life of most plugs.

What treatment is necessary to make a brake lining stick better?

No treatment should be given a brake lining to make it fit better except keeping it clean and maintaining the proper adjustment on the brakes. When worn down the brake lining should be replaced. One of the frequent occurrences is the wearing of the asbestos compound below the surface of the copper rivets which hold it in place. This brings the copper rivets in contact with the metal brake band, greatly reducing the retarding effort of the brake.

The Rivals.

The word "rivals" at one time meant neighbors who lived on the banks of a river.

FUN RAYS

By Ray I. Hoppman

BE HUMANE

OH! why be unkind to a cow or a rabbit, a horse or a chicken, a toad or a hound—or kick at a cat out of sheer force of habit and tread on a worm as it crawls on the ground? "To live and let live" is a motto, by golly! that should be observed by the world to a man. Oh! friend, have a heart for the dog and the polly—show them ev'ry kindness you possibly can. Some folks seem to think that it's handsomely proper to club at a horse with an immature leg—to pull off the legs of a captured grasshopper or throw a pound rock at the head of a frog. We ought to be kind to these poor, lowly creatures—the animal, fish and the bug and the bird, and not heave a brick at their innocent features or scare them to fits with a harsh, scolding word. When my days are o'er and my friends get together and speak of "yours truly," they'll murmur at least—"Although the poor boob had a brain like a feather, he never tied cans to the tail of a beast." Each creature is here, I believe, for a purpose—they've got their small something to live for and do—so therefore be kind to the snail and the porpoise, the elephant, pelican, goldfish and gnu. The mortal who tortures a bug or a sparrow, or don't care a rap if he causes them pain,—is cowardly, selfish and heartless and narrow—he ought to be thrashed with a hickory cane. So, friends, be humane to the little canary, the pig and the weasel, the little red hen; be kind to the fox and the glum cassowary, the gosling, the bat and the robin! Amen!

WOMEN TO AID NAVY LEAGUE.

Seek Pledges to "Talk, Think and Work" Patriotism.

Washington.—The aid of women has been invoked by the Navy league to assist in the organization's campaign to convince the country of the advantage of stronger national defenses, it was announced here. All women's patriotic organizations have been invited to co-operate with the Navy league. It is said that many pledges of aid have been already received.

A vigorous campaign will be carried on through the summer and fall to obtain pledges of women to give their personal efforts to this program. It is hoped to have 100,000 pledges to "talk, think and work" patriotism, Americanism and adequate defense before congress meets next December.

A feature of the work of the women's section of the league, as it has been named, will be a series of patriotic pageants for the purpose of depicting the necessity of national defenses. A prize competition for pageant scenarios has been planned in which the judges will be David Belasco, Colonel George Harvey, Mrs. William C. Story, president-general of the Daughters of the American Revolution, and Mrs. Daisy McLaurin Stevens, president general of the United Daughters of the Confederacy.

Among the founders of the women's section are Mrs. George Dewey, Mrs. Medill McCormick, Mrs. Finley J. Shepard, Mrs. George L. Carnegie, Mrs. Phoebe A. Hearst, Mrs. Ralph B. Strassburger, Mrs. Moncure Robinson, Miss Christine Biddle, Mrs. James H. Aldrich, Mrs. Charles H. Baldwin, Miss Marianne Biddle, Mrs. William W. Blackmar, Miss Mabel Boardman, Mrs. Willard H. Brownson, Mrs. William Brownson, Mrs. James Bulkley, Mrs. George M. Chester, Miss Fannie B. Coleman, Miss Corinne de Auguero, Mrs. Emily H. Emmet, Miss Mary F. Failing, Mrs. Fitzsimon, Mrs. J. E. Fuller, Mrs. Adolph Ladenberg, Mrs. Henry Lovering, Mrs. E. Rollins Morse, Mrs. William H. Porter, Mrs. Thomas Stevens, Mrs. Augusta Tyler, Mrs. Henry M. Warren, Mrs. John J. Borland and Miss Molly Elliot Seawell.

LYNCHINGS ON INCREASE.

Thirteen More Recorded Than For Same Period Last Year.

New York. — Professor Monroe N. Work, head of the department of records and research of the Tuskegee institute of Alabama, has compiled the records of the number of lynchings committed in the United States during the first six months of this year. In a statement given recently Booker T. Washington, the head of the institute, shows that thirty-four men were put to death by mob violence since Jan. 1, 1915, the number being thirteen more than the figures for the same period last year.

Twenty-four of the men lynched were negroes and ten were whites. Eight, or one-fourth of the total number, occurred in Georgia. Six of the negroes and one white man were charged with assault on women, and the rest of the lynchings were on accusations of having stolen cotton, hogs, meat and cows.

GOES BAREFOOT AT 73.

Says Close Union With Earth Keeps Him Well.

Kansas City, Kan. — When grass roots and mother earth come in contact with bare feet there is a sort of soothing electrical current transmitted through the body that rebuilds and invigorates the entire system is the theory and practice of J. M. Haiger of Carlton, Okla.

Eight months in each year he spurns the pressure of leather on his feet, and with trousers rolled up nearly knee high attends to his farm. He has been in Kansas City with no shoe or boot accompaniment and did not feel half as strange as people who looked at him.

Meeting All Expectations.

One evening the young minister, who had seemed rather attracted by "Big Sister" Grace, was dining with the family. "Little Sister" was talking rapidly when the visitor was about to ask the blessing. Turning to the child he said in a tone of mild reproof:

"Laura, I am going to ask grace."

"Well, it's about time," answered "Little Sister" in an equally reproving tone. "We've been expecting you to do it for a year, and she has too."—Ladies' Home Journal.

James J. Hill predicts a population of 400,000,000 by the year 2000. That means four men, four women and four kids for every one in evidence now.

As Mexico's revolution spree has cost that country nearly $400,000,600 it should be glad to have Uncle Sam step in with a cleanup squad.

It's Permysl here and Przemysl there, and you take your choice, but just can't pronounce it either way correctly.

Children Cry for Fletcher's

CASTORIA

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of [signature] and has been made under his personal supervision since its infancy. Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic, all Teething Troubles and Diarrhœa. It regulates the Stomach and Bowels, assimilates the Food, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

"WALLINGFORD" TO APPEAR ON SCREEN

FAMOUS STORIES WILL BE PRESENTED AS ELABORATE FILM DRAMAS.

FAMOUS FICTION CHARACTER

J. Rufus and His Partner, Blackie Daw, Have Entertained Millions of Readers.

No character in fiction of recent years has excited quite the same interest as that of "J. Rufus Wallingford, the get-rich-quick man." George Randolph Chester, his creator, acquired fame through him and for years the shady schemes of the big promoter have amused the American public from coast to coast. "Wallingford" is so peculiarly an American product, his adventures are so startlingly original and humorous that the question has often been raised as to why the stories have not been put into pictures.

Now comes the house of Pathe with the announcement that they have secured the rights to film these stories and that the pictures will be put out in the fall under the title of "The New Adventures of Wallingford." The production of them has been turned over to Wharton, Inc., who have produced many Pathe successes. Work was started by them on the "Wallingford" stories at Ithaca, N. Y., on July 12th. Several of the best known players of the stage today have been secured for the cast. Max Figman will do "Blackie Daw", Frederic de Belleville will play "Wallingford", and Lolita Robertson will have the feminine lead.

Max Figman.

Max Figman is easily one of the best known actors of the day. Augustin Daly saw him playing a small part in Philadelphia when young Figman was only eighteen years old, and offered him a three years' contract. On the expiration of his contract Mr. Figman went with Charles Frohman, and then with Mrs. Fiske, with whom he was associated for seven years as a producer and leading man. Then he went starring and for the last eight years has been under the management of John Cort. A recent engagement was with the all star cast of "Fine Feathers." Mr. Figman has just built a fine summer home at Great Neck, Long Island, but because of his "Wallingford" engagement cannot christen it until fall.

Mr. de Belleville needs little introduction to the playgoing public. Born in Liege, Belgium, his father was a colonel and his brother a commandant in the Belgian Army. One of his great-uncles was a prime minister of Belgium in 1830. He played a wide variety of parts in London and Australia, and made his first appearance in the United States years ago in San Francisco. Some of the famous productions with which he has been identified are "Diplomacy" with Rose Coghlan; "Divorcons," with Mrs. Fiske; "Tess of the Durbervilles"; "The Eternal City," with Viola Allen; and with Mrs. Fiske again in "Leah Kleschna."

Lolita Robertson is a California girl and began her stage career in stock at the Alcazar Theatre. After a season or two there she came to New York, and was engaged by Henry Miller for "The Great Divide." Mr. Figman offered her a good part in "The Substitute," with which company she remained for two years. Since then she has been continuously associated with Mr. Figman in his productions.

ARNOLD DALY IN NEW PLAY.

The new "Arnold Daly Series" will soon be released by Pathe. Mr. Daly will appear as Ashton Kirk, investigator; the character having been taken from the stories of that name, by John McIntyre.

GERMAN WEDS INDIAN GIRL.

Bridal Couple Will Live on a Farm in New Jersey.

New York. — Eunice Holmes, a full blooded Indian whose tribal name was Laughing Waters, was married by Alderman William F. Quinn in the marriage chapel in the municipal building to August Charles Erbach, a German farmer of Summit, N. J.

The bride, who is twenty-four years old, was born in Cherokee Indian territory. She does not know the names of her parents, both having died when she was a small girl. Until several months ago, when she came east, she lived with relatives.

Erbach is twenty-five years old and has been in this country five years. He gave his address as 312 East Fourteenth street, this city, but has a large farm in Summit. The couple will make their home on the farm.

MONKEY PAID COURT FINE.

Organ Grinder, Pleading Poverty, Had Gone to a Cell.

New York.—When John Fiorelle was arraigned in the Flatbush court, Brooklyn, charged with playing a hand organ in the streets at a too early hour, and was fined $2, he said he did not have the money. He was sent to a cell with his trained monkey, "Jocko." Later Fiorelle sent out word that his fine would be paid. When the organ grinder and the monkey were brought out, "Jocko" hopped on to a chair and handed up a two dollar bill to the clerk.

"Where did he get this money?" asked the court.

"Who, Jocko?" returned Fiorelle. "Oh, 'Jocko,' he carry his own roll, boss. I pay him back some time."

SING SING'S WICKED MUST WEAR YELLOW

Glaring Stripes to Punish All Refractory Inmates.

Ossining, N. Y. — Prisoners in Sing Sing who offend against the rules of the Mutual Welfare league, the self rule organization of the inmates, will no longer go unpunished. Recently the league held a meeting and arranged a system of colors whereby offenders will be disciplined.

The basis of each punishment inflicted by the league will be suspension from the rights of the league, but that is not all. Offenders suspended for five days or more will have to wear a yellow circle about as big as an orange on their neat gray sport shirts over their hearts; if suspended for ten days or more the shirts will be decorated with a yellow stripe straight down the back; if suspended for twenty days or more the other adornments will be supplemented by a yellow stripe down the front of the left leg of the trousers and a similar stripe down the rear of the right leg. If the offense is so severe that the punishment for it is suspension from the league for over thirty days the head of the offender will be shaved, and he will have to wear all the yellow decorations besides.

"My boys thought of the idea themselves," said Thomas Mott Osborne, the warden, "and I think it is fine. Their idea, of course, is that if a man offends against the rules he shows the yellow inside of himself. Therefore to punish him they have devised this scheme to show the yellow on his uniform."

Furthermore if an offender is made to wear any of these yellow decorations he cannot indulge in plaited shirts, white collars and the like. He must wear the prison shirt, practically the same as a gray outing shirt. Two offenders have already been sentenced to the yellow.

"They were found drunk," said Warden Osborne. "They said they had been drinking a mixture of alcohol, sugar and water, but you don't have to believe that if you don't want to. They were suspended for ninety days each and will receive all the yellow stripes there are and have their heads shaved as well.

"The executive committee of the league is still considering the case of Daniel O'Day, who escaped a short time ago."

BIRD HOUSE AT GRAVE.

Chicago Woman Places It at Husband's Tomb Instead of Headstone.

Chicago.—Near a shady nook in the Lake Forest cemetery, beside a large oak, stands a fountain. In the waters that tumble from its mouth a family of wrens play and sing.

Suspended from the lower branch of the oak is a handsome bird house where the wrens live. On the bird house and the fountain is this inscription:

"In Memory of Edward L. Hasler."

Beside the font is the grave of Mr. Hasler, who was fatally hurt several weeks ago in Suburban Lanes, when his horse shied and threw him. Mrs. Hasler decided to deviate from the custom of placing a headstone at her husband's grave and instead built the bird house and the font.

Dies Praying For Dead.

New York.—While Meyer Walerstein, seventy-five years old, of 336 East One Hundred and Twentieth street was offering a prayer for the dead in a synagogue at 337 East One Hundred and Twenty-first street he fell forward unconscious. Worshipers called Dr. Gordon from Harlem hospital. He said Walerstein was dead.

LILLIAN LORRAINE

Idol of New York Theatre-Goers Takes Stellar Role in Screen Play.

Lillian Lorraine, who is to star in the serial, "Neal of the Navy," was born in San Francisco in 1892. Like a number of other of the popular stage favorites of the day, she made her debut before the footlights at a very early age, playing "Eva" in "Uncle Tom's Cabin," when she was only four years old. Subsequently she took a child's part with a stock company at the old Central Theatre while attending the public schools. At the age of fourteen she left San Francisco for New York, just three months before the big earthquake. She obtained a small part in a musical comedy under Richard Golden almost immediately on her arrival. Her next engagement was with Eddie Foy in "The Orchid," half time in chorus and half doing a small part. Because of her striking personality Mr. Foy soon took her out of the chorus and gave her a song. The impression she made resulted in her being given an engagement in "The Great White Way," with Blanche Ring and Jeff De Angelis. Her first real chance came when she was engaged by Florence Ziegfeld to appear in support of Anna Held in "Miss Innocence." The next year saw a further advance in that she was featured in the "1909 Follies" with Nora Bayes and Jack Norworth. She remained with the "Follies" for the next three years, being starred in the "Follies of 1912," when Nora Bayes dropped out.

She became the sensation and favorite of Broadway in a remarkably short time. She broke into vaudeville with a six months' engagement over the U. B. O. eastern time as a headline feature in a single singing act with original songs. In 1914 she was featured in the big "Whirl of the World" cast, an all-the-season New York success. She was filling another U. B. O. vaudeville engagement when approached by H. M. Horkheimer, of Balboa, who induced her to appear in pictures for the first time in "Neal of the Navy," which he was about to put on for Pathe. Previously she had turned down many flattering offers from film manufacturers.

Miss Lorraine still preserves her fondness for musical comedy and expects to appear in New York in a big production this fall. She has been frequently offered stellar parts in drama and hopes eventually to be seen therein. Her screen work indicates a splendid fitness for this line of dramatic endeavor. Miss Lorraine is especially well known in New York for, like most of the great favorites of the stage, she has been featured there steadily in Broadway productions.

Welcome Speech.

When money talks it seems always
To make a hit;
At least nobody ever says
"Shut up!" to it.
—Boston Transcript.

Immortalized.

Brown—That's the cuckoo from a clock I used to have. I have the highest respect and admiration for it, because it is the only thing that ever dared to butt in while my wife was talking.—Boston Journal.

Too True.

You may break, you may shatter
A ten dollar bill,
And you'll find that the remnants
Won't cling to you still.
—Richmond Times-Dispatch.

PRACTICAL HEALTH HINT.

Mouth Breathing.

Mouth breathing is a serious matter, as it is responsible for many physical ills and germ diseases. A sufferer from this evil should be examined by a physician. Adenoids consist of lymphoid tissue forming a third tonsil and are situated behind the soft palate in what is called the naso-pharynx. It is a perfectly normal structure until it becomes overgrown or infected. Adenoids more or less completely close the passage between the nose and throat and in this way produce the condition known as "mouth breathing."

HE WAS WIDE AWAKE.

Asleep He Might Have Wrecked the Train by Vibration.

An abnormally fat man lumbered into a Pullman on a westbound train and set up a loud protest when he found that his berth was at the end of the car.

"I can't sleep a wink if I'm over the car wheels. I won't close my eyes if you put me over the car wheels, porter."

"Can't help it, sah," said the porter. "It's the one that was sold yeh, and it's the only one they is. You'll have to take a chair car and set up if you don't take this."

The fat man finally decided to keep the berth, protesting to the last that he did not expect to close his eyes. Shortly his snores were heard above the rumble of the train, but it was not until the train had a long wait that the sounds issuing from his berth caused anything but amusement. In the silence they got on the passengers' nerves, and by request the porter prodded him in the ribs.

"My goodness, sah," demanded the porter, "if you makes noises like that when you'se lyin' wide awake over the car wheels, what would you do if you was sound asleep in the middle of the car?"—Lippincott's.

Just the Same.

A girl who likes to think and read,
Learn books by heart,
Receives from us a well earned meed,
We call her smart.

Yet take a girl who dodges books,
Knows naught of art,
And only lives for dress and looks,
We call her "smart."
—Kansas City Journal.

Too Much For His Constitution.

"I leave you forever," said Artemas Phipps.
He loved her, that wasn't the question.
The red stuff she smeared on her kissable lips
Gave Phippsy acute indigestion.
—Kansas City Star.

Hints For Housekeepers.

In case you have guests and they engage in a heated political controversy, start up the phonograph.

Burning a large onion on a redhot shovel will do away with the odor of tobacco in your drawing room.

Don't throw your coffee grounds away. Dry them and keep them for the use of borrowing neighbors.

Letting the children run barefoot in summer will save money in shoes, but it makes the soap bill larger.—Chicago Herald.

A Cobwebby Tale.

A gallant named Cobb met a maiden named Webb,
And straightway he sat down beside her;
And quickly proposed in a manner so glib,
That he caught her as soon as he spider.
—Ladies' Home Journal.

Reversed.

"Who is that homely, little sawed off chap over there?" she asked.

"That is my husband," she replied, "but don't apologize. You can't make me mad by calling him names."—Detroit Free Press.

SUCCEED, SAYS KNOX

(Continued from Page One)

worth? What is it worth to you to be able to walk down the street of your home town and get what you want?

"People do not realize what they are doing when they spend their money outside of their own town. They are committing community suicide.

"Probably in this town, as in several other towns, the local merchants are carrying many large accounts on the books. Out here in Wolcott, a lawyer told me his commissons would total over $500 if he could collect the bills on the books of a few merchants in that town. But when people buy from a mail order house, it must be for cash.

"And yet many people have good reasons for going into another town, or sending into another town to buy. They say, 'I can't get what I want at my home stores, and they won't offer to send for it. I go elsewhere." They have other reasons. And there's a problem for the retail merchant—how to keep the trade at home.

"Now on the question of farm trade. They say that city business men are like sponges—want to take all and give nothing. You must show the farmer you are interested in him before he will begin to take any interest in you. There are many ways of doing that."

Mr. Knox spoke of the introduction of courses in commerce and efficiency in high schools, and said there were far too many merchants in business today who were unfitted for the work. He recommended the adoption of an examination system among the merchants, the same as among the doctors and lawyers, which a man must pass before he can enter the profession. Mr. Knox also cited some startling statistics in regard to efficiency among the people of the United States today, stating that 85 per cent. of the people earn only $15 a week, and closed by urging his hearers to unite at once in this city for community betterment.

EXPLANATION

Christian Science Lecturer Classes Disease, Sin and Death as Illusory Mental Conditions.

Buffalo, Aug. 3.—All discords of the physical and mental life of man are errors of mortal conscience, Dr. Hermann S. Hering, C. S. B., told hundreds at a Christian Science meeting in the Teck Theater yesterday afternoon. Prof. Hering is a member of the board of lectureship of the Mother Church, the First Church of Christ, Scientist, in Boston, Mass. He said these errors could not be corrected as long as they are classed as realties. Dr. Hering said in part:

There is no question of such general interest to mankind as the one of healing. The universal demand and endeavor of humanity is for a larger measure of health and happiness than is today attained, and there is manifestly great need of some better means of healing than that in general use.

In the Bible—that remarkable and unique book which is believed in, respected, and loved by millions of people as the standard of morals and right living and as the true record of the appearing of true divinity on earth for the salvation of mankind—in both the Old and New Testaments of this book there are many statements which point to a means of healing both sin and disease which Christ Jesus proved to be far superior to all others, a healing and saving power which should be searched for and found along very different lines from those generally followed, and which is above and apart from all that is material.

Christ Jesus proved existence to be wholly mental when he walked on the water, stilled the tempest and overcame other material conditions.

Since these discordant conditions exist solely as a state of human consciousness their correction or destruction involves a transformation of this consciousness.

The universe created and constantly sustained by God must be like Him for like produces like, therefore, the real universe is not finite or dimensional, but infinite, not destructible, but indestructible, not material but spiritual.

Perfect God, perfect man, perfect being, is the basis of all Christian Science teaching, analysis, and practice. This is the standard by which all human phenomena and experiences in order to determine their true value.

This spiritual understanding, the perception and apprehension of divine Truth, Christian Science now makes possible to all.

Disease, sin, death, all discords, are therefore to be classed as errors of mortal consciousness, as mesmeric, illusory mental conditions. On this basis they cannot be corrected with Truth, while they cannot be corrected so long as they are classed as either physical or mental realities. Even according to psychology and philosophy they are but objectified sense impressions.

FOUR CANDIDATES OUT TO SUCCEED G. E. POMPHRET

Charles E. Stewart, member of the Fire and Police Board, Benjamin Ingersoll and Rexford Carvey, have announced themselves as candidates to go before the voters at the coming primaries to succeed George E. Pomphret as Supervisor from the First and Sixth wards.

The men by training and experience are all well fitted for the position. The fourth candidate, Walter E. Drury, is, perhaps, the best known of the quad, as he served as alderman for the village of Oswego Falls; and is a member of the Board of Education, from which position he resigned to accept ex-Mayor's Quirk's appointment as Superintendent of Public Works.

Community Notes

Mr. and Mrs. Peter Boigeol of Central Square was the over-Sunday guest of Mrs. Nellie Merritt of Emery st.

* * *

Miss Margaret Conley returned last evening from a vacation spent at Scranton, Pa.

* * *

Edward O'Keefe has returned to his home in Geneva after spending two weeks with Mr. and Mrs. M. E. Reynolds.

* * *

David B. Carroll, Wm. J. McGovern, Vincent Cavanaugh, F. C. Hill and Edward McNalty returned Saturday from a two weeks' canoe trip.

* * *

Mrs. Hattie Millard and daughter, Zelma, of Oklahoma, are visiting Mr. and Mrs. Fred Boigeol.

* * *

Mrs. Lucretia Brown is slowly recovering from a recent illness.

* * *

Mrs. Carrie Piper and Mrs. Phoebe Stewart are spending a few weeks in Michigan.

* * *

E. C. Hart, coal dealer, has returned from a visit with friends in Canada.

* * *

W. Lawson Woodbury, Commissioner of Charities, has returned from New York.

* * *

The Misses Gertrude Farrell and Neil Whitaker are at Richfield Springs.

* * *

Mrs. Eleanor Davids has gone to Richfield Springs. She spent a delightful vacation with friends here.

* * *

Mr. and Mrs. Marcus Crahan and their son, William, are camping on the shores of Oneida lake. P. Fred Crahan will join the family this week.

* * *

The L. P. Smith store on the West Side is receiving a renovation.

* * *

Mr. and Mrs. Charles H. Brooks are entertaining Mr. and Mrs. Charles Hegadorn of Syracuse.

* * *

Mr. and Mrs. Charles Sage have returned to their cottage, 365 Park st. after a pleasant outing at Red Creek.

* * *

Attorney and Mrs. W. S. Hillick have had as their guest Mrs. Peter Nodecker of Cortland.

* * *

"It was some time," was one of the many expressions heard by wireless from South Granby, the scene of the Rebekah picnic today. Mrs. J. Ralph Brown was hostess to the members of Nehasane Lodge and their friends.

* * *

Homer Smith, son of Mr. and Mrs. Fred Smith, has gone to Island Heights, N. J., to recuperate from a recent operation. He will return to New York university in the fall.

* * *

Mr. and Mrs Alfred Copeland of 555 South 6th st. have a young son, born on Sunday.

* * *

Mr. and Mrs. Emmett Lamb of West 1st st. are being congratulated upon the arrival of a baby girl.

* * *

Miss Mary Brookes is entertaining Miss Ruth Hobbs of Hoboken, N. J.

* * *

Miss Mary Murphy has returned from Old Forge, where she had a delightful time as guest of Miss Helen O'Brien.

* * *

Mr. and Mrs. Harry Welch of So. Granby were the over-Sunday guests of Mr. and Mrs. Bert C. Jones of So. 3rd st.

* * *

After Chautauqua what's next? Miss Prosperity will make a return trip to Fulton soon.

* * *

The Misses Virginia and May Brennan of West Fourth st. left today for Fredonia, N. Y., where they will spend some time with friends.

* * *

The Junior Merchants of this city will meet the Pennelville A. C. team at Pennellville tomorrow afternoon. The Fulton team will make the trip by automobile.

FIRST ST. PAVING BEGINS AT EARLY DATE

Dr. Park Lewis Sees a Way to Reform

(Continued from Page One)

County Committee. In a general way, Mr. Griener of the Republican committee, Mayor Fuhrmann, Mr. Crane, Mr. Conners, Mr. Meldrum of the Chamber of Commerce; John Lord O'Brian and about every man identified with leadership in a political, commercial, industrial or labor way, recently has given expression to views in one form or another along the line of thought advanced by Dr. Lewis, although they might differ in the way they go about it.

"It would seem that the men of Buffalo of all political parties are ready to accept the non-partisan spirit of the new charter. Only one movement has been started to influence the selection of candidates and that naturally must be void of any practical results. Men who are active in political affairs, as in other affairs of daily life, are showing that they have a stake in Buffalo beyond any mere political consideration and it is possible that a proper, sincere effort for the safety, security, advancement and substantial business management of Buffalo, would bring all those elements together.

"Dr. Lewis' suggestion, coming at a time when all can realize the possible dangers as well as the possible achievements of commission government, is undoubtedly worthy of some serious thought."

WEATHER FORECAST.

Showers tonight and probably Wednesday; cooler tonight.

AUBURN PUBLIC MARKET GAINS IN POPULARITY

The Auburn Advertiser-Journal comments on Saturday's doings in that city at the public market thus:

"Records for attendance and number of sales were broken at the trial public market today. More buyers and more gardeners were on hand than at any previous time. When the selling opened 50 producers were in place. The gardeners in many cases remained on the site until late in the morning, as crowds of buyers continued to come from all directions.

"A noticeable feature was the number of automobiles on the market today. A number of prominent residents of the city did their trading from automobiles, and a number of expensive touring cars wereu sed as delivery rigs. Six cars were also used by farmers from which to display their wares.

"As on the preceding days dressed poultry sold rapidly, and the supply was exhausted within a short time. The demand for this commodity was heavy and by 7:30 there was not a dressed chicken on the market for sale. Poultry sold for 20 cents a pound. A number of live broilers were sold at 25 cents apiece, and others were sold according to their weight, the purchasers carrying them away by their feet.

"Butter sold quickly at 28 cents a pound, and it was not long before the supply was gone. Eggs were selling at 23 and 24 cents a dozen. The demand was heavy for these products, and it is expected they will be brought in greater quantities in the future. A few pounds of cottage cheese and other diary products were solr.

BIG TENT FOLDED AWAY DURING NIGHT

This morning those who during the past week have been accustomed to wending their footsteps parkwards found that like the Arabs Chautauqua had during the night "quietly folded its tent and silently stolen away." However, the laughter of last night still seemed to linger. Ralph Bingham and his mirth-provoking stories will not soon be forgotten. Who could imagine "A Hot Time in the Old Time," being transposed as a funeral dirge, a wedding march, a tango, a rag time and even a voluntary? Yet all who heard Ralph Bingham in "Bill and his One Tune," understand how it is done, also how an old nigger with nothing in his legs but pie-ralisis could beat the dogs home when a coon hunt developed into a bear scare.

REV. C. J. TAFT HERE.

Mr. and Mrs. Ernest Taft are entertaining her brother, the Rev. Clinton J. Taft, recently of Corning, but who will at the conclusion of his vacation take charge of a church near Boston. The Rev. Mr. Taft was a former pastor of the First Congregational church, this city, and his numerous friends here rejoice in his advancement.

OSWEGO HAS CAR AND GASOLINE THIEF

Oswego, Aug. 3.—A new kind of thief has made his appearance in the city—the one that breaks into garages, steals cars for the night and takes them for a trip to return them before morning. The police think the culprit is an irresponsible youngster who does not appreciate that a transaction of this kind is burglary and grand larceny and a state's prison offense.

The first case of this kind occurred Friday ngiht when the garage of Gard T. Lyon in West Sixth st. was entered. The car was taken out, but returned before daybreak. On the trip there had been thirty-five gallons of gasoline used, indicating that either the gasoline had been siphoned from the tank or that the thief had made a long run during the night. Probably the gasoline had been removed or at least a portion of it, as the thirty-five gallons is worth over $5. The car when returned was left on the platform half in and half out of the garage.

Last night an attempt was made to enter the garage of John T. Mott, but evidently the thief or thieves were scared away before the car could be removed.

J. MEAGHER GETS NEW JOB; SALARY INCREASE

Fred J. Meagher, former secretary to Congressman Mott, and who for several months has been employed as an examiner of court and trust funds, with offices in New York, has been transferred to the Comptroller's office in Albany. An increase in salary is said to go with the new position.

Chronicle of Events and a Forecast of What is Doing in Officialdem---Special Correspondence.

By Frederic T. Cardoze

Albany, Aug. 3.—Delegate Harold J. Hinman of Albany, for two years majority leader of the Assembly, is confident that he will be able to obtain a flattering vote upon his proposed amendment to the Constitution which would require the legislature to hold monthly sessions. He regards his proposition as the solution of too short or long drawn out sessions of the law-making body of the state and the one effective medium of attracting to the legislature the best qualified men possible.

"That the legislature ought to be frequently convened is a sound constitutional doctrine," says Mr. Hinman, "and by failing to cure the real evil which lies at the root of the legislative method, namely, to provide more deliberate machinery, we have aggravated the disease rather than cured it. The object of short sessions is to expedite business and we have been getting it at a great cost. We do not want to expedite business but to provide some method for mature judgment and deliberation."

The project which has been launched to so provide that the legislature meet once in two years is frowned upon by Delegate Hinman, who is of the opinion that the great industrial and commercial development of New York State necessitates a great mass of legislation and that the customs of other states to its legislative conduct should and has no bearing upon the law-making body of this state.

"The legislative method has not permitted keeping pace with the development of our commercial and industrial advancement," continues Mr. Hinman. "No private business uses the methods of a century ago. New and improved methods are adopted to meet the changing conditions. The new situation, so far as legislative method is concerned, has not been met, and ther esult is that the original trust in legislatoins has disappeared and they have been distrusted."

When Delegate Hinman first declared that one of the most important of his proposed amendments to the would require a year through consideration of legislative matters, his declaration was mildly criticised. His attention was called to the fact that under the present order of things, many months are required for members of the Senate and Assembly to conclude their business. This situation, Mr. Hinman thinks, is the mere result of shirking legislation in the early part of the year and then finally striving to make up for lost time.

That there should be no effort made to finish up the legislative work in a given time, such as one hundred days, generally accepted as the duration of a legislative session, is the contention of Mr. Hinman. He is convinced that the proper way to legislate for the entire people of the state is to meet exigencies as they arrive. To accomplish this he says that bills should be introduced each month during the entire year. "More men will find it possible to give up a definite week every month than you can find who will give up the time for a continuous service of four or five months broken only by hasty and unsatisfactory visits home at weekends," he predicts.

By amending the Constitution so as to provide for a year round legislative, Mr. Hinman believes that there would be no congestion of unfinished business in that the unfinished of one month would go over to the next.

CAN TELL WHENEVER DAUGHTERS GET KISS

Stoyerstown, Pa., Aug. 3.—A kiss resonator—that's the invention of Joshua Conkling Reeves. Joshua is the father of three perfectly kissable daughters. Men called on them sometimes. Joshua felt his parental responsibility, so he invented the resonator.

"It catches and increases sound," Joshua explains. "When there is any kissing going on in the parlor the sound floats through the machine and I hear it all, but much lounder. Just common kissing on the cheek or neck sounds like a train going over a crossing, and long, hugging kisses are like the wind blowing in November. Good-night kissing sounds like cannon shots."

AT AUCTION

They Will be Handled Every Day on New York Market This Season. Plan to Help Growers.

The New York State Department of Foods and Markets advises the apple growers of New York State that it is making arrangements for the sale of New York State apples at auction in the City of New York, daily, throughout the season of 1915-1916.

The California and Florida fruit growers have found the auction system the most satisfactory of any methods of selling fruit. There is open competition, with several hundred buyers present every day, and the top of the market is always assured. These sales are reported daily and a check, less the auction charges, is immediately sent to the shipper. There is no possible loss or delay and shippers are assured of a square deal.

The Auction Company is not a dealer, a jobber or commission merchant, but merely sells fruit at auction, in open competition. There are always buyers eager enough to get the fruit, to bid against one another until the top of the market is reached. This plan has been presented toa large number of growers in prominent fruit-growing sections of the state, and has met with general approval, it is said.

The department intends to carry on a vigorous campaign in New York City, to give publicity to New York State apples next winter and to do all it can to secure the best prices for growers, and to increase the retail sales and consumption of apples, by exerting its influences to have apples retailed at a lower price than has formerly been asked.

Meetings are being held in various parts of the fruit growing sections where the plans of the department are fully discussed by the growers, and questions are answered and explanations made by a representative of the department. Every section of the state that has a considerable quantity of apples or pears to be sold will be given full information and a speaker will be assigned to any meeting that is arranged by local growers of Granges, up to the early part of September.

The department declares that it has no object except to secure better prices to the producer and honest and prompt returns. It is willing to exert every possible effort to help the producers, but it is evident that the department cannot sell apples daily at auction, unless it is assured of a constant and sufficient supply. This puts the question directly up to the producers. Will they do their part? Will they pledge to the department apples enough to make this auction market a success?

It is estimated that at least 800 carloads of apples will be required to carry on the daily auction market throughout the season, but the quantity of apples which might be sold under this system may be very much in excess of 800 carloads.

"The grower must realize that the problem is now up to himself. He must furnish the apples to be sold, if he expects to realize the benefits that the department is now offering him," declares John J. Dillon, commissioner, New York State Department of Foods and Markets, whose address is 71 West Twenty-third Street, New York City.

Dogs That Froth at the Mouth.

There is a prevalent impression that "frothing at the mouth" is proof that a dog is "mad." The rabid dog does not "froth." The dog that does usually has some stomach trouble or has been running hard and shows it, just as a hard driven horse does. Remembrance of this fact should prevent a lot of cruelty to sick, lost, tired and frightened dogs. When you see a dog "frothing at the mouth" don't yell for policemen and guns. Just let the poor beast alone, or try to get it into a quiet corner where it can lie down and rest. Then give it a dish of cold water and keep on letting it alone, and insist that your neighbors do likewise.—Chicago Herald.

No Room For Mirth.

Eleanor—I believe my husband is provoked at my extravagance. He didn't even smile when he saw my dress. Madeline—Some men, my dear, have no sense of humor.—London Express.

Without a Guide.

"I went to Jonesboro to see my father and mother the other day, Percy."

"By Jove! And how did you find them?"

"Oh, I knew where they lived."—Wisconsin State Journal.

CORRESPONDENCE

News Mostly of a Political Nature From the Nation's Seat of Government for Times' Readers.

Washington, D. C., Aug. 3.—The safety of millions of dollars' worth of the nation's timber supply has been jeopardized by the Democratic neglect.

An authorized appropriation of three million dollars for preventing forest fire and kindred purposes, provided for in what is known as the "Weeks Law," was allowed to lapse because of the careless failure of the last Democratic Congress to carry out the mandate of a former law.

The Weeks Law was enacted to enable the federal government to cooperate with the states to secure protection from forst fires. It authorized appropriations up to eleven millions to carry its purpose into effect. Based upon carefully drawn plans, it provided for the purchase of lands at the head waters of navigable streams, to aid navigation and the regulation of the stream flow, and thereby promote forest protection.

"Fire destroys the soil covering in a forest," says the forestry report on the plan of the Weeks Law. "This causes rapid run-off on steep slopes and erosion results. The soil thus washed out if the chief source of sediment in the channels of navigable streams. Forest fires, therefore, cause irregularity of stream flow and loss of navigability. This calls for active assistance from the federal government, and section 2 of the Weeks Law is designed to authorize this assistance."

The necessity for forest fire protection is shown by the official reports of they ast destruction such fires cause.

"An average of 10,000,000 acrs is burned over annually in the United States, with a money loss of about $25,000,000," says the Forestry Bureau report. "The danger threatens both northern and southern forests. In the coniferous forests of th north the destruction of merchantable timberr is frequent. In the pine or hardwood forests of the south the chief damage is the repeated killing of the young growth. This is severe, because the young growth has a very great future value, and upon it depends the permanency of the lumber industry in the region."

The attention of Democratic members of Congress was repeatedly called to the necessity of giving formal approval to the law formerly enacted and that without that approval the appropriation would lapse and be no longer available for forest firep rotection. In spite of this warning, however, the Democrats neglected to include the necessary provision in the law this year.

The result is that during the next fall and winter, when the danger from forest fires is at the maximum, the protection that would have been afforded under the Weeks Law will either be lost or must be provided for in some other way.

* * *

The styles in women's shoes are to be less bizarre and more expensive, we are told. In other words, for more money one can get less shoe. This seems to be a universal tndency with the necessaries of life as affected by Democratic legislation.

* * *

There are 70,000 women and girl wage-earners in New York today who cannot find employment. "War order prosperity" means nothing to them.

* * *

"The next war," says Josephus Daniels, "will be fought by machinery and by men of brains." Which seems to leave Josephus out of it.

Watches Are Sympathetic.

Superstition or not, I am half sure the watch is alive and knows its owner; that it has some sort of sympathy with the person who carries it. Do you not know the bitterness of sending your own watch to hospital and harboring another—a patient—in your pocket? It lies—always. The scientific man reduces the whole matter to rhythmic motion. To put it roughly, the watch likes—or does not like—your particular skip, jump, stump or decent walk. Really the scientist has nothing much more to say about it as a conclusion, but that—rhythmic—notion. The touch of the watch on the heart.—London Chronicle.

Self Protection.

Singleton—It seems to me you are paying your cook pretty high wages. Wedderly—Yes, as a matter of self protection. If I were to cut her wages she would leave. Then my wife would do the cooking.—Indianapolis Star.

SAYS RELATIVES PROVOKE HIM

Mike Borak Prefers Freedom to Serving Time in Jail—Cautious Against Continued Wife Beating.

Mike Borak, a hulking Polack, hung his head this morning in City Court while Judge Wilson denounced him for beating his wife, a frail, delicate woman who stood by his side. Mike was arrested yesterday for intoxication and the police saw him strike his wife. In court this morning, Mike said his brother-in-law and sisters abused him and drove him to drink. He is a shoemaker but has done little work in the past few months.

After Judge Wilson had sentenced Mike to ten days in Oswego jail, in default of payment of a fine of $10, his son asked to be allowed to pay the fine at the rate of one dollar each week. The Judge refused to let the young man pay, but called Mike back from a cell and asked him if he would go to work and pay the fine if set free. Mike said he would, but when the Judge told him hem ust stop drinking, Mike said he "couldn't get along without a couple of drinks a day." He promised to abstain, however, and he was allowed to go on condition that he pay two dollars each week until his fine is paid. Judge Wilson warned him that an arrest for wife beating would mean a long term in jail.

Bread as sweet as the "kind your mother used to make," is the people's verdict applied to Black company's bread. adv

THE QUIRK.

This is the day when you get that trip to South America by way of the Paramount Travel Series that has been so interesting every Tuesday for several weeks. This also is the day when "Ghosts," taken from the novel by Henrik Ibsen, and which in five complete reels features Henry Walthall and Thomas Jefferson. Pathe also contributes to the program in a lively comedy. Tomorrow is the final No. 12 of "Who Pays" series, entitled, "Toil and Tyranny," in three parts, "The Searchlight Gun" of Romance of Elaine series in two parts and the Pathe Weekly.

EVENING TIMES FEATURES

We will begin shortly the daily publication of

Easy and Practical Home Dressmaking Lessons

Prepared Especially for Readers of

The Evening Times

by

The Pictorial Review Company

of New York City

And in addition, each issue will contain

Beautiful Half Tone Illustrations of the Latest Ideas in the Art of Correct Dressing for All Occasions

These two features are designed to please and benefit the women readers of this Newspaper and are EXCLUSIVE.

The advertising value of the features is that Fulton Merchants will benefit, as the Patterns are sold in the leading stores of the city.

The Prosperity Dawning Upon Fulton is Reflected in the Amount of Increased Advertising Space Used by Merchants in

THE EVENING TIMES

The why and the wherefore of this lies in the recognition of a fact—that Success comes in "cans" and not in "can'ts," and our advertisers know that The Evening Times has in stock a big supply of "cans."

A FLOWER AMONG WEEDS

Story of the Eighteenth Century.

By F. A. MITCHEL.

During the reign of Louis XV. France reached a culmination of profligacy which had been growing for years. While the king was in his minority the regent, his uncle, Duke of Orleans, set the example of debauchery to the court and through the court to the kingdom.

Louis himself, on assuming the scepter, by continuing in his uncle's footsteps completed the work of laying the foundation for the French revolution which broke out during the reign of his successor.

During the regency of the Duke of Orleans the wealthiest nobles owned estates in different parts of France. Only the more moral of these lived in their country chateaus, for the profligate could not endure to live elsewhere than in Paris, where the intriguing and debauchery were going on. Among those who preferred the virtue of rural life was the young Marquis Gaston de Roquette, who, though a soldier of acknowledged bravery, had a mind capable of foreseeing the ruin the regent, the princes of the blood and the nobility were bringing upon France.

However, the marquis was obliged occasionally to go to Paris either at the call of the regent or on account of some duty connected with his station as a peer of the realm. One day on the street on which stands what was then the palace of the Louvre he passed a young lady riding in her "chair," the very sight of whom deeply impressed him. She was not only beautiful, but a natural purity showed itself in every line of her countenance. This was the more noticeable, for at that time the women of the court were as bad as the men, and the lives they led were discernible in their features.

The marquis followed the young lady with his eyes, and when he saw her carried into the palace he heaved a sigh, for he did not believe that any woman could enter that royal abode and be good. Her entrance there, however, proved that she was a lady of rank.

The marquis' duty to the sovereign later called him to the court, and he saw there the lady whom he had met in her "chair." Hanging over her was a famous but notorious duke, the most pronounced and successful beau of that period. He was a very wealthy man, and he was also the most accomplished villain of his day. Three times he had been in the Bastille, the third time for having attempted to betray France.

Another sigh marked the marquis' discovery that the girl who had made such an impression on him was probably falling into the hands of this notorious villain. Leaving the palace without even inquiring the name or rank of the young lady, M. Roquette returned to his estate and, shutting himself up in his chateau, endeavored to banish her image, which had haunted him since the first moment he had seen her.

This was not possible. To the young such impressions are very strong. What it was in that pure face that had taken hold of him he did not know. What he did know was that she was a member of a profligate court, that he had seen its most notorious rake hanging over her, and he did not doubt that sooner or later she would go down under the influences which surrounded her.

Gaston de Roquette remained on his estate for a month without returning to Paris. Often was he tempted to go there for another glimpse of the face that had enthralled him, but he believed that in yielding to the temptation he would only bring upon himself greater pain. So he devoted himself to the care of his estate and to his tenants. He endeavored to occupy himself with his books, but this was impossible, for, whatever he did, his mind was upon that pure being, growing like a flower in the midst of poisonous weeds.

Whether it was that the young marquis was a poor sleeper or that Cupid was keeping him awake, he went to bed late and at times when unable to sleep would arise, dress himself and walk about outside. Not far from the chateau was the church where he and his household and his tenants worshiped and about which their forefathers slept. Within the structure were the bones of the De Roquettes incased in sepulchers or under the flags, the sepulchers supporting marble figures of the departed, while here and there were the arms the men had borne in war.

Gaston de Roquette often strolled about during his midnight walks in the churchyard, but had never cared to enter the church at night when it was deserted. One night when troubled with sleeplessness he was strolling in the grounds near the chateau when, glancing toward the church, he saw a light apparently within the structure. Thinking that he had seen a firefly, he was turning away, when he saw the light again, this time shining evidently through a different window than before. Surely some one was moving in the church. Walking toward it, he went to a window and looked in. There was no light except that the moon which was nearly full, shone in, dimly [on the statu]ures on the sepulchers.

Thinking again that he had been mistaken, he was about to turn away when it occurred to him to try the knob of the door at the main entrance. To his surprise, the door was not locked. Entering the church, he found no one, but through a crack in a door leading from the chancel to a room used by the priest and acolytes came a ray of light. What could it mean? The pastor of the church was an old man, too feeble to be engaged in any church duty at dead of night. It was no religious matter that was being observed.

The marquis was about to walk toward the door through which the light came when it opened and half a dozen persons came out of the apartment. They bore lights, but so dim were they that De Roquette could not distinguish the faces of the several members of the party. There were a priest who was unknown to him, two men and two women, evidently persons of rank, and the last two to enter the church were a man and a woman. From this woman's dress De Roquette judged that the couple were about to be married. The little party moved toward the chancel, where the priest stationed himself, the couple before him, the two other men on the side of the groom, the two women on the side of the bride.

The marquis walked softly forward, hoping to get a nearer view of the faces, but before he reached a point of vantage their backs were to him. The priest faced him, and he saw at once that he was not the pastor of the church. To the marquis' astonishment he recognized in a priest's garb a worthless fellow of the neighborhood, who had served several terms in prison as a malefactor.

Assured that some piece of villainy was being perpetrated, De Roquette seized an enormous sword resting on the tomb of one of his ancestors and, pushing forward till he stood directly behind the wedding party, cried out:

"I forbid the bans!"

The false priest looked up from a book he held in his hand, and the others turned quickly.

Then did the marquis meet with a great surprise. The attendants were men and women of the court. The groom was the profligate duke, while the bride was the lady of whom the marquis had been dreaming. She had entered with apparent reluctance and now looked up like a frightened bird. The duke, with the assurance that often characterizes vice, knit his brows and said threateningly:

"Who are you, monsieur?"

"Gaston, Marquis de Roquette, proprietor of the estate on which this church stands. No ceremony is permitted here except it is conducted by Father Arouet, the pastor. Surely none will be permitted by one not in orders and the veriest scamp in the province!"

Paralyzed by these words, the group, all except the [illegible] discovered in a crime. Then she, breaking away from them, flew to De Roquette and, catching at him for protection, stood regarding the others in terror. Raising the ponderous sword, the length of which was nearly equal to his own height, he stood ready to bring it down upon whomsoever might interfere with him or her. The duke, drawing the rapier at his side, advanced, paused, then said to the girl:

"Emilie, will you not return to me?"

She made no other answer than to cower behind her protector.

"This is no place, marquis," said the duke, "for a dispute among men. Let us go out among the graves. The sexton will not have far to carry you in the morning."

"I will certainly give your grace an opportunity to cross swords with me," replied the marquis, "but not at the present moment, unless you force me to do so. My first duty is to protect this lady, and I see no one here with whom I may safely leave her."

One of the attendant men sprang forward and seized the duke by the arm. He was followed by the other man, then by the women. All pleaded with him to desist.

"This will make a scandal," they argued, "that will put you again in the Bastille and send the rest of us to our country estates, where we will have nothing to do but pine for Paris. We were foolish to abet you in this wild scheme. And the Countess Emilie! Do you suppose the powerful family to which she belongs will not avenge this insult if it becomes known? Give up your mad scheme. It is doubtless fortunate that it has been interrupted, and if it can be kept secret none of us may suffer on account of our part in it."

The duke stood burning to proceed, but all declared that it was of them that he should think and not of himself, though an exile to the country would be less irksome than the Bastille. Finally he sheathed his sword and, after one more appeal to the countess to come to him, he was hurried out of the church by his friends, leaving the marquis and the girl he had saved from a mock marriage alone together.

Here stops the chronicle of one of the vilest episodes of the time of the regency of Philippe of France, but one which in that day was known only to a few. Later Gaston Marquis de Roquette and Emilie Countess de Vandiere were married in the very church where the mock marriage had been interrupted. And it is a matter of record that neither of them ever again appeared at court. Surrounded by their children, adored by their tenants, they lived a life of simplicity and purity.

But when at the end of the eighteenth century the people of France rose to throw off the yoke of a profligate nobility the innocent were made to suffer with the guilty. The marquis and marquise's grandchildren paid a penalty that they did not deserve.

A Philanthropist Spoiled

By SADIE OLCOTT

Miss Margaret Lawrence was an elderly maiden lady who, having pined for a mission, finally decided to take one upon herself. She selected the amelioration of the criminal classes. She visited them in prison, and many of them talked with her so persuasively about the unfortunate circumstances that had led them to become criminals that she came to believe they were all victims of their surroundings. This led her to advocate mercy toward them.

Miss Lawrence, who was wealthy, founded a society for helping criminals to lead a better life. Her society was really a corps of young women who were proud to be her assistants. They worked with her in the cause and though during a term of years they succeeded in lifting only a very few criminals up into a better sphere permanently, they persevered.

One of Miss Lawrence's objects was to induce persons against whom crimes had been committed to refrain from prosecution and to take the offender under their protection with a view to accomplishing his reformation. She found this a difficult matter. When one had been victimized by a confidence man he was usually bent rather on punishment than sympathy. When a woman lost her jewelry at the hands of a dishonest servant she considered it her duty to the state to prosecute the thief. Miss Lawrence spent much of her time in endeavoring to induce such persons to forego revenge and help bring about a new birth in those who had injured them.

Whenever Miss Lawrence saw an account in a newspaper of a theft or a robbery she would go or send one of her assistants to the injured person to induce him or her to be merciful. One day, hearing that an elderly butler had been caught purloining his employer's valuables she went to the jail, saw the thief, who had been arrested, and found him to be a man of fifty, of good appearance and, according to his account, the victim of unfortunate circumstances. His name was Homer Hawkins. When asked how he came by the name of Homer he said that his father had been a pedagogue and an admirer of the great poet. Homer Hawkins wept bitter tears over the condition in which he found himself and so worked on Miss Lawrence's feelings that she went to his late master, secured a promise that he would not prosecute the case and took Mr. Hawkins under her own especial care for the purpose of giving him an opportunity to show how cruel fate had been to him.

Hawkins was made major domo of Miss Lawrence's household. He seemed too respectable to be called butler or to perform the menial services of a butler. The truth is he did very little of anything, because Miss Lawrence had nothing for so respectable a person to do. He attended to the purchase of household supplies, and since his mistress paid cash for everything she bought her major domo was intrusted with the funds used for the purpose.

Never was a man more particular in rendering his accounts. If from the multitude of payments at any one time he was at a loss to account for a dime or a nickel he was so much troubled that his mistress sometimes expected that he would burst into tears. On such occasions she assured him that so trifling an amount was of no consequence, but in vain. He would mourn over the fact that after the unfortunate condition in which she had found him she would surely think him dishonest. He refused to be comforted.

One day Hawkins went out to do the morning's marketing. He did not return at the usual time and in the meanwhile a lady called on Miss Lawrence and she sought her kind offices in the matter of a criminal who had robbed her. The lady was willing to forgive the culprit, but asked Miss Lawrence to undertake his reform. The ladies' car was at the door, and she begged Miss Lawrence to go with her to a police station to see the prisoner. Miss Lawrence consented and on the way the lady told her that the criminal had called on one of her maids the evening before and had gone away with some valuable silver. He had been arrested in the morning.

When Miss Lawrence reached the jail, and the culprit was marched out of his cell the good lady was astonished. He was Homer Hawkins. His benefactress was at a loss what to do in the matter, but, turning to the lady who had suffered, was about to plead for the prisoner, when an inspector showed her a number of articles belonging to her that had been found in Hawkins' possession.

There was a difference in Miss Lawrence's neighbors losing valuables and losing them herself. She turned upon Hawkins, called him an ungrateful man, and then, after promising the inspector that she would appear against the prisoner, walked out of the office the picture of indignation.

This ended Miss Lawrence's individual work in the reformation of criminals. She disbanded her society, but in time joined one in which the work carried on was rather general than particular. Even this organized effort met with a very limited success. Nevertheless Miss Lawrence found that while particular reformations were not achieved, the condition of the criminal classes was bettered by the efforts of the society.

TODAY'S FASHION NOTE

A dressy costume in checked and plain taffeta. With the sectional skirt is worn a corsage basque with V-shaped neck finished with checked revers and cuffs. The sections of the skirt are emphasized with pipings of taffeta to match the corsage. Two yards of 40-inch plain and 5 yards 36-inch checked taffeta make the costume.

Pictorial Review Corsage Waist No. 6226. Sizes, 32 to 44 in. bust. Price, 15 cents. Skirt No. 6293. Sizes 22 to 34 in. waist. Price, 15c.

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.

He Had Felt Slippers.

Old Lady (in shoe shop)—Have you felt slippers? Boy Assistant (solemnly)—Yes, ma'am; many a time.

The KITCHEN CUPBOARD

SIMPLE, WHOLESOME RECIPES.

NO suggestions are more helpful and more acceptable to the housewife in helping her with her culinary duties than good recipes upon which she can rely, and which are not beyond her means. Every woman has a number of well tried dishes with which she is familiar and around which she constructs her menus, but new dishes are always acceptable, and the simplicity and wholesomeness of the recipes that follow will recommend them to every woman.

Smothered Steak With Onions.

Take round or chuck steak, dredge it with flour, then pound it thoroughly with a meat pounder or the edge of a plate. Immediately put in a frying pan in which a liberal amount of fat has been heated. Brown the steak quickly on both sides, then pack it in a pan or casserole (casserole preferred). Between each layer of meat put a layer of thin slices of onion, seasoning each layer with salt. Add one cupful of water for every three pounds of meat. Place in a moderately heated oven and cook slowly until tender. This is a desirable method for all tough steaks.

Spinach, German Style.

Cook the spinach by steam or in a very little water in a closed vessel over a slow fire until it is tender; then chop it very fine. For every pint of spinach mince one-half cupful of fat pork and fry it until crisp. Turn the spinach into the frying pan with the fried meat and heat thoroughly; then add one-third cupful of vinegar or lemon juice for each pint of spinach and season with salt. Turn at once into the serving dish and garnish with sliced hard boiled egg.

Cauliflower.

Separate a crisp white head of cauliflower into flowerets, wash them thoroughly and rinse in a little cold salted water. Tie in a cheesecloth and cook in a steamer or in salted boiling water for twenty minutes. Remove them from the cloth and chill. When ready to serve arrange four small flowerets on a crisp lettuce leaf on a salad plate and between each floweret place a small section of ripe tomato cut lengthwise. Mask with a mayonnaise dressing and garnish with nuts.

Care of Babies In Summer

[Prepared by the children's bureau, United States department of labor.]

Many thousands of babies die every summer, and many thousands more suffer from illness because of the excessive heat. Bottle fed babies form the greater part of the number, owing to the great difficulty of keeping cows' milk sweet in summer, but even breast fed babies need very particular care during July and August.

The first and most important thing in the care of the baby through the hot weather is to give him the right food. The value of breast milk to babies has been brought out in an earlier article. The next most important thing to do for the baby is to make him as comfortable as possible by plenty of baths, sleep, fresh air and light clothing.

The baby should have a constant supply of clean air to breathe, summer and winter, day and night. Do not be afraid to take him out of doors. In the country it is very little trouble to give the baby plenty of out of door life. A screened porch on the shady side of the house is an invaluable aid to the mother in the care of the baby. It makes a safe place for him to stay, awake or asleep, protects him from his enemies, the fly and mosquito, and at the same time affords him the fresh air he needs.

The poorest place in the house for the baby to stay in is the kitchen, which is necessarily the hottest one. When the mother has to be busy in her kitchen the baby should be kept out of doors as much as possible, and during the warmer weather, when the out of door air is hotter than that indoors, the baby should be kept in the coolest room in the house. A play pen will be a great help in confining a runabout baby within safe bounds. It may be used indoors or out, with a rug or blanket in the bottom.

The baby should be kept clean and cool by frequent baths. He ought to have at least one full tub bath every

BATHING THE BABY.

day, and when he is restless and the weather very hot he may have one or two sponge baths in addition. For a young baby the water should be slightly warm or tepid. The mother may test it by dipping her elbow into the water. If it feels just pleasantly warm it will be right for the baby. After he is a year old the water may be cooler, but should never be cold enough to shock or frighten him, for a baby should find his bath a great delight.

Use only a mild soap like castile and very little of it, rinsing the skin thoroughly afterward. A baby's skin is very sensitive and may be made sore by a harsh soap. If any redness or chafing appears use no soap at all, but try a bran bath.

Make a little bag of thin cheesecloth and partly fill it with ordinary bran. Sew or tie the open side and put in the bath water, squeezing it until the water is milky.

When the baby has prickly heat he may be sponged with a bath made by dissolving a tablespoonful of ordinary baking soda in two quarts of water.

It is important to keep not only the skin clean, but the clothing also. The diaper should be changed as soon as it is wet, for a wet or soiled diaper is quite sure to make the baby's skin sore if worn for any length of time. The country mother has the advantage in being able to dry the diapers in the sunshine after they have been washed or to spread them on the grass to bleach and sweeten. Every soiled diaper should be placed at once in a covered pail until it can be washed.

The baby needs very little clothing in hot weather. On the hottest days he may go with nothing on but his diaper, and, possibly one other thin garment. The mother will, of course, be ready to dress him as necessary to prevent him from chill when the weather cools. Clothe the baby in as few soft, clean, simple garments as will serve to make him comfortable and happy.

Plenty of cool drinking water is essential. Babies and young children often suffer for lack of this. It may be given from a nursing bottle before the baby is old enough to drink from a cup. The water for the baby should be boiled and cooled, as even clean looking water may contain germs of disease which are killed by the boiling process.

Give the baby a drink several times a day between meals and at night when he wakens.

Stunning Traveling Suit

THIS traveling costume is very appropriate in tan covert cloth or the popular black and white material resembling the old fashioned pepper and salt mixtures. The only trimming is a bit of soutache braiding on neck and belt, and over a model of this kind one of the stunning top coats may be worn.

• • •

A new method of making a hat resemble an aeroplane has been evolved. This is by arranging stiffened pieces of ribbon to fall over the sides of the hat quite near the top of the crown. A very jaunty hat of blue milan straw is given the aeroplane effect by having white moire ribbon used in this way. No other trimming appears on the model. The stiffened ribbon is a deviation from the huge bows that were overworked to simulate an aeroplane.

• • •

What could be cooler than a blouse of light blue linen made somewhat on the lines of a middy, but having chiffon sleeves to relieve the severity of the general effect? A blouse of this type seen recently was made with a collar flaring high at the back, but falling into wide spreading revers in the front. Black ball buttons fasten the blouse in a straight line from neck to the hem. The bodice was worn over a pleated skirt of white chiffon voile. A wide brimmed leghorn hat trimmed with pink and blue flowers and long streamers of black velvet completed the outfit, which was undeniably intended for hot summer days.

• • •

In the fashion department of the June Woman's Home Companion appear the following "dress don'ts" for stout women:

"Don't be inveigled into wearing the too short skirt. Three inches from the floor is a good conservative length.

"Don't adhere too strictly to fashion's latest whims—pass the choker collar, for instance.

"Don't let the smart deep yoked skirt tempt you if it's the slender hip you want.

"Don't set your heart on having one of your summer dresses of the rough surface tussah silks that come in the fascinating sand and ecru shades. These fabrics and these shades are not for you.

"Don't adopt the long, tight sleeve, even if it is the mode of the moment. The tight transparent sleeve brings out too prominently the shape of a big, fat arm. The sausage effect should be avoided.

"Don't allow yourself to take kindly to the 'bobbed' hairdressing, the forehead band, the too tight coiffure and the too small hat. It will be a sorry day for you if you allow yourself to be tempted."

• • •

Every one wears a neckpiece of some sort. Summer furs, satin throws, maline ruches and feather ruffs—take your choice, for the avenue approves.

ANNA MAY.

MAKING LIVABLE PORCHES.

Privacy a Desirability When Constructing Piazzas, Balconies or Loggias.

Unfortunately up to the present time few Americans realise the meaning and desirability of privacy. Even in the country many houses are built near the road, without any attempt to screen private residences from the public gaze, and in the city, where porches are so rare a luxury, they are generally built around the main entrance of a house, where there is a constant coming and going and where a cozy retreat, hidden from every passerby, is almost an impossibility.

However, many houses have possibilities. For instance, roofs over pantries and additions or projecting extensions that are created as a result of architectural design could be made into charming little balconies without much trouble or expense.

A roof can be converted into a very satisfactory porch floor by covering and leveling it with wooden slats that allow natural drainage, and there need be no permanent wooden roofs for such a retreat when awnings and canvas curtains can be made to answer the purpose of protection quite as effectively. Is there anything more restful or more delightful than to be thus sheltered from the dust and bustle of streets? Is there anything more desirable than the security of such a retreat?

Indeed, a balcony, loggia or veranda need not be limited to the homes of the wealthy, for it can easily be brought within the scope of limited incomes and talents. The barest and bleakest of porches can be made an interesting spot—one that is essentially livable—with the help of awnings and screens, a few comfortable chairs, a swinging couch or hammock and, above all, a few flowers and vines. Flowers and green things are to a porch what an open fireplace is to a room. They form a nucleus, a charming center, around which the other things naturally group themselves.

A Beau-Knot?

There once was a nice little shoe
That mused, "Yes, 'tis strange, but 'tis true—
When my mistress, so trim,
Goes walking with him,
I always untie—yes, I do!"
—New York Times.

The Exact Spot.

Lawyer—So you went out and waited for some time on the pavement. Now, did you strike the witness in the interim?

Defendant—No, I didn't. I pasted him in the jaw.—Baltimore American.

Height of Annoyance.

"I'm mad at my wife. To anger her I shall flirt with some other woman."

"If you want to make her absolutely furious ask some other woman to sew on a button for you."—Kansas City Journal.

SPORTS BLOUSE.

Shirt Waists Smartly Tailored Liked For Ordinary Wear.

A PINK AND WHITE FANCY.

The development of the blouse has given us many kinds of them for sports, as well as for more elaborate wear. The one shown in the illustration is made of pink and white striped linen combined with plain white linen for collar and cuffs. Large white pearl buttons are the only ornamental touches.

BE NEIGHBORLY.

"Get acquainted with your neighbor—you might like him." This, from the letterhead of a western village improvement association, is excellent advice. What fine things a large personal acquaintance can do for us, provided we are worthy of it! Let us put aside any petty dislike, engendered perhaps by fancied faults in other people, and go out and shake hands with neighbors whom we probably have never really known. Let us talk over our common problems with them; discuss the welfare of our community, the state, the nation, so that we may all have a better understanding of our common hopes and aims. All this pays. Its returns come not alone in the help we can be, one to the other, but in the greater discernment with which our personal business can be conducted and in the better feeling and progress that follow in a town or city where all are working for the common good.—Countryside Magazine.

Hints for Housewives

American Housewives Can Mix Their Own Flour.

That the American housewife is herself quite capable of doing all the flour mixing desirable, is the commentary of Assistant Secretary of Agriculture Vrooman on the mooted mixed flour question. He says further that the American housewife could materially reduce the cost of living if she were to get the flour mixing habit.

"There are some thirty substitutes that can be mixed with wheat flour in making bread. Many of these are more nutritious than wheat flour; some of them are cheaper than wheat flour, and of these two or three at least are commercially obtainable almost anywhere.

"Potatoes, corn flour and rice (in certain sections) can be used with profit in mixture with wheat flour in making yeast bread. With wheat flour as dear as it is now, the careful housewife stands to effect quite a saving by using one of these products to eke out her wheat flour. Experiments have shown that the substitutes can be used successfully in the proportion of one part to three parts of wheat flour. At least three-fourths of the mixture must be good wheat flour.

"Potatoes have a certain advantage in this regard, since potato bread can be made without going to the trouble to get the commercial potato meal. Plain mashed potatoes, four parts of mashed potatoes to three parts of wheat flour, will serve the purpose quite well. If the dry potato meal or flake is used the ratio should be one part of potato to three parts of flour. Boiled rice can be used in much the same way as mashed potatoes, care being taken to allow for the water in the rice and to use about three times as much in bulk as would be used of the rice flour.

"In making potato bread the sponge should be used and just enough water to serve to mix the yeast with the potato, since the sponge becomes very soft after partial fermentation. The remainder of the flour is worked in afterward, care being taken to make an extra stiff dough, which should be raised till quite light. This bread is much moister than bread made of straight wheat flour.

"Corn flour, which should cost about two-thirds the price of wheat flour, may be mixed with wheat flour direct, one part of corn flour to three parts of wheat flour. Use the mixture just as though it were wheat flour and mix it yourself.

"It should be remembered that the addition of starchy materials, such as potatoes, rice or cornstarch (which is sometimes used to adulterate wheat flour in baking), tends to make a loaf less rich in protein and hence less nutritious than the straight wheat flour. The addition of corn flour makes little if any change in the nutritive value of the bread, but makes it cheaper.

"There are other flour substitutes, such as soybean meal and pea flour, which serve to add greatly to the nutritive value of the loaf when mixed with wheat flour. These products unfortunately cannot be recommended in the present emergency, since they are not as yet common articles of commerce in this country.

"In this connection it should be said that a great saving could be effected if the housewife would emulate the professional baker and buy low grade wheat flours. There are flours on the market quite as good for home baking as the fancy patent flours, which cost in bulk from 25 to 40 per cent less than the fancy grades. Such are the so called 'second clear' and 'low grade' flours, which are graded lower than patents merely because they are darker, not because they are any less nutritious or less palatable. In fact, the darker color may be evidence that the flour is more nutritious than white flour.

Transmuted Philosophy.

Croesus had just touched a stone and turned it into gold.

"That's more than he could do to me," ruminated Hadji, the beggar. "I'm too poor to touch."

Which goes far to prove that poverty is no bar to wit.—Louisville Courier-Journal.

Not the Proper Thing.

"Your partner is late for this appointment."

"Well, he takes his time."

"It is all right for a man to take his own time, but just now he is taking mine."—Kansas City Journal.

Birds' Eggs.

The largest egg laid by any European bird is that of the swan; the smallest, that of the golden crested wren.

STUFFED CUCUMBERS.

Take large, firm cucumbers and cut them in two lengthwise. Peel and remove the seeds and pulp. Mix breadcrumbs with the pulp and season it with melted butter, salt and pepper. Place this mixture in the shells, sprinkle more breadcrumbs over the top and set in the oven to brown. A little water must be put in the pan to steam the cucumbers while they are browning, otherwise the crumbs will burn before the cucumber shell is cooked. This dish goes well with almost any combination of food.

For the Children

A Sweet Little Girl at the Flower Show.

Photo by American Press Association.

Not long ago there was held at one of the big New York hotels a flower show that was attended by many society folks. Among the visitors was Miss Ruth Atkins, a sweet little miss, whose portrait is shown herewith. Ruth was greatly pleased at the beautiful display of flowers, and many of the people at the show thought Ruth was the most charming rosebud of all the gorgeous display. As she was going about with her mamma the camera man came along, and he was so struck with Ruth that he snapped her picture then and there. If by chance Ruth should see her picture in the paper she would be a surprised little girl.

Kick and Run.

This is a boy scout game and is played in a clearing or open field with a regular association football or basketball. One scout takes his position in the clearing, and the rest seek cover as near as possible. With a scoutmaster acting as umpire, the ball is rolled into the open space and the scout inside immediately kicks it out and rushes out to tag any other scout he can find and catch, but directly the ball is kicked back into the clearing he must return and kick it out. The umpire watches the ball and as soon as it comes to a standstill inside the clearing blows his whistle to indicate the fact. While the one scout is returning to kick it out the others may change their positions or seek fresh hiding places.

The scouts who are caught remove their scarves or wind a white handkerchief around one arm and then help their captor to catch other scouts. They must not kick the ball, but must return to the clearing each time the whistle is blown. The winner is the scout who is caught last. In an open field the "clearing" is indicated by a white mark on the grass or by corner posts and scouts have to elude capture more by dodging than by seeking cover.

As a variation successive patrols may "hold" the clearing and endeavor to capture the rest of the troop in the shortest posible time. The patrol leader only is allowed to kick the ball out of the clearing. The winning patrol is that which takes the shortest time. In this variation the scouts who are caught do not take any further part in the game.—Scouting.

Wall Scaling For Scouts.

The exciting and trying sport of wall scaling is being taken up by many of the more aggressive troops of boy scouts. Wall scaling looks daring, appeals to the eye and gives opportunity for snappy contests. Teamwork counts and fumbles are glaring. Altogether, to the troop which has or can make the necessary equipment wall scaling is well worth the effort. There are few exercises so thrilling with so little of the element of danger of mishap. Many troops are practicing wall scaling at this time with a view to putting on exhibitions at various public gatherings, encampments and the like this summer.

Girlie's Troubles.

My name is little Albertine,
But mother calls me Tommy
Because my clothes are never clean,
My hands are always gummy.

She stops me racing through the house,
She says I make a racket;
Declares she'll dress me in a blouse
And put on pants and jacket.

Because I climb up fence and trees,
Make mud pies in the gutter,
Forget to say "Thank you" and "Please"
When I want bread and butter.

And after I am bathed at night,
She prays, "Lord keep her cleanly,"
But daddy holds me close and tight
And whispers, "Daddy's Queenie."
—Philadelphia Record.

GERMANS FAIL TO MOVE RUSSIANS FROM POSITION

(Continued from Page One)

that both Russia and England are anxious to brand the rumors as unfounded.

No hint of a separate peace or of dissatisfaction with England's policy comes from any authoritative source, and Count Benckendorff, Russian Envoy in London, has made it plain that, while there may have been some sentimental popular feeling in his country for a diversion in the west to relieve the strain in Russia, there had been no criticism emanating from those who understood the military situation.

From all the latest advices it seems the Russian armies in the Ivangorod sector are fighting desperately to retain their hold of the fortress. The Austro-Germans gradually are extending their circle around the fortress, but it is certain it will not be abandoned until the last moment. An excellent railway to the northeast offers a way for rretreat when the pressure becomes too strong for resistance, and this line should be secure from molestation until the entire middle Vistula line is broken.

Ten Million Germans Engage in War, Is British Estimate

London, August 3.—At today's session of the meat cargo cases before a British prize court, Sir Fredercik E. Smith, Solicitor-General, produced an affidavit by Major Eric Dillon, a member of the General Staff, showing that the number of persons serving in the German army and under the control of German military authority aggregate 10,000,000. His figures follow:

Under arms on two fronts, in garrisons in Belgium and on lines of communications	4,000,000
In training in Germany	750,000
Casualities, including constant temporary wastage	2,000,000
On railways, all of which are used and organized specially for war and are controlled by the military au-	
At Krupp's arsnals and factories and other arrsenals and facotries concerned in the manufacture of war munitions	750,000
In coal mines and in factories concerned in making army boots, clothing and other articles necessary in the equipment and provisioning of the army	2,000,000
Total	10,000,000

Solicitor-General Smith argued that at the moderate figure of two dependents for each of the 10,000,000 there would be 30,000,000 who might be dependent on the state for rations, so that it would be fair to assume that in all probability the siezed goods were intended for government use.

IMPROVEMENT SCHEDULE.

Kalamazoo (Mich.) Chamber of Commerce Maps Out Civic Reform Work.

That the recent reorganization of the Kalamazoo Commercial club, whose name in the process was changed to Chamber of Commerce, resulted in an awakened civic consciousness upon the part of the membership is indicated by the program of work for this year which has recently been decided upon. A few of the items in the program are quoted below:

Promote a higher sense of citizenship by holding before the people of Kalamazoo as an ideal the best accomplishment of the most advanced cities.

Study the manager form of city government and promulgate information concerning the results of this study.

Assist in co-ordinating the various charitable and relief agencies of the city and county with a view to increasing efficiency and preventing duplication.

Help to devise ways and means for providing a home for the Y. W. C. A. that will enable it properly to care for the young women transients and employees of the city.

Promote the cultivation of vacant lots and waste places to increase self help among the needy.

Co-operate with the authorities to increase efficiency in public administration.

Urge the repair of dirt streets.

Assist in securing full registration and vote in municipal and school elections.

Secure public comfort stations.

Cleaner streets and sidewalks.

Extension of ornamental light system.

City water service extension.

Improvement in fire protection.

Improve and beautify the river front and plan for its permanent utilization for park purposes.

Establish and improve parks and playgrounds.

Conserve our trees.

Prepare data on the establishment of a public market, farmers' headquarters and women's rest room.

Prepare and submit data on a modern system of garbage collection and disposal.

[illegible] study and analysis, for [illegible] of property [illegible] ment and public taxation, scope and proper expenditure of public funds.

Fire Protection In Hotels.

The guests of Raleigh (N. C.) hotels are given exceptional protection against fire hazard by the arrangement which the Raleigh chamber of commerce has made with the city commissioners for one of the city's paid firemen to inspect the hotels of the city hourly between 10 p. m. and 7 a. m. This protection is in addition to that provided by the hotels themselves.

PROTECTION.

The chamber of commerce of Raleigh has arranged with the city commissioners of Raleigh for one of the city's paid firemen to inspect this hotel hourly from 10 o'clock p. m. to 7 o'clock a. m.

This fireman carries a watch clock, and the watch clock stations are located at the end of each corridor on each floor, including basement, dining room and kitchen. The watch clock records are filed with the secretary of the chamber of commerce and are open to inspection.

This protection is arranged by the chamber of commerce in addition to that provided by this hotel that the guests may feel amply protected against hazard of fire.

The card here reprinted is tacked up in every room in the different hotels, thus informing all guests that the hotel is being afforded fire protection in the manner described and incidentally affording desirable publicity to the chamber of commerce.

Protecting Shade Trees.

Governor Walsh of Massachusetts has recently signed an act defining the powers and duties of tree wardens and their deputies and providing for the better protection of public shade trees. It includes a jail sentence for not more than six months or a fine of not more than $50 for any one who willfully, maliciously or wantonly injures a tree, shrub or growth which does not belong to him and which serves a useful purpose. The same penalty applies to cutting down a tree or shrub within the limits of a state highway without authority. Another section carries a $50 fine for attaching advertisements upon or painting or marking any tree located in a public place or highway except for the purpose of protecting it or the public.

The Proof.

Stella—Is she a cat?

Bella—Yes. She has had nine men stop [illegible].—New York Sun.

BROOK TROUT.

Science Outdoes Nature In Raising the Young Fish.

The brook trout is a nest builder, but does not belong to the group of fish which cares for its eggs and young. When the function of egg laying is completed and the nest covered with gravel the parent fish seem to feel that their whole duty has been performed, and they depart, leaving both eggs and the young when they are hatched to the care of nature, and nature, it must be confessed, is generally neglectful of her charge.

Early in autumn the mature brook trout in pairs seek the gravelly bottoms of shoals and spring runs. Here with nose and fins they hollow out a shallow basin and make it scrupulously clean. This is their nest, and over the bottom the eggs are scattered, covered with gravel, and their duty to posterity is ended.

Only a small proportion of the eggs deposited naturally are fertilized, and many of these are destroyed by spawn eating fishes. Most of the tiny fish which do develop and succeed in punching a hole through the egg shell with their little tails and emerging into a watery world do so only to find quick lodgment in some larger fish.

As a foster parent the trout culturist is a greater success than Dame Nature. The latter, under the most favorable circumstances, rarely succeeds in hatching more than 10 per cent of the eggs deposited, while the former expects to develop into wiggling fishes nearly 80 per cent of the eggs obtained.

PERFUME OF MUSK.

The Odor Is Penetrating Because the Substance Is Radio-active.

The extraordinarily penetrating power of musk perfume is accounted for by the fact that it is radio-active. The United States consul at Chunking, China, writes that this property causes the odor to be carried through the air in a way that would otherwise be impossible. And he adds that this radio-active property "affects most peculiarly the natives who carry it. If it is held close to the body for any length of time it produces sores that are probably similar in character to those caused by pure radium."

Musk is a secretion of certain glands or pouches of the male musk deer and is secreted only during certain seasons of the year. It is difficult to obtain pure, and one of the largest French manufacturers of perfume keeps a representative at Tachienlu, near the Tibetan border, for the sole purpose of buying it.

Three thousand pounds of musk on an average are shipped every year from Chunking, and fully half of this has passed through Tachienlu, which is one of the principal musk markets of the world, though eighteen days' journey from Chunking, the nearest post.

The deer, which are seldom more than three feet long and twenty to twenty-two inches tall, are being slaughtered in such numbers that they are becoming more and more scarce and will eventually be extinct.

That Genius Whistler.

Of Whistler Lady St. Helier, in "Memories of Fifty Years" writes thus: "He was a genius and had all the defects and qualities of one. To him everything was a joke, the subject of a bonmot. The lightest and daintiest of persiflage was what he excelled in, and one never had a dull moment in his company. He was always late for dinner, arranging the immortal lock of gray hair in its proper place as he came into the room, with apologies and excuses, none of them true, of which he was perfectly conscious and also that they were not believed. Wherever he was there would be a circle listening to him, and his ringing laugh would be heard all over the room as he sent his shafts right and left into the joints of the armor of those who were attacking him. It was a great surprise and almost a shock when he appeared as a benedict."

The Colossus of Rhodes.

The remains of the Colossus of Rhodes have been dispersed beyond possibility of recovery or even of tracing. It stood for little more than half a century and then, in 224 B. C., was overthrown by an earthquake. The Rhodians raised from benevolent outsiders large sums of money for its restoration, but divided the fund among themselves, asserting that the oracle of Delphi had forbidden them to set it up again. So there the ruin lay until 672 A. D., when the Saracens sold it to a Jewish merchant, who loaded 900 camels and went away—literally—with the brass.—London Spectator.

A Cruel Comparison.

"I don't make much," said the fond suitor. "My salary is $30 a week. Could we live on that, dear?"

"Ah," sighed the maiden dreamily. "Just the price of a tire for father's motorcar."

Then something told the f. s. that he was wasting time.—Birmingham Age-Herald.

Engaged.

Stranger (impatiently)—Say, isn't that newspaper to be had yet? I've been waiting for it for two hours. Waitress—I'll see about it. Farmer Cross has it in the side room. He's teaching his little boy to read.—Fliegende Blaetter, Munich.

And So It Is.

"What do you consider the greatest human paradox?"

A secret session of a woman's club."—Philadelphia Ledger.

Friends are lost by calling often and calling seldom.—Swift.

Corey Says Allies Look for 4 Years More of War

New York, August 3.—William Ellis Corey,, formerly president of the United States Steel Corporation, was a passenger on board the steamer Espagne, of the French line, which arrived yesterday from Bordeaux. He has been four months at his home, the Villa Genise, twelve miles southeast of Paris. Mr. Corey has turned his villa over to the French army for use as a convalescent hospital.

"The allies are optimistic," said Mr. Corey, "but they are preparing for three orf our years of war. The war is decidedly one of chemistry and mechanics. The allies are eager for both the moral and financial support of the United States, but are more interested in the financial end. It would not be a good thing for the United States to get into the conflict. Unpreparedness is the reason. It would take this country two years to get into shape to combat a first class Power. We might lick Portugal or Liberia or Spain, but this would be an effort. I have no use for a man who wants peace at any price nor for the man who wants war at any cost. 'Peace with dignity' is the right slogan.

"Russia must reorganize her army. There is no doubt of her resources, but they have got a bad start. It is generally recognized and I believe that the Grand Duke Nicholas is the greatest military leader in Europe."

Mr. Corey asked if Warsaw had fallen before the German attack, and when told it had not he appeared sceptical.

"We knew in Paris that Lemberg had fallen two weeks before it was announced," said Mr. Corey. "I would not be surprised if Warsaw had been taken and the news suppressed.

Bayonets of Militia Stop Strike Riots

Messena, N. Y., Aug. 3.—Cold steel and firing by State militia have awed the 1,000 strikers at the plant of the Aluminum company of America and the backbone of the strike has been broken.

Two men have been killed and half a dozen seriously injured. Automobiles have been held up and their occupants beaten, while innocent bystanders have been the targets of volleys of bricks hurled by the mob in its resistance of Sheriff Day and the three companies of the State Guard which surrounded the works.

At 8 o'clock last night General Manager Doersheck, o fthe company, and Deputy Sheriff Stubbs, failing to find any leader of the strikers with whom they could meet, went from house to house among the strikers and announced the company would pay what the men demanded if they would return to work.

Stubbs was attacked with a crowbar, and a riot followed which called the troops on the scene. The rioters scattered.

Another mob seized a freight car loaded with dynamite and made away with several boxes of the explosive. Colonel Hitchcock doubled the guard at the works and threw out a patrol for a half mile in each direction.

The only hostility today was an exchange of shots between rival factions of the men in the woods north of the plant and the seizure of a freight train.

That the situation has not assumed more serious proportions is due to the prompt arrival of Colonel Charles Hitchcock, of the First Regiment, with company C, of Watertown, in command of Captain Ryan; Company K, of Malone, in command of Captain Marshall, and Company D, of Ogdensburg, in command of Captain Briggs.

Sixteen of the ringleaders who attempted to leave town were arrested by Depity Sheriffs and militia at the railroad station, arraigned before Judge Chase and committed to jail without bail on a charge of rioting. Other arrests are expected by tomorrow morning.

So well is the situation in hand that it is believed terms will be made on which the men can be induced to return to work on Wednesday. The plant, which occupies twenty acres, employs 2,500 men, all of them foreigners. It is the largest manufacturer of aluminum ware in the United States. It is denied that the company has contracts for war munitions.

According to General Superintendent Martiz the men in the furnace department started rioting Saturday afternoon without making any demands on the company. When the 4 o'clock shift went off five hundred of them started to wreck that part of the building in which they were employed. After doing several thousand dollars' worth of damage they marched to the bridge over the power canal, took command of it and held it until the militia arrived yesterday.

One man who was shot through the stomach in the first clash died today in the Ogdensburg hospital. Another man, said to be a shop boss, who refused to join the mob, was knocked over the head and his body thrown in the power canal.

BYRON D. READ BURIED.

The funeral of Byron D. Read, who died early yesterday morning, was held this afternoon at 3 o'clock from his late home in Emery st. Hiram Lodge, F. and A. M., had charge of the funeral and the Rev. Mr. Bassett officiated.

MRS. GARRETT ENTERTAINS BROTHER AND HIS WIFE

Commissioner and Mrs. L. E. Garrett of 3rd and Rochester sts. have been entertaining since Sunday, Mrs. Garrett's brother and sister, Mr. and Mrs. Harry Parker of Washington, D. C. Mr. and Mrs. Parker will leave the city tomorrow for their southern home. Their vacation has included an extended visit at Sodus Point.

DESCRIBES BATTLE ON WESTERN FRONT

LETTER FROM FRENCH SOLDIER TELLS OF THREE DAYS' STRUGGLE.

WOUNDED BY GERMAN SHELL

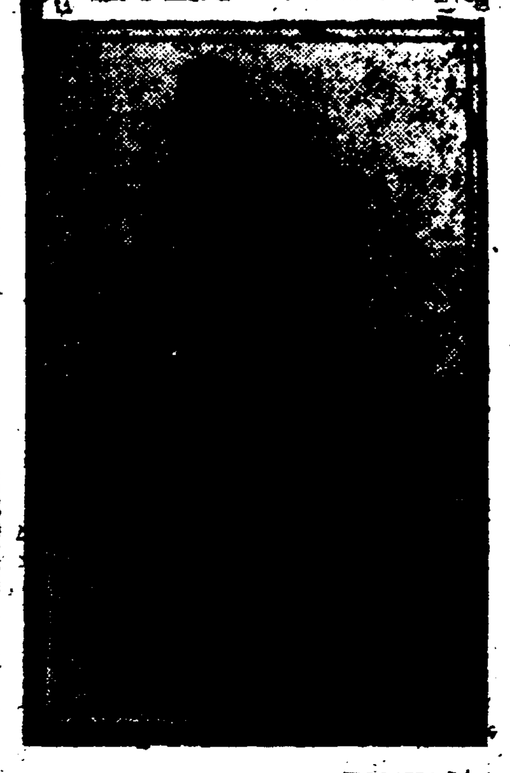
Father of Rene Bardet Gets Graphic Story of Charge—Pathe Employe Proud of Son.

The personal, intimate side of the great world war now being waged is lacking in the colorless, censored reports officially disseminated by the various governments of the countries involved. Rarely letters come to this country from men at the front, and it is from such letters that one gains a conception of the sensation of the brave fellows, thousands of whom are dying daily for the highest earthly ideal a man can have—"pro patria."

One such letter has been received by Mr. Gabriel Bardet, the notary of the Pathe American Company, and an old and trusted employee of that great concern. When the war broke out last summer, Mr. Bardet's two sons, Rene and George, were among the very first French-Americans to leave for France to fulfill their duty to their mother country. George, the elder, was made a prisoner in the very first weeks of the fighting, and has since been incarcerated in Germany. A few brief letters have come from him to his father, saying that he is well and as happy as could be expected under the circumstances, his greatest hardship being the lack of tasty food. Mr. Bardet has in consequence made arrangements for various delicacies to be sent to him.

It is from Rene, the younger, however, that the Pathe notary has received the most interesting letter. Rene has been in the thick of the fighting from the start and his experiences are worth narrating. He says in part as follows:

"After a terrible bloody struggle which lasted for three days I am safe and sound and taking a much needed rest. For the first time since I have



Rene Bardet.

been at the front I have taken part in a bayonet charge and I never had thought that our men were so brave. On the morning of the 25th of May we had received orders to go ahead. At 12:30 the struggle began. Shells were bursting all around as friends and comrades were falling thick and fast, but still we forged ahead through the hell of fire and succeeded in taking the first German lines. What happened afterwards is indescribable. We fought like tigers with bayonets, knives, stones, bombs and rifle stocks foot for foot, and yard by yard. Terrible shrieks were ringing through the air from all sides from the wounded and the dying. We could not stop to help our stricken comrades for duty compelled us to go forward at all costs. We advanced to within fifteen feet of the German third line, but our losses were so heavy that only a few of us reached there. In fact at one time there was only my captain, a sergeant and myself left. A few groups of our own soldiers ran up to reinforce us for the cry came that the Germans were making a counter-charge on our left. Just then a shell broke right over us. All in our party were bowled over like a house of cards. The next thing I knew I was in the hospital with my face and right arm heavily bandaged. Perhaps my wound saved my life and I surely look up to God and thank him for having spared my life. Chills of horror come over me when I think that of that brave little group of survivors in front of the Germans perhaps I am the only one living. The battle continued to rage for a whole day and our soldiers succeeded in retaining the two trenches we had captured. Let us hope that the sacrifices these brave men made in giving their lives will not be in vain. My poor friends! How I pity them, and hope that they are happy in heaven, for they surely deserve it."

A MAN OF ALL AROUND TALENT.

Rarely does one find a man who is an actor, a painter, a musician, a writer, and a producing manager, and does all his accomplishments with great skill. Yet there is one man, William Elliott, a Pathe-Balboa star, who is to appear in "Comrade John," with Ruth Roland, who is [illegible]

Aldermen Designate Sept. 17 as Election Day; Mayor Would Have Italians Observe Neutrality; Contractor Massaro Granted Extra Appropriation

MAYOR MAKES HIS FIRST OFFICIAL APPEARANCE SINCE RETURN HERE

The Common Council met last night in regular monthly session and in addition to completing much routine business, and accepting the reports of the city chamberlain and the commissioner of charities, broke all records for borrowing money. Shortly after the meeting came to order, Mayor Fox, who returned yesterday from his western trip, said the Police Fund needed $1,000, which was promptly borrowed, to be paid back when the Excise money is collected in October. There is great danger of an overdraft on the Excise money for this is no less than the tenth instance in which funds have been borrowed for various city departments with the expectation of payment from the Excise money.

The sum of $10 was appropriated for postage for the departments at City Hall. The poor fund has come to feel the very privation to its duty to allay, and the Aldermen voted $300 to pay the bills of the month of July. This sum was also in the nature of a small obligation which will come due at some future date.

Mayor Wants City Neutral

The council had a short respite from frenzied finance, while William Bogue, representing a group of Italians, who have formed a band in this city, asked the council for the use of the City Hall two nights each week for practice. The band is to be drilled by a Syracuse musical director, and the members of the band, who live in all sections of the city, wished a central location for the rehearsals. While Mr. Bogue stated at the outset that the organization was a band, and nothing more, he used the word "drill" several times, in reference to the instruction to be given the members, and Mayor Fox evidently understood him to speak of a military organization. At any rate, the Mayor, after Mr. Bogue had finished, began to comment on the policy of the council, mentioned President Wilson on "Neutrality," asked how many of the Italians were going back to fight and how many intended to stay and become citizens of the city, and continued to treat the organization and the proposal as one worthy of great consideration and thought because of its military nature. After everyone had begun to wonder what the Mayor was talking about, for everyone else seemed to understand that it was a band, Mr. Bogue explained again that the Italians were to study music and not the manual of arms. After the laughter had subsided, the council granted the request and the Italian band will practice at the City Hall on Tuesday and Thursday evenings, unless some other meeting should necessitate a change of date. The band will pay for the lights and for wear and tear and entrance will be restricted to those carrying instruments.

Alderman Breaks the Silence

The council was next called upon to decide the momentous question of the appointment of a dog catcher. George Snow, who was given the office early in the summer, earned about $9 in one week and then left the job flat on its back. Ephraim Fox, of Pratt st., applied for the position last night, but Alderman Sullivan suggested that the office be put under the supervision of the Chief of Police, and Ephraim will not be allowed to resign until every canine wears the insignia of the local lodge. Fox will receive 25 per cent. of the money received from the sale of tags.

Everone sat straight up when City Clerk Scudder began to read the petition asking the council to call a special election on the question, "Shall the city of Fulton adopt the simplified form of Commission government known as plan C, etc.," and after the City Clerk added "This petition is signed with 460 names," a deep silence ensued.

"How much will this election cost?" asked Alderman Sullivan. [illegible]

"That's a lot of money to spend foolishly," said Mr. Sullivan.

"Well, we can borrow it—we have been borrowing right along," retorted Alderman Foster.

The city attorney explained that the election would be held in every district and not at a central polling place. In answer to a question he said all the election officers had been appointed. Alderman Sullivan was asked if he would like to have the election at a central polling place and he replied that he was in favor of having a polling place in each district.

Mayor Fox called on Edward P. Cole for a few words and Mr. Cole said he deeply deplored the expense of such an election, but was in favor of submitting the question to the people as soon as possible, in order that the usual election formalities and political activity could go on as before after the matter had been decided.

Heydecker On the Floor

Wayne Heydecker, secretary of the Chamber of Commerce was present, and at the invitation of Alderman Sullivan he consented to explain the reason for the special election. Mr. Heydecker enumerated some of the questions which will be decided at the coming general election, among others the canal referendum, women's suffrage, and the amendments decided on at the Constitutional Convention.

"All these questions must be decided at the general election," said Mr. Heydecker, "and in order that this matter may receive the best possible consideration and not be clouded among other issues, we desire a special election."

During the course of his explanation, Mr. Heydecker mentioned the general city elections, should the commission plan be defeated. Immediately he had finished Mayor Fox said, "Are you admitting that this will be defeated?"

"Not for a moment!" said Mr. Heydecker. "I do not believe it for a moment!"

With possibly one exception, all the aldermen smiled mysteriously. Alderman Quirk, in a jocular tone, spoke of the work done by the Chamber of Commerce thus far and mentioned the oil station on the west side among the other new industries the Chamber had secured for the city. Other aldermen spoke disparagingly of the work of the organization, but although Mr. Heydecker offered

TAXI OWNER WANTS TO HAVE HIGHER LICENSE FEES CHARGED HERE

to explain the commission plan to Aldermen Gardner and Sullivan, he entered into no further discussion of the merits of the project. The date for the special election was set finally as September 17. The polls will be open from sundown to sunset.

The Fulton Light, Heat and Power company tendered a petition, asking the city fathers to correct the assessment of $61,000 made on their old plant in 1911 to $40,000, in consideration of which the company would abandon the certiorari proceedings now pending against the city. The council accepted the proposition and the assessment will be corrected. Claude E. Guile instituted the certiorari proceedings in 1912.

Massaro's Obstacles Prove Costly

As outlined in The Evening Times of last night, the tow-path sewer, constructed by Frank Massaro, who took the work on contract for $2,445, will cost the city more than $3,200. The Board of Public Works tendered a resolution to council at last night's meeting asking for a further appropriation of $2,150, the sum necessary to complete the sewer. Some of the aldermen raised a question at once. Mr. Fanning explained that Mr. Massaro was obliged to tak out 125 cubic yards of rock in the course of the work, the presence of which he was not aware when he took the contract at $2,445. Aldermen Gardner and Foster were of the opinion that Mr. Massaro should pay for his own mistakes and held that he should not have taken the contract at that price unless he could complete it. Mr. Fanning informed the aldermen that a clause in the contract protected the contractor if he encountered unusual obstacles in the course of the work, and said that Mr. Massaro had been obliged to blast. Mr. Gardner said he had seen a drill on the job, but had [illegible] it used, and added that Mr. Massaro had been obliged to do little excavating on the lower end of the job near the Hunter works, and asked if Mr. Massaro was prepared to give the city a rebate in view of that fact.

Alderman Distin voted for the appropriation under protest and Alderman Foster refused to vote for it. Mr. Massaro has already received $1,654.88, and if he receives the amount appropriated last night in addition the work will have cost the city $3,8804.88.

Alderman Foster also voted against appropriating the amount necessary to send City Clerk Scudder to the convention of City Clerks at Troy this month. The trip will cost about $25. All the other aldermen voted in favor of the appropriation.

W. J. Wilson of the Wilson-Scott Taxicab Co., asked the council to raise the taxicab license fee from $2 a year to $50 a year. Mr. Wilson said the small license fee enables many owners of cars to engage in the hacking business at odd times to the detriment of the men who devote their whole time to the work and are always at the service of the public. The council took no action.

Before the session adjourned, Alderman Gardner spoke of the construction of the Hunter bridge on North First st. and said he could see no difference in the width of the bridge, although he had been told it would be wider than the old bridge.

He compared the cost of the Hunter bridge with the cost of the bridge now being built over Black Creek, north of the city, and was of the opinion that the two bridges recently ordered built by the Board of Public Works were costing the city twice as much as they were worth.

BAND CONCERT

Tomorrow evening the Elks' Band will give the second of the series of public concerts which have been provided for by the Chamber of Commerce and J. W. Stevenson.

The concert will begin at 8 o'clock and the new park at Lower Falls is designated as the place. During the recital ice cream and drinks will be served and a merry time is promised.

EVERYTHING BUT BABES MAY BE LEFT AT REST ROOM IN FAIR WEEK

The Directors of the Chamber of Commerce at a meeting held last night voted to throw open the office of the Chamber as a rest room during fair week. The central location of the office of the Chamber should make it a great convenience to farmers and their wives who patronize the fair. They will be able to make their headquarters at the Chamber office during their stay in town, leave bundles, wraps, etc., in fact, everything but babies.

The Chamber will not assume responsibility for the articles left, but all reasonable care will be taken to see that they are not disturbed.

HIS WIFE OBJECTED TO POSTPONEMENT OF TRIAL

Robert Boisey, who was arrested two weeks ago on complaint of his wife, who alleges that he does not support his family, was arraigned in City Court this morning. Owing to the trial of another case, the matter was postponed for one week. Mrs. Boisey asked immediate action, as she says her husband will leave the city in the interim and allow his family to become a public charge. She finally consented to the adjournment, however.

Mr. and Mrs. J. H. Stewart of Utica st. spent last week with Mrs. Stewart's sister, Mrs. John Ouderkirk, on Bowens Corners road.

WOLCOTT MEN COMING TO TALK COLD STORAGE; DATE IS TO BE NAMED

The Division of Agriculture of the Chamber of Commerce announced this morning that D. Wadsworth and Mr. Baldwin of Wolcott, N. Y., had consented to come to Fulton to discuss with the members of the Chamber problems connected with building a cold storage plant in Fulton.

The Agricultural Division has not yet settled definitely upon a date for this meeting, but it is expected that it will occur Tuesday, August 24, or Wednesday, August 25. Mr. Wadsworth when seen yesterday morning expressed his willingness to co-operate with the division in this matter, and it is hoped that something definite will result from the meeting when held.

Opinions

HOW WILL THEY VOTE?

About 600,00 metal trades workers in factories producing arms and munitions, it is officially announced in New York, will demand more pay and shorter hours. They base their move on the prosperity of the factories affected.

How will these 600,000 workers vote next year? For a tariff policy that assures low wages or a tariff program that renders higher wages probable?

They are undertaking now to take advantage of an abnormal situation. How about a few months ago when they wereu nable to get any wages at all? Peace wages, not war wages is the prize worth striving for.

The workman who wants to protect his wage will vote to protect the factory that pays it.—Philadelphia Ledger.

LENDING A HELPING HAND.

An act of kindness, if not charity, done by the station agent of the Pennsylvania Railroad at Williamsport, Pa., was observed by a passenger on one of its trains, who sent a letter to the officials of the company commending the agent in the highest terms.

The railroad caused to be printed the letter sent by the passenger in praise of the agent, no doubt believing that the incident would have a wholesome effect on the other employes of the road.

A woman surrounded by a small group of children was waiting in the station. She was a foreigner and did not know where to go or what to do. The children were tired and hungry. The station agent saw the situation, and acted promptly. He supplied food, and after ascertaining that the party would have to remain over night to get a train that would take them totheir destination, he saw that they were cared for comfortably and safely, and sent on their way refreshed the next day.

The station agent probably thought nothing of what he had done. It may have been but one of many such cases that a busy railroad man must handle in the course of a week's work, but the incident made an impression on the passenger who thought it worth while to report to the officials of the company.

The company then issued the letter and the work of the station agent has been given its proper recognition. The incident will no doubt be remembered by other railroad men, who will be encouraged to exercise patience and care with the needy who come under their observation, and to extend a helping hand wherever it is possible to do some little act of kindness.—Elmira Observer.

DEAFNESS CANNOT BE CURED

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by Catarrh, which is nothing but an inflamed condititon of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

SYSTEMATIC SAVING

Once before The Evening Times published in this column a brief article on saving, and since that time requests have reached us for an article written about Systematic Saving.

In the first place there is no habit more desirable for young persons to form than the habit of saving—*Systematic Saving.* Events in Fulton during the last six months have forced home the conclusion that if one wants independence in living—independence when the wheels of industry have stopped to wait for orders for their product; the kind of independence that is assured the worker who is able to put away a part of his earnings, it is up to one to do as the editor of The Silent Partner advises: "Always paddle or scull your boat. If you insist on rowing with your back to the bow, you will not see the ducks of opportunity until they have passed out of gunshot." How very many of us, in times of prosperity, row with our backs to the bow. We sort of take it for granted that things will go on forever to suit our liking, and that no more shall we be up against the snags that stop the whirring wheels; no more shall we feel the pinch of hard times.

Workers everywhere, in spite of warnings, do just the same as other folks, they spend when they have money to spend, with never a thought to put away a part of their earnings and they become spendthrifts, leading a hand to mouth existence, and when adversity comes, fall into the misery of poverty.

In Fulton there have been unusually hard times for the worker, but better days are dawning, then why not profit by past experiences? Why not in these days take home the lesson of thrift that has been taught by hard times? Surely the lesson of thrift is taught in many ways and many opportunities are afforded those who heed it to make the most of their savings. With a view to aiding in this good work, the three banks of Fulton extend to the workers of the city the very opportunity sought by thousands and thousands of persons in many less favored communities—an opportunity to save money and to save it in a safe manner.

There lies buried somewhere in the mind of nearly every man an idea that he knows *when, how* and *where* to invest money. He is a wise man who knows all these things, but they are irrelative, as they must follow along later in life, after the young person has learned the art and science of saving—Systematic Saving, if you please. Most of us who do save money have our ideas of the method to pursue. While the savings departments of the banks are all that could be desired, there are among us men who have othr methods, but after all is said and done, could there be any better way to save one's earnings than by undertaking a plan of Systematic Saving: by buying a share of some sort of guaranteed industrial stock that is under the supervision of the State? We think not, at least for the person who has not thought of saving of any sort. Ten chances to one exist, that if a person is taught Systematic Saving by making installment payments on a stock certificate, he will become at some time in his life a good bank depositor and a better citizen.

There is a clever description of the "knocker" going the rounds of the press. It likens the knocker unto a vipor, a snake, with this distinction: In importance and in size the description of the knocker is the definititon of an animal-cule.

Knocking is a habit, and has a firm hold on a lot of good men. The knocker gets the habit so firmly fixed he knocks his own mind into believeing what he says, and this is the dangerous part. He is not a half bad fellow at heart, but he has a durned bad habit.

Listening to the knocker, or assuming the position of a knocker, has put many a good man on the bench for a full season.—Silent Partner.

ALBANY GOSSIP DAY BY DAY

Chronicle of Events and a Forecast of What is Doing in Officialdom---Special Correspondence.

Albany, Aug. 4.—Echoing what it believes is a general demand for an amendment to the Constitution relative tothe State's system of dealing with dependents, defectives and delinquents, the Bureau of Municipal Research of New York City has prepared a draft of an amendment to create a State department of Charities and Correction, to maintain which a far less amount than is at present devoted would be necessary. Appropriations estimated to aggregate one-third of the revenue of the State, are devoted to the care of the unfortunates relying upon public charity for their welfare.

It is the contention of the membersof the Bureau of Municipal Research, that the present Constitution contains too many rather than too few provisions for the care of its mentally or physically diseased wards and deals with many matters which could be more properly treated in the statute law.

In a word, the proposed amendment to the Constitution relative to the establishment of a department of Charities and Correction, offers in place of all the existing provisions a simple and direct plan of organization of the State's activities with respect to the unfortunates above mentioned. It would remove many existing limitations on the power of the legislature to deal with the management of State institutions and put in their place the briefest possible declaration of the fundamental principles in accordance with which the legislature would be required to act.

In dealing with the hospital for the insane, charitable institutions, prisons and reformatories and in making provisions whereby the State shall do its duty by the unfortunates who are gathered into such institutions, or who require the help or attention of public authorities, whether inside or outside of institutions, the present Constitution has set up a complicated system of checks and balances, and they have been superadded by the legislature other checks and balances resulting in a confusion and interference that is almost unbelievable.

This condition of affairs is decried against by the Bureau of Municipal Research, which through its members has urged that all charitable persons assist in the movement to loosen the tangle of overlapping authority.

Those who are familiar with the charities law as its exists, hold that the interlocking system of department control of public institutions is at once too expensive, confusing and inefficient. It is also maintained that there is a superabundance of red tape attached to the initiative and that it i sa difficult matter to fix responsibility.

The plan outlinde to remedy these chaotic conditions is to so amend the Constitution that all State regulation or control be vested in and be executed by a secretary of Charities and Corrections who shall be a vice-governor appointed by the Governor, removable at his pleasure and therefore absolutely responsible to him, thus making the Governor responsible to the legislature and to the people for the performance of the State's functions with respect to its unfortunates.

It is also planned to group four State Authority in one department, namely: A director of State hospitals for the insane and a State hospital council; a director of State institutions and work for the mentally deficient and epileptics, and a State mental deficiency council; a director of prisons and reformatories and a State prison council; a director of State Charitable institutions and a State board of public charities.

Hanford's Balsam of Myrrh is itself an antiseptic and the use of any other remedy before applying it is unnecessary.

Most Children Have Worms

And neither Parent or child know it yet it explains why your child is nervous, pale, feverish, backward. Often children have thousands of Worms. Think of how dangerous this is to your child. Don't take any risk. Get an original 25c. box of Kickapoo Worm Killer, a candy lozenge. Kickapoo Worm Killer will positively kill and remove worms. Relieves Constipation, regulates Stomach and Bowels. Your child will grow and learn so much better. Get a box today.

The consistent advertiser wins in the end. It may cost a dollar to get a dollar, but the deal wins prestige.

Automobile Owner

Queries and Replies Covering Matters of Importance to the Man Who Runs a Car

I have trouble with pounding in the second cylinder of my car. Several times I have tightened the connecting rod bearings so tightly that it is easily felt while cranking the machine. When I have run 400 or 500 miles the knock reappears. The machine has run 3,700 miles in all. Can you tell the trouble?

The most probable cause of the knock you mention is a loose bearing. This may be a main, connecting rod, wristpin or camshaft bearing. It might also be caused by a broken piston ring, the camshaft being out of alignment, or if the knock is not very severe it may be the result of carbon on a valve seat. As it is most probable that is it in the crankshaft bearings, these should be inspected and if necessary carefully taken up, or if they are badly scored they may need to be scraped, or in an extreme case they will require replacing. In taking up the bearings great care should be exercised not to get them too tight, and it should be noted that it is quite possible that the reason your machine begins to knock again after going 400 or 500 miles after the bearings have been adjusted too tightly. When a bearing is too tight excessive friction is the result, and overheating occurs. This wears the bearing away in a very short time and in some cases may even melt the metal. The bearing should be only taken up enough to remove all play.

It would hardly seem possible that the bearings should need scraping after the car has gone such a short distance, but if they have been adjusted too tightly it may be that they are badly scored, and if this is the case scraping will be necessary. This operation should be left to the care of an experienced and skillful mechanic and is not a job for the novice.

Kindly tell me the best way to true up the wheels on a car. I feel that my wheels are not running true.

Before anything is done be certain that the wheels need truing up. Sometimes all that is necessary is to readjust the tie rod, which connects both wheel knuckles. Wabbling front wheels may be caused by a bent axle, bent spindle, partially broken bearing, interior of hub worn, etc. The common cause is bent spindles, and a good repair man can bend these back in shape.

Why is it hard for me to start my car when I run out of gasoline and refill the tank again?

Possibly the carburetor float sticks against the side of the chamber, so that it is difficult for the gasoline to flow in. Another explanation is that there is dirt in the fuel pipe and that therefore the passage of fuel is very slow, with the result that it takes some time for the chamber to become filled, and if an attempt is made to start before this time difficulty may be experienced.

Can you tell me how to mend a crack in the crank case? It is so bad that the oil leaks out in a short time.

You cannot mend this yourself unless it is very small, in which case you might be able to patch it with a piece of sheet steel metal and some rivets. If the crack is of any size it is best to have it welded, although if the place is so situated that it is not strained by the operation of the motor it may be sufficient to solder it.

What effect does the practice of using the motor as a brake coming down a hill have on the mechanism of an automobile?

The use of a motor as a brake is generally conceded to have a more or less deleterious effect on the gears. The power through the gears is reversed, since the car is now tending to drive the motor. Thus instead of having the stepdown reduction we have a step-up with consequently more surface pressure on the teeth and hence more abrasion.

Where is the best place to look for a knock?

All moving joints are susceptible to knocks. Tracing through the transmission of power from the cylinder to the rear axle, we find that at each point of engagement of one or more moving parts with other parts there is a chance for a knock. Starting with the piston, if this is too loose, there will be a distinct slapping sound. It can only be cured by the use of an oversized piston. The next point is at the wrist pin, which might have a knock due to looseness in the upper connecting rod. The fourth point is in the main bearings in the crankshaft, fifth at the connection between the crankshaft and clutch, then in the universal joints and the gear box bearings and between the teeth of the different gears. Loose valve tappets, timing gears, etc., are also fruitful sources of knocks.

Will it shorten the life of a piston by drilling to lighten it, or is there any disadvantage in so doing?

You can drill the pistons and get good results. Many racing cars use such pistons. It will be better and cheaper in the end to get pistons of some light material, such as magnalium.

McSWEENY TRIAL POSTPONED

The case of Patrick McSweeny, charged with assault in the third degree on a small Polish boy, which was to have been tried this morning, has been set for August 31, when the case will be tried with a jury. The Polish lad alleges that McSweeny hit him on the head with a pitchfork. Robert Pendergast appeared for McSweeny.

JUDGE WILSON IMPOSES FINES

Warns Card Players Against Repeated Offence; Lectures Them; One Sleeper Goes Free.

Judge Wilson was in a lenient mood last evening when six of the seven men arrested two weeks ago while they were engaged in a "little game" in the tailor shop of M. Katrib, above 29 South Second st., were arraigned for examination on a charge of gambling. Herbert J. Fanning represented all the men except William Barry who was tried today.

Barry, O'Brien, George Taylor, Gus the Greek, David Richardson, M. Katrib and C. Martin were the men arrested, and at their first hearing two weeks ago, Judge Wilson announced his intention of holding them for examination by the District Attorney and released them on their own recognizance until yesterday. The trial was held last night at 7:30 o'clock, and Mr. Fanning asked that the men be prosecuted under the city ordinance prohibiting games of chance instead of under the gambling statute. He said the men were playing a friendly game with a five cent limit and urged leniency, inasmuch as none of the parties concerned had ever been arrested before and were ready to plead guilty.

Judge Wilson announced his intention of imposing a small fine in this instance, but warned the men that another offense would be dealt with more severely.

"This case has evidently been a great lesson to you," said the Judge, "and I hope you will remember it. Whether you know it or not, gamblers do not make good citizens."

George Taylor, who was asleep in the chair when Captain Norton and Officer Bray raided the place, was not engaged in the game and was discharged. A fine of $10 was imposed on the others. Richardson paid $5 of his fine and was given two weeks in which to pay the remainder. Gus the Greek paid his fine in full, and Katrib paid $3. The other men were allowed two weeks in which to pay their fines.

Barry plead guilty when arraigned today and was also fined $10 which he paid.

J. C. O'BRIEN

DR. E. J. CUSACK TO SEEK RE-ELECTION

Commissioner of Elections W. C. Whitney has sent notices to Clerks in cities and towns requesting a list of the officials whose terms of office expire Dec. 31, 1915. Among the number of county offices to be filled this fall will be that of County Clerk and three Coroners. No Democratic candidates have appeared for these offices. The Republicans who desire to succeed themselves are: Z. D. Stanton, Oswego; C. J. Vowinkel, Oswego; Dr. W. G. Babcock, Constantine; Dr. E. J. Cusack, Fulton.

All the data concerning candidates for office must be in the hands of the Board of Elections by the latter part of this month in order that the forms of advertising may be observed. The party committees are also required to furnish by August 26 the offices to which candidates are to be named at the primaries on September 28.

YOUNG ROSS PREPARED TO MEET WILLY GREEN

Reports from Syracuse are that Young Ross, who is to box Young Green of Fulton, is plugging away in his training quarters storing up speed and strength to carry him through a tough bout. There is no doubt but what Ross has an opponent who stands to make the entire four rounds a continual go, and Young Green can fight steadily without showing much fatigue. The bout is sure to be a slugging affair, and the fact that the local boy is not so apt to tire as the Syracuse boy improves Green's chances considerably.

Nine bouts in all are scheduled for Friday night, the main go being a six-round affair with Pop Johnson of Albany opposing Kid Crozier. The winner of the Ross-Green bout stands to oppose Kid Crozier in a main bout in the near future, so that the four-round preliminary between Green and Ross will be as interesting as the main go.

MAYOR RETURNS AND REPORTS FINE TIME

Mayor F. E. Fox returned yesterday from a six weeks' trip to the Panama-Pacific exposition and the western states. The Mayor spoke enthusiastically of his tour last night and described some of the places of interest he had visited, among others Yellowstone park and the famous Mayo Clinic at Rochester, Minn. The Mayor was accompanied by Mrs. Fox.

For nail in the foot, apply Hanford's Balsam.

Rhodes Studio OPEN

L. E. RHODES, Photographer, 61 E. 1st St.

Announces to his friends and patrons that his studio is now open for business, after being closed for four weeks. Your patronage earnestly solicited.

ROME MAN WAS ROBBED BY MATE

Herbert J. Anright of Rome, N. Y., says he will be more particular about his bed-fellows in the future. Anright blew into town yesterday and "met up" with Amos Carkner, who says he hails from Rochester. After visits to divers "merry mucilage parlors" Anright and Carkner linked arms and set their course for the Fulton house, where they engaged a room

Anright says he slept well and was at peace with the world, when he woks up this morning to find his bed fellow gone. Further investigation disclosed the absence of his (Anright's) gold watch, fountain pen and wallet, which contained $6. Anright values the watch at $15. The finger of suspicion pointed to his companion of the night, and after he reported the matter to the police, Anright remembered that Carkner had telephoned a friend on the Hotchkiss farm, outside the city yesterday.

Therefore Anright and Officer Smith engaged a taxi and headed for the farm. Sure enough, Carkner was there, and the watch, pen and what was left of the $6 were reposing in his pockets. At the police station he admitted taking the articles while Anright slumbered.

Anright told Judge Wilson that he did not wish to prosecute the man and would be content to drop the case if Carkner would pay back the money. Carkner was remanded and in the meantime he will try to repay the money.

THE QUIRK.

Today, still another of those splendid Mutual Masterpictures is offered as the feature attraction in four parts. This drama is from the pen of Cyrus Townsend Brady which insures its quality. "Lourdes," an educational and scenic subject, and "Once Every Ten Minutes," a one-reel comedy, are being shown to complete a six-reel program. Tomorrow No. 12 and the last of "Who Pays" series in three parts, "The Searchlight Gun," of Romance of Elaine and "Pathe Weekly are the attractions booked.

Of the New . . .

Sold on Our Origin

THIS IS THE RANGE FOR WHICH YOU HAVE BEEN WAITING

Read this letter from the manufacturers, the Sill Stove Works of Rochester, makers of the famous Sterling Stoves and Ranges:

GENTLEMEN:—

In re the "Scientific Sterling."

About twenty years ago we built the first gas attachment for coal ranges ever marketed. This was a device to be attached to the end of a coal range, having three top burners with oven and broiler underneath. Imitations of this device were numerous. Coal ranges marketed with gas attachments were called "combinations," and although they were all one-sided affairs, they seemed to supply a need.

Improvements on this "combination" idea finally resulted in our popular "Double Sterling," a compact range built in two sections of equal capacity, one for gas and one for coal. In the last three or four years this also has been widely imitated.

Judging from previous constructions it has always seemed to us nearly impossible to build a two-fuel range with a single oven in which baking could be done as well with either gas or coal as in a good coal range, or an exclusive gas range.

However, disregarding the failure of other manufacturers, for a long time we have been experimenting with a construction of this kind. A year ago the answer was in sight. The result of our work is the new "Scientific Sterling."

The "Scientific Sterling" is the first practical two-fuel range ever built with a single oven baking as well with gas as with coal. Heated with coal, the oven is as good as any oven we have ever built and with other Sterling coal ranges we have made thousands of public tests, baking a whole barrel of flour into loaves of bread with a single hod of coal. Heated with gas, the "Scientific Sterling" oven is no less efficient.

The "Scientific Sterling" is the most compact range ever built to burn both coal and gas. We believe that it will be welcomed in many households where a coal fire in the kitchen on cold, wet days is almost a necessity; where no furnace heat is provided for the kitchen; where it is economy to do some baking with coal; wherever some coal is used, but summer weather, or convenience of operation in winter, makes a gas range desirable.

To sum up—there is no better gas range made than the "Scientific Sterling"—there is no better coal range than the "Scientific Sterling"—and over any "combination" range on the market, the "Scientific Sterling" represents an advance of many years.

These are strong statements. We would make them stronger if we could do so. Because in the "Scientific Sterling" we have perfected a cooking apparatus that will back up the strongest statement we could make. Sincerely yours,

THE SILL STOVE WORKS.

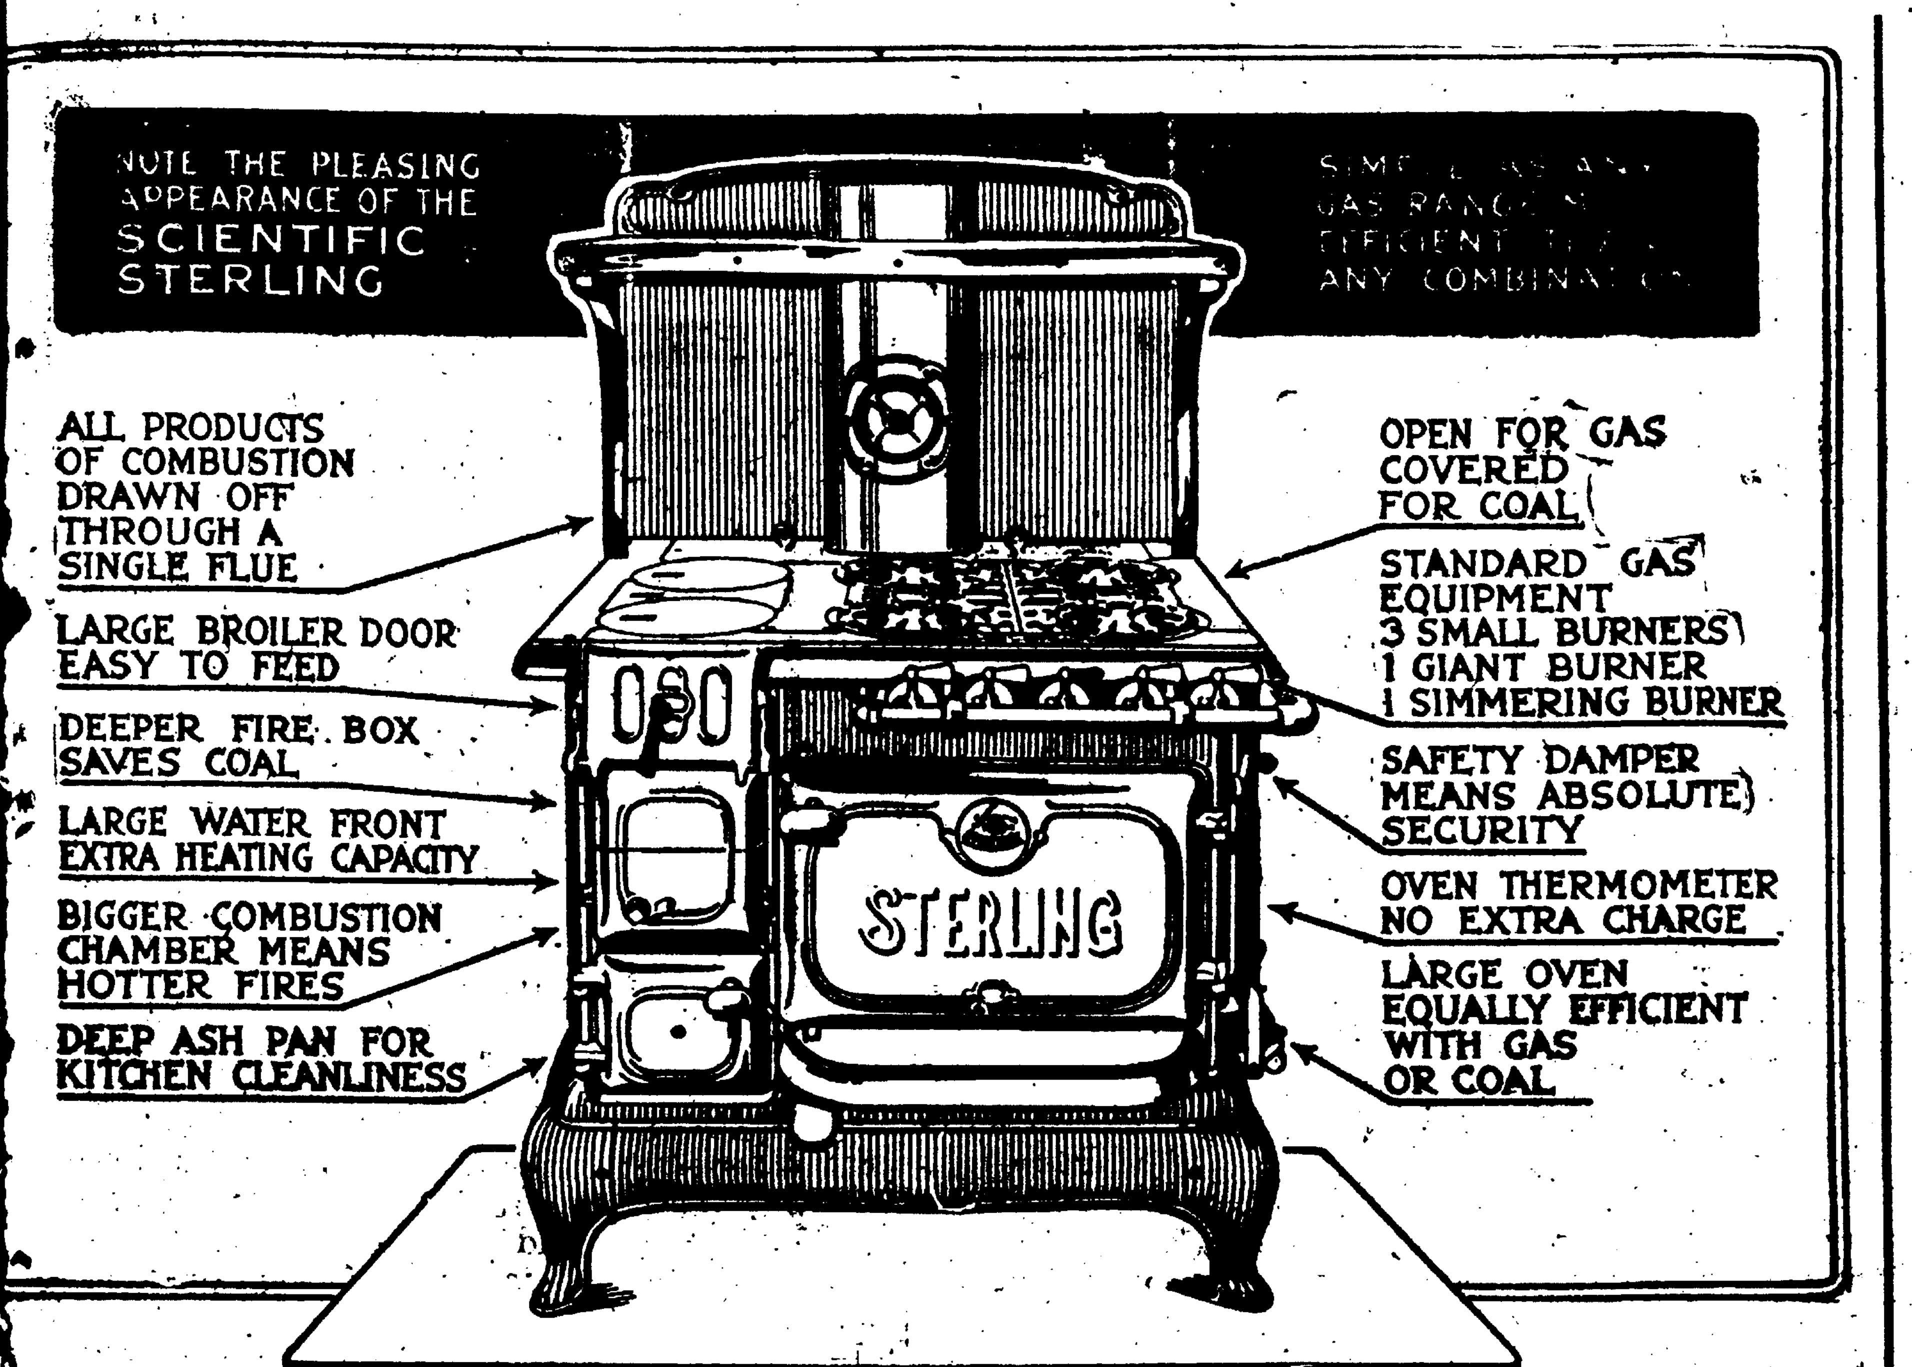
FIRST ANNOUNCEMENT
"SCIENTIFIC STERLING" The Gas Range That Burns Coal
CLUB PLAN at a Price to Please Everyone



ST SEE HOW EASY YOU CAN OBTAIN THIS WONDERFUL RANGE

For THREE Weeks only we are selling the "Scientific ...ling" on our original CLUB PLAN, offe ng advantages ... can obtain only during this club sale.

The price o' the "Scientific Sterling"—the Gas Range ...t burns coal—is $77. You will not be able to buy it for one ...nt less at any time; this is the cash price. But, for the next 21 DAYS during the life of thi Club only, we will grant to ...ry purchaser the following money-saving privileges—it will pay ...u to act immediately:

LONG TERM CREDITS: For the next 21 Days we will ...ow long term credits to every purchase of a "Scientific Sterl...g." A small first payment o $5.00 will install the "Scientific ...rl ng" in your home—pay $2.00 a week on the balance. Take ... weeks to pay—we extend your credit over eight months. You ...y only the regula retail price—no added interest or charges of ...y kind. Do not confuse this extension of credit with the usual ...stallment proposition. We simply allow you credit for eight ...nths at the same terms on which you could buy for cash.

FREE INSTALLATION: During the life of this club—...hree Weeks only—we deliver your "Scientific Sterling" free ... charge. We install it in your kitchen free of charge. That ...ans just what it says. Make your first payment of $5.00 only ...we will set up your "Scientific Sterling" making all connections ...ove the floor with gas and water piping, flue pipe and elbows. ...dinarily a plumber would charge at least $10 for this work. ...is amount you can save by purchasing your "Scientific Sterling" ...w.

THIRTY DAYS' FREE TRIAL: We put the "Scientific ...ling" in your home. There you try it out for 30 days. You ...rself must be assured that the "Scientific Sterling" is all we ...m for it before we consider the sale completed. If, at the end ...the 30 days' free trial, you are not entirely satisfied with your ...w range, we will take it out and hold you free from further ...igation.

FREE INSURANCE FEATURE Every Purchaser of the "Scientific Sterling" within the next 21 DAYS Automatically becomes a member of the Co-operative Club. Should any member die or become totally disabled before all payments are comp eted, all further payments will be cancelled, and a bill of sale for the ange issued to any designated member of the family. We do or you what no other store would do—you run no risk in buying the "Scientific Sterling" on our Club Plan.

PRACTICAL GUARANTEE: To every purchaser of a "Scientific Sterl ng" during this Club, we will give the strongest guarantee that we can write, signed by ourselves and the manufacturer. We give you our signed word that i there is any defect in material, workmanship, or installation—i the "Scientific Sterling" will not cook or bake with either coal or gas as well as any range you have ever used, you may return the range and you will not be held liable for further payments. Further, we guarantee the "Scientific Sterling" against any defect for a whole year, and during that time will furnish repairs free of charge. We could not make thi guarantee stronger if we tried.

INSPECTION SERVICE: Within ten days after the installation of your "Scientific Sterling" we inspect your range to see that it is working properly, and show you how to get the best results with the greatest economy of fuel. You will be at liberty to call for this inspection service at any time thereafter, and always without charge.

You have never been offered more liberal terms on any purchase you have ever made.

Think of it—term payments at a regular cash price; free installation; 30 days' free trial; free insurance feature; absolute guarantee, backed by dealer and manufacturer; free inspection and instruction service—made possible by purchasing now during the life of this Club.

Examine the "Scientific Sterling" today—learn all about its many labor-saving features—make your selection at our store.

INVESTIGATE THE MERITS OF THE "SCIENTIFIC STERLING" NOW

The "Scientific Sterling" is as far ahead of all other two-fuel ranges as electric light is superior to the kerosene lamp.

There was a time when the one-fuel range, either for coal or gas, would serve your needs, because it was the best you could buy.

Now that you can get the "Scientific Sterling," you need this range in your kitchen as much as you need electricity or gas-light in your home.

Think of the many advantages possessed by the "Scientific Sterling" that you can find in no other range—

Burns either gas or coal perfectly in one range—not two ranges joined together in a "combination."

Standard oven that works as perfectly with one fuel as the other. Bakes as well as any coal oven—better than most gas ovens. More economical with gas than many all-gas ovens, as the heavy walls hold and conserve the heat. Perfect circulation of heated air when using either fuel—that means perfect baking without burning.

All products of combustion drawn off through one flue—no back drafts possible.

Standard gas equipment; five burners on top of the range—large capacity when used as an all-gas range.

Top of the range used open for gas; closed as a regular, six-hole all-coal range. Two griddles directly over the fire; four indirect; boil over four holes as in any all-coal range. You could burn gas and coal at the same time if desired.

Absolutely safe. Patent safety damper on the oven makes it impossible to forget anything. You cannot light the oven burner without providing an exit for the products of combustion. The gas cannot be turned on without providing a safe exit into the flue and out of the house.

Absolute cleanliness; high grates, large close-fitting ash pan—no more spilled ashes. All gas parts easily accessible, and easily removed. The "Scientific Sterling" is easy to keep clean.

Extra large water front for coal economy, made possible by extra deep firebox and combustion chamber. You will burn less coal in the "Scientific Sterling" and get more heat from the coal you do burn.

The "Scientific Sterling" will take up no more room in your kitchen than the usual one-fuel gas or coal range.

Let us show you one of these new "Scientific Sterlings" today; examine it carefully—let us point out these features together with the others—then decide whether you can afford to be without this modern, two-fuel "Scientific Sterling" in your own kitchen.

CLOUDBURST AT ERIE; LIVES LOST

Main Business Section of Pennsylvania City Under Five Feet of Water; Heavy Property Losses.

Erie, Pa., Aug. 4.—Twenty lives were lost in a cloudburst in this last night. Millions of property was damaged. The flood inundated the greater portion of the city.

The city was plunged in darkness shortly after six o'clock and as with the bursting of dams south of the city water to the depth of five feet filled the main streets.

Among the first plants to go out of commission was the Erie County Electric Company, which supplied the city with light. Then the Erie Dispatch, a morning newspaper, whose building adjoins the electric light plant, was flooded and all idea of getting out a morning paper was abandoned until midnight, when the stag was removed to the plant of the Erie Times.

Meanwhile the first bulletin of the flood was sent to the outside world by The Associated Press operator, who waded in water up to his armpits to the Western Union Telegraph office, a distance of 5 blocks, and there sent out his story.

All telephone wires were put out of commission by the flooding of conduits and it was several hours before crippled telegraph communication could be partially restored.

Northwestern Pennsylvania suffered heavily by rain falls. Damage throughout Crawford was heavy.

BIG ILION STRIKE TAKES SERIOUS FORM

Ilion, August 4.—Striking employes 22,000 in number, of the Remington Arms company, have called on 600 day workers, who still remain in the shops as a result of the 25 per cent. raise in wages being refused them by Charles C. Tyler, general manager.

Employes remaining in the shops have informed the Strike Committee they will walk out if called. The ranks of the strikers now number 2,200, following the walk-out this morning of employes of six departments and the night workers, who struck last night in a bady.

Employes of the James Stewart Company, which is building three immense new buildings here for the manufacture of arms for the British government, as well as the Bridgeport, Conn., plant employes htreaten to strike in sympathy with the employes of the Remington Company.

More than 2,000 strikers this afternoon packed a local theater to hear the report of their committee on the conference with Manager Tyler. They enthusiastically voted to continue the strike until theri demands were granted.

Mr. Tyler denied he had promised all the employes ten hours' pay for eight hours' work under the new schedules which were to have gone into effect yesterday. The employes say he made no distinction between piece workers and day workers.

Black Baking Company time in Fulton is at all times. Your grocer sells the goods. adv

GRANBY PICNIC ASS'N PLAN MEET AUG. 11

William Pollard, president of the Granby Farmers' Picnic Association, announces the eighth annual picnic of the association will be held at High Banks on August 11. William Sylvester is the vice-president and Fred B. Payne the secretary.

Sports, music, and speeches by prominent persons will make up the program. It is unquestioned that the big dinner which Granby women are so capable in preparing will equal that of other years. A baby show will again this year be a feature. Two prizes will be given.

South Granby and Phoenix will play baseball. There will be sack, running, three-legged and other races for men and boys, with suitable prizes A tug of war between professional and business men and farmers from Onondaga county on one side and from Oswego county on the other will provide amusement. The rope pulling contest will be participated in by prominent men from both counties.

Use Hanford's Balsam for obstinate sores.

MINETTO BRIDGE CONTRACT TO BE AWARDED TODAY

The town boards of Oswego and Volney and a special committee of the Supervisors held a special meeting this afternoon in Oswego, to consider the bids on the Minetto bridge. The bids were submitted last Saturday. Superintendent of County Highways E. A. Howard and William Meuser of the Concrete-Steel Engineering company were present at the meeting. No details of the meeting were available at the hour of going to press.

For cuts apply Hanford's Balsam.

SEALER WOULD ABOLISH ALL DRY MEASURES

Syracuse.—The county sealer of weights and measures of Onondaga, county favors the abolition of dry measure and the sale of all produce by weight, including potatoes and other vegetables. He believes that there is less chance of false measure if the sale is made by weight.

EXPLOSION KILLS THREE

Philadelphia, August 4.—Two soldiers and a civilian lost their lives at the arsenal at Frank ford, this city, today, in an explosion of time fuses used on shrapnel shells. Another civilian was injured.

The men were unpacking fuses, that had been withdrawn from service and sent tothe arsenal to be broken up.

EVENING TIMES FEATURES

We will begin shortly the daily publication of

Easy and Practical Home Dressmaking Lessons

Prepared Especially for Readers of

The Evening Times

by

The Pictorial Review Company of New York City

And in addition, each issue will contain

Beautiful Half Tone Illustrations of the Latest Ideas in the Art of Correct Dressing for All Occasions

These two features are designed to please and benefit the women readers of this Newspaper and are EXCLUSIVE.

The advertising value of the features is that Fulton Merchants will benefit, as the Patterns are sold in the leading stores of the city.

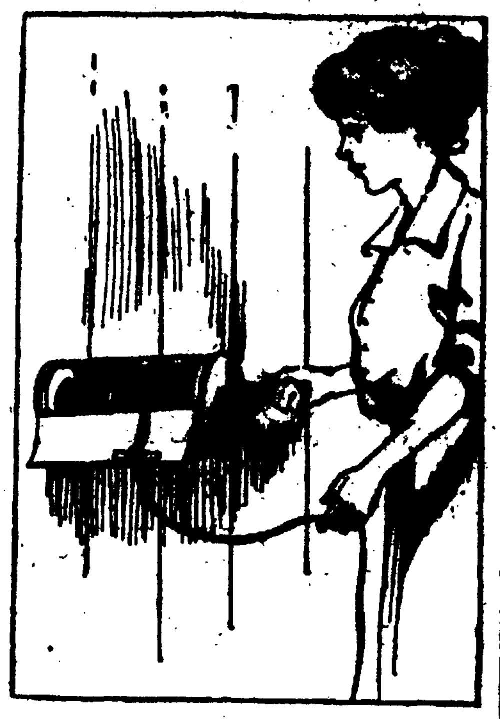
The Prosperity Dawning Upon Fulton is Reflected in the Amount of Increased Advertising Space Used by Merchants in

THE EVENING TIMES

The why and the wherefore of this lies in the recognition of a fact—that Success comes in "cans" and not in "can'ts," and our advertisers know that The Evening Times has in stock a big supply of "cans."

HINTS FOR THE BUSY HOUSEWIFE

Reel For Keeping Clothesline in Good Order.



The proper way to take care of a clothesline is to house it in such a way that it will be protected from the dust in the air and other causes which are likely to contaminate it. Thrown around in a loosely made hank formed over the hand and elbow, as it is most frequently done, the line becomes soiled and makes its mark on the clothes which are hung upon it to dry. By the new method the line is permanently secured to a spring reel, which is mounted on a cylindrical case, where it is protected from the weather. The usual size is supplied with 100 feet of rope, which may be drawn as desired and passed over the pulleys and hooks. It has also a crank and ratchet by which the rope may be tightened after being arranged for the clothes. The device is secured in place by a couple of hooks, and when it is desired for any purpose to remove it the apparatus may be taken down without the use of tools.

Cottage Pudding.

One-half cupful of sour milk, one level teaspoonful of soda, one cupful of sugar, one egg and flour to make a batter as stiff as ordinary cake batter. One-half cupful of sweet milk and one and one-half teaspoonfuls baking powder may be used instead of the sour milk. Flavor with any spice or vanilla. Bake in a wide, shallow pan and cut into two-inch squares. Have ready a sauce made with one pint of water, four tablespoonfuls of sugar and two level tablespoonfuls of flour rubbed into enough warm butter to make a cream. Have the water boiling, add the sugar and then the flour and butter, stirring rapidly. Flavor with lemon or vanilla. Put the cake squares into cereal dishes or saucers and pour the sauce plentifully around them.

Asparagus Salad.

Cook asparagus, taking large heads, until tender. Drain and chill; then cut in inch pieces. Make in the salad bowl a dressing in which the yolks of two hard boiled eggs are used with a teaspoonful of English mustard, salt, pepper and paprika to taste, a large spoonful of vinegar and three to four spoonfuls of olive oil, beating until thoroughly blended. Toss the asparagus in this and serve on lettuce leaves and on each plate put a little heap of minced hard boiled egg and some minced cucumber pickle.

Candied Cherries.

Make a light sirup, using half a pint of water to each pint of sugar, and let it come to a boil; cook for two minutes. Pour this over the fruit and let it all stand a day and a night. Drain, add to the sirup half the quantity of sugar used the day previous, and boil until it is dissolved. Pour this over the fruit and let it all stand for forty-eight hours. Repeat the process, letting the fruit stand in the sirup four different times. Then drain and pack in layers in boxes between waxed paper.—Country Gentleman.

Cafe Frappe.

Make one quart of very strong black coffee, strain and cool, and to this add a pint of cream stiffly whipped and sweetened. Turn into a freezer, pack in ice and salt and let it stand one and a half hours. Serve in tall glasses with a rosette of whipped cream on top, and with it serve madelines or lady fingers.

Cocoanut Pie.

Beat together thoroughly two eggs, three tablespoonfuls of sugar and a pinch of salt. Add two cupfuls of sweet milk, pour into a deep pie tin, well lined with good pastry. Sprinkle over the top two tablespoonfuls of grated cocoanut. Bake until the custard is firmly set and serve cold.

Mending Woolen Goods.

When mending wool goods, use threads pulled from the same goods, and darn closely on the wrong side, being careful to follow the weave of the material. When it is finished, press under a damp cloth on the right side. If carefully done the darn will be hard to detect.

Removing Grease Spots.

For removing grease spots on black woolen clothing the following is excellent: Make a solution of borax and warm water and wash the soiled article in it, then rinse in clear water and dry.

WAR HURTS TRADE IN FARM IMPLEMENTS

Unprecedented Activity Expected After Hostilities Close.

Washington.—Exports of American agricultural implements during the fiscal year 1915 totaled approximately $10,000,000 as against $40,000,000 in the high record year, 1913; $21,000,000 in 1908 and a yearly average of more than $29,000,000 for the last decade. This loss of trade fell most heavily upon sales to Europe, but there were also smaller though insignificant decreases in shipments to Argentina, Canada and various countries of Africa and other sections of the world.

Cuba and Siberia made gains. Australia barely held its own in the year's trade, but this is a good showing in view of the fact that her wheat crop dropped from more than 100,000,000 bushels in 1913 to 25,000,000 bushels last year.

The European war was doubtless the dominant factor in the great falling off in exports of agricultural implements, since the decrease in sales to Europe was disproportionate to that in sales to other sections. Thus exports of agricultural implements to European Russia, usually the greatest of foreign markets for this class of American manufactures, practically ceased, as did also those to Germany, while huge losses likewise occurred in sales to France and other European countries. Another contributory factor was the recent establishment of great plants in Russia and France.

Information reaching the department of commerce, however, indicates a growing use of machinery on farms both in Europe and elsewhere, a tendency which will doubtless be even more pronounced upon the resumption of peace, since the devastation of war is causing a marked shortage in human and animal labor, necessitating proportionately more machinery for the successful conduct of farming. Russia, for example, possesses one-seventh of the entire area of the world and an even larger proportion of the land devoted to cereal crops, which require for their cultivation more machinery than most other classes of farm products. General depression in Canada, Argentina and elsewhere so reduced buying power in 1914-15 that new agricultural machinery has not been purchased in the usual quantities, but with a restoration of normal conditions American manufacturers will doubtless find larger markets than ever before.

COLLEGE MAN A STONECUTTER

McLaren Has Two Degrees and Speaks Seven Languages.

Cambridge, Mass.—With two college degrees and an acquaintanceship with men of letters abroad, John McLaren, A. B., A. M., is working as a stone cutter here for $2.50 a day. Both his degrees are from the University of Glasgow and he speaks seven languages.

He was a prominent labor organizer in England. He is a friend of George Bernard Shaw and adviser of Kier-Hardie, the labor leader and member of parliament.

His present employment is due to his philosophy of life. He is known as No. 287.

FUN RAYS

By Ray I. Hoppman

WHEN—

(Apologies to Riley.)

WHEN the chilly blasts are blowing and the wintertime draws near and the price of washing woollens is exorbitantly dear; when the playful icy breezes play the tattoo on your spine and your optics are as moisty as a watermelon rind; then you vainly hunt for money at the bottom of your sock—when the frost is on the pumpkin and your overcoat's in hock. How you long for singing robins and the rosy month of June as you wonder how the summertime has passed away so soon; how you wish that frosty winter would forever stay away—why the climate can't be even all the year through as in May; then you shiver like a victim at the old beheading block—when the frost is on the pumpkin and your overcoat's in hock. Oh! you groan in desperation as you wander all about—as you try your best to figure how to get the blamed thing out; when you haven't got a jitney and you suffer with the chills and the sum you owe the uncle is four green hued dollar bills; that pawn ticket is as useless as the creamy suds on bock—when you haven't got a kopek and your overcoat's in hock. How you dread the coming winter with its whirling flakes of snow. And you'd almost like to warm up in the place where bad folks go; when the days are cold and dreary and the nights are dark and bleak and the air is getting colder ev'ry blessed day and week; oh! you'd like to seek the pawnshop and tear madly at the lock—when the frost is on the pumpkin and your overcoat's in hock.

SIRES AND SONS.

Mayor William H. Thompson of Chicago is a total abstainer.

W. H. Winans fills four public offices in Cleveland. He is twenty-six.

C. C. Herron of Philadelphia has completed twenty-five years in rescue mission work.

W. M. Smith has spent thirty-five years as a typesetter for the St. Louis Post-Dispatch.

The Hon. Austen Chamberlain, the new British secretary for India, is no tyro in public business and is regarded as a fine administrator. In 1902 he was postmaster general and afterward became chancellor of the exchequer.

Colonel Rogers Birnie, who recently retired as senior colonel of the ordnance department of the army, having reached the age limit, is one of the foremost ordnance experts in this country. He is a native of Maryland and entered the army in 1872.

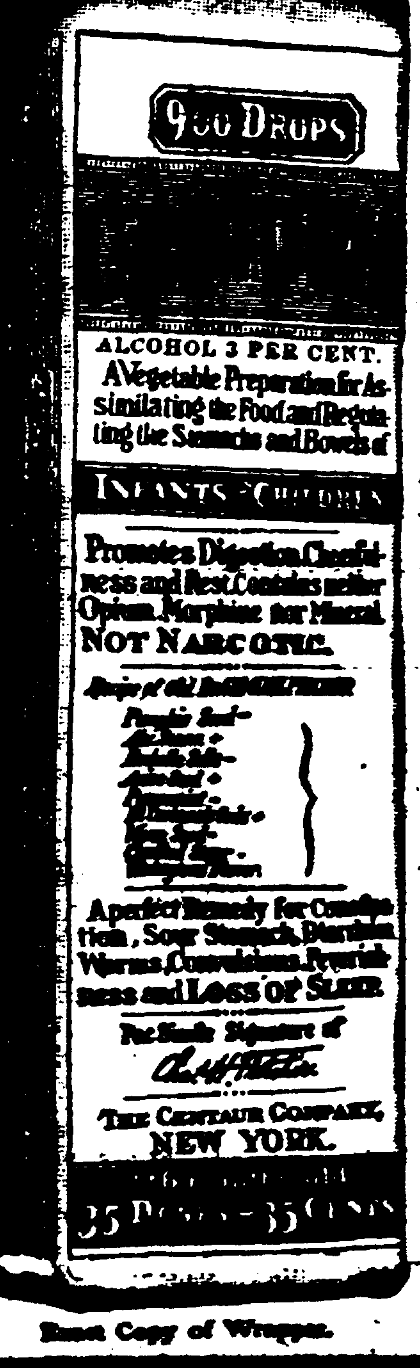
General Carlo Caneva, commander in chief of the Italian forces in the field, is a man tried in battle in the war with Turkey. His is the highest rank in the Italian army. He is seventy years of age and was on the retired list until the war threat loomed on the horizon.

Psychological Moment.

"Now, this hat really ought to suit her exactly."

"All right; I'll show it to her first."

"Bah! That's no way to sell a hat to a woman. Show it to her about fourteenth."—Louisville Courier-Journal.



Exact Copy of Wrapper.

CASTORIA

For Infants and Children.

Mothers Know That Genuine Castoria Always Bears the Signature of Chas. H. Fletcher

In Use For Over Thirty Years

CASTORIA

TODAY'S FASHION NOTE

Coats are among the first styles of Autumn and this handsome model for ladies and misses is carried out in rich black silk velvet. A plaited skirt is worn with it. Pictorial Review Coat No. 6375. Sizes, 32 to 46 in. bust and 16 to 20 years. Price, 15c. Skirt No. 5933. Sizes, 22 to 34 in. waist. Price, 15c.

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.

The KITCHEN CUPBOARD

MEATLESS DISHES.

DINNER MENU.
Tomato and Onion Pie.
Buttered Beets. Green Peas.
Lettuce Hearts. Red Dressing.
Raised Biscuits.
Huckleberry Pie. Cream Cheese.
Iced Tea.

Tomato and Onion Pie.

PARBOIL some onions, slice them and fry in butter until colored. Dip some tomatoes into boiling water, skin and slice. Lay alternate layers of tomato and onion in a pie dish, sprinkling each layer with breadcrumbs, small pieces of butter, salt and pepper. Cover with mashed potato. Score with a fork and brown in the oven.

Tomato Rice.

Wash two ounces of rice thoroughly and cook it in half a pint of milk until quite soft and flavor with salt and pepper. Take one pound of stewed and sieved tomato and beat together. Stir in one ounce of butter and cook until quite moist, but not wet. Serve very hot and, if liked, strew grated cheese over.

Tomato Rice and Eggs.

Serve the tomato rice in a fireproof dish with poached eggs on the top.

Stuffed Tomatoes.

Prepare the tomato rice as before. Take the necessary number of large dry tomatoes, dip into boiling water, skin, cut the tops off and remove some of the pulp (the tops and pulp can be used for the puree). Fill the tomato cases with rice. Scatter with fine browned crumbs, seasoned with celery salt and cayenne. Put a little piece of butter on each and bake on a greased tin in a moderate oven for about twenty minutes. Serve hot.

Vegetable Curry (Hot or Iced).

Weigh five ounces of margarine. Chop very fine four medium sized onions. Melt the margarine and cook the onions in it until they are a deep gold brown, a process which takes time. Meanwhile put on a saucer in the oven a tablespoonful of curry powder and leave it for ten minutes and then mix it smooth with a little milk or cream. Add to the onion mixture and cook gently for two hours at least, stirring now and then.

Cut into neat squares one small vegetable marrow, a small peeled cucumber, one raw apple, two tomatoes (peeled) and some French beans with the strings removed, all of which have been previously cooked. Place in the curry mixture and cook gently for thirty minutes. Serve very hot with well boiled rice or ice it.

Almost any leftover vegetables may be used in the curry, such as peas, cauliflower, broad beans, etc.

Anna Thompson.

HANNIBAL NEWS

Mr. Mark Minar was a welcome guest of friends in town the last of the week.

* * *

Mr. and Mrs. R. F. Brower, who have just returned from a four days' auto trip through St. Lawrence county, spent a part of last week at C. B. Brower's.

* * *

Mr. and Mrs. James Rose of Weedsport, were guests of Mr. and Mrs. Roy Welling last week.

* * *

Mr. and Mrs. J. R. Chamberlain left town Friday for Quonochontang, R. I., where they will spend the next two weeks at the seashore in company with their daughter, Mrs. Edward Parsons, and family. Wilfred Adaing will take Mr. Chamberlain's place in the feed mill.

* * *

Frank Engle and Thomas Thomson will close their blacksmith shops on Thursday afternoons during the months of August and September.

* * *

Cox & Rice have taken the wagon scales from the roadside on Church street and are installing a new set between the garage and the office building, which is a great improvement.

* * *

Mr. Lockwood, a piano tuner, from Syracuse, has tuned a number of pianos in town and at Hannibal Centre.

* * *

Mr. William Mosier died at his home near Hannibal Centre, Friday, July 30, aged 72 years. Mr. Mosier was born near Lysander and when a young man engaged in the boot and shoemaking business. Later he purchased a farm near Hannibal Centre and made a specialty of tobacco raising, at which he was very successful, and later was an expert tobacco buyer. He was a charter member of the grange and its first secretary, and the members attended the service in a body and took charge of the last ceremonies at the grave. Services were held at the M. E. church Monday afternoon, August 2, Rev. F. W. Dunning officiating. Interment at Hannibal Centre. He leaves a wife who has cared for him with unselfish devotion during his long illness.

* * *

Nicholas B. Brower, founder of the Hannibal News and its editor for many years, died at the home of his daughter, Mrs. B. N. Hinman, of Pulaski, Friday, July 30, at the advanced age of 92 years. Mr. Brower had been for many years a resident of this place, and of more than usual vigor and activity for a man of that age. Surviving are two children, C. B. Brower, of Hannibal, and Mrs. B. N. Hinman of Pulaski. Interment at Hannibal.

* * *

Harrison Springer and Miss Aletha Patchen were married at the home of the bride's parents, Mr. and Mrs. John Patchen, Friday evening, July 30. Rev. B. A. Matzen officiating. Only the immediate relatives and Mr. and Mrs. William Byrne and daughter, Ethel, were present. Mr. Springer is a Rochester man, but for the last three years has been engaged in mining in Gowganda, Canada, where they will make their home for the present. Miss Patchen has been a successful teacher near New York for the past three years, and has many friends who wish her happiness.

* * *

Rev. F. W. Dunning will enjoy a three weeks' vacation in camp at Fair Haven.

* * *

Mrs. Will Wilson will entertain the Social Ten Friday afternoon.

* * *

Mrs. Fred Lockwood and daughter, Marjorie, spent last week with friends at Walcott.

* * *

Rev. William I. Stearns, cartoonist, will give an attractive and interesting entertainment at the Presbyterian church on Friday evening, August 6. Admission free. A collection will be taken. Everybody come.

* * *

The Lecturer's hour of Golden Sheaf Grange will be in charge of the gentleman officers and executive committee. Everyboy come and see—what?

Children Cry FOR FLETCHER'S CASTORIA

Thirty-Six for 25 Cents

Easy and pleasant to take. Effective and positive in results. Cheap and economical to use. Get a bottle today, take a dose tonight—your Constipation will be relieved in the morning. 36 for 25c, at all Druggists.

Gown of Copper Color Silk With Old Metal Belt

Designed by Joseph, New York.

THIS gown of copper color silk is edged at the bottom with a narrow accordion plaited ruffle of the same material. Both the skirt and waist of this gown fall in loose plaits, and the waist is worn with a sand color chiffon blouse. The frock is given a soldierly effect by having rows of metal buttons on the shoulders which give the appearance of epaulets. An old metal belt with a large center ornament is worn with this stunning copper color gown.

ANNA MAY.

SOUTH GRANBY.

Miss Mary Moore, the evangelist, who held revival meetings at Little Utica last winter, has come to Granby and will hold meetings in the school house this week and next. We hope there will be a good attendance. The trustee, Fred Paine, has put in four new side lamps in the school house which were much needed.

* * *

Mr. and Mrs. Frank Darling and children and his sister and her husband, Mr. and Mrs. Clarence Bridenbecker, and children from Utica were guests at Ralph Brown's Friday.

* * *

Mrs. H. Austin spent the past week with Mr. and Mrs. Roy Austin.

* * *

The Social Ten from the Cody district, entertained at Mrrs. Elmer Cook's Friday, and they employed their time sewing carpet rags for Mrs. Cook. There were about 22 ladies present and almost as many young folks and a jolly time was enjoyed.

* * *

Mr. Lacy, who has been with his son, Charles Lacy, all summer with a broken hip, was taken to his daughter's near Syracuse Sunday.

* * *

Miss Mary Stege and her brother, Harlon, were home over Sunday.

* * *

The Bethlehem class and the Baraca class of Little Utica, held their picnic at High Banks Thursday of last week.

* * *

Miss Ethel Whitcomb, who has been to North Woods visiting her cousin, Gladys, for some time, returned home Saturday.

* * *

Mrs. Minnie Paine had the misfortune to sprain her ankle and has suffered very much from it.

* * *

Mr. and Mrs. Pingree and children arrived home Sunday night. They came from Schenectady Sunday, and had quite a trip in the two weeks they were gone. They visited Mr. Pingree's brother in Boston and his parents in Maine, besides visiting her sisters in Roxbury, and had a very nice time. Mrs. Pingree's parents did not come back with them.

* * *

Miss Forence Whipple arrived at her home from two weeks' visit in Albany visiting friends.

* * *

Mrs. Ethel Hunter visited her parents Saturday and Sunday.

* * *

Miss Myrtis Cook is spending the week in Marcellus.

* * *

The Cook picnic will be held at Charley Cook's August 14, a week from next Saturday.

* * *

Mr. Dewey and his wife, who had the show in the school house to advertise medicine, went from here to Hinmansville school house and from there to Bowen's Corners.

* * *

Mr. Elmer Fisher, wife and sister, Miss Flora Fisher, motored to Baldwinsville Monday and called on his brother, Fred.

BUNDYS CROSSING.

Mr. and Mrs. Edward Echard and Bertha and Catharine Echard were in Syracuse on Monday and Friday.

* * *

Howard Simons and Fred Stevens and Miss Stevens called at C. J. Echard's on Tuesday.

* * *

Mrs. Ervin Dumont and daughter, Mrs. Byrron Wells, and daughter, Miss Goldia Graham, and Mrs. Lewis Burcha all were in Fulton Thursday.

* * *

Martin Mainy of Oswego spent Sunday with D. E. Wells.

* * *

Mr. and Mrs. Benjamin Congdon were in Fulton on Saturday.

* * *

Mr. and Mrs. Frank Decker of Volney Center, and Miss Hattie Decker of Fulton, brought their invalid mother, Mrs. Cynthia Decker, here last week to see her old home, and her sister, Mrs. Eunice Adams.

* * *

Mr. and Mrs. Norman Adams of Syracuse brought their infant son here for burial on Wednesday.

* * *

Mrs. Muriel Congdon was around gathering up the school books on Thursday.

* * *

Many from here attended the hop grocers' picnic at Sylvan Beach on Saturday.

* * *

Mrs. Hattie Frost and children called on Mrs. C. J. Echard on Thursday.

* * *

Mrs. Howard Simons of the Kingdom called at Conrad Echard's on Sunday.

* * *

Little Harrison and Gladys Spaulding spent Sunday with their cousin, Iva Dodge.

* * *

Misses Thelma and Clara Congdon are spending their vacation at the Kingdom with their aunt, Mrs. Benjamin McCann.

* * *

Miss Goldia Graham spent a few days the past week with friends here.

* * *

Mr. and Mrs. Ula Adams, Mr. and Mrs. Edward Echard, Miss Elizabeth and Bertha Echard and Howard Simons went to Sylvan Beach on Saturday by auto.

* * *

The back door of Hattie Decker's house was broken open a few nights ago and a quantity of her linen stolen. The thief has not been located.

* * *

Mrs. Fred Loughrey and son of Oswego Center spent Wednesday with her mother, Mrs. Alice Adams.

* * *

The farmers in this vicinity have their haying about completed and are harvesting their oats.

* * *

Friday was said to be the hottest day this season. The thermometer registered 110 in the shade.

* * *

Mr. and Mrs. Arthuh Stevens of Minetto and Mr. and Mrs. James Stevens called on their paretns, Mr. and Mrs. Ranson Dormont, on Sunday.

* * *

Crops are lookinfi fine here, excpet corn, which needs rain.

* * *

Rosslyn Cox Tells Evening Times Cities Favor Home Rule

Middletown's Mayor Makes Public the Results of His Tour of Municipalities, Including Fulton---Explains Home Rule.

President Rosslyn M. Cox of the New York State Conference of Mayors has sent to The Evening Times a copy of a letter which he has made public and which he yesterday sent to Hon. Elihu Root, presiding officer of the Constitutional Convention.

The letter summarizes the Municipal Home Rule sentiment throughout the State as President Cox and Secretary Capes found it during their tour of all the cities, including Fulton.

The letter in part follows:

"We found the citizens generally familiar with the Home Rule proposal as drafted by the Moyors' Conference Committee and introduced by the Hon. John Lord O'Brian; also with the proposals of the Cities Committee, as reported in the press in the last three weeks.

* * *

"We found a universal demand by the people in the cities that there be submitted to the people this fall an adequate Home Rule amendment similar to that proposed by the Mayors' Conference.

* * *

"All the cities of the state, with three exceptions, either will or have through their legislative bodies, represntative conferences or civic organizations, and some by all of these bodies, indorsed the Mayors' Conference Home Rule proposal; and by resolution filed with you and Chairman Low urged the approval of it by the convention.

* * *

"There was universal and emphatic disapproval of the proposition reported as now being considered by the Cities Committee that new charters or amendments to existing charters, after approval by the people, be submitted to the Legislature for its approval. The general opinion is that under such a proposition the cities of the state would be in worse position than they are at present.

* * *

"In every city we visited, with one exception (the sentiment in this we did not have an opportunity to judge) we found a determination among the leading citizens to register at the proper time their disapproval of any rejection by the Constitutional Convention of the state-wide demand for adequate Home Rule.

* * *

"The people generallly understand adequate Home Rule to include a broad grant of power to the cities subject to the Constitution and general laws which are state-wide in their application; the right for cities to draft, adopt and amend their charters without legislative interference and without legislative approval; and a prohibition which will prevent the State Legislature in the future from enacting laws which are not state-wide in their application.

* * *

"In view of the intelligent understanding of the subject, the state-wide demand for a proper amendment, as outlined above, and the favorable publicity and editorial comment throughout the state, we express the hope that the convention will give the people of the state this fall an opportunity to express their opinion on the amendment as drafted by the Mayors' Conference or on some similar amendment. If this is done, we are confident that the people of the state will approve the wisdom of the convention.

"Making Good in Business," An Address by Raymond, to be Made Tuesday Night

Several of the retail trade merchants pointed out to the committee in charge of the public meeting originally scheduled for next Wednesday, August 11, that many of the clerks and many of the Retail Merchants would be away from the city on account of the half holiday. Accordingly the Chamber of Commerce telegraphed Frank Jewell Raymond, the speaker, and secured him for Tuesday night instead of Wednesday night. Mr. Raymond's topic as previously announced will be—"Making Good in Business" and "Business Mastery."

The meeting will be held in the City Hall at 8 p. m.

STATE HAS ITS FIRST MUSICAL BARBER SHOP; IT'S LOCATED IN FULTON

Fulton claims the honor of the first musical barber shop in Northern New York, in fact, is willing to go so far as to claim the honor for the state. George Walker, thep rogressive Clark House barber, installed an electric piano yesterday in his model shop and patrons who are inclined to be irritable when the razor edge reminds one too forcibly of a hoe will be calmed with sweet music. For instance, if you have been shaved and attempt to rise, before the barber asks in a matter of fact tone, "Tonic? Shampoo? Massage?" an electric arrangement will start the selection, "Stay Down Where You Belong!" by Irving Berkin (copies at any music store) and at the first thrilling note you will sink back with a sigh of resignation, prepared to let the barber do his worst. If one of the tonsorial artists shows an inclination to let his thoughts wander as he passes the razor reflectively to and fro in the latitude of your jugular vein and you feel death approaching, soft, soothing strains are on tap and you can pass quietly.

Monsieur Mikaelo Cuba, the genial little shaver, who presides at chair No. 3, is musically inclined, and while he pays us nothing for this, we recommend that you give his voice a trial. If you believe in the axiom "Safety First," however, take a hot towel while he sings.

All in all, Proprietor Walker is inclined to believe that the innovation will meet with the approval of the large majority of his many patrons and wishes it understood that a "Musical Shave, Haircut or Massage" costs no more than the common or garden variety.

RAY DEWEY THROWN FROM WAGON; ANKLE SEVERELY INJURED

A horse owned by the Gas company ran away at 11 o'clock this morning, collided with a telegraph pole on the upper bridge and was not stopped until it had run a considerable distance in East First st. The driver of the rig, Ray Dewey, was thrown to the bridge pavement at the time of the collision with the telegraph pole and suffered a severe fracture of the ankle. The injured man was taken to the Lee hospital and the fracture reduced. An examination was made this afternoon to ascertain if there are other injuries, it being feared that an arm is possibly broken.

A broken bit caused the runaway. The horse was being driven in West First street and before the driver could jump from the rig the horse had bolted and, tearing across the bridge, narrowly escaped colliding with other vehicles. It was in the middle of the bridge that the horse disengaged himself from the wagon and ran free the rest of the way. A number of men made an ineffectual attempt to stop the horse. The wagon was damaged considerably.

* * *

Driver Wallace Escaped Injury

Becoming frightened by a dog, a horse attached to a rig belonging to Leon Read, a grocer of the West Side, started from in front of A. Alderman's grocery on West First st. this morning and dashed through First st. to Phillips. A child seated with the driver was thrown back into the wagon when the horse started abrutly and the driver was knocked against the dashboard. He was powerless to stop the horse, however, and at the corner of Second and Phillip sts. the animal was stopped by a man living in the neighborhood running out and grapsing the bridle. Neither the driver of the wagon, a young man named Wallace, nor the child were injured.

LAUNDRY SMOKESTACK ARRIVED HERE LAST NIGHT

Quick time was made by John McIntyre, whose faundry smokestack blew down during Tuesday's gale. He at once made an attack on the Ames Iron works at Oswego, selected a new stack, which arrived here last evening, and is now in place. The laundry will begin operation in full tomorrow morning. The new stack stands 50 feet in the air and is about 12 inches in diameter.

TONS OF MUNIITIONS LEAVE NEW YORK

New York, Aug. 5.—A year ago yesterday the Adriatic of the White Star line, left New York with 450 first cabin passengers, most of them Englishmen returning to answer the call to the colors, and no cargo. Yesterday she took only thirteen cabin passengers, but she was loaded to the water line with 18,000 tons of munitions of war.

WARSAW HAS FALLEN, BERLIN INFORMS WORLD

General Battle of Immense Proportions That Was Expected to Decide Fate of the Capital Won by the Teutonic Hosts.

Berlin, via London—Noon: Warsaw has fallen and the German armies under Mackensen and von Hindenburg have entered the great Russian city, is the official announcement received this afternoon.

* * *

London, Aug. 5.—After nearly ten days of unusual quiet on the front immediately west of Warsaw the Germans yesterday began a general assault on the forts protecting the city. Bavarian troops passed Blonie and stormed the outlying works.

At the same time Berlin and Vienna announced that the portion of the Ivangorod fortress lying west of the Vistula River, had been occupied by Teutonic troops. The Ivongorod fortress ring consists of nine separate forts laced together by a system of redoubts and improvised earth works.

Field Marshall von Hindenburg has increased his pressure on the Narew by attacks on the fortresses at Lonza and Ostrolenka. Apparently the Russians have taken cover behind the advanced defenses of Lomza, while the Germans have crossed the river at Ostrolenka.

General von Buelow, in his immense encircling movement in the Baltic provinces which he hopes will put him astride the Vilna-Petrograd railway and behind the northern end of the line on which the Russians expect to reorganize, has reached Kupischke, fifty miles west of Dvinsk.

Italians Make Gains In Carso and Cadore Valley

Rome, August 5.—The Italian offensive on the Carso plateau is continuing. Notable progress has been made in the center, while the right wing is advancing speedily in the zone of Monte Sei Busi, where heavy and obstinate fighting is taking place. The Austrians' activity is limited to counter attacks at Monte Sei Busi, which are easily repulsed by the Italians.

Meanwhile Italian artillery is demolishing the barrier of forts in the Cadore Valley, silencing the Austrian guns near Malborghetto.

Austrian attemps to drive the Italians from Monte Sei Busi are explained by the fact that the Italian advance in this direction threatens to cut off their communications and hence the eventual retreat of the garrison of Goriza, since an enveloping movement is apt to follow any moment.

Besides easily repulsing counter attacks, the Italions are enabled to send troops against the attacking forces. The Austrian counter attacks are worse than useless, since the Italian positions at Monte Sei Busi are practically impregnable.

The Italians are advancing against Rovertto. The forts surrounding the town have been shelled by Italian seige guns.

Expert Says Controversy With Britain is One for Arbitration

London, August 5.—All the questions in controversy between the United States and Great Britain are justiciable and can well be left to the diplomatic officers, the courts, and to arbitral tribunals. They involve only money damages which can well be measured by the judgment of the final court.

There is no substantial controversy between the British and the United States Government as to the principles of international law, but the differences arise as to the application of recognized principles to the particular circumstances surrounding the trade of neutrals.

The United States recognizes the right of Great Britain to es-

Opinions

Adirondack Squatters.

There are not a few squatters in the Adirondacks, a fact that is bothering the Constitutional Convention. It has been suggested that the squatters shall be licensed to remain, or shall be ejected. Some of the squatters have merely built shacks on state land where they can go to spend a week or two in the summer; others have pretentious camps, and some have a permanent home. Some are poor and others are rich.

It would seem rather hard for those to be ejected whose camps are not in the way of the general public. On the other hand, it would hardly be fair not to treat all alike. Moreover, if men in the past have been allowed to appropriate lands not belonging to them, why let them have what men now cannot possess?

It is a perplexing question. But one thing is certain. No arrangement should be made by which the state would lose full control of the property and have the right to eject, or do what it desired with the property.—Utica Observer.

Where Progress Resides.

Colonel Roosevelt's announcement that he intends to remain a Progressive was to be expected. As the head and front of that party—indeed, its cause for existence—he could not well desert it while any other members, even a few, remained. But there is in evidence in that announcement a great change in the attitude of the chief Progressive toward others and other parties from the days when the Bull Moose were presented as the fount of all righteousness and the source of the nation's salvation.

There is a broad spirit of tolerance toward those who have re-entered the Republican party, and a tacit acknowledgement that it may be possible for them to work for progressive ideas and modern methods of government. In other times not so very long ago they would have been backsliders, not to call them traitors, as some of the more hot-headed local Progressives have done.

All this is a notable advance, which will be valuable to the extent to which the spirit of it is continued. Neither the Bull Moose nor the Republican party has a monopoly of virtue or of that general state of mind which demanding improvement and modernity in social and political conditions and governmental agencies is termed progressive for lack of some more specific name.

In this state particularly it is essentially a question of individual judgment whether more can be accomplished for the practical furtherance of these ideas by affiliation with the Republican or the Progressive party. The Tribune believes, as thousands of thousands of good Progressives have showed they do, that opportunity is greater in the old party, or, at worst, in fusion of the old and new on given issues and candidates. The important thing is that the demand of the young men of the country for improvement, for progress politically, shall be expressed, not the manner of the expression, and this Col. Roosevelt, a practical man, apparently recognizes clearly. The organization, the ageny of expression, may safely be left to American common sense and genius for accomplishment.—N. Y. Tribune.

Evacuation of Warsaw.

In the great European war, cities count for little, and conquered provinces for hardly more, unless their occupation hastens the collapse. If in withdrawing from Warsaw, therefore, the Russians save their army the sacrifice of territory will be well repaid. The great German drive was planned to effect not merely the taking of the Polish capital, but the destruction of the Russian army by one smashing blow. All the battles won so far by the Kaiser's generals on the eastern front have proved to be local victories The task they had set themselves this time was to paralyze Russia and make an end of its power of resistance. But a foe that fights and retreats to fight again, with characteristic Russian persistence, is neither exhausted nor beaten.

While Germany may fall short of achieving its primary purpose in the Vistula campaign, politically the capture of Warsaw will be immensely to its advantage at home and abroad. On the German people the effect must be to strengthen their confidence in the invincibility of the Teutonic allies and to stimulate them to even greater efforts to win victory. In the Balkan countries, which have been debating to which side self-interest bade them incline, in the light of passing events there should be greater reluctance to favor the allies. With its expulsion from Galicia and retreat from the Vistula, the influence of Russia must be on the decline.

That the French and British armies should have remained inactive during the Russian crisis is incomprehensible says the New York World. For months they have virtually left Germany free to concentarte its energies, with Austria's help, against the Czar's forces, and except for desultory fighting hace lain in the trenches awaiting the indefinite date when they are to take the offensive. If the Germans now intrench along the Vistula line and are intent to hold Russit at bay on its own soil, the French and British may soon haver eason to regret the opportunities neglected while Russia engaged the greater part of Germany's military strength.—Utica Dispatch.

THINKING FOR OURSELVES

The East Auburn sage once said in his own original way, "Only about one man out of fifty ever thinks. The rest merely memorize and think they think. Average people follow the mob." This is what most of ous always knew, yet "never thought of it."

The average person in Fulton today, we might find after an investigation which would shock us, just thinks he thinks. Many persons can give an opinion as to why a thing is right or wrong, yet the opinion, like as not, is some one else's recently voiced, and which appealed. Had the question been studied it is probable an entirely different opinion would have been formed. The human mind is lazy.

Fulton has live vital questions to be solved. Don't let us take any one's word a thing is true however honest and sincere the person may be, who voices the sentiment. Let us dig instead for the facts for ourselves. No exercise is more satisfactory than that of developing of our think-tanks. Again, to simply dig, to find it's only too true, that some one has gone wrong, then to set and bemoan the fact, doesn't get us anywhere. And in the words of the writer whose expression appears at the beginning of this article, the following is explicit:

"The folks who sit on hotel verandas and discuss their aches, ills and operations are listening to an organ recital. Cut it out, I prithee, even if you have to take ether."

To sit moaning over our civic ills inactive, except for the use of our ears, is to continue inactive. Let us "cut it out." Let us use our mental equipment, the development of which we may find reflected in the fatness of our public pocket book.

Toy houses, buildings made of a child's wooden blocks, paper towers, are constructed in a short time, but they topple over with the least jar. A business success, to stand, requires steadiness of purpose, energy, enthusiasm, and a long time to build. If you are making money rapidly, it stands to reason that you are in a position to lose money rapidly.

Speculating into success, jumping into prosperity, is one way, but a mighty poor one. Do not get envious of the man who is making money fast. Continue to go right along, and make it slow but sure. Patience, perseverance—permanent prosperity.—Silent Partner.

COMING BACK

Once there was a boy whose mother had reared him tenderly and in the way he should go. Then one fine day he decided that mother was all wrong and that his ideas were all right. Just to spite her he said he would run away. This did not worry the mother very much. She knew he could not go far. She was alarmed, though, when about 3 o'clock one afternoon she called out the back door, "Willie! Willie!" and Willie did not come. Willie was back by the pasture gate. He had resolved to go it alone and intended to make his mother very, very sorry. And he did. She was very sad for a few minutes. Then she slipped down the long lane and saw Willie standing close to the gate with his little head pillowed on one soft hand. She hid near a corner of the barn and watched Willie.

Meanwhile Willie had but one thought. "How can I go back and still make it hard for mother? She can't be boss. I'm going to be." And as he philosophized in his juvenile way, mother was quite calm. She knew he would come back.

If you substitute Progressive for Willie and Republican for mother you will nearly parallel a certain political situation today. Down in Jersey the Bull Mooses have decided to go it alone a while longer. In Erie county the leader has come back. And so it goes. They want to come back all over the land. But it is hard for them to acknowledge that mother is right and take the subordinate place in the Republican household which is their due.—Batavia News.

ALBANY GOSSIP DAY BY DAY

Chronicle of Events and a Forecast of What is Doing in Officialdom—Special Correspondence.

By Frederic T. Cardoze.

Albany, Aug. 5.—If you should happen to ask the question while attending a sessison of the Constitutional Convention, "where does the Honorable William Berri sit?" a dozen in the Convention Hall would reply with avidity, "Down near the desk of the presiding officer. He is that distinguished gentleman in the back silk coat." Looking in that direction you would see a dignified, kindly appearing delegate with a small, imperial keen, observing eyes and courtly bearing.

Aside from the fact that he is a delegate-at-large, is the owner of a large Brooklyn newspaper, is widely known for his phianthropic acts, is identified with the Sunday school children of his city, is the chairman of the committee on printing of the Constitutional Convention, is immensely popular, is able and modest, it may be said that he is acknowledged to be the most royal host among the delegates. The last tribute is in itself sufficient to single him out for observance and it does.

When Mr. Berri came to Albany to attend the sessions of the convention, he arrived at the conclusion that some of the idle hours of the delegates could be whiled away pleasantly; he straightway went about "whiling," as it were. The first little pleasantry he conceived was to make the members of the printing committee, some chosen friends and a small army of newspapermen his personal guests for a four days' sojourn at the Fort William Henry hotel, Lake George. When his secretary submitted tentative arrangements for the trip, Delegate Berri raised his hand and smiled ever so faintly. "Make it a private car, Jo," he admonished. A private was substituted.

The private car was followed by private launches which merrily churned the waters of the historic and the scenic lake, leaving memories which will link those who were guests of Mr. Berri to an occasion quite unprecedented in the annals of legislative hospitality.

But Mr. Berri was not satisfied with one mere illustration of his hospitality. Little dinner parties here and there, when the guests numbered a score or more and none of whom had been selected because of dyspeptic qualifications, followed with a regularity which made practically the entive delegation at Albany at one time or other a participant.

"I enjoy being in good company," was the comment of the bountiful host when he was mildly cautioned by his associates that he was doing a trifle more than his share to alleviate the wear and tear of after-affect of too close an application to the needs of the people. And there is nobody who does not believe that the remark is true. Mr. Berri is an ideal host because he enjoys being one.

But it was not always that the generous Brooklyn delegate could laugh at expense. He is another illustration of sturdy Americanhood and tireless application to the setting of the cornerstones of his business enterprises. Time was when he filled more than one position in connection with the modest sheet which since has been guided to its proud and influential staton through his energy and ability. And there was also a time when Mr. Berri was now and then the guest of someone else, sampling the pleasures which he now dispenses with a lavish hand.

One of the delegates quotes from Shakespeare and likens the words of the Bard of Avon to him thus: "I do not profess to be less than I seem; to serve him truly that will put me in trust; to love him that is honest; to converse with him that is wise and say little. A very honest fellow."

Expert Advice for the Automobile Owner

Queries and Replies Covering Matters of Importance to the Man Who Runs a Car

Is it common practice to regrind the cylinders when a motor is worn or is it better to get new pistons and rings?

All depends upon the condition of these parts. Sometimes it is advisable to regrind the cylinders, which is the case when they are worn oval. In this case the fitting of new pistons is a difficult job, and the previous troubles would return again. If the cylinders retain their circularity, then new pistons and rings may be fitted.

Is it a good plan to place graphite in the crank case with the regular oil?

Graphite shows excellent results when used as a lubricant for the motor. Its action is one of a filler, the minute holes in the cylinder being filled in with the graphite, thus reducing friction and wear. Some owners use ordinary flake graphite, while others prefer the deflocculated form.

There is a swishing sound issuing from the neighborhood of the right front wheel of my car when it is in motion. It seems to occur once every revolution. What can be causing it?

There are two very likely causes of such a noise. It may be due to the speedometer gears meshing too tightly or the demountable rim has a wedge loose. Jack up the wheel and rotate it slowly, and you can soon determine whether the gears are too close. If this is the case loosen up the arm that carries the driven gear and move the gear only far enough away so that the noise is eliminated. If the trouble is not found in the speedometer gears tighten up the wedges on the rim. One loose wedge will make a noise similar to that you have described, due to the lack of support at this point.

What, in your opinion, is the best way to crank a motor, with the throttle open or nearly closed?

It is preferable to crank the motor with the throttle only opened a small amount, say an inch or an inch and a quarter movement on the quadrant. With some carburetors it is impossible to start the motor with the throttle wide open, while with others it is generally done with difficulty.

I have always been bothered with motor knocking when throttle was opened on a hard pull, necessitating my retarding the spark to the extreme limit, and that, of course, reduced power. I have been told that it was caused by too high compression. Will it help matters to reduce compression by raising the cylinder and placing a plate beneath so make a larger compression space?

The high compression reason which has been assigned to your case is very possibly correct, although it might be that carbon trouble is at the bottom of the difficulty. If you have noticed that the knocking continues even after the motor has been cleaned of carbon it is probably due to the high compression or to a loose connecting rod, wrist pin or crank shaft bearing or part. It is never a good idea to reduce compression until you are sure that it is too high, and it will be better to have this measured by gauge and see what it really is before attempting to cut it down by means of a plate. A compression pressure of seventy pounds is sufficient, and for ordinary purposes you should not have higher than this. If it is below this a reduction of compression will reduce the power correspondingly, as it influences the mean effective pressure in the cylinder.

If a motor is equipped with a high tension magneto, does each cylinder receive alternately one effective spark and one surplus spark?

The ordinary four cylinder high tension magneto only produces sparks when required—that is, at the beginning of the working stroke. Such a magneto produces a spark every half revolution of the armature, and therefore by connecting it to the motor so that it revolves at the same speed just the right number of sparks are generated, since a four cylinder, four cycle motor requires a spark every half revolution. These sparks are distributed to the proper cylinders in turn by means of a rotating brush which makes consecutive contact with the four segments which are connected to the high tension wires running to each of the four cylinders. The distributer runs at half the speed of the armature, and the two are positively connected by gears. The two are so set that the brush is in contact with one of the segments when the breaker points separate and the spark occurs.

Will you kindly give me any information you can on soldering aluminium?

Aluminium is soldered by the use of a blowtorch. A solder which may be used without a flux is composed of seventy-five and five-tenths parts of tin, eighteen parts of zinc and two and five-tenths parts of aluminium. The parts should be slightly heated before applying. The solder should be forced in place by means of a stiff metal brush. Another solder which requires a flux, however, is made up of 80 per cent tin and 20 per cent zinc, stearic acid being used as a flux. The objection to soldering aluminium is that the joint is not very strong.

THE COUNTRY STORE

WANT to know who'll win the war? Go to Cornseed's country store. It's the greatest view exchange east of the old Rocky range. Village fathers gather there, from Pop Green to Deacon Blair. And they talk with zest and ire as they sit beside the fire. There's a flash in ev'ry eye as the talk runs loud and high. Ev'ry topic's on the slate from the war to fishing bait. Satan, I believe, would choke from the dense tobacco smoke. Doc Spriggs says the democrats have no brains beneath their hats. That's the spark that starts the flame. Up jump six with shouts of "Shame!" Then they argue loud and long—try to sift the right from wrong. Owner Cornseed spills the salt—said it was Cy Plantem's fault. Judson Martin burns his ear when he tries to prove that beer is more nourishing than tea—'course, the others won't agree. Ben Spanks says the time's remote when the women folk will vote. Pop Green says they ought to now. Then that starts another row. Oh, they talk from morn till late! Life is just one long debate. Durn it! It would be just grand if these fellows ruled our land. Ev'rything would be O. K. from Cape Cod to San José. Ev'rything would be just fine from St. Paul to Brandywine. Wilson sure would get a tip if he'd pack his leather grip, steal away from Washington—go to Oatville on the run. Hunt up the old country store—listen to advice galore. Ev'ryone would do his share, from Pop Green to Deacon Blair. Country stores win in a walk when it comes to slinging talk.

Dogs That Froth at the Mouth.

There is a prevalent impression that "frothing at the mouth" is proof that a dog is "mad." The rabid dog does not "froth." The dog that does usually has some stomach trouble or has been running hard and shows it, just as a hard driven horse does. Remembrance of this fact should prevent a lot of cruelty to sick, lost, tired and frightened dogs. When you see a dog "frothing at the mouth" don't yell for policemen and guns. Just let the poor beast alone, or try to get it into a quiet corner where it can lie down and rest. Then give it a dish of cold water and keep on letting it alone, and insist that your neighbors do likewise.—Chicago Herald.

Japan's Toothache Altars.

"Japan is dotted with shrines," said a traveler. "One that I examined closely resembled a little house about three feet wide and as many high, with a peaked roof and its front wall taken out. Attached to bamboo rods across the front were many slips of paper on which sufferers from toothache had written their prayers and promises to do acts of charity and kindness if the pain which brought them there disappeared. We were told that at least one toothache altar might be found in any Japanese town."

Capital of an automobile factory jumped from $2,000,000 to $100,000,000. The auto plays a great part in peace and in war, too, nowadays.

ised by Government Report.

A corn crop of 2,814,000,000 bushels, exceeding expectations by more than 60,000,000 bushels, is estimated in the last government crop report. This is the first report of the year on the size of the corn crop. The crop condition is 81.2 per cent, as compared with 85.8 last year at this time.

The record corn crop was 3,124,746,000 bushels in 1912. Last year the promise at this time was for a crop of 2,868,000,000 bushels, but the crop actually harvested was 2,672,804,000 bushels.

The area planted this year is a record, 109,273,000 acres. The acreage in 1912 was 107,083,000. Last year's acreage was 103,435,000. The increase in acreage this year, it is thought, points to crop diversification in the south, corn in part supplanting cotton.

Understanding.

The visitor claimed to be a good pianist, with unusual ability in reading music at sight. Seeing a sheet of music on the piano rack, she sat down and began playing, pounding the keys with little regard for correctness or time. Observing the small daughter of the household watching her earnestly, the would be admired player pressed harder on the loud pedal, lifted her hands higher and ended with a flourish.

Whirling around on the stool, she bestowed a patronizing smile upon the child, who looked up and naively remarked, "I can't play that either."—Woman's Home Companion.

Science Siftings.

It has been estimated that the earth can maintain a population of 6,000,000,000, a total which will be reached about A. D. 2100 at the present rate of increase.

The brain is divided into two parts. If you are right handed you think with the left side of your brain, while if you are left handed you think with the right side of it.

The velocity of a star seems to be a factor of its effective age. Unlike our ordinary human experience, the speed of a star increases with its advancing years, and in the world of spheres above us it is the young who cannot keep the pace.

Town Topics.

As a summer resort all that Chicago lacks is an ablebodied sea serpent.—Chicago News.

Baltimore is boasting that the government reports show it costs less to eat in that town. But life is not all eating, except to the gluttons.—Pittsburgh Dispatch.

Minneapolis, too, is making rapid strides as one of our foremost American cities, one of her judges reporting that there is one divorce in that city for every eight marriages.—Detroit News.

Automobile Runs.

It is a pity that incomes don't increase in the same ratio as automobile cylinders.—Cleveland Plain Dealer.

Life has many mysteries, one of them being why motorists keep right on taking chances at railroad crossings.—Detroit Free Press.

The Long Island railroad is testing "auto proof" gates to prevent accidents at grade crossings. They must be fool proof too.—New York Sun.

Children Cry for Fletcher's

CASTORIA

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of Chas. H. Fletcher and has been made under his personal supervision since its infancy. Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic, all Teething Troubles and Diarrhœa. It regulates the Stomach and Bowels, assimilates the Food, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

GENUINE CASTORIA ALWAYS

Bears the Signature of Chas. H. Fletcher

In Use For Over 30 Years

The Kind You Have Always Bought

THE CENTAUR COMPANY, NEW YORK CITY.

Who is the Most Beautiful Girl on The Screen?—Many Say Gail Kane.

Every now and then the old argument breaks out afresh as to who is the most beautiful girl acting in motion pictures. Rival film manufacturers through their various publicity men argue vehemently as to the merits of their respective candidates, for on a delicate question like this, bias is the publicity man's middle name. Let us whisper it gently,—some of those very ladies whose charms are so loudly extolled are not the raving beauties in real life that we are led to believe. In the case of one of them, however, "the half has not yet been told," as the Queen of Sheba said,—Miss Gail Kane, who stars in "Via Wireless," the well known play by Paul Armstrong and Winchell Smith, now being put into pictures by Pathe, is a stunning beauty whose charms need no qualification.

Miss Kane was born in Philadelphia and if there were many more at home like her, Philadelphia would soon have a vast increase in its male population. Tall, beautifully figured, splendidly gowned and with a peaches and cream complexion mere man can be reckoned upon to follow her in droves like the famous rats of the Pied Piper of Hamlin.

This is Miss Kane's first engagement with Pathe. She comes to her picture work with a splendid reputation gained from leading parts in "The Model", "Anatol", "Seven Keys to Baldpate", "The Miracle Man", and "The Hyphen", all Broadway successes.

CLIFTON CRAWFORD

Noted Broadway Star Joins Pathe Forces—To Star in "The Galloper."

Another famous Broadway favorite has cast his lot to moving pictures. Donald Mackenzie announces that he has signed Clifton Crawford to play the lead in "The Galloper", the great Broadway success of Richard Harding Davis, which is now being produced for Pathe at their Jersey City Studios.

Melville Stewart, who is now playing in the "Follies of 1915," will support Mr. Crawford. The rest of the cast is also decidedly strong.

Mr. Crawford held off a long time before consenting to sign up for the silent drama, but it was the tempting contract offered by Mr. Mackenzie which caused him to decide to enter the field.

Born of actor parents in Edinburgh, Scotland, Mr. Crawford took up the stage at an early age, and after appearing in small parts for some time, became a great favorite in the English music halls. Later he came to America and played in vaudeville, where he always appeared as a headliner. Later he appeared in such noteworthy successes as "The Peasant Girl", "The Quaker Girl", and "The Three Twins." After starring for three seasons in the last named production, he made a tour of the world, and thereby earned the sobriquet of "the man who put a belt of smiles around the world."

Mr. Mackenzie's production will be released in the early Fall, and will be in five reels.

There is a feature of Dickens' character which cannot be too often or too seriously insisted upon, and that is his intense earnestness and thoroughness in everything he did. He said to me more than once:

"My dear boy, do everything at your best. If you do that neither I nor any one else can find fault with you, even if you fail. For myself, I can honestly say that I have taken as great pains with the smallest thing I ever did as with the biggest."

In giving advice to a young author he said on one occasion:

"If you want your public to believe in what you write you must believe in it yourself. When I am describing a scene I can as distinctly see what I am describing as I can see you now. So real are my characters to me that on one occasion I had fixed upon the course which one of them was to pursue. The character, however, got hold of me and made me do exactly the opposite to what I had intended, but I was so sure that he was right and I was wrong that I let him have his own way."

Whatever he did either in work or at play he always gave of his very best. He hated slackness or half heartedness in any shape or form.—Harper's Weekly.

ODDITIES OF VISION.

Peculiar Optical Effects and the Yellow Spot in the Eye.

If one places a pinhead up close to and directly in front of the eye the head of the pin appears transparent and things may be seen as easily through it as through a sheet of isinglass, the head appearing simply as a large round cloud. If it is placed somewhat closer no pin or head can be seen at all.

If one goes into a very dark room and puts a lighted candle near the side of one eye very pretty and peculiar effects are observed. A tracery, forming a regular network, can be easily detected, and this is merely the shadow thrown by the candle on the retina of the eye of the small capillary blood vessels between the retina and the candle.

If one looks to the side of a dim star in the heavens the star appears a great deal brighter than direct vision makes it appear. This is because the light in the direct view falls on what is known as the "yellow spot" or point of keenest vision. As this is not put directly behind the front of the eye the side glance is necessary. Some people can see stars that way that they cannot perceive at all on direct vision.—Pittsburgh Dispatch.

A Garrick Incident.

David Garrick, where speaking was concerned, was the pride of London. Members of parliament envied him his powers. Burke envied him. There is that instance in parliament when, during a heated debate, a member moved that the gallery be cleared. This was ordered to be done, and the strangers withdrew, all save Garrick. Still the member objected. Then up spoke Burke. Would it be fair to exclude from their debate the master of eloquence, the genius who taught them the art of speaking? he demanded. For himself he was proud to acknowledge his indebtedness to Garrick. Fox followed in the same strain, and Townshend. The house then voted that the "stranger" should remain. And Garrick did not budge.—St. James' Gazette.

Soho Square, London.

Soho is perhaps the most curiously derived place name in London. According to Samuel Pegge, the antiquary, Soho square, which has given a name to the district, was first called Monmouth square when the ill fated Duke of Monmouth had a house there. Upon the duke's defeat and execution in 1685 the square was ordered to be called King's square, and a statue of King Charles II. was set up in the middle of it. But the partisans of the Duke of Monmouth, wishing to preserve a distant remembrance of their leader, called it Soho square, from "Soho!" a hunting cry adopted by the duke as his watchword at the battle where he was taken prisoner.—London Saturday Review.

Justice.

A Sunday school teacher had been telling her class of little boys about crowns of glory and heavenly rewards for good people.

"Now, tell me," she said at the close of the lesson, "who will get the biggest crown."

There was a silence for a minute or two, then a bright little chap piped out:

"'Im wot's got t' biggest 'ead."—London Tit-Bits.

Futility of Argument.

Plato defined man as "a two legged animal without feathers." Diogenes, who heard this, plucked a cock. "This is Plato's man," said he. But never you think the old timer lacked a "comeback." He added to his original definition the words, "With broad flat nails." Such is the futility of argument.—Springfield Republican.

The One Advantage.

"Traded your motor boat for an aeroplane, eh? What's the idea?"

"Well, there's this about an aeroplane—even if the engine does break down, you're bound to land somewhere."—St. Louis Post-Dispatch.

Passionate people always deny their anger, and cowards often boast their ignorance of fear.

Donald Mackenzie has set a high name for himself in the realms of filmdom. He likes to tell the story of how he was thrust into the directing game, "forced" he says; but is modest on the subject of being to the manner born. He was working in a Pathe picture some three years ago in the studios in Jersey City, playing the lead, when the director was taken suddenly ill. Of course, this caused much commotion, there being no one to continue the work and get the picture out, and plans were all upset. Chief Director Louis Gasnier, now General Manager, sent for "Mac" and asked him if he could direct the picture as well as act. Mr. Mackenzie hesitated about taking on the responsibilities of the job, but Mr. Gasnier said that he had watched him at work and knew he was equal to the task. Mr. Mackenzie, with the intuition of the canny Scot at last agreed to complete the picture, and made such a success of it that he has been making pictures for Pathe ever since. "So you see I was 'forced' into being a director, with Mr. Gasnier as the propelling force!" he says.

KING BECOMES CORPORAL.

Victor Emmanuel Gets Grandfather's Place In Famous Zouaves.

King Victor Emmanuel of Italy has been appointed a third corporal in the First section, First company, First battalion of the Third Zouaves by the regiment's commander, Lieutenant Dencausse.

This place was held by the king's grandfather on the night of the battle of Palesto, June 1, 1859, in which the Austrians were defeated by the French and Italian allies.

Grazing Lands.

Present methods of transforming the grasses of the public grazing lands into beef and mutton are generally conceded to be wasteful, and it is estimated that under a proper system the quantity of beef and mutton produced on these lands could be increased at least 50 per cent.

Setting Him Right.

Corporal (to soldier reporting sick)—What's the matter with you? Tommy Atkins—Pain in my abdomen. Corporal—Habdomen be 'anged! Stomick, you mean. It's honly hofficers as 'as habdomens.—Boston Transcript.

A Dustless Duster.

A good "dustless" duster can be made of a pair of old stockings, slit open, stitched together and then soaked in coal oil for several hours before hanging in the air to dry.

Machine Oil Stains.

Yellow machine oil stains on white material may be removed by rubbing the spot with a cloth wet with ammonia before using soap.

RADISH ROSES.

Radish roses are not hard to make, and they are very attractive when served as a salad garnish or with celery and olives. Make two deep cuts at right angles in the radish, but leave the ends intact. Then loosen the red skin and place the radishes in ice water. The water makes the skin curl back like rose leaves. A tiny bit of the green stem left on the radish heightens the rose effect.

USE IN WISCONSIN.

Great Increase During Past Year In Use of Schoolhouses.

Five hundred and nine schoolhouses in Wisconsin were used as community centers in 1914-15 as against eighty-six so used in 1910-11, according to a report compiled by Edward J. Ward of the social center bureau, University of Wisconsin extension division. Twelve hundred and sixty-five community meetings were reported in the former period, 9,031 in the latter.

Five years ago only one principal had undertaken the duties of the community secretaryship; last year 152 performed such services. In 1910 a dozen schoolhouses were used as polling places; in 1914-15 over 100 school buildings were so used. Not until 1913-14 is any school principal reported as serving in the capacity of voting clerk; last year seventeen school principals did this work.

Not a schoolhouse in the state reported gymnasium equipment in 1910-11; 130 are now thus equipped. Fifty-five public school libraries were in use in their respective communities in 1910; now 479 such libraries are in use. Two dozen young people's organizations were reported in the public schools in 1910; over 200 such organizations are now in existence.

No community secretaries were regularly employed five years ago; last year seven communities employed such officers.

These figures are taken from responses received in answer to a questionnaire sent out to 900 school principals throughout the state.

ORNAMENTAL WINDOW BOXES

Often Can Be Made to Atone For Architectural Incongruity.

A properly designed window box, suitably planted with trailing vines and a harmonious selection of colors, can often be made to atone for a vast amount of architectural incongruity in the house itself. Even in the most skillfully designed work the need for some softening effects about the windows can be felt. Aside from the charming exterior effect of such an arrangement, the bright colors and the scent of the flowers add greatly to the interior atmosphere of the house, while the view from a window is greatly enhanced by being framed in by the foliage of growing plants. Great care should be taken to secure the boxes from falling on passersby.

The window box may be made of white pine, painted to withstand the weather, or oak or chestnut stained, strongly put together and braced, and should be lined with copper or zinc with suitable apertures for drainage. The soil is put directly into the metal lined box so formed.

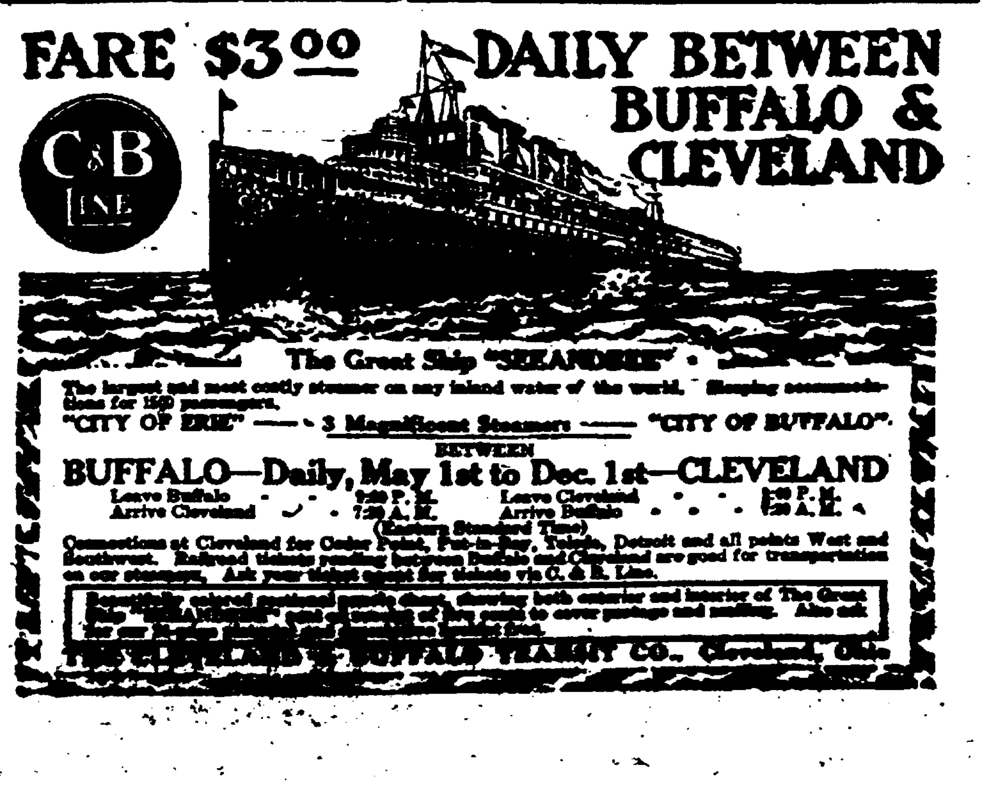
Of the planting it is enough to say that there should be a vine of some sort to hang over the edge, thus softening the rigid lines of the box, and that the flowers selected should be such as harmonize in color. Plants which form constant masses of bloom are best. It is well to provide several flowers which blossom in rotation, thus insuring a continuous effect. Pansies, heliotrope, giant mignonette, myrtle and similar plants are suitable for small boxes, while foxglove, salvia and digitalis may be grown in the larger ones. Geraniums are hardy and because of their bright coloring and fragrance make an excellent combination for the smaller window gardens.

Rubbish in City Parks.

A vigorous campaign has been instituted in New York city against the throwing of rubbish in city parks. Mayor Mitchel, Police Commissioner Woods and the park commissioners instituted the crusade, and the city magistrates have co-operated, with good results. Numbers of malefactors in this respect have been admonished, while others have been arrested and fined. A great improvement has resulted, and the arrests now are few and far between.

Dr. William T. Hornaday, director of Bronx Zoological park, gives the following testimony:

"For fifteen years we have been trying to educate the persons who come to the zoological park on Sundays into the knowledge that the park was not built for a big rubbish can. Now on Monday the park employees can put all the peanut shells into a silk hat and the waste paper into a receptacle just as small. The result is very satisfactory."



COME TO A SALE THAT'S DIFFERENT

Here it's not the idea to give you the lowest prices, but to give you the biggest values.

BARN STORMERS ARRIVE HOME

Pennelville's Homage to Sylvester's Squatters; Demonstration Outrivalled State Fair Shows, It is Said.

"Fatty" Sylvester's baseball nine was given a royal reception on its return from a barn storming trip through Pennellville yesterday. (This is press-agent stuff and may be slightly overdrawn. But "Yes!—yes! go on!") Red and green lights, torpedoes, wild cheering of voices greeted the Fulton gents at the train. Although defeated, Sylvester's team is well deserving of praise for holding such a remarkable nine as the "Brother-hoods" to such a small score, 9-8.

Sylvester (did he write this?) was the bright star of the game, pulling down several hot drives and making some wonderful stops with his chest. The boys were royally entertained at a chicken pie dinner, served by the sisters of the M. E. church at Pennellville.

The line-up of the locals was as follows: J. Reese, 1b.; H. Sylvester, 2b.; J. Wells, 3b.; D. Cook, ss.; P. Soper, ss.; C. Hart, c.; R. Mitchell, rf.; Di-Belloe, cf.; K. Kitts, lf.

THE EARL S. BROWN TEAM WON HARD FIGHT

Twenty-five members of the Pathfinder club gathered at the Island yesterday afternoon for the weekly stag day sports. Two baseball teams, captained by Dr. Kellar and Earl Brown battled for 11 innings, when Brown's nine won out, 5-4. The game was featured by sensational fielding on the part of both teams, and was perhaps the hardest fought of the season.

One of Mrs. Holmes' characteristic suppers was served at 6:30 o'clock and the rest of the evning was spent in informal discussion and musical entertainment.

The consistent advertiser wins in the end. It may cost a dollar to get a dollar, but the deal wins prestige.

Expert Says Controversy With Britain is One for Arbitration

(Continued from Page One)

tablish a blockade against Germany. It may contend that the blockade is not effective and therefore not binding. But this is a question to be determined upon the particular facts.

Many of these facts can be determined in the first instance only by adjudication and the prize courts, and in the second instance, if dissatisfied, by an appeal from the decision to the higher courts of England; then, if dissatisfied, the United States has the right, recognized by the English Government, to demand that the question be resubmitted to an international tribunal.

In the case of the Springbok, a British vessel condemned by the United States prize courts, an international tribunal's judgment affirmed the law laid down by the Supreme Court of the United States unanimously. Thus arose the doctrine of continuous voyage and ultimate destination which is now being applied by Great Britain to the disadvantage of the United States.

It thus depends on whose ox is being gored. In 1861 it was the British ox. In 1915 it is the United States ox that suffers from the application of this doctrine.

WHAT DO YOU ASK OF A WATCH?

SHOE FIRM BUYS FINE NEW CASH REGISTER

Stranahan & Love have just received a new cash register, the most costly model made by the National company. The register is equipped with a separate cash drawer for every clerk and with every latest improvement, including an attachment which prints receipt slips and charge memoranda. The firm has disposed of their old register to a local merchant.

JULY CANAL TOLLS $573,365;;RECORD

Panama, Aug. 5.—Tolls collected by the Panama canal during July were the largest since it opened. The total was $573,365. The March tolls, $560,784, were the previous record.

Excess of earnings for the year ended June 30 were $230,833. Total earnings for the year were $4,343,383. Total operating expenses were $4,112.-530.

WOMAN LENT JEWELS REGRETS RASH ACT.

New York, Aug. 5—Mrs. Max Ehrlich, of 205 East 103d st., lent her jewels early last week to Samuel Rothblut, of the same address, so that his wife might appear resplendent at a wedding reception. She said cynical things about generosity as a virtue yesterday when, after these same jewels had been stolen, pawn tickets for them were found in the pockets of Samuel, who confessed to having stolen them to get money to gamble.

The trinkets disappeared on Friday night while the Ehrlichs had deserted their flat for the less torrid realms of the front steps. The woman remembered that Rothblut had seen where she kept the three diamond rings, the bracelet and the diamond pendant, but she did not suspect him.

Detectives Kahn and Meyers, who were assigned to the case, had no such trust in human nature. Yesterday they searched Rothblut and discovered the pawn tickets. The man was arrested and arraigned in Harlem court, where he was held in $2,500 bail.

MR. AND MRS. PIPER RETURN FROM THE WEST

Attorney Giles S. Piper, accompanied by Mrs. Piper, returned yesterday from his trip to the Panama-Pacific Exposition. In the course of the trip, Mr. and Mrs. Piper spent many happy hours in reunion with their son, Fay Piper whom they had not seen in fifteen years and who is now engaged in horse-raising in Montana. Mr. Piper was much impressed with the wonders of the Exposition and reports a very enjoyable tour.

POSTMASTER CONLEY HAS GONE TO CONVENTION

Postmaster Peter T. Conley left this morning for Binghamton, where he will attend the State convention of postmasters which is meeting there this week. Mr. Conley is accompanied by Postmaster Kessel of Syracuse and the two men are not expected to return until Monday.

MRS. ADELIA SIMONS.

Mrs. Adeia Simons, wife of Harley Simons, died yesterday at her home in Mt. Pleasant. She was 70 years old and had been a resident of that section nearly all her life.

It can be said of Mrs. Simons that she was a mother to the motherless—beloved by the entire neighborhood wherein she lived.

Mrs. Simons' illness dates back about three years, but the period that resulted in her death was of four weeks' duration only.

Harley Simons, her husband, survives, and two daughters, Mrs. Cora Hubbard of Bowens Corners, and Mrs. Jesse White of this city. One son, Frank, survives, and two sisters, Mrs. Orrville Jennings of this city and Mrs. Ella Looker of Mt. Pleaant. One brother, George Ives, also survives.

The funeral services will be held at the home of Frank Simons at Mt. Pleasant, Saturday next, at 10 a. m., the Rev. Mr. Williams officiating. Burial will be made in Mt. Pleasant cemetery.

Mrs. Ernest Beaudin of South 7th st., is ill at her home.

Gas Cooking Means Summer Comfort

Strike a match—light the gas—there is no waiting for a fire—the kitchen is always cool.

The biggest baking can be accomplished without heat, fuss, or bother. A whole dinner can be prepared in the gas oven without trouble. The early breakfast becomes the most pleasant meal of the day.

Gas cooking leads to comfort, convenience, economy—and plenty of time for pleasure.

But, perhaps there are times when the kitchen is a trifle chilly. You know that often the best gas stove can scarcely replace some of the advantages of the old coal range.

The range you need is neither all-coal or all-gas— but a real gas range and a real coal range inbuilt in one scientific construction. And there is only one such range.

THE "SCIENTIFIC STERLING"

The Gas Range that Burns Coal.

Cooks, boils, bakes, broils, heats water, as well with one fuel as the other—standard five burner gas equipment—standard six hole coal range—all in one range that takes up no more room in your kitchen than the ordinary one-fuel range.

Take Advantage of Our Club Plan.

Put a "Scientific Sterling" in Your Home.

$5.00 down, $2.00 a week, will give you a "Scientific Sterling" now, at the regular cash price, $77—with all of the added advantages offered by our Club Plan—if you buy now, during the life of this Club.

For THREE WEEKS only—TWENTY DAYS more, we will offer you, in addition to eight month's credit at the cash price, these advantages obtainable at no other time.

30 Day's Free Trial.

Free Installation. **Free Insurance.**
Absolute Guarantee. **Inspection Service Free**

All together, your purchase now will represent a saving of many dollars to you.

The "Scientific Sterling" is the range you cannot afford to be without. Our Club Plan offers terms you cannot afford to miss. Investigate the "Scientific Sterling" and our Club Plan today.

DOLLAR DAY TO BE HELD SOON

Auburn's Past Successes Encourage Merchants There to Again Hold Trade Creating Movement.

Those who have a dollar to spend will be able to make it go a long ways on Wednesday, August 18, so the mer chants say, for they are getting ready for another big Dollar Day in Auburn. This was decided upon yesterday at a meeting of the Special Sales Committee of the Retail Merchants' Association for a discussion of the proposition.

The question of holding a Dollar Day met with no opposition, the only point that came under any discussion being the best day for all concerned. This was gone over from many angles and two weeks from tomorrow decided upon after much deliberation.

They All Get In.

All of the merchants witll get in on the dollar bargain proposition and in order that all might reap benefits as well as for the purchasers, it was believed that the sale should be held not later than the middle of the month. This reason was advanced by the merchants who sell merchandise for summer wear, they contending that if the sale was put off too long it would not appeal to those who have summer merchandise to sell and the shoppers looking for summer apparel. The shoe men believed that the low shoe season would be over, the hatters that straw hat season would be closing and the dry goods stores that the summer season for light weights would be nearly passed, if the sale was staged later in the month.

Eye on Picnickers Too.

Another reason for holding the sale early was the fact that at this season many people are coming to the city on picnics and for a day's outing and that if the sale was held in the height of the summer season the pleasure seekers from out of town coulld kill two birds with one stone and pick up some good dollar bargains and enjoy an outing at the lake.

The Dollar Day experiment was tried here a year ago last March and it proved to be a success both from the merchants' standpoint and the viewpoint of the buyer. With the experience of one Dollar Day upon which to plan their sales, the merchants believe that the day this month [satisf]actory than the former one.

The Special Sales Committee of the Retailers is composed of merchants representing every line of retail trade in the city and all were enthusiastic over the proposition. Each member of the committee will take the proposition up with the merchants in his particular line. In fact, they had obtained the sentiment of most of them before yesterday's meet ing and declared that there was much interest among the merchants and that they would all turn in to make the day a big one. Every merchant in the city will commence getting ready for the sale at once and when August 18 arrives they promise to have the biggest collection of dollar buys ever seen in the city.

FORMER NAVY CHAPLAIN EMBROILS CONGREGATION

The Rev. W. H. Jones, pastor of the Baptist church at Southwest Oswego, has resigned his charge for the second time, but not without bringing to light a little of the existing dissention. His resignation is to take effect Nov. 1 and he wil leave for the West.

The trouble in Southwest Oswego, it is said, started last fall, when some of the church members asked Dr. Jones to support Willam Sulzer for governor. Dr. Jones, it is claimed, refused, stating that he was not favorable to the policies of Sulzer, did not have confidence in him and was going to vote for Whitman. This was the first affront to the faction now opposing him.

The next trouble started when, in a sermon, Dr. Jones is said to have declared that certain members of the congregation, who professed to be strong Prohibitionists, were bringing their apples to the applejack factory to be made into an intoxicating drink. Since then the opponents of the pastor have criticised his belonging to the Elks, and have otherwse hindered him, it is claimed, in his church work.

MACCABEES' NEW OFFICERS

Deputy Great Commander Frank Carrier succeeded in installing the new officers of Fulton Tent, Knights of Maccabees, Tuesday night. The officers are:

Sir knight past commander, William Joice; sir knight commander, Leroy Lewis; sir knight lieutenant commander, D. Spencer; master-at-arms, Will Carl; record keeper, A. Z. Wolever; financial secretary, William Van Sanford; doctors, E. P. Cusack, S. D. Keller; chaplain, John Shipman; sergeant, V. Willey; first master guard, George Dickinson; second master guard, Henry Pilch; picket, Frank Parke; sentinel, Tracy Wallace.

MT. PLEASANT.

The Wesleyan class will hold a social at the home of Mr. and Mrs. Albert Paddock Wednesday, August 11, for the benefit of the church repair fund.

* * *

The Rowlee-Dustin reunion will be held at the fair grounds Saturady, August 7. Don't forget the date.

* * *

Byron Dustin and Master William Grant are ill with tonsilitis.

* * *

Mrs. Don Vant had a narrow escape from serious injury Saturday when her horse became frightened at an auto and broke the carriage and dragged her some distance.

* * *

Mrs. Emma Howard was a recent guest at Ernest Grant's.

* * *

Mr. and Mrs. Fred Foster of Hannibal were recent guests at Earle Foster's.

* * *

Master Fred Gibbons is ill with ivy poisoning.

* * *

Mr. and Mrs. Arthur Lewis, Mr. and Mrs. Alfred Cole, Mr. and Mrs. Arthur Dunsmoor and Irving Clark were among those who attended the hop growers' picnic at Sylvan Beach last Saturday.

* * *

Mrs. Harley Simons is very ill. Her children are at her bedside.

* * *

Mr. and Mrs. Campbell of Syracuse and Calvin Reynolds of Fulton were recent guests at Bernard Howard's.

* * *

Miss Maud Bartlett has recovered from her recent illness.

* * *

Miss Pauline Montague of Syracuse is visiting her sister, Mrs. Charles Osborne, and other friends.

* * *

Miss Mabel Grant was called home from Oneonta last week by the death of her little nephew, Myron Grant.

MINETTO BRIDGE TO COST $65,000

Contract Awarded to Larkin & Sangster of Seneca Falls —Work to Start at Once.

The Oswego Times of yesterday gives the following account of the awarding of the contract for building a new bridge at Minetto:

The contract for the Minetto brdge was today awarded to Larkin & Sangster of Seneca Falls for $65,000. This action was taken at a meeting of the town boards of Oswego Town and Volney, with Superintendent Howard, the members of the special Board of Supervisors' committee and William Meuser of the Concrete-Steel Engineering Company of New York, designers and supervising archtects of the bridge, held at the office of Superintendent Howard in the Co. Clerk's building this morning.

The contract was discussed briefly and there was a decided unanimity of opinion favorable to the acceptance of the Larkin & Sangster tender. Supervisor V. V. Vant of Volney presided and Town Clerk George J. Phillips of Oswego Town was secretary. The motion to accept the bid was made by Supervisor Callison of Oswego Town and seconded by other members of the boards. County Attorney W. M. Gallagher, who was present, was instructed to draw up a contract.

Arthur A. Sangster of the firm was present and said that his company was prepared to accept the contract and carry it out to the satisfaction of all parties concerned. He stated that he would be ready to assemble his plant just as soon as the contract has been signed. Mr. Sangster stated that his firm had performed several contracts involving crib work in deep water. such as required to be done at Minetto, and had the apparatus to carry on this work. Mr. Sangster gave a number of references, but the officals had already learned that the firm had a high rating and had given excellent satisfaction.

Under the terms of the contract the bridge must be completed within 150 working days after the contract has been signed. The piers will be built first. It is probable that the bridge will be completed some time next summer. If the winter is not too severe much work can be done then.

The bridge will be built about 600 feet south of Benson avenue on the west side. The contract let today, however, covers only the part to be bult by the county and towns and has no reference to the span to be built by the state, including a bascule span over the barge canal. The part covered by the contract extends from the east end to the center of the river, or where the state part begins. The state has appropriated $50,000 for the bridge in addition to the amount required for the structure over the barge canal. This is in direct compensation for the destruction of the old bridge which was weakened by the blasting for the barge canal.

The old bridge was in bad condition for two years before it collapsed about three years ago. A foot bridge was built to replace the damaged span, but wheel traffic has not been permitted.

The new bridge will make complete the string of iron bridges from Three Rivers to Oswego, including three bridges at Oswego (railroad included) two at Fulton, one at Hannibal, one at Phoenix and one at Three Rivers.

STATE'S INSANE STEADILY INCREASING IT IS REPORTED

Albany, Aug. 5.—A steady increase in the number of insane persons in New York state during the last 25 years is shown by figures made public today by Secretary of State Francis M. Hugo. Secretary Hugo staets that there are 36,240 insane persons in the hospitals or 3433 persons out of each 100,000 of and private institutions of the state population. In 1890 the proportion per 100,000 population was 249; in 1900, 304 in 1905, and 332 in 1910.

The greatest increase is shown in the criminal insane. In 1905 the number of inmates in the two hospitas devoted to this class of patients was 905 as compared with 1,360 in 1915, an increase of more than 50 per cent. in 10 years.

Of the 63240 patients in the 14 hospitals approximated six per cent. are of native birth and 44 per cent. foreign born. Twenty-six persons are aliens. In this connection Secretary Hugo reports that the percentage of aliens in the hospitals will show an increase this year on account of the war, which permits comparatively few deportations.

EVENING TIMES FEATURES

We will begin shortly the daily publication of

Easy and Practical Home Dressmaking Lessons

Prepared Especially for Readers of

The Evening Times

by

The Pictorial Review Company

of New York City

And in addition, each issue will contain

Beautiful Half Tone Illustrations of the Latest Ideas in the Art of Correct Dressing for All Occasions

These two features are designed to please and benefit the women readers of this Newspaper and are EXCLUSIVE.

The advertising value of the features is that Fulton Merchants will benefit, as the Patterns are sold in the leading stores of the city.

The Prosperity Dawning Upon Fulton is Reflected in the Amount of Increased Advertising Space Used by Merchants in

THE EVENING TIMES

The why and the wherefore of this lies in the recognition of a fact—that Success comes in "cans" and not in "can'ts," and our advertisers know that The Evening Times has in stock a big supply of "cans."

He Shaves

And Mrs. Bowser Has Something to Say About It.

By M. QUAD.

Copyright, 1915, by the McClure Newspaper Syndicate.

"What have you got there?" queried Mrs. Bowser, as her liege lord made a display of a small package when he came home the other evening.

"Mrs. Bowser," he replied as he sat down and carefully handled the package, "did you read of that case in Troy where a barber cut a customer slightly on the cheek, and he died of blood poisoning?"

"No. Say, you've gone and got another shaving outfit, haven't you?"

"Another? When did I ever have one?"

"You got one two or three years ago in Detroit, and how did you come out with it? Mr. Bowser, you do the most foolish things of any man I ever heard of in my life!"

"I do, eh? Is it foolish for me to want to avoid blood poisoning by shaving myself, to say nothing of the enormous saving of money? Yes, I did get an outfit in Detroit. But I had a boil on my arm and couldn't handle the razor. That was a cheap outfit, just an experiment."

"And you cut yourself and pranced around here and whooped until the neighbors thought we had a fire. How much did this outfit cost?"

"Only $10."

"Ten dollars thrown right away!"

"Is it? Let's see about that. Having my outfit I can shave daily. That's

HE LATHERED UNTIL BOTH ARMS ACHED.

$1.05 a week, or $4.20 per month. Seems to me that $50.40 per year is worth saving. In the twenty years I have been shaving I could have saved the trifle of $1,008. Where are you now, Mrs. Bowser?"

"Just where I was before. You'll shave once and that'll end it."

"Will it? If that's your opinion I have a great surprise in store for you. I've been taking lessons from a barber on how to handle a razor, and I can shave clean in exactly four minutes. Easiest thing in the world, when you know how. Just think of the $1,008 I have thrown away!"

"Well, I suppose you'll try it in spite of anything I say, but I shall decline to be held responsible for trouble."

"Responsible! Trouble! How could I hold you responsible! And what trouble can there be?"

"Why, that time in Detroit you almost tore the house down because you cut your ear."

"Pooh! I was probably joking. Don't remember a thing about it. I'd look pretty blaming you for what I did, wouldn't I? After dinner I will take a little shave, and if you don't say it's a better one than any barber has ever given me I'll put the razor up for good."

After dinner Mr. Bowser took a bowl of hot water and started upstairs, saying to Mrs. Bowser as he went:

"Better time me by the clock. I may be six or seven minutes this time, but I'll be right on tick tomorrow night."

He went into the bedroom and locked the door. Then he took off his coat, vest, necktie and collar. He looked down at his shoes for a moment and then decided to take them off also.

"Let's see," he mused as he opened the box and stood before the glass. "The first thing is to lather, of course. That's as easy as rolling off a log. This is something like comfort, this is. Hanged if I don't believe I shall want to shave twice a day after this!"

Mr. Bowser decided to put on plenty of lather. He put it on his chin, cheeks, nose, forehead, ears and throat, and more or less fell on the carpet. When he had lathered until both arms ached and no more would stick to him, he picked up the razor and chuckled.

"I just hold it with three fingers, this way, and lay it on my cheek, this way, and move it gently down. A child three years old could do that. I'll show Mrs. Bowser a trick or two before I'm through. Good woman, but she thinks she knows it all. Razor just slides"—

Mr. Bowser gave a jump, and at the same instant he saw the lather stained with blood.

"Don't amount to anything—just the head of a pimple," he whispered to

He lathered away until it began to drop off, and then picked up the razor again.

"The idea of my throwing away $1,008 to the barber!" he muttered as he laid the flat of the razor on his cheek. "Well, better late than never. No particular hurry about this, however. Feller wants to give himself time to get the hang of it. Perhaps I'd better begin on my chin first. Don't suppose it makes any difference whether I shave up or down, so long as I"—

"Mr. Bowser, what's the matter?" called Mrs. Bowser as she kicked upon the door.

"Nothing," he answered her.

"Then what are you jumping around so for? I thought you'd shake the chandeliers down."

"The blamed thing must have slipped on me!" he growled as he fumed to the glass to survey the cut. "Probably didn't hold it exactly right. Ah, that's more like the way the barber told me to hold it. Now, then, take it easy till you get the hang of it. May be ten minutes this time, but on the next occasion I'll"—

"Mr. Bowser, open this door!" called Mrs. Bowser from the hall.

"W-what do you w-want?" he gasped.

"I want to know what all this swearing and kicking over the chair means! Didn't I tell you how you would come out?"

"You go away! I'm all right. It was the man next door you heard."

He heard her go away after a bit, and he went back to the glass to whisper:

"I'll be hanged if I haven't nearly cut my old chin off! What in Texas ails the old thing, anyway! I'll get the hang of it if it cuts my head off! I suppose I did not have lather enough."

He lathered away some more. Then he picked up the razor and carefully examined both sides and the edge and the back. Then he laid the flat of the blade on his chin and smiled sweetly and whispered:

"Probably a little nervous, being the first time. I'll just get it by degrees. That's the way to do it! No barber ever slid a razor over my chin any nicer than that. The idea of Mrs. Bowser calling it $10 thrown right away! That's the way with a woman. If they save a cent here they waste a dollar there. I'll"—

Mrs. Bowser heard a yell and started for the stairs. She met Mr. Bowser halfway up. The lather was flying about and the blood streaming down on his shirt bosom, and his eyes were as big as onions.

"Well, didn't I say so?" she demanded.

Her words brought Mr. Bowser to himself. He turned back, beckoned for her to follow, and as they entered the bedroom he silently pointed. The razor lay on the floor, the bowl was broken in three pieces, and there was lather everywhere.

"Well?" she queried as she picked up three towels and placed two chairs on their legs again.

"Woman," he hoarsely whispered, "this is too much."

"Why, what have I done?"

"Sure! Done! Look at me!"

"Yes, but you tried to shave yourself."

"But who dragged me into it?"

"Mr. Bowser, you certainly can't blame me. I told you before"—

"That's enough. This is the limit. I understand it all and can see just how you planned it. It's not your fault that I did not cut my throat and that you are not now a widow. Mrs. Bowser, leave me to myself. I have some papers to look over before I consult a lawyer tomorrow."

"Just a minute," called Mrs. Bowser. "Why do you shave?"

"That strikes me as being a fool question."

"It may be one, but please answer it."

"I shave because I don't want to grow either a mustache or whiskers. That ought to be obvious to a child. What are you grinning at?"

"At the time you have wasted."

"Wasted? Wasted?"

"I have known you for twenty-five years, and I have never seen the slightest sign of a beard on your face. You are naturally a smooth faced man. If you didn't shave for three months there would be no beard."

"Do you mean to tell me that I'm the biggest idiot in America?" he thundered.

"But you have no beard," she protested.

"And you have never said anything about it until now."

"Why, if you hadn't been shaving you'd have been trying to cut your hair with a can opener."

Mr. Bowser came downstairs and brushed past her and went over to the barber's. After he had been greeted he asked:

"Would I have any beard if I didn't shave?"

"Not a sign of one," was the prompt reply.

"But you have shaved me a hundred times."

"Yes, sir."

"Why in thunder did I come here if I've no beard to be shaved?"

"I thought you liked to be tickled with the lather brush."

When last seen Mr. Bowser was kicking the stone dog on his front lawn.

Might Be Worse.

When the indigo predominates
  The view I take of life,
And man's well known existence rates
  As useless stress and strife,
When I am hitting .89
  And fielding .23,
And fate has hung the Indian sign
  With extra frills on me;
When I am tempted to object
  To fortune's cruel ways—
It's comforting to recollect
  They're worse in picture plays.

—Peoria Journal.

Hints For Housewives

Look For Dishonest Measures.

The north plaza of the city hall, New York, which was stacked high with all kinds of weights, must surely have caved in were it not for one thing. The weights were false. They were not as heavy as they looked. They were not honest weights.

That is the reason they were there, for it was weights and measures week, and Commissioner Joseph Hartigan of the mayor's bureau of weights and measures had placed all the dishonest baskets and pails and scoops and balances and other weighing paraphernalia which his inspectors had confiscated in public view that passersby might see and become wise.

One of the prize fakes was a five gallon oil can, so constructed that it contained but one quart of oil. It was said that the engineer who designed this can did not mean to be dishonest. He had a grudge against John D. Rockefeller and figured that he would not let any one use his oil, like the Irishman who bought a ticket and then walked, to get square with the railroad.

Another infernal machine was a large ice scale which gave only thirty-five pounds when it registered 100. When the iceman was arrested he said the ice had melted on the way up the dumbwaiter.

On one side of the exhibit was a pile of baskets, such as are used to mismeasure fruit and vegetables, while on the other a large stack of short weight paper containers gave mute evidence of the fortunes to be made in the ice cream business. A prominent confectioner accused of possessing these containers asserted that he only used them when selling ice cream and water ices to young ladies, as he could not bear to see them injure their complexions.

An interesting balance was one with a wire attached, connected through a hole in the counter with two weights weighing eighteen ounces below. By this device an ostensible five pounds of coffee became in reality only three pounds fourteen ounces.

While this exhibition was exposed to the elements, safely housed on the third floor of the Municipal building, in Commissioner Hartigan's office, was a display of correct and proper scales and measures of all sorts. At this office the commissioner is busy organizing what is known as the Consumers' league. Already 61,000 women have joined this organization, and by the end of three months the bureau expects the enrollment will be more than 200,000. This league, composed of housewives, will spread the propaganda of honest weights and measures by insisting on them when making their purchases.

When Ice Cream Sticks.

Ice cream is sometimes frozen so hard that it does not come out of the mold easily. When this happens let the cold water run over the outside of the can. The water is so much warmer than the ice cream that it melts it sufficiently to start it out and does not melt it enough to spoil the shape of the mold.

How to Clean Matting.

When matting is soiled rub it with a soft flannel cloth dipped in lukewarm salt water. Rub the spots with moistened cornmeal; then go over the whole surface again with salt water, this time cold. Wipe with a dry cloth. This method of cleaning does not turn the matting yellow, as water usually does.

If You Need More Fat.

If your physician advises you to eat more fat see that your diet includes plenty of cream, butter, olive oil, bacon, walnuts, pecan nuts, egg yolks, suet, salt pork, salmon and beef and mutton fat. All these foods contain a very large percentage of fat.

Cleaning Mackintoshes at Home.

Spread the mackintosh out flat on the table and scrub with warm water and yellow soap, in which a little carbonate of ammonia has been dissolved. Rinse in cold water and hang in the air to dry. On no account put it near the fire.

This Drives Mosquitoes Away.

Wind a piece of paper around a pencil and fill the tube so formed with Persian powder. Stand it in a dish of sand and burn it an hour before bedtime. This drives the mosquitoes away and so insures an untroubled night's sleep.

Bran For White Paint.

A plain cloth dipped in hot water and then in a saucer of bran will clean white paint and not injure it. The bran acts like a soap on the paint.

Brightening Rugs.

Throw coarse salt over rugs and carpets before sweeping them to prevent the dust from rising. This will brighten the color also.

To Sharpen a Knife Quickly.

A strip of emory cloth tacked to a small square board will be found useful for quickly sharpening the carving knife.

Ironing a Bias.

Be sure to iron garments with the straight of the goods and thus prevent stretching of the bias seams.

OF GEORGETTE CREPE.

Pale Yellow Color Employed In This Pretty Summer Blouse.

ELABORATE SHIRT WAIST.

The eton jacket effect is simulated in this handsome blouse by means of inserts of white silk embroidery. The color of the blouse is a pale yellow, a color much liked this year. The collar follows the lines well liked by all femininity and is moderately high in the back. The sleeves are long and trimmed with the embroidery.

ABOUT HYPOCRISY.

Be Sincere About What You Say, Do and Think.

Be sincere of what you say of others. If you cannot think nice things about them do not say anything at all. You should never run down others in your speech, so if you cannot praise be silent. If you are forced to utter an opinion about a person you dislike pick out the one point you find to admire in that person and mention that.

Unfortunately it is all too seldom that the real hypocrite recognizes herself in her true nature. She usually garbs herself in a cloak of self righteousness, covering her inward self with a mask of dissimulation. Her "I am better than thou" attitude succeeds in deceiving most of the world, including herself. This pharisaism is one of the commonest characteristics of the hypocrite.

It is better to be blunt and outspoken than to be hypocritical. The hypocrite may make more friends, but the frank person knows her friends are true. You want your friends to like you for what you are—not for what you are not, but pretend to be.

The hypocrite parades her pretended virtues before the world. Self advertisement is a model of kindness and nobility is her pet labor. Her plausibility is her best stock in trade. You have only to talk to her five minutes to know that she has two Bible classes and is the most charitable member of her church. According to her, she is constantly doing good. She will tell you in one breath that she has only love in her heart for the whole world and in the next that Mrs. Brown is no doubt a respectable woman, but that she shouldn't be so indiscreet.

The awful part about the hypocrite is that she can do more harm to a girl's character in one minute than a frank person can do in a year. The outspoken girl will talk to you against a person and you will know right away that she is talking of some one she greatly dislikes. You can tell, consequently, that her opinion of the person in question is prejudiced by her dislike and is to be valued accordingly.

But the hypocrite speaks very highly of the person she wants to slander. Then she inserts a but and a slight innuendo. Every insinuation is preceded by a flattering comment. The impression you receive at once is that this criticism must be quite unprejudiced, as the talker said so many nice things too. Every harmful innuendo is doubled in importance because you think that if a woman who is such a friend can say such things they must be true.

Keep Pantry Neat.

We all know how hard it is to keep the pantry looking neat. The spices and other articles lying around make it so untidy. From your grocer get three large, strong egg cases. Nail these firmly one on the other. This gives you six compartments. Now get a ten cent can of paint (any color you want); then make a curtain (double) and put on rod. In one compartment have spices, in another all articles that come in bags, like beans, rice, etc. This cleans the pantry out and helps fill up the kitchen.

To Keep Stockings Mated.

Take some small snap fasteners. Sew one part of the fastener on one stocking at the top and the other part on the other stocking at the top. Then when stockings are taken off to put in the wash have each person snap his or her pair together. It does not interfere with the washing, and no clothes- [illegible] at all, the [illegible]

HIGH VELOCITY STARS.

Their Fearful Rate of Speed in Space is Somewhat Puzzling.

The average velocity of stars ranges from about six kilometers, or between three and four miles, per second for "young" stars to about thirty kilometers per second for "old" ones. But notable exceptions occur. At Mount Wilson solar observatory of the Carnegie institution some stars have been found to move with velocities of 141, 150, 179, 233, 316 and even 325 kilometers per second, the highest speed yet known.

These high velocity stars are sometimes described as runaways because they seem to be quite beyond the control of the gravitational power of the universe. At their speed the attraction of the entire known stellar system would be wholly insufficient to check the star's career through space.

The astronomer, Simon Newcomb, once calculated that the maximum velocity attained by a body starting with velocity zero at an infinite distance and passing through a stellar system containing 100,000,000 stars each five times as massive as our sun and distributed throughout a disklike spheroid of certain extent cannot exceed 40 kilometers per second. Yet the star "Groombridge 1830" has a speed nearly nine times this value, and the massive star Arcturus has a speed probably four times this value.

If existing velocities owe their magnitudes to the gravitation of the system the quantity of attracting matter in the whole stellar system would have to be at least eighty times that assumed by the calculations of Professor Newcomb.—Baltimore American.

HE ASKED FOR DONALD.

And Much to His Surprise He Got the Answer He Sought.

Dr. Norman Macleod, the famous Scottish divine, before visiting India, called on an old highland woman in Glasgow, says a writer in the Scottish American. "When ye gang tae India," he said, "ye'll be seein' ma Donal' that went awa tae India ten years ago an' never sent the scrape of a pen tae his mither since."

"But, Katie," said the doctor, "India is a very big place, and how can I expect to find him?"

"Oh, but ye'll just be askin' for Donal'. What for no?"

So, to please the old woman, he promised to ask for Donald, and he conscientiously kept his word. At various ports he made inquiry among British ships, although it seemed very much like looking for a needle in a bale of hay. But it is the unexpected that happens. As Dr. Macleod's steamer went up the Hugli river an outward bound vessel [illegible] was leaning over her bulwark, and, moved by a sudden impulse, the doctor shouted out:

"Are you Donald Mactavish?"

To his intense surprise the man answered, "Yes."

Dr. Macleod had only time to shout, "You're to write to your mother!" as the vessels drew apart. The result of his amazing meeting was that the old lady received a penitent letter from her long neglectful son.

Not Quite.

"Young man," inquired her father sternly, "will you give her a home like the one she has been used to?"

"No," replied the truthful suitor, "for there will be no grumpy father to come home and make every one miserable by his kicking over trifles and swearing at matters in general. There will be no mother to scold her from morning to night for wasting time merely because she wants to be neat. There will be no big brother to abuse her for not doing half of his work and no little brother to make enough noise to drive her crazy when her head aches. There won't be any younger sister to insist on reading some trashy novel while she does all the work. She will not have with me a home like she has been used to, not if I can help it."—Boston Journal.

The Mistletoe.

The mistletoe is a Druidical contribution to Christmas. It was held in great veneration by the Druids in ancient England, and the cutting of it was attended by sacrificing and feasting.

With weird incantations the priest climbed the tree on which the mistletoe grew and cut it away with a knife of purest gold, no base metal being allowed to touch it. As the twigs fell they were received below in a mantle of spotless whiteness.

The Open Question.

Many, many years ago the Stork and the Wolf met at the door of a human habitation.

"After you!" they exclaimed simultaneously.

And since then scientists have been unable to determine whether poverty or population came into being first.—Philadelphia Ledger.

How It Turned Out.

"Did Blabson's love affair have a happy ending?"

"I presume so. I saw his former fiancee the other day, and she must weigh at least 200 pounds."

"Do you suppose that makes Blabson happy?"

"At least it doesn't make him unhappy. You see, she didn't marry Blabson."—Birmingham Age-Herald.

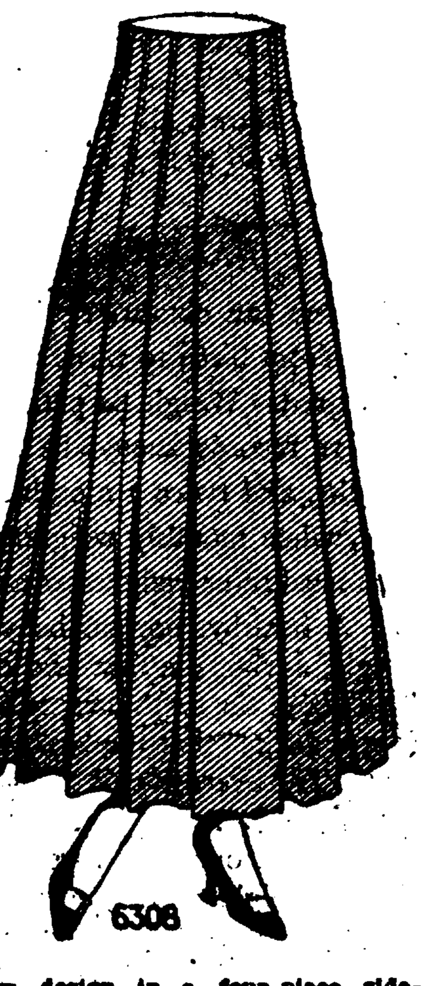
Easy & Practical Home Dress Making Lessons

Prepared Especially For This Newspaper by Pictorial Review

A SKIRT OF MANY POSSIBILITIES.



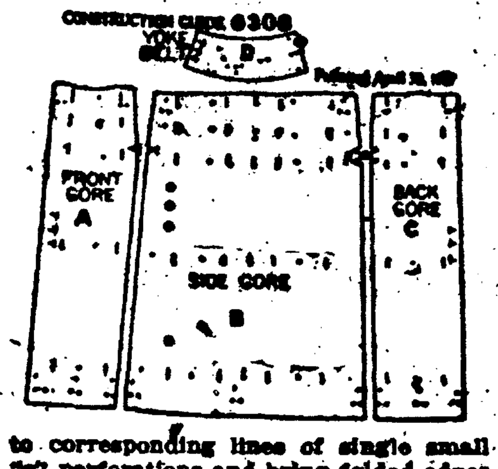
6308

New design in a four-piece side-pleated skirt, suitable to development in any of the smart materials of the season.

One may choose between serge, broadcloth, gabardine, taffeta, poplin or voile as a material for the development of this smart four-piece side-pleated skirt. It has many charming possibilities if one desires a change from the original model. For instance, it may have a yoke-belt that fastens either at the back or front, and the yoke-belt may or may not have pockets. These belts come in two widths, the wider extending almost the depths of the hips.

Pleated skirts are not difficult to make if they are properly handled, despite the general belief to the contrary. In this instance, the first step is to arrange the gores together, according to notches; then pleat, creasing on lines of slot perforations, and bring folded edges

CONSTRUCTION GUIDE 6308



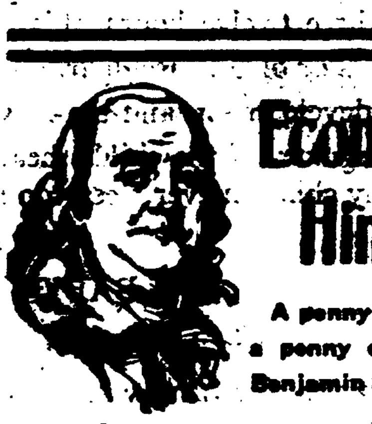
to corresponding lines of single small "o" perforations and bring folded edges each of the line of double "oo" perforations together on the line of double "oo" perforations. Stitch as illustrated, leaving seam to left of center-front free about 12 inches for a placket, and press. Close seams under pleats. Adjust 2 inch belting to position underneath upper edge skirt for a stay; stitch upper edges together.

If the deep yoke-belt is desired, use the entire pattern and cut off pointed end on large "O" perforation. The belt can be made to close in the back by slashing on line of four small "o" perforations, after which a pocket can be inserted. Adjust on skirt, center-fronts and center-backs even, the small "o" perforations being used to indicate the center.

Belts will be used a great deal during the fall and winter, and kid in various colors makes ideal belts for separate skirts.

Pictorial Review Skirt No. 6308. Sizes 22, 24, 26, 28, 30, 32 and 34 inches waist. Price, 15 cents.

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.



A penny saved is a penny earned.—Benjamin Franklin.

THE finish of the woodwork and walls of the house is part of its permanent equipment which plays an important role in its general attractiveness and the ease with which it can be taken care of. Woodwork of the baseboards, doors, window casings, etc., should be easy to dust and wash. This means round corners and no elaborate moldings. Whether or not such surfaces should be painted or stained and varnished depends partly upon how good the wood is and partly upon personal taste. As a general rule, varnished woodwork is easier to keep in order than painted, but paint covers up poor wood better and can be used in lighter colors, a point which is often in its favor in rooms where there is insufficient light or where a "light" treatment in color and furnishings is desired. Good enamel mixed with the last coat of paint prolongs its life and makes it easier to clean.

For floors, paint is less durable and harder to clean than well finished waxed varnish, but if the boards are old and rough it would probably be better to paint them. Carpets or mattings tacked down close around the baseboard may be warmer in winter than rugs which do not cover the whole floor, but they are less desirable, because it is so difficult to take them up and clean them. Not only must the tacks be removed from the carpet, but their larger size makes them more difficult to handle than rugs. For months they remain full of dust and dirt which flies into the air when they are walked on, and for this reason they are very insanitary. If a floor is too bad for ordinary rugs, it is better to paint it and then lay down a carpet rug large enough to cover all but the edges than to tack a carpet over the whole floor. For the floors of kitchens, bathrooms and passageways which must be washed frequently some material less absorbent than wood is desirable. Cement is sometimes used for back entries, pantries, etc., but it is hard and cold underfoot for the kitchen. Good heavy linoleum is perhaps as satisfactory as anything for kitchen, laundry and bathroom, as it is comfortable underfoot, easy to clean and very durable. Oilcloth is cheaper, but not so durable.

Five inches short of average on the rainfall for the first five months of 1915. But a hosing counts as one rain, so more power to the agricultural elbow.

PLAY GARMENTS.

How the Romper and the Jumper Have Become Invaluable.

Play garments in the sense in which they are known in this country find no place in the French collection. Such practical affairs as the romper and the jumper are American in origin and to a very great degree in use also. Like many styles that in the course of time are adopted by the Parisiennes, the romper made its French debut on the American child. It can hardly be said to have universal vogue, but nothing has been advanced of recent years that has approached it for utilitarian service.

Pinafores have been discarded by most American mothers, but in certain of the foreign countries they retain their old time vogue and are offered in many interesting fabrics and styles. The smock of the working classes has been taken as the model for latter day aprons designed for children, and while originally it was meant to wear over the frock, it gradually was lengthened, the opening down the front became a seam and the erstwhile pinafore was graduated into the dress ranks for little folk.

Many mothers in planning the wardrobes for their children buy an extra quantity of material so that bloomers may be made to go with the washable dresses. This is an excellent idea, since it helps to reduce the laundry bills.

In many instances the bloomers are cut on circular lines, because this gives more breadth and consequent ease to the active small girl or boy. Moreover, the extra fullness does away with the necessity of petticoats, since the folds of the bloomer serve to hold out the dress-skirt.

This year there are interesting checks, plaids and stripes in washable materials especially designed with reference to the dress wants of the younger generation. The better quality will wash without fear of running or of shrinking in any marked degree. With the shepherd checks in ginghams, linens and cotton voiles are sometimes combined plain linens in old blue, rose, pink or light blue.

How to Make the Summer Bungalow Look Cool and Dainty.

Dainty hangings of printed cotton in the cool combination of blue and white have long been a favorite selection for the summer bungalow or cottage, and long has been felt the need of a rug that would carry out this cool color scheme. A shop which makes a specialty of showing Japanese goods had on exhibition rugs of various sizes in a charmingly covered oriental design. The design, carried out on a white background, well covered the background in different shades of blue. No, they did not look like bath mats, but evidently they are made on the same looms.

No Room For Mirth.

Eleanor—I believe my husband is provoked at my extravagance. He didn't even smile when he saw my dress. Madeline—Some men, my dear, have no sense of humor.—London Express.

HOW TO TAKE GOOD CARE OF THOSE DELICATE ORGANS, THE EYES.

It is undoubtedly true that we do not take sufficient care of our eyes. The eye is too delicate an organ, however, to be subjected to haphazard treatment. A sudden change from very bright light to darkness should be avoided, and if the eyes are weak the prevailing color in the room in which one spends most of the time should be some tint that is helpful to the eyesight.

Do not read while lying down, when rocking or when in a car. Do not use the eyes before breakfast, and do not read or sew in the sun, but let a good, strong light fall over your right shoulder. Hold whatever you read on a level with the eyes, and do not bend over your book or paper.

TENNIS TOGS.

How to Know and Acquire Proper Outfit For Pastime.

All signs point to tennis as the leading pastime for the summer season. Specially made dresses, hats and sweaters for the sportswoman are much more attractive than usual. She can no longer be fooled by any "just as good for the purpose" togs which may be offered to her. This is a step in the right direction and promises a smarter gowned lot of women at the net this year than ever before.

Another improvement is also to be noticed in the fact that slim and stout women now adopt clothing which in color and cut conceals rather than accentuates their own peculiarities of figure.

One charming novelty is a coat and skirt suit of balbriggan of the same weave as that used in fine underwear. This is very attractive in old rose, hunter's green and old blue, the popular tennis colors.

There is also a jumper suit of fine blue and white striped flannel, having the white trimmings which make it very pretty for outing use. A very smart hat of white linen, trimmed with blue suede, is worn with this suit.

Tweed flannel semifitted sweaters are quite new and have collars, cuffs and sashes of plain white tweed, finished with mother of pearl buttons.

Box plaited waists in dainty colored chambrays, having polo collars and cuffs of white pique, are especially new and smart and go beautifully with white linen or serge tennis skirts. The English skirt is also a fetish, which is on the smock model and laced at the top, so that it may be slipped on and off over the head.

Embroidered hats are new and very becoming. They are of the coarse white or tan straw, and the flowers are embroidered in linen on the crowns and brims of the hats in embroidery stitches, and they are sewed through and through. The brims are then faced with linen the color of the embroidery on the top of the hat. The embroidery matches the tennis skirt or suit.

With the white tennis shoes white stockings are usually worn, though many are selecting those of the color of the chambray blouse or the dark stripe in the flannel suit, which gives an added note of color to these dainty out of door suits.

How to Adjust the Wabbling Legs of Your Furniture.

It is well known that the legs of tables and other furniture in a dining room, whether owing to imperfection of manufacture or to the inequality of the floor suface, are apt to wobble unsteadily at times, and this is a great trouble and annoyance.

It is commonly remedied by a wedge or wad of paper, but this is an unsightly expedient, and it is interesting to note that an adjustable caster has been invented by which the variations in lengths of support can be compensated for. The crux of this invention is a screw, so that the tread can be quickly and accurately adjusted, and it can be adapted to meet all requirements, from a billiard table to a small clock.

How to Clean Your Sink in a Sanitary Manner.

Do you know that an old newspaper is excellent to clean an iron sink? It does not soil the hands, and it is sanitary, as it is burned after using, thus doing away with the unsightly and unsanitary sink-cloth.

Pour on the sink about a tablespoonful of kerosene, then wipe with the paper. A sink cleaned in this way is free from grease. It is glossy and sheds the water. Therefore it does not rust easily.

How to Keep the Kitchen Paint Bright and Clean.

Kitchen paint will soon acquire a shabby, dull look from the frequent cleaning that is necessary in this room. The use of soap only increases the difficulty, especially if the paints are varnished. A good plan is to boil one pound of bran in a gallon of water for an hour, then wash the paint with this bran water. It will not only be kept clean, but bright and glossy.

How to Keep Bread, Cheese and Cake Fresh.

Keep cheese in a cool, dry place, and after it is cut wrap it in a linen cloth and keep it in a tight tin box.

Keep bread in a tin covered box and it will keep fresh and good longer than if left exposed to the air.

Cake also should be kept in a tight tin box. Tin boxes with covers, like trunks, with handles at the ends, are fine for bread and cake.

TODAY'S FASHION NOTE

A shirt waist of matic colored Georgette crepe, touched at the neck and wrists with brown satin. It is worn with a box-plainted skirt of krimmer brown cloth. Two yards of 44-inch crepe, with one-fourth yard satin and 4 yards of 44-inch cloth duplicate the waist and skirt, respectively.

Pictorial Review Waist No. 6112. Sizes, 32 to 46 in. bust. Price, 15c. Skirt No. 6308. Sizes, 22 to 34 in. waist. Price, 15 cents.

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.

The KITCHEN CUPBOARD

TWO DELICIOUS DISHES.

LUNCHEON MENU.
Macaroni Loaf.
Salad. Biscuits.
Marshmallow. Iced Tea.

Tomato Marshmallow.

COOK and strain ripe tomatoes. If canned tomatoes are used they must be drained, cooked and strained. Make a sirup of one-half cupful of the strained tomato and one cupful of sugar. Cook to 230 degrees Fahrenheit. Pour this moistened with a quarter cupful of water. Stir, add one cupful of water and cook to 240 degrees. Remove from the fire and add three tablespoonfuls of gelatin dissolved in one cupful of water. Mix and strain. With a wooden paddle beat until it becomes foamy and white; then gradually add the beaten whites of two eggs and continue beating until it is stringy and almost set. Sift over one tablespoonful of cornstarch and pour on a marble slab or large platter which has been dusted with pulverized sugar. Let dry for twelve hours and cut in squares. If they are to be eaten plain, roll in pulverized sugar, or they may be dipped in melted chocolate.

Macaroni Loaf.

Three-quarters cupful macaroni, one cupful cream or milk, four level teaspoonfuls of butter, one tablespoonful of red or green peppers chopped, one cupful grated cheese, one teaspoonful of onion juice, one tablespoonful of chopped parsley, three eggs, one tablespoonful salt. Cook macaroni in usual way. Scald cream, add to this one cupful breadcrumbs, butter, salt, peppers, cheese, parsley, onion juice, beaten eggs and macaroni. Line a quart baking dish with buttered paper, pour in the mixture, set pan on many folds of paper in pan of water, place in moderate oven and bake from half to three-quarters of an hour. Turn out on deep platter and serve with tomato sauce. Sauce: Two teaspoonfuls of butter, two tablespoonfuls of flour, one-half teaspoonful salt (scant), one cupful stewed and strained tomatoes, slice of onion, one-half teaspoonful capers, three cloves. Brown butter and flour separate, then combine, add salt and pepper. Cook tomatoes with slice of onion, then remove onion, add tomatoes slowly to flour and butter, cook thoroughly and add capers and cloves, or these may be omitted. Pour over loaf and serve very hot. This seems a lot of trouble, but it pays, for it is delicious and just as good next day for luncheon as any meat dish.

Anna Thompson.

PREFERRED TEN DAYS IN JAIL TO HIS HOME; THE REQUEST GRANTED

"Judge, please send me to jail for ten days?" said James Doyle, 56 years old, in City Court this morning, where he was arraigned on a charge of public intoxication.

"Well, Doyle," said the Judge, "I did think of letting you go home. Don't you want to go home rather than to go to jail?"

"I think not," the old fellow answered, "I know that ten days in jail would do me good right now, and I will let drink alone when I come out."

So Doyle was given ten days in Oswego jail, and Judge Wilson offered to give him the commitment papers and let him go to jail alone. There will be several companions for Doyle, however, whom the Judge felt less inclined to trust, and Doyle will accompany them. The man was arrested last night by Officer Brown, as he lay asleep on a South First st. lawn. Doyle told a straightforward story this morning, and after he had admitted his guilt, told the Judge he had been convicted of the same offense here before, and that a sentence of 30 days had been suspended. Chief Dyer consuled the records and found that Doyle had been arrested here in 1913. In spite of the suspended sentence, Judge Wilson was inclined to give the man another chance, when Doyle requested a jail term. Doyle is a bricklayer and worked on the west side until three weeks ago.

* * *

Officer Lewis arrested Mitchel Ouger and Martin O'Donnell, hoboes, in the railroad yards last night, and they were fined $20 with the alternative of 20 days in jail. Both men, accompanied by Joseph Porter, who says his home is in Rhode Island, entered the city by the side-door Pullman route yesterday. They told the Judge they were weavers and had come to this city expecting to get work at the American Woolen Co. plant, having heard that the local mills were booming. One of the men has only one arm. The Judge told the men that bums were not welcomed here, adding "We have enough bums of our own here, and if the mills start to work there are plenty of unemployed in this city." Porter was given the same sentence as the other pair, athough he was arrested on a different charge.

* * *

Herbert Anright, of Rome, who made his debut in the City Court yesterday in the capacity of complainant against Amos Carkner, of Rochester, who lifted Anright's gold watch, fountain pen and wallet Tuesday night, while the men were sleeping at the Fulton House, was arrested late last night, charged with public intoxication.

Anright had a fair start yesterday morning when he appealed in court against Carkner and tears stood in his eyes when he was obliged to testify against his bed-fellow. Then he told the Judge that he would be content if Amos would pay back the $5 he had already spent from the wallet, and the Judge allowed Carkner to look for some money. Yesterday afternoon Carkner succeeded in getting the funds and Anright received all his stolen property from Captain Norton. He immediately started to celebrate his good fortune and had parted with $3 of the five-spot before Officer Brown arrested him for intoxication.

Judge Wilson fined Anright the remaining $2 and when Anright asked, "How Will I Get Home, Judge?" His Honor answered, "Walk! It will do you good." Anright pleaded for his money, but the Judge refused to remit the fine and Anright will start his Weston for Rome as soon as he is released from custody.

THE BETTER BABY SLOGAN
By JEANETTE VAN REYPEN

No one is satisfied today unless their baby is qualified to rank among the prize winners. "Better Babies" is the watchword that meets one at every turn. County fairs rival city up-lift work in pushing the movement for improvement in human livestock, and no point is neglected that has been found helpful in this development. Two generations or perhaps three, from the present crop of "Better Babies" ought to show an improvement in the race, though with the tendency shown all through Nature to revert to the original type it will never do to neglect any item in the approved schedule.

* * *

BABY WEIGHT AND MEASUREMENT.

One can obtain regular charts showing the standard development from birth to three years of age, with which the baby can be compared. Weight is perhaps the best index of baby's health, and regular records should be kept. Weekly records for the first six months, and twice a month after that, until the close of the second year, when monthly weighings are usually sufficient. Delicate children need to be weighed oftener.

A healthy, normal baby loses from ten to eleven per cent. in weight during the first two days after birth, and does not regain it until about the tenth day. Continued loss of weight, after the second day, indicates that the child needs more nourishment than he is getting. The average child weighs three times its weight at birth at the end of the first year. The weekly gain, in a normal infant, being from four to six ounces. First born children usually exceed later ones both in height and weight. The average height of a healthy, new born child varies between sixteen and twenty-one inches, and the weight between six and eight pounds. Boys weigh one-half to three-quarters of a pound more than girls as a rule. Baby's height increases most rapidly during the first two weeks of life. After two weeks, and up to the fifth month there is an almost uniform increase in height which then becomes less rapid, but continues uniformly to the end of the first year. During the second year two to three inches, and from this to the eleventh year the yearly gain is from one to two inches.

* * *

BABY'S SLEEP.

A new-born, healthy infant, with good digestion and proper food, will usually sleep eighteen to twenty hours a day. At six months about fifteen hours are necessary, at two years thirteen hours, and at three twelve hours, this period continuing until the child is four years or older. Regular, quiet sleep, is an indication of normal, healthy development, and the habit should be formed early and continued regulary if the child's health is to be insured. It is doubtful if healthy children ever sleep too much.

* * *

BABY'S BATH.

The baby should be bathed daily from his birth, using at first a basin withl ukewarm water and Castile soap, and later a full tub bath. The very young infant should not be kept in the bath longer than three or four minutes, though the bath should be given thoroughly, and the body dried by wrapping in a soft towel. A liberal dusting of talcum powder, especially in the folds, follows this. The temperature of the water should be 70 to 75 degrees, with doors and windows closed to avoid drafts. Soft gauze is better than a sponge, and there should be one cloth for the face and head and another for the body. Temperature of the bath should be 100 degrees Fahrenheit until the second month, then 95 degrees until the twelfth month and during the second year 85 to 90 degrees. Always use a thermometer for the bath, never guess at the temperature. Teach baby to enjoy his bath. Lower him gradually into the water if he cries or seems afraid. In warm weather when he suffers from prickly heat give him a bran or soda bath before he goes to bed.

Neuralgia Pains Stopped

You don't need to suffer those agonizing nerve pains in the face, head, arm, shoulders, chest and back. Just apply a few drops of soothing Sloan's Liniment; lie quietly a few minutes. You will get such relief and comfort! Life and the world will look brighter. Get a bottle today. 3 ounces for 25c., at all Druggists. Penetrates without rubbing. 2-12

DRUGGIST USES CUCKOO AS BURGLAR ALARM

New York, Aug. 5.—As Frank Schwartz employs no clerk in his drug store at No. 515 Amsterdam avenue, he attached wires to the more valuable articles on display in his show window, so if taken by a thief the wire would release the cuckoo in a clock and thus warn him.

Mr. Schwartz was behind his prescription counter last night when the cuckoo began to squawk excitedly. He ran out and found a man leaving the store with a camera, to which the cuckoo wire had been attached.

After a chase of a block he caught and arrested a man who said he was Leonard White, of No. 308 West Fifty-fifth st., and the druggist said he had the camera.

Cookies and cakes and all things baked by the Black company, fresh every day, at your grocer's. adv

Children Cry FOR FLETCHER'S CASTORIA

WEATHER FORECAST.

Partly cloudy tonight and Friday. Moderate south to southwest winds.

UNFAVORABLE WEATHER BRINGS WHEAT ADVANCE

New York, Aug 5.—The belief is gaining ground in the wheat market that there has been more damage done to the winter wheat crop by the prolonged rains during harvest than had been conceded, and during yesterday's operations shorts became nervous and bid the market up rapidly, closing prices being 1 5-9c to 2 3-8c net higher.

The weekly government weather bulletin said that the wet weather had caused further damage during the week to wheat in shock and that which is still uncut.

The Question.

Stella—You have two proposals?
Bella—Yes, I can't decide which to marry first.—New York Sun.

CONFIDING HEN AS TAR BABY

North Arlington, N. J., Aug. 5—This is the pathetic tale of William Aiken's little brown hen Gladys, who almost came to an untimely end in a tar barrel today while in the faithful performance of her duty. This is how it happened:

Gladys is an industrious bird. Every day she adds to the Aiken larder one nice fresh egg. She chose an inviting looking barrel near the chicken coop yesterday in which to leave her daily contribution. The barrel was half full of tar, but Gladys settled down in the soft, sticky mass with a little cluck of content. Pretty soon, with a satisfied cackle she tried to fly out again but she was stuck fast.

Her squawks brought William Aiken, Jr., and William Flannigan, who were playing in the barn, to her aid. In a moment they were almost as powerless as the hen, for when they thrust their hands into the tar to pull her out they, too, stuck fast.

Some one called Chief of Police Riepe. By dine of much pulling he finally loosed the two boys and removed most of Gladys.

Part of her tail feathers, however, and nearly all of her down over her wishbone section stayed in the tar. The egg, too, could not be pried out, but the resourceful officer solved this dijiculty by punching a hole through the shell and sucking the contents through a straw.

TO WAGE FIGHT FOR NATION'S DEFENCES

New York, Aug. 5.—A new element in the widespread campaign for improved national defnces came into being yesterday when the American Defence Society, in which some of the most prominent citizens of the United States are actively interested, filed papers of incorporation and opened headquarters at No. 303 Fifth avenue.

It was announced that the purpose of the new organization is to act as a general clearing house for publicity from any recognized source regarding the condition of the country's defences and to further an aggressive educational campaign for the purpose of summoning the support of the public to all of the organizations in the country which have as their design the betterment of the country's strength in preparation for possible warfare.

GERMANY'S RULE IN ANTWERP HARSHER

Rotterdam, Aug. 5.—German rule of Antwerp is becoming increasingly harsh. From today more servere regulations are to be enforced. Apparently, the Germans have reason to suspect that demonstrations against the invaders are contemplated by the Belgians.

LEGAL NOTICES

NOTICE TO CONTRACTORS

State of New York, Office of the State Commission of Highways, Albany, N. Y.—Pursuant to the provisions of Chapter 30, Laws of 1909, as amended by Chapter 646, Laws of 1911, and Chapter 80, Laws o f1913, sealed proposals will be received by the undersigned at their office, No. 55 Lancaster street, Albany, N. Y., at 1 o'clock p. m. on Thursday, the 26th day of August, 1915, for the improvement of the following highways: Oswego County—Road No. 5408; Fulton City; East First st. Mileage, 0.36.

Maps, pans, specifications and estimates may be seen and proposal forms obtained at the office of the Commission in Albany, N. Y., and also at the office of Division Engineer, Chas. J. McDonough, 433 South Salina St., Syracuse, N. Y.

The especial attention of bidders is called to "Information for Bidders" in the itemized proposal, specifications and contract agreement.

Proposals for each road or contract must be represented in a saparate sealed envelope, endorsed on the outside with the name and number of the road or contract for which the proposal is made. Each proposal must be accompanied by a certified check payable to the order of the State Commission of Highways for an amount equal to at least five per cent. of the amount of the proposal which such check accompanies.

This check will be held by the Commission until the contract and bond are duly executed.

The successful bidder will be required to give a bond for fifty per cent. of the amount of the contract; such bond to be executed by a surety company to be approved by the Commission, or a bond secured by the deposit of collateral securities to be approved by the Commission.

The right is reserved to reject any or all bids.

EDWIN DUFFEY,
Commissioner.

I. J. MORRIS,
Secretary.

Notice to Creditors.

In Pursuance of an Order of Hon. Clayton I. Miller, Surrogate of the County of Oswego, New York, notice is hereby given according to law, to all persons having claims against Lucinda J. Curtis, late of the Town of Palermo, in said County, deceased, that they are required to exhibit the same, with the vouchers therefor, to the subscriber at the office of William S. Hillick at No. 59 South First Street in the city of Fulton in the County of Oswego, New York, on or before the 1st day of February, 1916.

Dated this 12th day of July A.D., 1915.

Germans Draw Net Tighter About Czar's Retreating Troops

Warsaw Left an Empty Shell by Russians Who Are Beyond the Vistula. Grand Duke Trusts Rear Guard to Cover Retreat

London reports that Warsaw, the capital of Poland, was occupied by the Germans yesterday morning, closing the first stage of the greatest military movement in the history of the war.

The entry of the German army—led by the Bavarians under Prince Leopold—was practically unopposed. Following the definite break in the Blome line on Tuesday and the general assault on the outer and inner forts defending the city, only a feeble rear guard was left to offer perfunctory resistance to the Bavarians and cover the retirement of the main defence force across the Vistula.

In evacuating Warsaw the Russians removed every pound of military stores, dismantled factories, destroyed or removed all railway equipment and left to the victors the shel of a city. The work of removal has been in progress officially since July 15. While no advices have been received indicating the course pursued by the Russians after crossing the Vistula, it is regarded here as certain that they bew up the three bridges spanning the river and willl make further stands with rear guards in Praga, the eastern suburb of the capital. The destruction of the bridges would mean that the beautiful Praga bridge, completed a few years ago at a cost of more than $6.000,000, would be given over to dynamite.

While to the Bavarians commanded by Prince Leopold has fallen the honor of taking over Warsaw in the name of the German Emperor and his consort, who are expected to make a state entry within a few days, the real conquerors are the troops fighting under Field Marshall von Hindenburg along the Narew river to the northeast, to the Austo-Germans who crossed the Vistula to the south of the city and to the armies of the Austrian Archduke Josef Ferdinand and the German Field Marshall von Mackensen, which are advancinf northward between the Vistula and Bug rivers.

* * *

RUSSIANS FIGHTING STUBBORNLY

The Russians are fighting desperately and stubbronly to check the progress of these four armies and have had several successes, inflicting heavy losses on their pursuers; but they are being steadily pressed back, which made the longer occupation of the Warsaw Polish salient a hazardous undertaking.

Even now, although the stadiness of the Russian troops and their fierce counter attacks have gained much valuable time for them, it is problematical whether the whole Russian army will succeed in reaching the new positions chosen for it or whether, if it should get there, it will not find those positions turned by the Austrians, who have crossed the Bug southeast of Cholm, and the Germans under Generals von Scholz and von Gallwitz, who have crossed the Narew.

At the northeastern end of the line the Russian communications are further threatened by General von Buelow, who is advancing toward Dvinsk on the Vilna-Petrograd railway. Indeed, the Austro-Germans have set three traps to catch and destroy the Russian army. None of them was sprung, but one was so near to closing that the Grand Duke Nichola was forced to evacuate Warsaw and now is fighting with all his might to prevent the others from cutting off his retreat.

Thus far he seemingly has been successful, for although the Germans assert the capture of a large number of prisoners the aggregate is small when compared with the immense forces engaged. In addition, the Russian guns apparently are well on their way to the rear.

* * *

PREPARE TO EVACUATE RIGA

The Russians are also preparing to evacuate Riga, the port on the gulf of that name in the north. The arrival of the Germans ten miles south of that city already has been the cause of the flight of the civilian populace.

While expressing the fullest confidence in the future, the British military writers make no attempt to belittle the achievements of the Germans or the effect their success is likely to have in the near east and the west.

Since early in May, when they started their great counter offensive in Wester Galicia against the Russians, who were debouching through the Carpathians on to the plains of Hungary, the troops of the Germanic powers have cleared the Russians out of Galicia with the exception of a narrow strip of territory in the southwest, have recaptured Permysl and Lemberg, taken Lublin, Cholm and Warsaw and are in military occupation of virtually the whole of Poland.

What their next move will be is a matter of conjecture. Some military observers believe they will continue to attack the Russians in the hope of finally crushing them, a task which it is considered is rendered difficult by the fact that the Russians in their retreat lay the country waste, making it necessary for the invaders to bring up every ounce of food required for their army.

Others of the observers think Serbia will be attacked to impress

(Continued on Eighth Page)

CONTRACTOR FILES HIS OBJECTIONS TO REPORT OF COUNCIL MEETING

Frank Massaro, the contractor who built the tow-path sewer from First and Onedia streets, north to the Hunter tail-race, was indignant yesterday at what he termed "the insinuations made that he had accepted graft" in the sewer work, because of the fact that the sewer will cost a little more than $3,800 instead of $2,445, Mr. Massaro's price. Mr. Massaro wants it understood that the plans and specifications include a clause which specifies the amount of rock to be removed and the cost per cubic yard, and that an unlooked for contingency almost doubled the work necessary in removing the rock, necessitating much blasting and the excavation of 125 cubic yards of rock, for which no provision was made.

Mr. Massaro implied that this was the usual contract form, but did not know whether the form was in general use, for instance, on barge canal contracting work, where a number of contractors failed here because of the same unexpected contingencies.

At the time the contract was given, Mr. Massaro's bid was several hundred dollars lower than that of Tony DeBarbour, the next bidder, and many people were of the opinion that the work could not be completed for that sum, because of the rock to be encountered.

Several of the councilmen at Tuesday's meeting were outspoken in their sentiments against a form of contract which would place no obligation or responsibility on the contractor and which would permit him to secure additional funds from the city for the completion of the work he found it impossible to perform at his contract price. Several taxpayers yesterday said if that was the usual form of contract given for city work, they were prepared to enter the contracting business at once.

Buffalo Socialist Sees In Manager Form Dire Consequences

All Plans Except Those Provided by the Peers of His Party Fail to Give the People Relief, Is the Speaker's Public and Private Opinion.

Stephen J. Mahoney, of Buffalo, Socialistic spell-binder, addressed an interested crowd of more than 100 people last night in lower First st. on the subject, "Commission Government." Mr. Mahoney's rostrum was his automobile and at the end of his lecture, which developed into an anti-militiarism harangue, he distributed for the sum of ten cents each, a few copies of the debate between Morris Hillquit, of New York City, attorney and Socialist leader, and Congressman Gardner, of Massachusetts, on the question, "Shall We Arm?"

Briefly, Mr. Mahoney's objections to the commission form of government were: 1st, That it is in direct opposition to the Federal form of government, outlined in the Constitution of the United States; 2nd. That it places the power in the hands of a select few men; 3rd. That Plan C is particularly to be defeated because it does not include the referendum and recall for commissioners; 4th. Plan C would establish a monarchy here; 5th. Because it takes all the power from the hands of the people, inasmuch as the City Manager is appointed by a few men, and because these few men are directly responsible to the interests of the men who pay their campaign expenses.

"The plan is to establish a one-man government in this city," said Mr. Mahoney, "without the power of recall. It is the same in Russia—there the people cannot recall the Czar if he doesn't please them; the people of England can's recall the King if he does wrong; and here in Fulton you cannot recall the commissioners if they prove to be dishonest or unworthy. It takes the reins from your hands.

"From national government down to city and municipal governments, the people have elected those who make the laws and represent them. Under the proposed plan, you will not be able to do that. Those who are supporting the plan here, the members of the Chamber of Commerce and those who control your daily paper, are making a veiled attempt to get all the power into their hands and you will have nothing to say in regard to the control of your city.

Mr. Mahoney then inferred that all those in this city who favor the adoption of commission government were affiliated in some mysterious way with Congressman Gardner and the militarist party of the United States, all working together to the detriment of the working man, and all working for the one end—to establish a monarchy in the United States.

When the sale of pamphlets had commenced, one old man, who stood on the outskirts of the crowd, yelled "A Good Republican wouldn't soil his hands on one of them books!" Mr. Mahoney announced an address on "Socialism" tonight. He denied that he had come to this city at the solicitation or request of any person or persons opposed to the commission form of government and said he was a free lance, as far as anf political affiliations were concerned.

FULTON'S "PIED PIPER" MYTHICAL, SAYS THE PAPER MILL MANAGER

Some one on the staff of an Oswego newspaper is busy "hitting the pipe" again. In yesterday's effusion the long-suffering public is given to understand that a man, known as the "Pied Piper," has recently completed an extensive campaign against rats in the plant of a local paper company, with the result that the rodents have transferred their operations to other sections. This "Pied Piper" makes a business, says the newspaper, of clearing manufacturing plants of rats and they never return—this he guarantees.

The skeptical Times reporter "nibbled" to the extent of a telephone call to the manager of the plant, who said that he had never heard of any such person and had never engaged any one to rid his plant of rats or anything else.

The newspaper concludes by saying that the man is in Oswego at present and may decide to linger there if he can receive any commissions. He should have little difficulty in finding work.

A. W. BROWN, VEHICLE INSPECTOR, HERE TO ENFORCE AUTO LAWS

State Motor Vehicle Inspector Brown of Pulaski spent yesterday in this city investigating alleged violations of the state automobile laws. Mr. Brown stationed himself along First st. and many drivers were ordered to show their licenses, while others were obliged to change the position of their license numbers to conform with the state requirements. Two or three cars which have been running over the allotted period on manufacturers' numbers were ordered registered.

Inspector Brown explained to a Times reporter yesterday that driving licences were necessary when the driver is an employe of a corporation whose car he drives, or when he is a paid chauffur. Private owners, their friends and acquaintances, in fact, any one else who does not drive a car for pay, needs no driving license.

Thirty-six drivers, among them five Fultonians, whose names have been withheld by the State Department, took the drivers' examination in Oswego yesterday. Examiner B. Schmidt, of Albany, was in charge of the examination. Seven drivers were rejected on the road test.

Opinions

NO BACKWARD STEP!

Mr. Barnes and The Tribune are in entire agreement on his statement that the Constitutional Convention should decide the questions of abolishing direct primaries and statutory regulation of political parties raised by certain delegates. Further than that the agreement extends not.

The proposal to abolish direct primaries for state officers through this convention's action is reactionary and entirely contrary to the mandate of public sentiment which caused a state-wide primary nominating system to be established. Statutory regulation of party affairs developed as the most practical and effectual way of checking blackjack and boodle tactics in non-supervised, non-regulated party methods. It affords the protection for the individual and the minority in politics which Mr. Barnes so often eloquently demands. His reason for desiring it to be wiped out, therefore seems obscure.

The old party column ballot was bad but it cannot be made to bear the faults of politics which Mr. Barnes is now trying to put on it. Party conventions and unregulated party methods went out of existence in New York because the public found them bad and said so firmly enough to make its lawmakers understand the message. The old party column ballot was disposed of for the same reason. There is no reason for going back to the old conditions on any of these lines.—N. Y. Tribune.

FALLEN WARSAW.

Warsaw is taken.

Well may Polivanoff, garrulous Russian War Minister, speak of Russian gloom. Well may the Allies, ill concealing annoyance and dismay, renew their oath for war to the bitter end. German armies, guided by crafty overminds, surge forward today a tide of supermen, sweeping in massed cohesion on land decreed for inundation and red flame.

Warsaw, capital of Poland, conquered by Russian greed, held in tyrant's yoke for some odd one hundred years, lies today prostrate beneath the mailed fist of Hohenzollern. Warsaw, for one hundred years shadowed with Russian sullenness and gloom, is part today of Wilhelm's "Place in the Sun." It is a momentous change; an epochal event; whether for better or for worse, who shall say?

Two fearful powers have clashed, two sinister powers. The stronger has won. Gerrman militarism opposed by Russian militarism, has beaten growing Pan-Slavism into dust. The world clamors against Germans militarism. Unfairly, it disregards Russian militarism. More insidious than the German brand, more malevolent, more venomenous, it falls below the Hohenzollern only in efficiency. The snake heart is there; but the Car brain is weak. Germany has her military caste, her military oppressors, her tyrants. Russia has her unspeakable hierarchy of imbecile Grand Dukes and all the corrupt array of the Romanoffs and their drones.

While Nicholas and his family have been sluggards and cruel, Wilhelm and his family have been leaders and efficient. Stronger and weaker clashed. Warsaw evacuated is the result. Nicholas vowed at war's outbreak, that he would spend his summer in Berlin Today, the Kaiser and his Kaiserin prepare for triumphal entry into Warsaw. Nicholas, trembling and cowering, shivering for revolution's fear, retreats into darkest Russia. "I shall fight this war till it costs me my last moujik!"—Atlantic Review.

HERE AND ABROAD

With the return of better times all over the land follow the attendant evils of strikes and other labor disturbances, much to the regret of nearly everybody. While differences of opinion may exist as to the justice or injustice of the movements of the employer and employed, it is nevertheless a pity that after all the country has endured for the last two years by reason of the disturbed condition of business there should arise at this time a labor war.

A notable fact exists at this time when the labor world is so greatly disturbed, viz: That the men who are in a spirit of unrest are the men who are able to earn by their labor the highest pay in the many trades. While contrast does not offer an excuse for contentment, because demand and other conditions should govern all prices, a little glance at the surroundings of our fellow workers abroad affords interesting reading.

One of the big textile companies of Germany has made a wage advance to its workers. The announcements show that—

> Men who are or have been married and whose wages on pay day amount to less than $5.28 per week, will receive an increase of .07 1-2 for each working day, the total wages, however, not to exceed $5.28 per week.
>
> Unmarried male workers whose wages on pay day amount to less than $4.32 per week, will receive an increase of 3 1-2 cents for each working day, the total wages not to exceed $4.32 per week.
>
> Female workers who are or have been married and whose wages amount to less than $3.884 per week, will receive an increase of 3 1-2 cents for each working day, the total wages not to exceed $3.82 per week.
>
> Unmarried women whose wages on pay day amount to less than $3.88 per week, will receive an increase of 3 1-2 cents for each working day, the total not to exceed $2.88 per week.
>
> This increase of wages is not to apply to workers under 16 years of age.
>
> Male and female operatives to whom this increase is granted and who have more than three children under 14 years of age to support, will receive a further increase of 3 1-2 cents for each working day.

It is regretted that figures are not obtainable to show the wages paid to foreign workers in such industries as are now affected by strikes in this country, but the figures given above are proof conclusive that the German manufacturer is paying wages that are one-third to one-fifth what the American textile workers receive, which, from figures at hand average $8 to $18 weekly.

It is a hard matter to reconcile the unrest prevailing in the labor world. Various causes are ascribed for it. It is alleged that German gold has transformed the high-salaried mechanics into another set of beings, but the veracity of the many claims is yet in dispute. Meanwhile the great gun works of the East are idle, except in one instance, where manufacturers have made a disbursement of the annual dividend of the company, with the ostensible purpose of thwarting discontent.

In spite of the reports as to the causes of the labor war in this country, there are enough indications on the surface of things to make one believe that envy of the man with the big piece of property has a lot to do with the present state of unrest.

WELL PAID

Probably the greatest merchandiser that Great Britain has ever seen is the late Thomas J. Barratt of Pears soap fame. While Mr. Barratt was a great believer in the more conservative forms of advertising, such as those in newspapers and magazines—he was chiefly notable for the variety of "stunts" he successfully carried out on behalf of his product.

One noticeable achievement of his along the line of "stunts" consisted in stamping a large number of French copper coins with the word "Pears" and putting them in circulation. Before the French government put a stop to the practice thename "Pears" had become a household word in France. It is said that Mr. Barratt paid $11.000 for Sir John's Millais' painting of a little boy blowing soap bubbles. With "Pears Soap" added to the masterpiece this picture was given a world-wide reputation through advertising.

Perhaps a culmination of Mr. Barratt's merchandising achievements was reached when the Rt. Hon. Wililam Gladstone arose in the House of Commons and said the Home Rule amendments were as "plentiful as advertisements of Pears Soap."

At the same time Mr. Barratt was making his soap a household word he incidentally did not let the public forget him. Without stamping his picture on a carton or placing his signature on a wrapper he achieved an international reputation as a merchandiser, chiefly through his advertising, which is very good proof that he was a genius in his line.—Batavia Times.

The consistent advertiser wins in the end. It may cost a dollar to get a dollar, but the deal wins prestige.

CASTORIA
For Infants and Children
In Use For Over 30 Years
Always bears the Signature of Chas. H. Fletcher

(Concluded from Yesterday.)

BABY'S TEETH.

The healthy growth and proper nutrition of an infant is indicated by the easy and timely cutting of the teeth. This process begins very early and to be normal should be completed at the end of infancy (two and one-half years).

Improper feeding is responsible for most of the ills of infancy, as well as for the nervous, irritable symptoms that babies sometimes display. Disorders of digestion generally indicate the giving of a smaller amount at each feeding, slightly lessening the intervals. Plenty of boiled water should be given between meals. Rubbing the gum, where the coming tooth is indicated, with the finger covered by a clean napkin, helps as effectively as lancing. Twenty teeth compose the first set, called "milk teeth." The first teeth cut are usually the middle lower incisors. These generally come the sixth or seventh month; followed by the four upper incisors, and two lower lateral incisors from the eighth to the tenth month. The first four molars arrive between the twelfth and fifteenth months; the eye and stomach teeth between the eighteenth and twenty-fourth month and four posterior molars between the twenty-fourth and thirtieth months.

WEANING BABY.

The weaning of a baby should always be gradual, and should be avoided in hot weather, as well as in the teething period, or if the child is suffering from illness no matter how slightly this may be. Where infants are accustomed to receive one or two bottle feedings a day, in conjunction with the natural supply, weaning becomes an easy matter. Such alternate feedings greatly lessen the strain on the mother, and are a convenience in travelling and where, for some important reason, the regular interval between feedings would have to be lengthened, unless bottle feeding could be substituted. Eagle brand condensed milk, diluted with boiled water according to formula has proved the most generally acceptable and successful alternate food. This contains the elements necessary for baby's nutrition, is perfectly pure and sterile, and is usually all-sufficient, though occasionally barley water or some other ingredient suggested by the physician is advisable to use with this milk.

BABY'S MOUTH.

Nutrition is frequently interfered with, owing to some inflamed condition of the mucous membrane lining of the mouth. If a thorough washing with boracic acid water is given before and after each feeding the chance of infection and consequent soreness, will be eliminated.

THE EYES.

The eyes of every new born infant should be treated by dropping one or two drops of a two per cent. solution of silver nitrate into each eye. If any irritation is caused by this treatment, it will be only temporary. Throughout infancy and childhood the eyes require most careful attention, and if any redness or irritation develops the family physician should be at once consulted. Baby's eyes should be carefully shielded from the direct rays of the sun. One sees frequent instances of carelessness in wheeling the baby carriage directly toward the sun, the child lying on his back, receiving the full glare in his eyes, a position that few adults could tolerate and that is bound to be injurious.

WITH THE SUFFRAGISTS

Lost: By Martin H. Glynn in California during his visit to the Panama fair, a perfectly vigorous prejudice against woman suffrage. In his speech at the fair the ex-Governor of New York announced that his stay in equal suffrage California meant the end of his opposition to votes for women.

* * *

"Haven't time to vote!" exclaimed the wife of Congressman Taylor of Colorado to a protesting anti-suffragist. "Why it doesn't take nearly as long to vote as to match a piece of silk."

* * *

Editorially the New York Times has been wont to protest vigorously against admitting the hysterical and weaker sex to the ballot box.

In its news column it reported the women victims of the Eastland as waiting calmly for death or rescue while men, fighting madly for their lives, dragged women from places of safety, and it added, "All witnesses agree that in the crisis women showed the stronger nerve." Either the editor doesn't think the news department of his paper reliable or he does not read it.

* * *

Mr. Bryan, who himself so recently deserted the titular head of his party, is reported as being very irate at the Congressional Union for attacking the Democratic party as responsible for the failure of the woman suffrage bill in Congress, which shows that he is not yet willing to allow women the same freedom of action that he assumes himself.

At the gate of the Panama Exposition he said in his severest tone to a member of the Union, "Madame, I would never move an inch to speak to a body of women which had opposed the Democratic party."

* * *

"Over rude paths with hunger and risk she pressed onward toward a vision of the better country. To an assemblage of men busied with the perishable rewards of the day, she brought the three-fold leaven of enduring society; faith, gentleness, and home with nurture of children: "so runs the inscription on the statue of The Pioneer Mother which California, where women vote is the first state to thus honor the deeds of the pioneer woman."

* * *

The New York Call has found by taking the total vote for and against woman suffrage in eight southern states where the legislatures passed on it, that there were 469 votes cast for it to 233 against it. And it concludes that, while only in West Virginia was the majority enough to bring it before the voters, yet the so-called anti-suffrage South is really in favor of votes for women, two to one.

'OLD SWIMMING HOLE' ACTS AS REFORMER

Visalia, Cal., Aug. 6.—The old swimmin' hole is one of the most effective reform agents at the disposal of Tulare County officials, according to Frederic Grimes, probation officer.

Grimes declares that since the swimming season has opened there has been next to no trouble with the boys, usually engaged in mischief. During the last month three cases only were called to his attention, and these were minor offenses.

FUN RAYS

By Ray I. Hoppman

THE SERVICE.

We ought never to feel nervous, with our first class fighting service, ev'ry time we hear the rumor of a war. For our fighting aggregation can compete with any nation—they're a bunch of fighters to the very core. Three cheers for our scrapping navy, and our army, too, by gravy! And another for the dashing, brave marines. They will shoot their foes to chowder, for they love the smell of powder, with their belts of bullets strapped around their jeans. If you don't believe it quiz 'em, note their militarism—ask them if they'd rather lie around or fight. Then just listen to the clamor, like a reinforced trip-hammer, see and hear them shout for battle—it's a sight! Though it's rather small in numbers, yet whatever it encumbers it will slam with perfect ease to smithereens. Do not let your courage smoulder—just lean hand upon the shoulder of the army and the navy and marines. They don't go into a battle like a lot of driven cattle, but they use the little think-works in their dome. That is why they fight like blazes with a fearlessness that dazes, and, believe me, friends, they bring the bacon home. No, sirree, friend, don't get nervous—just rely upon the service; we're as well protected as a podded bean. Now, dodgast it! cheer and holler like a kindergarten scholar for the soldier and the sailor and marine.

The Jitney Bus.

At least the bus of that name has lived long enough to make the jitney famous.—Chicago News.

So far as is known, with all her troubles, Europe doesn't have to grapple with a jitney bus problem.—Detroit Journal.

One thing the jitney certainly has done—it has enabled the street car motorman to see a prospective passenger sooner than formerly.—Dallas News.

With the coining of the word "jitneur" to denominate the driver of the jitney bus there should no longer be any curbing the demand that this vehicle must go.—New York Post.

A rise in the price of beef used to be accompanied by an interesting explanation. Now it simply takes place. —Washington Star.

Almost any man with personal magnetism, some guns and a few boxes of soda crackers can get up a revolution in Mexico.—Los Angeles Express.

The crank is capable of much worse mischief than the criminal, and the pity of it is that he should be so much harder to detect.—Philadelphia Ledger.

A Retraction.

Painter—How do you like the picture? Critic (sardonically)—H'm! It might be worse. Painter (offended)—Sir, I hope you will withdraw that statement. Critic—All right, then; it couldn't be worse.—Pittsburgh Press.

TWELVE INCH SHELLS.

These Big Projectiles Carry a Thirty Pound Explosive Charge.

High power projectiles are constructed with cavities in their centers which contain the explosive charge, the explosive carried varying with the size of the projectile. A twelve inch shell, weighing 870 pounds, carries about thirty pounds of explosive. The cavity of such a projectile is about seven inches in diameter at the base, and gradually tapers in size toward the point. After the charge is placed in the projectile a plug is screwed into the base, thus sealing up the explosive, and a fuse is inserted in the center of the plug extending into the explosive within the cavity.

The fuse, without which the explosive is harmless, depends upon the high rotary motion of the shell to become active. This rotary motion is imparted by the rifling of the gun. In the smooth surface of the tube are cut the rifling grooves of a width of about one-eighth inch.

Round the shell, near its base, in a groove cut for the purpose, is compressed what is known as the rotating band. This band projects above the surface of the shell and corresponds with the rifling grooves, so that upon its discharge it is forced into the rifling, where it acts as a seal to prevent the escape of the gas formed by the exploding powder and gives the shell the required rotary motion, which keeps it on its true course with its point always in a direct line ahead.—London Tit-Bits.

Motions of the Earth.

The earth has at least eight different motions. There is the rotation on the axis, making day and night; the inclination of the axis, making summer and winter; the revolution around the sun, making the year, and the motion resulting from the attraction of the moon, which shows itself more plainly in the tides. There are several other motions of less interest. Perhaps the most awe inspiring of all is the motion of the earth in space, dragged by the swiftly moving sun at the rate of 700 miles a minute.—Philadelphia Press.

WARNED BY MORGAN CASE.

Du Ponts Will Sell Explosives Only to Known Persons.

Philadelphia.—As a direct result of the shooting of J. Pierpont Morgan, the Du Pont Powder company of Wilmington, Del., issued orders to all its employees to sell explosives only to customers concerning whose identity they are certain.

The order applies to thousands of clerks, salesmen, managers of branch offices and keepers of magazines throughout the country and marks the first step taken by any of the great ammunition concerns to prevent their products falling into the hands of irresponsible persons.

Kills Snake and a Boy.

Yreka, Cal.—A half dead rattlesnake made a spasmodic attempt to coil when Mrs. Johnson Ahlgren, who had shot it, drew near with a party of children, at Somesbar, Siskiyou county, and everybody ran. In the flight Mrs. Ahlgren's revolver was discharged accidentally and Roy Donahue, eight, was shot through the back and killed.

Discusses Wedding; Dies.

New York.—Two hours after taking a headache powder Miss Reba Becker, eighteen years old, of 1727 Park place, Brooklyn, dropped dead. She was telling relatives at the time of her approaching wedding.

MODERN WARFARE IN THE TRENCHES

Armies Are Driven Underground to Escape Annihilation.

THE wonderful accuracy and power of modern artillery have driven armies underground as the only salvation from annihilation. At the same time the enormous numbers of men engaged extend the flanks so far that turning movements are often impossible, and battles must be decided by frontal operations.

In the wars up to the Russo-Japanese war in 1904-5 the campaigns consisted largely in maneuvering the armies so as to threaten the enemy's flank. Now the important advantages are gained by maneuvering the heavy artillery so as to bring a preponderance of fire to bear upon a definite length of the enemy's front.

The shattering power of high explosive shells can reduce to a rubble mound any structure on which they are brought to bear. Consequently the military engineer recognizes this physical limitation of the defense and adjusts his structures by utilizing mounds of sand or earth for parapets. The energy of the shell is largely used up in raising a cloud of earth, most of which falls back in place.

Instead of the dash and glory of historical warfare the soldier of today has the prosaic task of devoting over ten hours to trench work for every ten minutes spent in firing his rifle.

The principle of trench warfare consists in providing a number of lines of trenches so that if one is captured the next succeeding line can be held. By delaying the enemy at each successive trench time is gained to bring up reenforcements of men and artillery.

The artillery is depended upon for bombardment and for action against groups. Its long range and accuracy

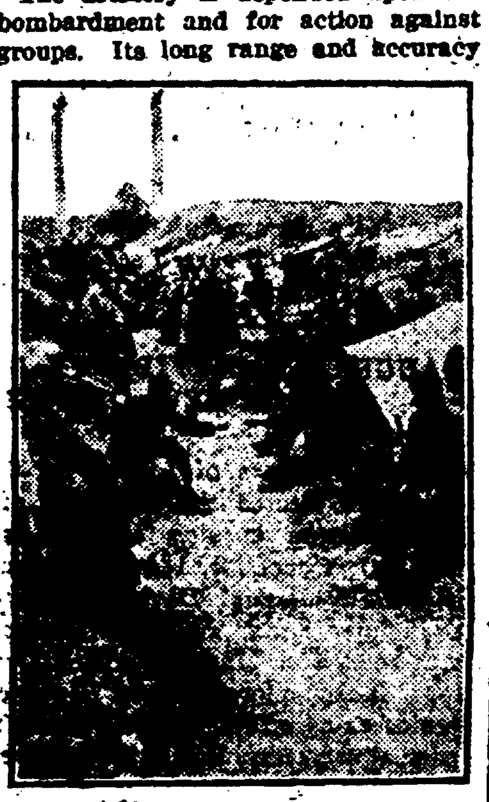

Photo by American Press Association.

FRENCH SOLDIERS IN A FIRING TRENCH.

permit the batteries to be placed on the reverse slopes of hills from one to six miles in rear of the advance lines. Here the guns are safe from observation except by aeroplane scouts, and the gun crews are further protected by parapets. So important is concealment that even in these protected locations the guns are screened by being placed in woods or orchards or by being covered with branches or with hay.

The man at the gun does not see his target. Information is telephoned in to the battery and calculation is made of the change in azimuth or elevation needed to correct the landing point of the shots. In this way the objective of the gunfire may be changed from point to point as the action dictates.

The close contact is maintained by the infantry, which depends upon the firing trenches for its effective work. These are deep narrow trenches with a steep bank on the side toward the enemy.

To give the man in the firing trench a still better chance to stop an attacking force the ground in front is covered with obstacles that will delay the enemy without affording any protection. Any device is used, but the best of all is barbed wire. It cannot be shot away. Even if cut it coils up and entangles the feet. As chance offers, barbed wire is crisscrossed between the posts until a formidable entanglement is obtained.

The trench guard cannot stay in the trenches during bombardment as the protection is so slight that the losses would be excessive. This object is secured by having a cover trench close by, a deep narrow trench from which entrance is obtained into underground shelters.

In these cellars, or bombproofs, the trench guard sleep, eat and live during their forty-eight hours at the front. New detachments are then brought up to the front line, while the old guard goes back to the reserve for four days' rest.

Troops for assault are gathered in the most advanced trenches during heavy bombardments concentrated in the vicinity of the point selected for attack. When the enemy's infantry and artillery seem to be driven to cover the signal for the advance is given. The attackers scramble up out of their trenches. Selected groups rush forward to cut the enemy's wire entanglements or to blow up the obstacles in front of his parapet. The rest follow close behind with bayonets fixed for the hand to hand struggle with the enemy.

COMFORT FOR SOLDIERS.

All Branches of Our Army Are to Use Cavalry Tents.

Because of the additional comfort which will be afforded the soldiers the war department has decided to equip all branches of the United States army with cavalry tents. The decision was reached recently after a personal inspection by the secretary of war of twenty different types of shelter tents which were set up in one of the Washington parks and thoroughly tested. While this tent is two pounds heavier than the one heretofore used by the infantry, it is so much larger and more comfortable than the old one that it is considered preferable.

Either two sabers or two rifles may be substituted for the ordinary collapsible poles in setting up one of these tents. This is considered a distinct advantage, for it makes it possible to cut down the weight of the haversack load on long marches.

Considerable complaint has been made in the past regarding the small size of the infantry tent. The cavalry tent, however, is sixty-five inches in length on the ridge, sixty-one inches wide at the base, and when supported on the collapsible poles stands about forty-three inches from the ground at the ridge. The canvas, which is of an olive drab color, is divided into two sections, which button together at the ridge and along the slanting end. A wide flap covers the buttons and prevents leakage. Each half has a row of buttons and buttonholes, so that any two sections can be used together. The collapsible poles are made in three sections. When the tent is not in use one of these poles and four pins are wrapped in each half of the canvas and become a part of the pack equipment of the individual soldier.—Popular Mechanics.

Making Coin Blanks.

To provide ingots for making one cent and five cent pieces, which are being coined in larger quantities every year, a new casting machine that turns out ingots weighing more than five times as much as those heretofore used has been placed in service in the United States mint at Philadelphia. In connection with this machine larger rolls for forming the plates from which the coin "blanks" are cut are also being used, the whole purpose of the improved equipment being to turn out more coins in a day. How important this is is shown in the fact that each year there is now a demand for approximately 100,000,000 cent pieces and 60,000,000 five cent pieces, or nickels. —Popular Mechanics.

Wireless Telephony.

When entirely perfected it is now seen that wireless telephony will be more perfected than the wire system, as the voice is carried much more clearly, and if desired the sound can be enlarged so that a whisper on the part of the sender will be received as a shout. With wireless telephony it will be impossible for a person successfully to disguise his voice, as every tone, syllable and shade of emphasis is carried with remarkable accuracy.

Well Censored.

Shortly after the war began a woman in England received a letter addressed to her by her husband. She opened the envelope, which had already been opened once by the censor, and instead of the expected letter she found a slip of paper bearing these words:

"Your husband is well, but too communicative."

The Cod Catch.

The cod is not exactly an aristocrat among fishes, but numerically and commercially he can hold his head up with the best of them. During 1914 the waters of the north Atlantic coast, from Georges Bank to Labrador, yielded 161,792,600 pounds of cod, and 1914 was by no means an unusual year.

Parrots as Sentinels.

The French are reported to have stationed parrots on the Eiffel tower to give warning against the approach of aeroplanes. The birds bristle and screech when the machines approach long before they are detected by human lookouts.

Swallowed the Bait.

Omaha detectives seeking to discover a man's past history sent him a fake dispatch saying he had fallen heir to $4,000,000. He was required to prove his claim and in trying to disclosed the desired information.

PRACTICAL HEALTH HINT.

Trachoma.

Trachoma, or granulated lids, is a dangerous disease of the eyelids and eyes. It is highly contagious and if contracted by one pupil in a school is apt to spread to many other children. When the disease is contracted a physician should be consulted at once, as the eyesight may be involved. Trachoma is a serious disease because it has a great tendency to involve the eyeball, producing inflammatory conditions in the interior of the eye. It also causes deformities of the lid and is especially liable to result in the turning in of the margin of the lid. The treatment of trachoma is mainly preventive. Every person suffering from trachoma should be careful to use only his own towels and handkerchiefs. Individual wash basins should be used. Children should not be allowed to play with toys that have been handled by a child suffering from the disease.

ENGLISH WOMEN AID IN THE WAR

"Votes Now Forgotten," Says Mrs. Pankhurst.

FIFTY THOUSAND IN PARADE

Government to Accept All Ready For Service—National Register Will Be Taken—Crime For Men to Be Doing Work of Women, Says Suffrage Leader.

London.—Fifty thousand women of England, accompanied by seventy-five brass bands and dressed in red, white and blue, the colors of the union jack and France, paraded from the Thames to Trafalgar square to demonstrate their desire to be enlisted in the services of their country in factories supplying war material. There was a remarkable scene when the minister of munitions, accompanied by Mrs. Emmeline Pankhurst, the suffragist leader, appeared on a platform overlooking the embankment along which the procession made its way.

Mrs. Pankhurst placed before Lloyd-George figures to show that 40 per cent of the munition workers in Ger-

Photo by American Press Association.

MRS. EMMELINE PANKHURST.

many are women and that 75 per cent of all food canned for the German army is tinned by women.

"Our fight for votes for women is a forgotten issue in the national crisis," said Mrs. Pankhurst. "We are willing to 'do our bit' for England by taking our place in the factories and releasing men for the trenches. We are willing to do any work the government may assign to us, day or night."

The minister of munitions told the deputation of women that something like 50,000 women already were working at various factories in the production of munitions. It was not a question of competition between male and female labor, he said, but of getting men and women to work together to help the country.

The first thing, continued Mr. Lloyd-George, was to get an adequate supply of machinery and tools, and the government was assuming the control of all machine and tool making establishments in the country. Women who came forward to serve must give their whole time. There must be real national organization for all women who were prepared to take up munition work.

Secondly, added the minister, there must be a sufficient number of women trained to direct and instruct others. In regard to wages, women would be paid the same piece rate as men, and all establishments would be under government control, while the government would see that there was no "sweated" labor.

Feather Currency.

Red feathers are used as a substitute for coin by some of the south sea islanders.

Self Protection.

Singleton—It seems to me you are paying your cook pretty high wages. Wedderly—Yes, as a matter of self protection. If I were to cut her wages she would leave. Then my wife would do the cooking.—Indianapolis Star.

CREIGHTON HALE

Creighton Hale's fame extends the length and breadth of the land as the man who plays the part of Jameson in Pathe's Elaine serial.

In playing this part he seems to have found a fitting vehicle for his art and has made a tremendous hit. He is the junior member of the great Elaine "firm" of stars; Arnold Daly, Sheldon Lewis, Edwin Arden, Lionel Barrymore, and Creighton Hale.

YOUNG FOLKS' CORNER

Jolly Book Title Game.

Assemble the players and announce solemnly that it has been decided by certain authorities that the books in some libraries are misnamed and also ascribed to the wrong authors and that this assemblage is requested to, at once and in unison, rechristen the volumes and restore them to their proper, if somewhat unknown, authors.

Then, standing in front of the guests, with a tablet and pencil, on which are inscribed the title of some well known book and its author's name, proceed as follows:

Suppose you have selected the book "Tale of Two Cities," by Charles Dickens.

Ask some player at random if he will assist you by giving you the name of some familiar object or animal. He may choose something in the room or from memory, but it must be a common noun, the name of some object or animal. He selects possibly the article "stove," and you proceed to write it under the word "tale" on the tablet. You leave intact the word "of" and ask some other mystified participant for a number, any number except "2." You are given "14" and use it in place of the "two" in the title. Then request a plural noun of some one, and possibly you receive "kittens," which is placed in lieu of the word "cities." Now say that the book being corrected as to title the right author must be found and will Mr. So and So give you a man's Christian name. He offers "Ichabod" an a girl guest presents "Poindexter" as a suitable surname.

With much ceremony you then announce that this company has decided in solemn conclave that the book, "Tale of Two Cities," by Charles Dickens, shall, hereafter, be known to the world as the "Stove of Fourteen Kittens," by Ichabod Poindexter.

Let each one in the party select a book and have it and its author renamed, and the combinations of words make the greatest and most irrepressible merriment possible.

What Boy Scouts Learn.

Boy scouts have always been taught to help humanity and service through the advantage of scout craft. They have acquainted themselves with the flower and bird folk so that they can differentiate between all species. They have been taught to single out the poison plants from the harmless ones and to classify the numerous varieties of flowers and plants. "Be kind to animals and conserve natural resources" has always been a motto of the boy scout.

Takes Things Easy.

"Does any one think your son has a future?" "Yes—the life insurance companies."—Life.

Now we'll be likely to hear more about macaroni "made in America."

The Heart of the House Is the Kitchen

The Modern Housewife Demands the Best Kitchen Equipment She Can Buy,

THE "SCIENTIFIC STERLING"

The Gas Range That Burns Coal

Has no equal for compactness, safety, efficiency, convenience and cleanliness—it is the modern range for the modern housewife. The "Scientific Sterling," bakes as well with gas as with coal—better than most ranges with either fuel. But it is not a "combination"—not a "double range"—it is built as a unit—one range burning both gas and coal. The "Scientific Sterling" is the one range you can take comfort in using all the year.

But the best part of the "Scientific Sterling" is this—you need not wait to own one. For a final payment of only $5.00, we will install the "Scientific Sterling" in your home.

OUR CLUB PLAN MAKES IT EASY

We have been asked how we could do it—give you eight full months to pay—give you thirty days to try the range—give you free installation with all piping and labor that would ordinarily cost at least $10.00—give you or your family a bill of sale without further payments in case of death or disability—give you the strongest guarantee ever sold with any range—and free inspection and instruction service, $5.00 first payment, $2.00 a week—without adding one cent to the $77.00—the cash price of the range.

During this Club Sale we will sell a very large number of *"Scientific Sterlings"*—both the manufacturer and ourselves have cut profits for quick sales. Our total selling expenses will be small—we save on storage, floor rent, advertising, salesmen's time, and other large expense—this saving we give to you.

After this sale we could not afford to make such liberal terms. This is the reason you can now buy a *"Scientific Sterling"* at the regular cash price, and get the benefit of all these savings.

Investigate the *"Scientific Sterling"* now—and let us have your order today. *It will pay you to act at once.*

L. P. SMITH COMPANY

13 E. First Street —Two Stores— 312 W. Broadway

THIRD OLDEST I. O. O. F. MEMBER

Volney K. Burr, One of Oswego's Grand Old Men, Celebrates Today His Ninety-first Year.

Westerday's Oswego Times describes one of the three oldest Odd Fellows in the world. The Times says:

"Volney K. Burr, one of Oswego's oldest and most highly respected citizens, will quietly celebrate his ninety-first birthday at his home, No. 162 East Third street, tomorrow. Despite the fact that he has passed far beyond the allotted age of man, he retains all his faculties and much of his stretngth, is able to be down town every day and is rarely ill or even indisposed.

"Mr. Burr was born near Watertown but when fourteen years of age started for Lockport. Arriving in Oswego he liked the place and has lived here practically ever since. When a young man he joined the Odd Fellows and is now one of the three oldest members of that organization in the world. He has held the office of financial secretary in Oswegatchie lodge No. 156, I. O. O. F., for the past forty years and is still able to attend to the duties of that office as carefully and as accurately as when he was first installed. In his long membership he has missed very few meetings and has been present at every special and regular meeting of the lodge for the past two years, besides being a constant evening visitor at the Odd Fellows' club. He is also a member of Oswego lodge No. 127, F. & A. M.

"During the fifties Mr. Burr was one of the fire wardens of the city of Oswego nad also served several terms as Supervisor of the Second ward, which then included everything between East Utica street and the lake. He was also a member of the old Board of Education and severd several years as its president."

DAUGHTERS OF LIBERTY ELECT NEW OFFICERS

The Daughters of Liberty of this city have elected the following officers for the ensuing term of six months: Councilor, Ida Davis; vice-councilor, Jennie Davis; associate councilor, Lena Wilson; associate vice-councilor, Mary Guernsey; junior ex-councilor, Minnie Gardner; junior ex-associate, Ophie Battles; financial secretary, Bertha Guyer; treasurer, Adella Westover; recording secretary, Doris Dievendorf; assistant recording secretary, Pearl LeMay; guide, Jennie Guernsey; outside guard, Naomi Tallman; inside guard, Kate Wheelhouse; pianist, Harriet Baker.

The reports of the financial and recording secretaries for the past six months were read at the meeting, and Adella Westover, Della Draper and Minnie Gardner, delegates to the state convention, tendered their reports.

JUDGE WILSON SENTENCED 3, THEN SUSPENDED TWO

Ed. Perkins, George Waterhouse and James Ralston, all charged with intoxictaion, were arraigned this morning in City Court. Perkins and Waterhouse were given sentences of 60 days in the county jail, which were suspended during good behavior.

Judge Wilson sentenced Ralston to 30 days in jail, and suspended the sentence when the man promised to get out of town at once.

THE QUIRK

Today, in addition to the great Mutual Masterpicture, "The Cup of Life," in five parts, featuring Bessie Barriscale and a competent cast, Pathe presents an authentic sea fight, entitled "War on the Sea," in which dreadnaugths are seen in action in the Black Sea. A big battleship is sunk and the bombarding of the Dardenelles is distinctively shown. This was taken by the Pathe camerman in the thickest of the fight and is authorized by the Allies. The funeral of Charles Becker, who was executed at Sing Sing prison, is also shown. Tomorrow, a Mutual Masterpicture, "The Devil," taken from the celebrated play of that name, and another reel of interest will be shown.

"The best seller," is the expression of merchants handling Black Baking Co.'s products. adv.

ALBANY GOSSIP DAY BY DAY

Chronicle of Events and a Forecast of What is Doing in Officialdom—Special Correspondence.

By Frederic T. Cardoze.

Albany, Aug. 6.—Notwithstanding the fact that the people of the State several years ago defeated the proposal to increase the salaries of the members of both houses of the legislature by a substantial vote, the Constitutional Convention has seen fit to present for consideration the same proposition again.

After the greater part of a day had been devoted to the consideration of the subject, the delegates voted that the amendment should be included among those which had run the gauntlet. While some opposed the proposition by argument and vote. These members took the position that the present salary was adequate, that since but about four months were devoted to legislation each year, $1,500 appeared the right figure.

The argument was also raised that since legislators had served for many years for $1,500 and excellent results had been achieved that as many years more might naturally be expected to pass with equally good results at the same salary.

Those who advocated an increase in salary for the law-makers, so that they might draw $2,500 instead of $1,500, pointed out that the fact that the cost of living had gone up materially, a legislator was naturally subjected to a greater expense while in Albany. It was also declared that by adopting the proposition, better men could be secured and that if a legislator was not required to pay out his own money to serve the State there would be more aspirants for the nominations for that office.

The fact was brought out during the debate that thre had not been a change in the salary rate for legislators for forty-one years, in the face of innumerable increases for State departmental heads and employes.

Other delegates took the position that the people of the State were not likely to change their position and that inasmuch as they had repudiated the proposition recently, after two legislatures had passed bills providing for the increased salaries for the law-makers, the present was not the time to endeavor to force a similar proposition upon them.

Still other of the delegates were of the opinion that the presence of all the legislators was not required during the entire legislative session. They declared that it was frequently a difficult task to secure a quorum and pointed out that in the past it had been the rue for the Speaker to notify all members of the Assembly, and the presiding officer of the Senate to apprise the individual members of that house that it was necessary for them to be in attendance at certain sessions. This conclusively illustrated that many of the members did not devote their entire time to the work of making laws while they drew salaries apparently for so doing.

The animosity of the people, expressed against the proposal to increase the salary of legislators, is explained by the contention that talk of legislative graft had embittered many against the law-makers. This explanation is accompanied by the declaration that of recent years only two members had been found guilty of misconduct in office, both were Senators.

TODAY WAS FEAST OF THE TRANSFIGURATION

Today was the Feast of the Transfiguration, when, according to the Gospel of St. Luke, Christ, accompanied by Peter, James and John, ascended Mount Tabor and there was transfigured with Moses and Elias. The disciples, overcome by the dazzling brightness of their transfigured Master, fell prostrate to the earth, hearing a voice from heaven saying, "This is my beloved Son, hear Him." The feast is observed by the Roman Catholic and Episcopal churches, but in the first named the solemnity is observed the following Sunday.

MASONS TO DANCE OUT DOORS NEXT WEDNESDAY

Baker's grove, at Minetto, will be the Mecca for hundreds of Amaranths and Free Masons of this city next Wednesday, when the annual outing takes place there.

One feature of the picnic will be the appearance of the Masonic band of Oswego, whose members propose to provide music for those who desire to trip the light fantastic toe. The band will be present in the evening at the time when the largest crowd is in the grove.

FOOD SALE TOMORROW

Let come good weather or bad weather. Circle No. 9 of the Ladies' Aid society of the First M. E. church will hold a food sale the entire day, tomorrow, at the Druse hardware store.

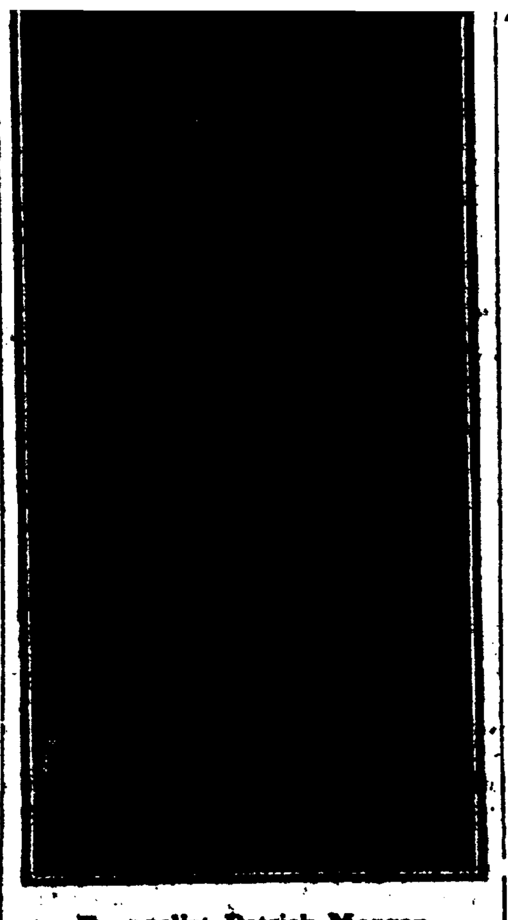
DEMSTER CAMP MEETING GROUNDS IMPROVED

The Ontario District of the Methodist church will hold its annual camp meeting on August 20th to 29th inclusive. This is about the usual time selected for the affair, which will take place as usual at Demster Grove in the beautifully remodeled grounds. A feature of the camp this year is that there will be no admission charged. A number of carpenters have been employed for some time past enlarging the dining hall and a dormitory has been constructed over the dining hall and a large number of outside verandas have also been built that will accommodate a number of people who wish to stay in comfortable quarters during the camp session. There will be a small charge for a bed in the dormitory and the outside verandas, weather permitting, will also be used to house the people.

The Rev. W. H. English of Oswego is scheduled to address the campers on Saturday, August 28th. He has not as yet selected his theme. One of the features of the encampment this year will be the annual meeting of the Epworth League, which will be held on August 22d to 27th. Among the speakers who have been selected to address the League during its annual session are the Rev. Dr. Ismar Peritz of Syracuse University, and Dr. W. S. Sheridan of Chicago. The latter is the General Secretary of the Epworth League. Dr. P. L. Tucker, Superintendent of the Syracuse District of the Anti-Saloon League, will also address the League. The camp promises to be a popular place with Oswego county Methodists and a larger number are expected to attend than ever before.



Evangelist Patrick Morgan

The man whose picture appears above is a convert to Protestantism. In a leaflet which he circulates he describes himself as a former Capuchin Franciscan Friar, who is a resident of Ottawa, Canada.

Concerning the evangelist, The Standard, a newspaper of Kingston, Ont., says:

"The speaker of the evening, Patrick Morgan, Editor of 'The Liberator,' Ottawa, gave an interesting and well delivered address which was listened to closely by the large audience present. There was no bitterness in the speaker's utterances. He is a tall, scholarly-looking man, with a voice that carries well and with a ready command of the English language, and he impressed his hearers with his earnestness."

His appearance in Fulton will be made at the Free Methodist church, State and 3rd sts., Sunday evening, August 8, at 7:30 o'clock. No admission fee will be charged but a silver offering will be taken up.

King and Commons.

King James I. of England, although keenly alive to his own divine right, yet recognized the power of the house of commons. Sir Robert Cotton was one of the twelve members to carry the famous declaration against monopolies to the king at Newmarket. When the king caught sight of them he called out, "Oh, chairs, chairs, here be twal' kynges comin'." His majesty mounted his horse on one occasion to find his usually quiet steed in a restive mood. "The de'il i' my saul, sirrah," said the king to the prancing brute, "an you be no quiet I's send you to the 500 kings in the house of commons. They'll quickly tame you."

One Thing Lacking.

He—Miss Oldgirl told me the other day she intends to be married.

She—That's right, she does. The trouble is she has never been able to induce a man to assist in carrying out the threat.—Richmond Times-Dispatch.

He Had Felt Slippers.

Old Lady (in shoe shop)—Have you felt slippers? Boy Assistant (solemnly)—Yes, ma'am: many a time.

4 NASHVILLE BANKERS LAY BLAME WHERE IT SHOULD BE LAID

Within the last few days the Chamber of Commerce has received a number of letters from Nashville which throw additional light upon the situation in that city. Letters from four bankers, who in view of the situation in their home city prefer to remain unknown but whose letters can be seen at the office of the Chamber of Commerce, show that there is a difference of opinion as to the cause of the failure in Nashville.

Banker No. 1 writes:

"In reply, I beg to say that the Commission Form of Government has been an unqualified failure in Nashville, but owing to the tpye of Commissioners who were elected it is hardly fair to ascribe all the trouble to the Commission form of Government. Two of the Commissioners are accused of appropriating city money to their own use and using city labor for the purpose of building their own homes. Another who has an interest in a furniture business sold large bills of goods to various city departments contrary to the statutes and neoptism seems to have run riot through all of it. There was no citizen organization interested in good government and no one seemed to take much interest in affairs. The people had the right of recall and ouster."

Banker No. 2 says:

"The failure in Nashville was due to too much politics and to the men elected. Unfortunately our business men have taken too little interest in our city affairs."

Banker No. 3 says:

"The trouble consisted in clothing inferior men with too great power. They cannot avoid the temptation to abuse it and misuse it. The great majority of voters in our city at any rate are not men of special attainment, and therefore in making a selection to fill these offices they vote for and usually elect men that are not sufficiently able to wield authority."

Banker No. 4 says:

"The success of any organization in the last analysis works back to the personal equation and the condition of affairs in Nashville today is attributable not to the commission form of government, but the manner in which affairs were handled. The commissioners have very broad powers, and it appears that when the head of one department made a proposition that the other heads voted for it through courtesy."

These four letters show that Nashville demonstrates again the truth of the statement that any government is as "good as the men elected under it, but as efficient as its form permits."

38 Business Men Enrolled to Defeat Commission Govt

The Business Men's League, formed in this city for the purpose of opposing the adoption of Commission government, now numbers 38 local business men on its rolls, according to good authority, and will issue a statement signed by all of the members in the near future. Those who profess to know the personnel of the league say that several members of the Chamber of Commerce are active in its organization and it is even rumored that one of the directors of the Chamber of Commerce is a member of the league. One man, who would not say definitely that he was a member of the league, but intimated as much, said recently that $1,500 was subscribed at the first meeting with which to fight the commission plan.

A Beau-Knot?

There once was a nice little shoe
That mused, "Yes, 'tis strange, but 'tis true—
When my mistress, so trim,
Goes walking with him,
I always untie—yes, I do!"
—New York Times.

The Exact Spot.

Lawyer—So you went out and waited for some time on the pavement. Now, did you strike the witness in the interim?

Defendant—No, I didn't. I pasted him in the jaw.—Baltimore American.

NEVER DESPAIR.

The most perilous hour of a person's life is when he is tempted to despond. The man that loses his courage loses all. But it matters not how poor he may be, how much pushed by circumstances, how much deserted by friends, if he only keeps his courage and with unconquerable will determines to be and to do what becomes a man all will be well. It is nothing outside of him that kills. It is what is within that makes or does not make.

Meals on a Man-of-war.

All food served on board a man-o'-war is carefully inspected and prepared under the close supervision of the commissary officer. Here is a typical Sunday bill of fare:

Breakfast.—Baked pork and beans, bread, butter, coffee.

Dinner.—Roast veal or roast beef and gravy, stewed tomatoes, mashed potatoes, bread, butter, coffee.

Supper.—Bologna sausage, cheese, potato salad, bread, butter, tea.

The menus of every ship are forwarded to the flagship every week so that the admiral may observe whether the men are being supplied with the proper food.—New York World.

Our Eyes and Reflected Light.

The human eye has passed through thousands of years of evolution until it has become best adapted to sunlight or skylight coming obliquely from above and resents strong illumination from any other direction. It is apparent that snow blindness, distress from white sand or water is not caused by the intensity of the light so much as by the fact that it is reflected up instead of down and is not stopped by the rather transparent lower eyelid. If the lower part of the eye is guarded with goggles no difficulty is found.

Without a Guide.

"I went to Jonesboro to see my father and mother the other day, Percy."

"By Jove! And how did you find them?"

"Oh, I knew where they lived."—Wisconsin State Journal.

EVENING TIMES FEATURES

We will begin shortly the daily publication of

Easy and Practical Home Dressmaking Lessons

Prepared Especially for Readers of

The Evening Times

by

The Pictorial Review Company

of New York City

And in addition, each issue will contain

Beautiful Half Tone Illustrations of the Latest Ideas in the Art of Correct Dressing for All Occasions

These two features are designed to please and benefit the women readers of this Newspaper and are EXCLUSIVE.

The advertising value of the features is that Fulton Merchants will benefit, as the Patterns are sold in the leading stores of the city.

The Prosperity Dawning Upon Fulton is Reflected in the Amount of Increased Advertising Space Used by Merchants in

THE EVENING TIMES

The why and the wherefore of this lies in the recognition of a fact—that Success comes in "cans" and not in "can'ts," and our advertisers know that The Evening Times has in stock a big supply of "cans."

IN RUINS OF HOUSE

French Use Furniture to Kill Their Foes.

BOTH SIDES WERE TRAPPED

Germans Pulled Through Riddled Ceilings and Clubbed by Invaders—One Frenchman Was Armed With a Leg of a Statue of Venus—Machine Guns Active.

Of all the tragic, intense minor engagements of the war, that of the fight by which the French captured the Chateau of Vermelles, at the end of fifty days' battling for possession of the town, is most thrilling. The correspondent of the London Post at the British headquarters in France tells of the fight as follows:

"The story of the struggle may seem incredible to those who have taken no part in this style of fighting. After several futile attempts at a direct advance the French commenced to carry a mine underneath the chateau, but it exploded just outside. An immense cavern yawned in front of them, and the bodies of Germans were flung in all directions. All that was to be seen of the enemy was the shapeless mass of what had been a man half driven through a garden wall."

Germans Crazed by Explosion.

The correspondent then describes the condition of the German soldiers caught in trenches which had been dug into the garden in front of the house.

"The men in the trenches instead of firing at them (the French) were groping about confusedly as though it were pitch dark, pawing at each other's faces and feeling about for their arms. The tremendous shock of the explosion so close at hand had blinded and deafened some and deprived others of their senses.

"Scarcely understanding their good fortune, the French leaped on the distracted men, and a weird struggle followed in the narrow trenches between the half crazed Germans and their assailants.

"Machine gunners in the chateau, with that happy indifference to everything, tilted their weapons over the sandbagged windows, determined to kill friend and foe together. The utmost depression, however, which could be given their guns only enabled them to hit odd corners of the trenches, but in their desperate attempt to kill something they fired belt after belt, sweeping to and fro that awful scythe of steel and, like Death himself, were furious at being outwitted.

Germans Hold Two Floors.

"The garrison of the chateau, irritated by the impotence of their machine guns, were dragging a couple of the guns out to play from the sandbagged porch. The Germans were unaware of twenty-five or thirty Frenchmen who had gained the shelter of the house walls. These, as the door of the chateau, which barred their hopes, so unexpectedly opened, leaped with a joyous yell upon the emerging Germans, who, encumbered by guns, tripods and belts, gave way before the onslaught and either were bayoneted or shot or escaped to the first story of the chateau.

"Thus there were Germans on the first floor of the chateau and in the cellar, with the French on the ground floor between them.

"After an attempt to carry the staircase leading to the Germans above had been flung back the French on the ground floor began to fire upward through the ceiling, and the Germans above them fired down. The Germans even managed to get off part of the belt of a machine gun, but the effort proved disastrous. Such a fusillade from below was concentrated on the spot that the ceilings were falling in every direction; the air was scarcely breathable with dust and smoke; men were collapsing, shot through the whole length of their bodies, and the din was indescribable.

Seize Leg Through Ceiling.

"Suddenly a man's leg protruded through the ceiling. A leap was made for it, and a couple of Turkos hung on to the boot. The Germans may have made a dash to rescue their comrade, but the ceiling was too riddled to withstand it. Another leg came through the ceiling, and a cluster of men settled on to it like flies, dragging the owner through the floor, his face scraped of all flesh on it as he came through the ceiling.

"Then the beams of the floor began rending and crashing. The upper stories of the chateau, already more or less in ruins, began to topple.

"Through the break in the floor slid a horrible confusion of masonry, furniture, Germans and guns. The French were outnumbered, but the men that came down with that debris on top of them were not well placed to make a fight of it, and the dreadful piece of carnage ended in favor of the attacking party.

"'We just killed, killed, killed,' said a French officer. 'We used anything that was there—pieces of furniture, pieces of chandeliers, anything. One man of mine killed his enemies with a chunk of marble—a piece of the leg of a statue of Venus.'"

He Is Still Going.

Because his wife left him Mike Comisky sat on a stick of dynamite at Franklin, Kan., and has not been seen since.

An Unexpected Meeting With a Long Lost Set of Dishes.

In the American Magazine the story of a curious coincidence is told in a letter written by Elsie B. Hart of San Gabriel, Cal.:

"In the early days in California very little china was used that did not come from the orient. A man whose home was in Folsom, who preferred the china of Europe, took advantage of a visit to England to order a complete dinner set ornamented with a design of his own selection. In the course of time this was packed and shipped to San Francisco by sailing vessel round the Horn, but after long delay the vessel was given up as lost and was never afterward heard from.

"Years afterward the Californian while traveling in China was invited to dine at the home of a missionary. What was his astonishment to find the table set with his own dishes, purchased so long ago! Concealing his surprise, he commented on the beauty of the china, and this called forth an explanation from his hostess. She told him the china had an interesting history, as it had been washed up on the nearby shore, and they had bought it from the man who had recovered it from the ocean.

"Surprising as it may seem, he never told his host that he was eating off his own dishes!"

THE UNIVERSE.

Our Own Stellar System and What May Be Beyond It.

In one of the latest conceptions of astronomers the stellar universe has a diameter of 10,000 to 15,000 light years, with a thickness of 2,000 to 3,000, and our sun has a place a little removed from the center. It embraces 30,000,000 to 50,000,000 stars within the range of telescopic visibility, with dark and invisible bodies whose number cannot be computed.

So far as can be determined the stars are surprisingly uniform in mass, the range of variation being not more than fiftyfold, but in density the range is from more than twice that of the sun to only one-millionth and in absolute luminosity or brightness from 3,000 times that of the sun to about one three-thousandth. The temperature rises from near absolute zero in the nebulae to 20,000 degrees C. in certain giant hot stars.

It is suggested that our universe may be not the only one and that the small Magellanic cloud, for instance, perhaps 30,000 light years distant, may be a relatively small universe of about 1,000 light years in diameter.

Another separate star system at similar distance is possibly, astronomers hold, the Andromeda nebula.—Newark News.

Ants Are Six Eared.

In the matter of some of their sense organs the ants are more than ordinarily endowed. Strange as it may seem, each ant has at least six ears. Aside from this multiplicity of ears, they are located in just about the queerest place imaginable—on the legs. They seem deaf to all sounds made by the vibration of the air, but detect the slightest possible vibrations of solid material. This is supposed to be to their advantage in that such things as approaching footsteps tell more of the possibility of danger than such sounds as are transmitted through the air. So sensitive are their feet that they detect the impact of a small bird shot dropped on the table from a height of about six inches and about fourteen feet distant from an artificial nest placed at the other end of the table.—St. Nicholas.

Rainbow Trout.

The rainbow trout is bluish above, silvery or golden below, more or less spotted with black on the body and fins and with an orange or red lateral band. It is doubtless for this varicoloring that it receives its name. It is more hardy than the English trout and accommodates itself to almost stagnant waters and has thus proved a success in many ponds which were regarded as fit for coarse fish only. In many places, however, it has caused disappointment by going down to the sea and never returning.—Philadelphia Press.

Meaning of Cemetery.

It is not correct to say that "cemetery" means the "city of the dead." The word is from the Greek "koimeterion," meaning sleeping place, not the place of the dead. There is nothing in the etymology of the word to warrant us in thinking that it was originally intended to convey the idea that the departed were really dead any more than there is in the old Hebrew term for cemetery, "bethaim," the house of the living.—Exchange.

Opposing Arguments.

"Why can't those two men agree in their dispute?"

"Well, you see, the skinny one's arguments are too thin and the big fellow's are too fatuous."—Baltimore American.

Color Blindness.

It is known that color blind people cannot distinguish colors, but the reason for this is not generally known. They cannot distinguish many colors, and most of them usually give the appearance of being gray. The cause lies in the constitution of the retina, which microscopically consists of rods and cones. If a certain part of the cones is wanting the sensation they arouse is also wanting. Even the normal eye has not cones fine enough to detect ultra violet rays and electric rays.

The Power of Sympathy

By ESTHER VANDEVEER

When the Spanish-American war broke out Ralph and Edgar Townsend, brothers, enlisted in the same regiment of sharpshooters and were assigned to the same company. One day they were out on the picket line sniping for the Spaniards. Their position was behind a stone wall, its continuity broken here and there. Ralph was on one side of a gap, while Edgar was on the other side, the opening between them being eight or ten yards.

Edgar concluded to make a dash to join his brother. He had passed safely over all but a couple of yards of the distance when Ralph saw a Spanish sharpshooter taking aim at his brother. Ralph had just emptied his piece or he would have shot the Spaniard. As it was, he sprang between him and Edgar and received a shot which, grazing the spine, paralysed his lower limbs. He was discharged from the service and sent home, where he submitted to an operation that partly restored his locomotive powers, but he was in a measure crippled for life.

As soon as the war was over Edgar Townsend rejoined his brother, resolving to devote the rest of his life to him. Ralph was twenty years old, Edgar twenty-two. Ralph would not admit that he was crippled and was very sensitive at the mention of his being so. As for Edgar making any change whatever in his life's plans on his account he would not hear of it, nor did Ralph seem to realise that he had sacrificed himself for his brother. He considered what he had done simply in the line of his duty as a soldier. Edgar, on the contrary, was impressed with the idea that his brother had taken a burden which he should have borne himself.

Nevertheless as soon as Edgar saw that Ralph was averse to such an interpretation of the status between them, he refrained from any mention of it, and wherever it was possible to conceal any sacrifice he made for his brother he did so. He soon came to studying Ralph's wishes, and wherever they conflicted with his own, made pretense that what Ralph wanted was distasteful to him.

Then came Edith Payne into the lives of the brothers. She was sympathetic with Ralph, but her heart went out to Edgar. The one she loved as one who needed her, the other she loved as one she needed. Edgar, noticing that his brother was daily growing more dependent on her, refrained from paying her any marked attention.

As time went on Edgar perceived that Edith was growing to be a necessity to Ralph. Moreover, he noticed that while Edith was devoted to Ralph, there were indications that her heart was setting toward himself. One day when he and Edith were speaking of Ralph Edgar said to her.

"I feel it my duty to say to you, Edith, that I have seen what perhaps has passed unnoticed by you. Ralph loves you."

The girl paled, and she had cause to pale. She loved Edgar and she knew that while his brother held this view, Edgar was lost to her. He would never stand between his brother and her.

"I hope," she said presently, "that you are mistaken."

"And I hope," said Edgar, "if you think you cannot respond, that you are mistaken. Our attentions to those dependent upon us often draw us to them with far greater force than we realize."

Edith sighed. She knew that the man she loved was endeavoring to persuade her to give herself to the man she only pitied. But she said nothing more. She knew what Edgar would have her do. She did not know his feelings toward her, but she surmised that he had no desire to possess her himself. Even if he had he would give her up to his brother.

Soon after this brief dialogue Edgar went away for a time, leaving Edith and Ralph together. Before his departure he said to Edith, "I hope when I return to find that you have decided to make Ralph happy."

It was thus that Edith was led to bear a part of the burden of the man she loved by giving herself to the man she did not love. She considered what he had said to her a command, and she would not disobey. When Edgar returned she told him that she and Ralph were engaged.

She looked Edgar in the eye when she made the announcement, hoping to see him wince. If it was a shock to him he concealed it so well that she was deceived. From that time she gave herself up more and more to Ralph's companionship, and when the wedding day came went with him to the altar a martyr.

Then Edgar, feeling that his brother no longer needed him as before, spent much of his time away from him. Some said he did not dare trust himself near his brother's wife.

As the years sped on Ralph Townsend grew more and more helpless, his wife more and more devoted to him. Ten years after his marriage he died. Those who knew of the sacrifice that had been made supposed that Edith and Edgar would quickly come together. They have been disappointed. Four years after Edith became a widow she and Edgar had not married. It is said that she illustrates Edgar's words to her years before, "Our attentions to those dependent upon us often draw us to them with far greater force than we realize."

Edgar is still a bachelor.

For Young Folks

Esther Morris, Handsomest Baby In Staten Island, New York.

Photo by American Press Association.

Recently in the borough of Richmond, a part of the city of New York, which comprises all of Staten Island, situated in New York bay, there was held a great baby show. Hundreds of little ones from all over the borough were entered for the various prizes. There were many prizes offered for the fattest baby, the most beautiful, the healthiest, the largest for its age, for the tallest and for the shortest, and all the classes were well filled. The charming little miss who captured the prize for beauty is shown in the accompanying picture holding the cup that was awarded her. Among so many handsome children it must have been a difficult question for the judges to decide. But they one and all agreed that Miss Esther Morris was worthy of the high honor. As you can see by the picture, Miss Esther is a young lady of exceeding beauty, but she is altogether too young to care about that, but was highly pleased with the handsome prize.

Paper and Pencil Game.

When your friends come give them each a paper and pencil and see how many can write the correct answers to these questions:

Name a battle found in every farmyard?
Name an uninhabited battle?
Name a battle unpleasant to barefoot boys?
Name two battles that are found in a forest?
Name a good luck battle?
Name a stimulating battle?
Name an observing battle?
Name a comfortable battle?
Name a college battle?
Name a wealthy battle?
Name a cleanly battle?
Name a suspended battle?

Answers: Cowpens. Wilderness. Stony Point. Fair Oaks and Seven Pines. Horseshoe. Brandywine. Lookout Mountain. Fort Pillow. Princeton. Rich Mountain. White Plains. Suspended Rock.

"Fool Monkey."

In this as in so many games it lends ease if the players sit in a circle and select a leader.

The leader then starts the game by naming an animal whose name begins with "A," as "antelope." The player on his left at once takes this up and adds to it another animal, the name beginning with "B," saying, "Antelope, bison," and passing the turn to his left hand neighbor, who repeats the list, adding, say, "Camel" for "C." And so it goes on, soon becoming a serious tax on the memory and alertness of the players.

Whoever bungles the catalogue or fails to find an animal with the letter for which he or she is responsible is hailed in mockery as "fool monkey," and this name must be mentioned by succeeding players instead of the animal which the delinquent ought to have uttered, but muddled.

Experience shows that the ranks of the "fool monkey" will soon be well filled.

Interesting Bird Items.

Birds seen eating army worms were: Robins, catbirds, meadow larks, chewinks, thrushes and wrens.

In Germany the owners of vineyards are encouraged by their government to distribute nesting material and erect birdhouses in their vineyards to attract feathered foes of insect pests.

The swiftest bird is said to be the frigate bird. This bird is able to fly, under favorable conditions, 200 miles an hour.

Earliest Watches.

Some of the earliest watches were made in Nuremberg. Their shape was almost round, and they were called "Nuremberg eggs."

Why the Owl Is Wise.

"As wise as an owl," my father said
One day while talking to Uncle Ted.

Now I've thought and thought about that speech,
And every time I hear one screech

I say to myself, "As wise as an owl,"
And wish that I at night might prowl

So I could learn to be as wise
And see as much with my wee eyes.

You know the owl can see at night;
They say he has such wondrous sight.

So he must know each elf that roams
And witches, kelpies, goblins, gnomes.

And that is why the grownups say,
"As wise as an owl"—'tis as plain as day.
—Philadelphia Record.

Hints For the Crochet Worker

Decorations For Towels.

Vandyke Border.—Abbreviations: Ch., chain; d.c., double crochet; tr., treble. Materials: Crochet cotton No. 24 and a No. 4½ steel crochet hook.

Pierce holes along the edge of the towel on the wrong side a quarter of an inch apart and work the border straight on to the material.

First Row.—1 d.c. into first hole, * 6 ch., 1 d.c. into next hole, and repeat from * all along, 1 ch., turn.

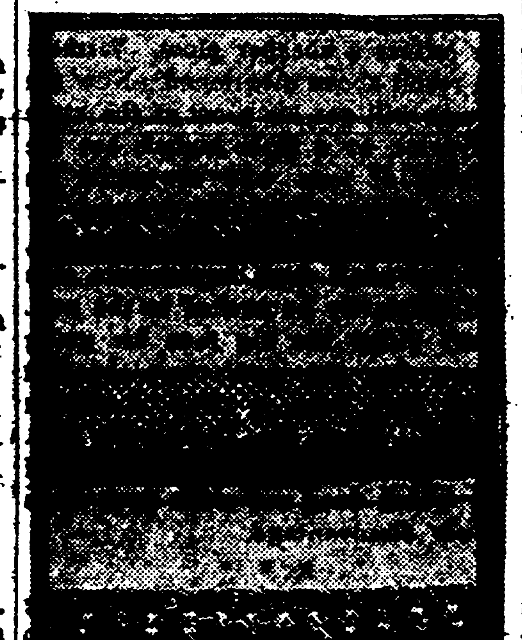
Second Row.—* 9 d.c. into each of three loops of chain, 5 d.c. into next loop, 6 ch., turn, 1 d.c. into fifth double crochet of first loop, 6 ch., 1 d.c. into fifth double crochet of next loop, turn, 3 d.c. into first loop of chain, 4 ch., 1 d. c. on last double crochet made, to form a picot, 6 d.c. into same loop, 5 d. c. into next loop of chain, 6 ch., turn, 1 d.c. into fifth double crochet of loop at left, turn, 5 d.c. into loop, 4 ch., 1 d.c. into last double crochet, 4 d.c. into same loop, 2 d.c. into next loop at left, 4 ch., 1 d.c. into last double crochet made, 2 d.c. into same loop, 4 d.c. into last loop at left, and repeat from * all along.

Narrow Lace.—Materials: Crochet cotton No. 24 and a No. 4½ steel crochet hook. Commence with 23 chain.

First row—1 d.c. into sixth chain from hook, 1 d.c. into next chain, * 3 ch., miss two chain, 1 d.c. into each of the next two chain; repeat from * three times more, 5 ch., turn.

Second row—2 d.c. into first loop of three chain, * 3 ch., 2 d.c. into next loop of three chain; repeat from * to end of row, the last double crochet being worked into the loop of five chain which turned the row, 5 ch., turn, and repeat from the commencement of second row.

For the Edge—Work 1 d.c. into first space, * 3 tr. into next space, 5 ch., 1



[illegible] TOWEL [illegible]

d.c. on last treble made, 5 ch., another double crochet on same treble, 3 tr. into same space, 1 d.c. into next space, and repeat from * all along.

Fan Lace.—Materials: Crochet cotton No. 16 and a No. 4 steel crochet hook. Work chain the width of the towel, add 5 ch.

First row—1 tr. into fifth chain from hook, * 1 ch., hook, * 1 ch., miss 4 ch., 1 tr. into next, 2 ch., 1 tr. into same place; repeat from * all along, 5 ch., turn.

Second row—1 tr. into first space, * 1 ch., 1 tr. into same space, 3 ch., 1 tr. into same space, 1 ch., 1 tr. into same place, 3 ch., miss one space, 1 tr. into next space; repeat from * all along, 5 ch., turn.

Third row—Miss two treble, 1 tr. into next space, * 1 ch., 1 tr. into same space, 3 ch., 1 tr. into same space, 1 ch., 1 tr. into same sapce, 3 ch., 1 tr. into center space of next group, and repeat from * all along, 1 ch., turn.

Fourth row—1 tr. into center space of first group, * 5 ch., 1 d.c. under the top of the treble just made, 1 tr. into same space, and continue making these treble with picot at top until there are six all in the same space, 1 d.c. under the chain between the groups, 1 tr. into center space of next group, and repeat from * all along.

Useful Crochet Edging.—Abbreviations: ch., chain; d. c., double crochet; tr., treble. This narrow crochet edging is useful for trimming lingerie of all kinds, and is illustrated actual width. Materials: White crochet cotton No. 40 and a No. 6 steel hook. Begin with 10 chain and join into a ring with a slip-stitch.

First row—11 d. c. into ring, 4 ch., turn.

Second row—Miss one double crochet, 1 d. c. in next, 4 ch., miss one double crochet, 1 d. c. in next; repeat from * three times, 4 ch., turn.

Third row—* 1 d. c. in next hole of four chain, 4 ch., 1 d. c. in same hole, 4 ch.; repeat from * twice, 1 d. c. in next hole, 8 ch., 1 d. c. in next, 1 ch., turn.

Fourth row—11 d. c. into loop of eight chain, 4 ch., turn.

Fifth row—Miss one double crochet, 1 d. c. in next, * 4 ch., miss one double crochet, 1 d. c. in next; repeat from * three times, 4 ch., turn.

Repeat the third, fourth and fifth rows once, and at the end of the eighth row only make 2 ch., to turn.

Ninth row—Like the third after the two chain to turn previous row are worked; work a double crochet into the second loop of previous fan on same side, then work 2 ch., and proceed as usual for third row. Work the fourth and fifth rows as usual, then to continue length of lace work from third to fifth row, joining each fan at beginnig of third row as described.

Border—Join the thread on to the first loop of a fan and work 3 ch. (for one treble); * 5 ch., miss a loop, 1 tr. in next, 6 ch., miss a loop, 1 tr. in next (on next fan), and repeat from * along the length of lace.

Second row—5 d. c. in loop of five chain, 1 d. c. in treble, 7 d. c. in loop of six chain, 1 d. c. in treble, and repeat.

Easy & Practical Home Dress Making Lessons

Prepared Especially For This Newspaper by Pictorial Review

REALLY SPORTY IN ITS SEVERITY.

Mastic cheviot is used for this smart coat with convertible collar and comfortable armholes. It is trimmed with buttons of self-material.

It is seldom that one sees the purpose of a coat so clearly defined as in this model of mastic cheviot. It is designed for early fall year. The front extends over the shoulders to the center-back, forming a back yoke, and there is a convertible collar that can be arranged in two or three different ways. The large armholes suggest comfort in the highest degree, and the sleeves are finished with turn-back cuffs of self-material.

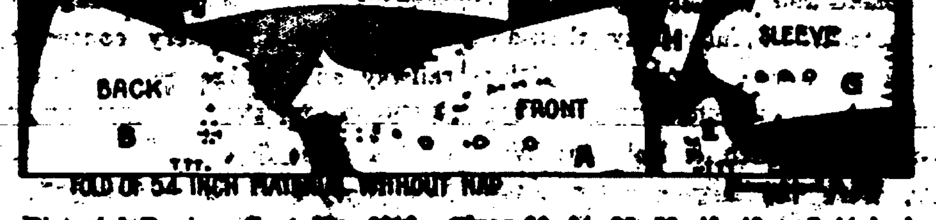
It takes 3¼ yards 54-inch material to reproduce this coat in medium size. Since the cutting is such an important item, today's lesson in dressmaking will be devoted to that feature of the development. First fold the cloth, then place the back on the lengthwise fold. To the right of the back and on a lengthwise thread the front is laid and following this is the collar, along the fold.

At the extreme right end of the material on which the sections of the pattern are being laid the sleeve is placed and to the right of this the cuff. Provision is made for giving to the upper edge of the cuff a curved effect, if preferred to the straight finish shown in the illustration.

The underfacing runs parallel with the selvage edge of the goods, and the cuff is placed on a lengthwise thread.

Coats of this design are used extensively for traveling. Much of the joy of the week-end trip lies in the possession of smart clothes, and these coats are among the smartest of advance models in outer garments.

One of the feminine touches that one finds accompanying the sport coats is the neckpiece of tulle. One of the extreme novelties for the coming season is a ruff of black tulle, with a moderate frill standing up above a folded choker collar of ribbon, while below this collar and band fall three full, overlapping, picot edged frills of the tulle, the lowest covering the shoulders and falling almost to the elbow.



Pictorial Review Coat No. [illegible]. Sizes 32, 34, 36, 38, 40, 42 and 44 inches bust. Price, 15 cents.

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.

THE KITCHEN APRON.

How to Choose Materials For This Protector That Are Becoming.

In the apron that protects the gown while cooking there is possibility for the utmost ugliness, so this garment should be chosen with an eye to its effect with other things. A blue and white checked apron only looks well with a blue and white dress and the statement holds good with other contrasts. On the other hand, an apron in the solid color that forms the dress trimming is very neat, and if it is a bib pinafore of coarse white butcher's linen it can be used with various gowns. Brown holland is also an adaptable material, and if the apron is only assumed for a moment and put on over a good dark dress it is a good thing to have it of black calico. The model of the apron must be of a generous sort, but if it is shaped to the figure and made neatly it can still be as pretty as a gown. Colored pipings could also be put with white or black, although the single color will wash better.

Most beautiful housekeeping aprons are made of yellow pongee in various English pinafore designs, which is to say, there is always a bib. The smock apron which goes over the head and hangs full below the knees is very easily made at home, and these can be real beautifiers if they are of white, yellow or robin's egg blue rajah, with a little embroidery about the neck and armholes.

Very useful pinafores—the sort of protectors needed for pickling, preserving and any other hard cooking stunt—are of oilcloth, with several convenient pockets and braid edges.

If smartness is considered the material of the apron and cap should match, except where the former is of oilcloth, which is too hot to put over the hair. But a white cap is always dainty and convenient. A mob crown and a straight or shaped face frill is the model used, but the ribbon band that trims the dressier of these caps is, of course, left off with the genuine housekeeping article.

What is called the Dutch cap, this with the face frill cut away at the forehead and very deep at the ears, is a very becoming style for pretty faces. Gingham sweeping caps and muslin breakfast caps are both made in this style.

The Proof.

Stella—Is she a cat?
Bella—Yes. She has had nine men save her life.—New York Sun.

THE HUMAN HEART.

The human heart is like a millstone in a mill; when you put wheat under it, it turns and grinds and bruises the wheat to flour; if you put no wheat it still grinds on, but then 'tis itself it grinds and wears away.
—Luther.

AN AFTERNOON GOWN.

Dotted Cream Net Makes a Charming Frock For Summer Femininity.

HANDSOME [illegible]

Dotted cream net combined with hello pussy willow taffeta is the material used in this charming afternoon frock. A deep tunic accordion, plaited and of irregular length, falls over a plaited foundation of cream colored daphne silk. The tunic is finished with two wide bands of the taffeta. The bodice is simple, crossing in surplice effect with a girdle of taffeta, which ascends in a point very high on the right side. Two points of taffeta also trim the back.

Watches Are Sympathetic.

Superstition or not, I am half sure the watch is alive and knows its owner; that it has some sort of sympathy with the person who carries it. Do you not know the bitterness of sending your own watch to hospital and harboring another—a patient—in your pocket? It lies—always. The scientific man reduces the whole matter to rhythmic motion. To put it roughly, the watch likes—or does not like—your particular skip, jump, stump or decent walk. Really the scientist has nothing much more to say about it as a conclusion, but that—rhythmic—motion. The touch of the watch on the heart.—London Chronicle.

Care of the Baby In Summer

Summer Complaint.

[Prepared by the children's bureau, United States department of labor.]

Most mothers have leared to regard diarrhea as one of the most dangerous ills of babyhood. Thousands of babies die of this disease every year, largely in the hot weather months—a fact which has gained for this illness the common name of "summer complaint." The deaths from this disease begin to increase in May, and the number grows rapidly in June and July and reaches its highest point in August, then decreases rapidly as cool weather approaches. It is prudent, therefore, for mothers to be on guard at the beginning of summer and to do all in their power to prevent the onset of this illness by exercising great care in feeding the baby and by keeping him as cool and quiet as possible. In all illnesses prevention is far better than cure, but this is particularly true with infant diarrhea, because the second attack comes on much more readily than the first. Also the baby's growth is seriously interfered with at a time when it is proceeding most rapidly.

To prevent summer diarrhea in babies first feed the baby on the right food in suitable amounts at proper intervals and in no other way; give him plenty of pure, cool water to drink between meals; keep him out of doors as much as possible in cool, fresh air, dress him lightly and bathe him frequently.

Another important part of keeping the baby well is to protect him from flies and mosquitoes, which frequently carry disease about. It is believed that one form of infant diarrhea is distributed by these household pests.

The healthy baby usually has one or two bowel movements a day. If this number is increased to four or more it is time to take measures against sickness.

It is well to remember, however, that the bowel movements of a baby fed entirely at the breast are normally more frequent than those of a bottle fed baby and that a slight increase in the number of movements is not so serious a matter to a baby at the breast as to one artificially fed. A baby fed at the breast does not usually have diarrhea, and when such a baby shows signs of digestive disturbance it is usually because he is overfed, either he is nursed too often or at irregular intervals, or is allowed to nurse too long at one time. When he does have diarrhea the time between nursings should be increased to four hours, and the times at the breast reduced to five or ten minutes. If the bowels continue loose the breast should be withdrawn entirely for several feedings if necessary, giving the baby instead cool drinking water at frequent intervals. In this case the mother should pump her breasts at the regular nursing times, both to keep them from drying up and to prevent their caking.

Bottle fed babies are the most frequent sufferers from summer diarrhea, and this fact furnishes another strong argument in favor of breast feeding. Diarrhea in a bottle fed baby is also best treated by reducing the amount of food. The bottle should be omitted for eight, twelve or twenty-four hours, according to the severity of the attack, and in place of the milk there should be given as much boiled and cooled water as the baby will take. Food should not be withheld for more than twenty-four hours, without the advice of a doctor. When the bottle is resumed the food should be much weaker than before, water should be substituted for at least half the milk previously given. The milk should be skimmed and the sugar omitted. The return to the former feeding should be made gradually by adding a little more milk each day and beginning to add sugar. The more severe the attack has been the more slowly should changes be made.

If the baby is on "mixed" feeding—that is, partly breast and partly bottle fed—the bottle feedings should be omitted if diarrhea appears and the breast given once in four or five hours, with nothing but drinking water between meals.

The children's bureau publishes a pamphlet called "Infant Care," which is sent free to any one sending a request to the chief of the children's bureau, United States department of labor, Washington. This pamphlet contains some simple directions for the care of the babies in summer, which may help the mother to prevent summer diarrheas and other ailments of infancy.

It should be understood that whenever possible the baby should be put at once under the care of a doctor. If the mother in the city has no physician she should take her baby to the nearest infant welfare station, where she will be well advised as to his care.

Since the country mother does not usually have access to an infant welfare station and is frequently far away from a doctor, she should use every effort to keep the baby well, but if serious diarrhea occurs a doctor must be procured without delay.

To Clean Sinks.

Coal oil will clean badly discolored enameled sinks or bathtubs and also will remove fresh paint stains.

TODAY'S FASHION NOTE

The miss whose delight it is to own a velvet suit will be enraptured over this design in Panama blue velvet. The jacket is trimmed with vest and collar of cream colored cloth, while the full skirt is box plaited. Fve yards 40-inch velvet make the suit.

Pictorial Review Coat No. 6073. Sizes, 14 to 20 years. Price, 15c. Skirt No. 6323. Sizes, 14 to 20 years. Price, 15 cents.

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.

The Kitchen Cupboard

SOMETHING NEW.

Cherry Cheese.

STONE ordinary red cherries and chop them very fine, reserving all the juice. For each pound of fruit add half a pound of sugar. Simmer until a smooth mass is formed, stirring all the time to prevent burning. It is a good plan when making this or any other sweet which requires long cooking to place the pan in a moderate oven, where it may remain several hours, simmering slowly, with no danger of scorching. Try the "cheese" by placing a small quantity in the refrigerator. When cool it should be quite firm. This conserve is delicious served in slices with whipped cream and white cake. Gooseberry cheese is made in the same way.

Raspberry Parfait.

Mix one cupful of powdered sugar with one quart of raspberries and mash through a fine strainer. Add to the juice one-third box gelatin which has been melted in cold water. Whip a pint of cream and beat the salted whites of three eggs stiff, mix the cream and whites together and fold it into the juice as it thickens. Freeze without churning in a mold packed in equal parts of ice and salt in a freezer.

Iced Rice Pudding.

Wash and drain one-half cupful of rice, cover with two cupfuls of cold water and let it boil for twenty minutes. Drain and put in a double boiler with one cupful of milk. Cook until the rice has absorbed the milk and is very soft. Then press the rice through a sieve and return to the saucepan. Beat the yolks of three eggs with one cupful of sugar and add to the rice. Cook, stirring until it begins to thicken, which should take but a couple of minutes. Remove from the fire, add one teaspoonful of vanilla extract and one teaspoonful of lemon extract and set away to cool. Add two cupfuls of whipped cream and freeze.

Cheese Souffle.

Melt a tablespoonful of butter, stir into it two tablespoonfuls of flour, add a pint of milk, stir until thick and smooth, then add one cupful of breadcrumbs and one-quarter pound of American cheese. Season with salt and pepper. Remove from the fire, add the yolks of four eggs, mix, then stir in the well beaten whites of the eggs. Turn into a buttered baking dish, bake in a quick oven until a golden brown. Serve at once.

AUTO RAMMED BANK; 5 HURT

Men Were Hanging On All Round Chassis; Driver Lost Control and Car Dashed Against Bank.

Mirney Cacrey and five men whose names could not be learned today were badly shaken up and bruised early last evening when a Ford automobile, the property of Caffrey, in which they were riding, turned turtle on the west river road near the Washburn farm. The men were riding on the stripped chasis of the car, according to stories told by witnesses and were hanging on to the frame work. When the machine rounded a curve near the Washburn place, witnesses say, two of the men lost their grip and were catapulted into the road. A little further on, the driver lost control of the machine and it ran up a bank before turning over. Some of the men were thrown with great force into the road and others were pinned under the car. The car was raised quickly and the men had disappeared before Chief Dyer, who had been called by residents of that vicinity, arrived.

Witnesses told the chief the car was making about 60 miles an hour when the accident occurred and the men's escape from death was nothing short of miraculous. A man named Davis was said to be a member of the party, but none of the other men were known to the witnesses. This is the fifth accident along the west river road in less than three weeks.

MARKEY PULLEN HAS BIG BIRTHDAY PARTY

Mrs. Patrick Lilly of No. 65 North Seventh st. entertained a number of young men at her home last night at a birthday party in honor of her nephew, Edward Markey Pullen. The guests enjoyed an elaborate supper which was served in the dining room decorated with flowers. During the evening Lawrence Ranger sang several pleasing solos. He was accompanied on the piano by David Carroll. Harry Quirk rendered a cornet solo. Later in the evening cards and games were enjoyed. Those present were Edward M. Pullen, Olovier Pullen, Lawrence Ranger, Harold Green, Harry Quirk, Earl Dempsey, Lester Gillespie, William Branche and David Carroll. A flash light picture was taken of the group at the dining table.

PEOPLE'S OIL AND FUEL CO. INCREASES STOCK

The People's Oil & Fuel Company, which recently established a distributing station in this city, filed notice in the County Court yesterday that it had decided to increase tis capital stocw from $50,000 to $100,000 by the issue of cumulative six per cent. preferred stock. The company was induced to erect a station here by the Chamber of Commerce and the plant was built by a local contracting firm.

HE FEELS LOST

This morning's mail brought a post card written by the Rev. M. G. Buck of this city, who is now at Cleveland, N. Y. Mr. Buck asks that The Evening Times be forwarded to his present address, and he adds: "I feel lost without it. Having a fine time."

A Clam That Pearl Divers Fear.

All sorts of superstitions prevail among the pearl fishers of Ceylon, and a large business is done by sorcerers who sell charms to restrain the appetite of the sharks and to drive away the diabolical stingrays. Another peril which the diver dreads more than either stingray or shark is the giant clam that weighs nearly half a ton when full grown. It will snap off a man's legs like pipestems if the victim chances to thrust a limb between its open jaws, or, at all events, will hold him until he drowns miserably.—London Globe.

GERMANS DRAW NET TIGHTER ABOUT TROOPS

(Continued from Page One)

the Balkan states, which remain neutral, while still others look for a big offensive against the Franco-British-Belgian line in the west. All of the observers are of the opinion that wherever the new operation is begun it will be on a big scale.

An Amsterdam dispatch to the Exchange Telegraph Company says the announcement of the fall of Warsaw caused great demonstrations throughout Germany.

The official bulletins, the dispatch adds, indicate that the Russians retreated in good order and that the invaders found little booty and nothing of military value.

Emperor William has sent a congratulatory message to Prince Leopold and the King of Bavaria. Extraordinary scenes of enthusiasm were witnessed in the German cities.

Fall of Warsaw Places Great Shops in German Hands

Berlin, Aug. 6.—The fall of Warsaw places in the hands of the Germans the principal maritime shops and munitions supplies plants in Poland and leaves to Russia no other shops nearer than those along the Petrograd-Warsaw-Kherpof Railway.

For years the aWrsaw shops supplemented by those of Lodoz and Vilna, have been the chief contributors to the industrial development in Poland and Western Russia. IIt is estimated that fully fifty thousand mechanics were employed in the Warsaw shops, and building trades The works of Gerlach & Pulst, at Warsaw, were the largest machine-tool works in Poland, and this firm was conducting, prior to the war, its manufacture of machinery for making machinery in strictly American lines. This same establishment, by reason of manufacturing in series, has been able for several years to offset German competition and had in consequence earned a hearty share of German enmity. Unless the valuable plant has been destroyed by the retreating Russians it is fair to assume that the Germans will turn the Gerlach & Pulst shops to making munitions for their own account.

Other noteworthy machinery works at Warsaw are those of K. Rudzki & Co.; Rohn, Zielinski & Co. and Borman, Sdwede & Co. These four great plants are among the best in their lines in Europe and were engaged in all lines of machinery construction, railway and bridge construction and equipment for shop installations. The loss of these fine works will in itself be a heavy blow to the Russians.

With the loss of the Polish plants Russia must now appeal even stronger to othe shops at Petrograd, Moscow, Khehoff and Sebastopol. The Riga works are in danger of going the same as those of Warsaw, and with the loss of the Polish plants the Russian army has no source of supplies nearer by railroad than thirty hours' travel.

Expert Advice for the Automobile Owner

Queries and Replies Covering Matters of Importance to the Man Who Runs a Car

What increase in power can I expect by using ether in gasoline and in what proportion is it used to gain the best of results?

The use of ether in fuel will give a slight increase in power, due to the more rapid propagation of the flame. One-half pint of ether for each ten gallons of gasoline is used for this purpose, but it is not recommended, as it is not economical. For getting easier starting a mixture of one-half commercial ether and one-half gasoline is carried in an oil can. This can be squirted into each priming cup for the initial explosions. The can must have a cover on the spout.

How will incorrect wiring affect my motor?

The effect of incorrect wiring on the motor depends on how the wires are misplaced. For instance, if the high tension cables were changed around so that no one of them went to the right plug it would be impossible to run the motor, although an occasional explosion might be obtained. If two or three of the high tension wires were interchanged, but one or more were left on the correct plugs, then the motor would run on the cylinders in which the latter were. Where a dual system is employed the wires of the battery system may sometimes be misplaced without interfering with the operation of the magneto and vice versa. As a rule, however, the changing of the wires will result in the whole ignition system becoming inoperative.

Has a long stroke motor any advantages over a short stroke motor?

Yes. The gas after ignition has greater chance to give up its energy to the piston. A greater volume of gas may be gotten into the cylinder without increasing the bore. This means more power for the same piston speed.

How can I take up the end play in a crank shaft without putting in new bearings?

It is best to replace the bearings when end play develops, but if this is not desirable the play can be removed by moving the thrust bearing to one side enough to compensate for the wear. The thrust is taken by the center main bearing, which is easily distinguished by having large flanges on each side. Remove the bolts holding the bearing to the crank case and file out the bolt holes enough to permit the bearing to be shifted. Then replace the bearing and tighten the bolts carefully.

How will running with retarded spark make the water boil in the radiator?

Operating a motor with retarded spark will cause overheating by retarding and prolonging the combustion of the charge throughout the power of expansion stroke. Thus the cylinder walls are exposed to the action of the burning gases during the whole of the stroke instead of only during the time the piston is in the region of upper dead center, as is the case when the spark is properly set. If the spark is advanced to the point of most efficient operation the spark will occur some time before dead center and maximum pressure will be reached and the combustion nearly completed just after dead center has been passed. During this time, since the piston is near the top of the stroke, the amount of surface exposed to the exhaust gases is a minimum, and, furthermore, at this point in the stroke the compression is at its height, and combustion takes place with greatest rapidity. Contrast these conditions with what happens when the spark is greatly retarded. Let us assume that ignition occurs when the piston has half completed its stroke. At this point the compression is lower, and combustion is therefore slower and will probably not be completed until after the exhaust valve opens. The hot gases are in contact with nearly the whole of the cylinder wall surface for practically one-half revolution.

But this is not all. When the spark is retarded, as in the instance just mentioned, the motor does not develop full power, therefore for a given load on the motor the throttle must be opened wider and more gasoline and air must be supplied. The extra heat generated by the combustion of the increased amount of fuel thus adds its share to the already overheated motor.

My car is equipped with electric lights and would like to know if dry batteries would work the head and tail lights. If so, how many and about how many hours would they last?

Dry batteries are not suited for lighting the head and tail lights. This method would be entirely too expensive, as the number of batteries you would require would be great and their life short. Take your storage battery to a battery repair man that you are certain is an expert—if possible take it to a service station maintained by the maker of your battery—and have it examined. It may be that all it needs is an overhauling to make it as good as new. But even if you must buy a new battery it is better to do this than try to use dry cells.

OUR WASHINGTON CORRESPONDENCE

News Mostly of a Political Nature From the Nation's Seat of Government for Times' Readers.

Washington, August 6. (Special the decrease in our exports of agricultural implements—from $40,6000,000 in 1913, a epublican year, to $10,000,000 fiscal year 19155, a report of the Department of Commerce says: "Another contributory factor was the recent establishment of great plants in Russia and France, financed and controlled by American capital, for the manufacture of farming machinery." This is but another instance of the Democrats placing the blame on a condition of affairs which they created. By placing farm implements on the free list they encouraged American capital to go abroad, erect mills and employ foreign labor, after having either closed up its mills, or reduced the number of hands employed here. Corporations like the International Harvester Company can possibly afford to do such a thing. A representative of this company, appearing before the Ways and the Means Committee, said that the International needed no protective duties, but he hoped the committee would give protection to the numerous small companies in this country. The Republicans gave the small men a protective duty of 15 per cent which enabled them to run. Then came Mr. Underwood, with his bunk for farm consumption. Free trade in farming implements would give the farmer a cheaper plow. Witness the result above mentioned. Now the farmer will get his plow at the same old price, or a little higher, but the number of men who consumed his farm products will be reduced, or their purchasing power decreased, and the small farm implements men will ultimately be pushed to the wall. Don't blame the big men for going where they can manfacture cheapest when they have a free American market. Blace the Democratic law. It is an unusual Democratic tariff law which does not work poth ways to our disadvantage.

SENT TO PRISON AT 16; IS PARDONED AT 27

Chicago, Aug. 6.—Governor Dunne has commuted the sentence of James Formby, Jr., a young man serving a life sentence in connection with a murder committed by another.

Eleven years ago young Formby, then only sixteen, participated in a saloon hold-up. Three other boys took part. The shot which resulted in the killing was fired by one of the other boys. Formby was outside of the saloon when the shot was fired—nearly a block away, in fact, it is said, he was unarmed. But he did not escape the law. Prison incarceration has told upon the boy's frame and it is asserted that he is in the early stages of tuberculosis. His plea direct to the Governor, done in beautiful scroll work, attracted the attention of Governor Dunne and the investigation that followed determined the Governor to commute the young man's sentence.

THE ELECTRIC CO.

Home Economics in Rural Schools

One progressive, hustling county in Missouri has employed a "county woman," the first one in the United States, just as the county adviser, "Sam" Jordan, whom it hired four years ago, was the first to be employed in any county without outside help. Theduties of this county woman are many and varied. None bid fair to bring greater results than her efforts to rescue many farm women from the lack of opportunity they have had of learning to cook and to sew.

The Pettis County Home Makers' Club really deserves the credit; the men happened to have the sense to realize a good thing when they saw it and to foot the bill without a murmur. Of course, back of the Home Makers' Club is Sam Jordan, lean of body, wrinkled of face, making no claim to being a beauty, but shrewd to the point of canniness and gifted agriculturally to the point of being able to make the most obtuse learn.

If you drive through the countryside of Pettis county today you will encounter farmers who are not only prosperous but whose digestion is sound and whose sleep is unbroken by indigestible food. The day of poor cooking has passed, never to return. But the start was not made in the farm kitchen, as might be thought; it was made in the country school. The members of the Home Makers' Club had wisely decided that once they got their girls interested in home economics and home subjects it would not be long before the older homemakers would likewise take up the work.

There are 96 school districts in Pettis county; and of these, 34 immediately signified their desire for special home economics work in the schools. Furthermore, they backed up this desire by raising their part of the county woman's salary, and cheerfully furnished the meager equipment necessary for this work.

Visiting two schools a day, the county woman makes her rounds. O none day the girls of the country school have lessons in cooking; on another day the subject under discussion is plain sewing.

The start which has been made is an object lesson to others, and already the onlookers have begun to imitate. Rural America has paid all too little attention, it must be admitted, to its manner of living. Because he produces the foodstuffs of the world, the farmer has paid little attention as to how his little share of these foodstuffs was prepared and served in his own home. The old story of the farmer who, when asked what he did with all his fruit produce, answered, "We sell what we can, and what we can't sell we can," has been laughed at so often that until recently nobody ever stopped to investigate how the canning operation was carried on. But at last the farmer has been arousedto the realization that he is entitled to just as good and as digestible foodstuffs as the city man, and that there is a rectangular shaped island of refuge—in the form of a kitchen, properly presided over—from which he may sight the promised land of perfect digestion.

FUN RAYS

By Ray I. Hoppman

SORROWFUL WAIL

BACKWARD, turn backward! oh, Time, in your flight. Make me a boy again just for to-night. Let me forget that the gas bill is due (dod-gasted bills make a fellow feel blue). The wife needs a dress and the kidlets need clothes. I'm chock full of sorrows and teardrops and woes. The high cost of living will drive me insane. Oh, Father Time, make me a youngster again. The papers are full of the horrors of war. I'm tired of reading of scrapping galore. I want to forget all about tango teas. Oh! Father Time, make me a boy again, please. I'm tired and weary of politics, too. I want to repeat what I once used to do. Oh! take me once more to the old swimming hole, for winter is coming and then we'll need coal. The roof needs repairing, the butcher will sue—oh! thunder and blazes, now what can I do? My daughter from college is dropping her "R's." She soon will be married, I'm thanking my stars. My wife joined the "vote seeking women's rights" throng—it's nothing but argue the blessed day long. The furniture man wants a dollar each week. Now, where is it coming from, gentle friend, speak? I long for the taste of a ten cent cigar—the three for a nickel kind give me a jar. The barber's dull razor feels just like a hoe. I dare not complain, 'cause he trusts me, you know. Backward! turn backward! oh, Time, in your flight. Make me a boy again just for to-night.

Flippant Flings.

The old Liberty bell, at least, is all that it is cracked up to be.—Boston Record.

"Is any man's love worth $2,000,000?" asks Clara Morris. Well, that's for the courts to decide later on.—Washington Post.

Some ingenious Yankee ought to turn an honest penny during this war by inventing meters for the gas bombs.—Cleveland Plain Dealer.

Officials in the California State Insane asylum assert that baseball cures insanity. One had supposed it caused it, but maybe this is a homeopathic principle.—Exchange.

By Comparison.

"Dubkins is a great comfort to me."

"I don't see how you can say that. He's the most tiresome chump I have ever met."

"That's just it. Although I don't amount to much, it's true, every time I look at Dubkins I feel that I could amount to him."—Birmingham Age-Herald.

Settled the Difficulty.

An insurance agent had vainly tried to persuade a man to insure his valuables against burglary. "A safe's all very well," he admitted, "but look at the constant trouble of locking up and unlocking to see if your things are all right."

"I've got over that difficulty," declared the weary listener.

"Indeed!" said the agent incredulously. "How?"

"I've had a window put in the safe," growled the other.

Seek Pledges to "Talk, Think and Work" Patriotism.

Washington.—The aid of women has been invoked by the Navy league to assist in the organization's campaign to convince the country of the advantage of stronger national defenses, it was announced here. All women's patriotic organizations have been invited to co-operate with the Navy league. It is said that many pledges of aid have been already received.

A vigorous campaign will be carried on through the summer and fall to obtain pledges of women to give their personal efforts to this program. It is hoped to have 100,000 pledges to "talk, think and work" patriotism, Americanism and adequate defense before congress meets next December.

A feature of the work of the women's section of the league, as it has been named, will be a series of patriotic pageants for the purpose of depicting the necessity of national defenses. A prize competition for pageant scenarios has been planned in which the judges will be David Belasco, Colonel George Harvey, Mrs. William C. Story, president-general of the Daughters of the American Revolution, and Mrs. Daisy McLaurin Stevens, president general of the United Daughters of the Confederacy.

Among the founders of the women's section are Mrs. George Dewey, Mrs. Medill McCormick, Mrs. Finley J. Shepard, Mrs. George L. Carnegie, Mrs. Phoebe A. Hearst, Mrs. Ralph B. A rise in the price of beef used to be accompanied by an interesting explanation. Now it simply takes place.—Washington Star.

Almost any man with personal magnetism, some guns and a few boxes of soda crackers can get up a revolution in Mexico.—Los Angeles Express.

The crank is capable of much worse mischief than the criminal, and the pity of it is that he should be so much harder to detect.—Philadelphia Ledger.

AERIAL TORPEDO BOAT PATENTED

Consists of Aeroplane Equipped With Whitehead Projectile.

COULD ENTER ANY PORT.

Rear Admiral Fiske Inventor of New Device—Plan to Guide the Missile of Destruction by Radio From Another Aeroplane—Experts Think Well of Scheme.

An aerial torpedo boat for attack on ships in protected harbors is projected in patents just issued to Rear Admiral Bradley A. Fiske, now attached to the navy war college, but formerly aid for operations to Secretary Daniels.

The plan contemplates equipping a monster aeroplane, similar to a number now under construction in this country for the British government, with a Whitehead torpedo of regulation navy type.

Swooping down at a distance of five sea miles from the object of attack, the air craft would drop its deadly passenger into the water just as it would have been launched from a destroyer. The impact sets the torpedo's machinery in motion, and it is off at a speed of more than forty knots an hour toward the enemy ship.

Could Attack In Fortified Harbor.

Admiral Fiske believes that the flying torpedo boat would make it possible to attack a fleet even within a landlocked harbor. The range of the newest navy torpedoes is 10,000 yards, and even the older types will be effective at 7,000 yards. Carried on a huge aeroplane, the 2,000 pound weapon would be taken over harbor defenses at an altitude safe from gunfire. Once over the bay, the machine would glide to within ten or twenty feet of the water, the torpedo rudders would be set and it would be dropped to do its work while the aeroplane rose and sped away.

Aeroplanes to carry a ton of dead weight have been perfected by several countries. Russia is said to have several that will carry twenty men and the new British air craft probably will have a similar capacity.

Wireless Guides Torpedo.

It is said to be possible that a type of radio controlled torpedo might be employed, one aeroplane carrying the torpedo and another carrying the wireless machinery to control the missile's flight through the water. It is pointed out that Admiral Fiske secured patents on such a method of control in 1890 when he was a lieutenant in the navy. They are said to be so broad and far-reaching as to underlie all subsequent development of radio control devices.

"My invention," said the application filed by Lieutenant Fiske before the battle of Manila was fought, "is especially applicable to automobile torpedoes and makes it possible to control the movements of a torpedo with great certainty from a shore, from the deck of a ship or the like."

Since the aerial torpedo plan was advanced reports have come that German engineers were at work with a somewhat similar scheme. It is proposed to drop from aeroplanes a torpedo that can be guided by radio impulses during its fall and sent with absolute certainty to its mark.

ARCTIC KNOWS OF WAR.

Remote District In Alaska Just Learning of Great Conflict.

Captain A. D. Williams came into Ruby, Alaska, the other day after a ten months' absence on the extreme upper reaches of the Novi river and learned for the first time of the European war.

Bob Smith, Jack Larson and Ed Slater came out from the same region awhile ago, ignorant of the war. Several men who spent the winter across the divide on the Kuskokwim had not heard of the conflict.

Last fall a few men came down the Porcupine from the Arctic divide, and people on the Yukon thought it a great joke when it was learned that the men from the rim of the pole had remained in total ignorance of the belligerent state of Europe until reaching the big river.

With the usual winter expedition of the northwest mounted police to Herschel island and trips of mail carriers from Nome to Port Barrow, it is probable that now most all the white men and natives on the Arctic slope know about this world event.

SHE WAS A MAN FIVE YEARS.

Eighteen Years Old, Worked on Ranch and on Dikes In Holland.

After traveling all over the United States and northern Europe dressed as a man Edna Puffer, eighteen years old, was arrested in New Haven, Conn.

Miss Puffer says she has worn male costume for five years. William Shaw, her traveling companion for some time, was dumfounded when he learned of her sex.

She told Judge Booth she had cooked in a Mexican ranch and had been a dike tender in Holland. She left home when twelve years old, she said, and assumed male attire for protection in traveling. Her father had Indian blood, and her mother was English. Both died before she was seven years old.

LABOR IN KRUPP'S WORKS.

Mightiest Organization of War In the World Built on Trade Secrets.

Krupp's is more than the greatest war factory in the world. It is the mightiest single industrial organization that has ever existed. Never in any industrial center has there been anything like the stupendous concentrated activity that now reigns in Essen, the Westphalian city that has grown up round the great works, says Reynolds Weekly of London. Essen is Newcastle and Sheffield and Barrow-in-Furness rolled into one, and more.

Before the war the company employed more than 70,000 men. About 40,000 were engaged in the gigantic steel works at Essen, where the 42 centimeter monsters come from, and where daily there streams forth a tremendous volume of guns and munitions for Germany's armies. Ten thousand men were digging for coal in their mines in Germany. Fifteen thousand toiled at their rolling mills at Annen and Grusen and the blast furnaces of Rheinhausen, Duisburg, Neuwied and Engers. An army of 7,000 was engaged in their shipbuilding yard at Kiel, and 5,000 miners dug ore in Spain.

Day and night in Essen work goes on without ceasing. In the great works spread over 1,200 acres, 235 of them under roof, at least 44,000 men toil in shifts of eight hours each. Some sixty factories make up the organization. Forty miles of standard railway link them together and carry their products out. Thirty miles of narrow lines are required as auxiliary for the shops.

More than 450 miles of cable and wire and over 600 telephone stations and twenty telegraph stations are needed to facilitate communication throughout the works. There are more than 300 steam boilers to generate the steam for the 7,200 different machines and 2,224 electric motors at work.

And the whole gigantic concern has sprung from a humble cottage factory with six workmen. Essen was a filthy, poverty stricken little hole of a town a century ago, when the Krupp firm was in its beginnings. Today it has more than 300,000 inhabitants and is one of the finest towns in Germany.

CZAR'S NEW WAR MINISTER.

General Polivanov Appointed to Take the Place of General Soukhomlinoff.

The reverses in Galicia brought about the retirement of General Soukhomlinoff, the Russian minister of war, and the czar has designated General Polivanov to succeed him.

General Polivanov was assistant minister of war during the reorganiza-

tion of the Russian army following the Russo-Japanese war. He has the reputation of being an excellent soldier and organizer and enjoys considerable popularity on account of his liberal views. Full power has been placed in his hands to conduct the Russian war office in Petrograd.

Grazing Lands.

Present methods of transforming the grasses of the public grazing lands into beef and mutton are generally conceded to be wasteful, and it is estimated that under a proper system the quantity of beef and mutton produced on these lands could be increased at least 50 per cent.

21, YET HE'S A CHILD.

A. M. Ross Married Girl He Met on Three Day Furlough From Asylum.

Alexander M. Ross of New York, who, although twenty-one years old, has the mentality of a child of twelve, was adjudged incompetent by a sheriff's jury.

The purpose of the inquiry was to have a committee appointed to manage the young man's property, valued at more than $300,000, which he received from his late father, Alexander M. Ross.

It was held on the petition of the incompetent's mother, who told about her son marrying a young woman on a short acquaintance, having met her while he was on a three days' furlough from Bloomingdale asylum, where he had been an inmate for three years. The marriage was annulled. Dr. William L. Russell, superintendent of the asylum, testified that Ross' mentality would not develop.

The Silkworm.

The silkworm is three inches long and is well provided with legs, having no less than sixteen of them.

NEW YORK SOLDIERS AT WARFARE PRACTICE

Midsummer Encampment Has Attracted Unusual Interest.

The camps of state militia have attracted unusual attention this year, and naturally so, for the question of national defense is looming large in the public mind. The encampment of the national guard of New York state at Camp Whitman, Fishkill Plains, drew many thousands of spectators. There have been encamped at Fishkill Plains 5,000 guardsmen and 500 regulars. Never before had this particular section of the state witnessed such a scene, and one thing that every officer, regular as well as militiaman, commented upon, was the apparent fact that the people were much more interested than in former years in the military organization that would form the backbone of the land defense in the event of a national crisis.

The men were put through the paces of up to date warfare. Trench work was featured, and the pick and shovel

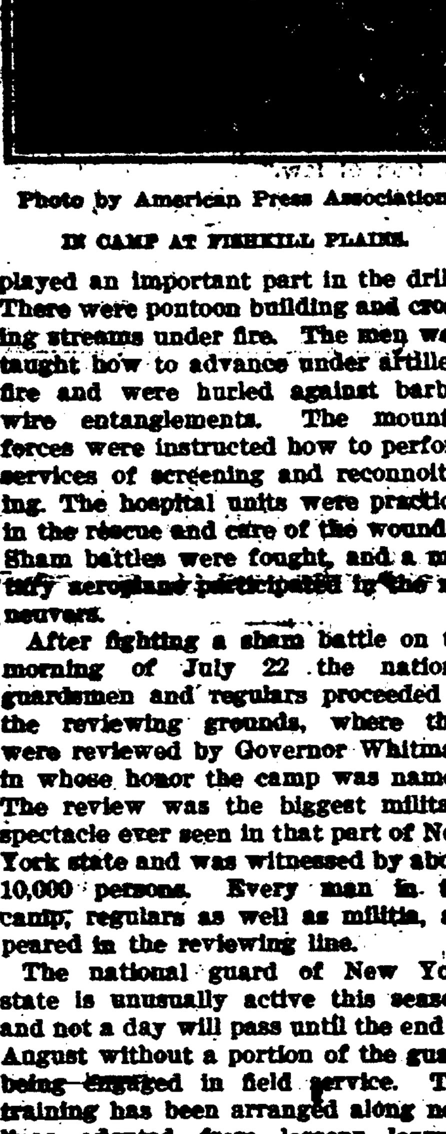

Photo by American Press Association.

IN CAMP AT FISHKILL PLAINS.

played an important part in the drills. There were pontoon building and crossing streams under fire. The men were taught how to advance under artillery fire and were hurled against barbed wire entanglements. The mounted forces were instructed how to perform services of screening and reconnoitering. The hospital units were practiced in the rescue and care of the wounded. Sham battles were fought, and a military aeroplane participated in the maneuvers.

After fighting a sham battle on the morning of July 22 the national guardsmen and regulars proceeded to the reviewing grounds, where they were reviewed by Governor Whitman, in whose honor the camp was named. The review was the biggest military spectacle ever seen in that part of New York state and was witnessed by about 10,000 persons. Every man in the camp, regulars as well as militia, appeared in the reviewing line.

The national guard of New York state is unusually active this season, and not a day will pass until the end of August without a portion of the guard being engaged in field service. The training has been arranged along new lines adopted from lessons learned from the grim warfare in Europe.

NEVER DESPAIR.

The most perilous hour of a person's life is when he is tempted to despond. The man that loses his courage loses all. But it matters not how poor he may be, how much pushed by circumstances, how much deserted by friends, if he only keeps his courage and with unconquerable will determines to be and to do what becomes a man all will be well. It is nothing outside of him that kills. It is what is within that makes or does not make.

Nowadays the appeal of "the best seller" and the "epoch making novel" is not of much account in the land.

Ask any seasoned war vet whether it isn't nobler to live and sweat for one's country than to die for it.

NEW BRITISH LIQUOR RULE BARS TREATS AND CREDIT.

Besides limiting the hours during which liquor may be sold in towns where the English government has taken over control of the sale of liquors, the board of control appointed to deal with the munitions areas has ordered that there shall be no treating and has prohibited the giving of credit for liquor.

The sale of liquor in licensed houses is permitted only between the hours of noon and 2:30 p. m. and between 6 and 9 o'clock in the evening. No orders may be given or accepted for spirits to be consumed off the premises on Saturdays and Sundays and only between noon and 2:30 p. m. on other days.

The penalty for contravention of the regulations is fixed at six months' imprisonment and a fine of $500.

MAKING LIVABLE PORCHES.

Privacy a Desirability When Constructing Piazzas, Balconies or Loggias.

Unfortunately up to the present time few Americans realize the meaning and desirability of privacy. Even in the country many houses are built near the road, without any attempt to screen private residences from the public gaze, and in the city, where porches are so rare a luxury, they are generally built around the main entrance of a house, where there is a constant coming and going and where a cozy retreat, hidden from every passerby, is almost an impossibility.

However, many houses have possibilities. For instance, roofs over pantries and additions or projecting extensions that are created as a result of architectural design could be made into charming little balconies without much trouble or expense.

A roof can be converted into a very satisfactory porch floor by covering and leveling it with wooden slats that allow natural drainage, and there need be no permanent wooden roofs for such a retreat when awnings and canvas curtains can be made to answer the purpose of protection quite as effectively. Is there anything more restful or more delightful than to be thus sheltered from the dust and bustle of streets? Is there anything more desirable than the security of such a retreat?

Indeed, a balcony, loggia or veranda need not be limited to the homes of the wealthy, for it can easily be brought within the scope of limited incomes and talents. The barest and bleakest of porches can be made an interesting spot—one that is essentially livable—with the help of awnings and screens, a few comfortable chairs, a swinging couch or hammock and, above all, a few flowers and vines. Flowers and green things are to a porch what an open fireplace is to a room. They form a nucleus, a charming center, around which the other things naturally group themselves.

His Trouble.

"How are you getting on with your golf?"

"Not very well."

"What's the trouble?"

"I'm not able to get off often enough to get on."—Detroit Free Press.

USES MULE TO LOCATE OIL.

Colonel Green Has Novel Method of Finding Spot For New Wells.

Colonel E. H. R. Green of New York and Dallas, son of Mrs. Hetty Green, firmly believes that there is nothing like a mule for locating a new oil field.

The other day Colonel Green and a party of Dallas men associated with him in an oil venture went out to locate a site for the first well. He selected a mule as master of ceremonies. The mule was driven into the field and allowed to take his own time in coming to a stop.

Where the mule first started to graze a stake was driven and plans begun for the erection of the first derrick. If oil is struck the mule will be placed on a pension.

WIFE BEATER IS WHIPPED.

White Man Gets Fifteen Lashes at Post In Maryland.

To Charles S. Dove of Middlebrooke belongs the distinction of being the first white man to be whipped in Montgomery county, Md., for wife beating. Fifteen lashes upon his bare back were administered in the Rockville jail yard by Sheriff Peyton Whalen in the presence of the jail physician and a number of witnesses.

Several of them drew blood.

Russians to Risk All the Dangers of a Great Siege

Novo Georgievsk, Prepared for Long Siege, Will be Left to Fight Alone---Garrison Well Provisioned and Protected by Fortress

London, August 7.—Russia now confirms the fall of Warsaw and Ivangorod, but Lieutenant Colonel Roustam Bek, a veteran of three Russian wars, says:

"Grand Duke Nicholas holds Pragra, and until that is taken Warsaw is only a shell emptied of all stores that might be of military value to the Germans. It was known here that the evacuation of Warsaw has been proceeding for several weeks. Prince Leopold of Bavaria, like Napoleon at Moscow, entered a dead city."

Lieutenant Colonel Bek, saying history has a habit of repeating itself, closes with the cryptic statement:

"Napoleon [illegible] enveloping movement always is [illegible] of being enveloped."

Harold Williams, in a special dispatch to the Daily Telegraph says:

"The whole operation of retirement from Warsaw was effected with wonderful strategic skill. The Germans only won the Polish capital at terrible cost in casualties. Their main object, the great Russian army, has slipped out of their clutches."

General Staff Leaves Main Body to Guard Vistula Line

London, August 7.—The Russian garrison of Novo Georgievsk, next to Brest-Litovsk the strongest fortress in Russia, is surrounded by Germans and has been left to its own resources by the German Staff. Alone of all the fortified positions of the Vistula line it remains in the hands of the Tsar's soldiers. Here, protected behind steel and concrete and a most ingenious system of massive earthworks, the defenders are prepared for an indefinite siege.

Early reports from Petrograd and Berlin yesterday said Novo Georgievsk had been evacuated and the forces included in the post had retired to join their comrades on the Narew line. Official advices, however, made it plain that the garrison had been ordered to risk annihilation or capture, that it may in the interim prevent the Germans from utilizing the Vistula as a transport line for army supplies.

The siege operations which the Germans now are compelled to undertake are expected by military observers here to provide one of the most intresting features of the war. Novo Georgievsk is situated at the juncture of the Vistula, the Bug and the Wkra rivers, and is twenty-five miles northwest of Warsaw, for which it is was the principal defence. Its strength rests primarily on eight new forts, at an average distance of ten miles from the city. These forts are connected by twenty-four redoubts, containing 11-inch and 12-inch batteries. It has two powerful bridgeheads and about all are great earthworks on which the garrison has put much work since the war began.

While there is nothing to show the numerical strength of the

First Gun Evidently Loaded With Blank Shells. Syracuse Business Managers Spike Second Gun in Anti-Commission Government Campaign

The Fulton Business Men's League, if there be such an organization, will have to present something more tangible than promises if it wishes to enlighten the Fulton public on the evils of commission government through the media of newspaper advertising. Fultonians who are readers of Syracuse dailies circulated in this city may have noticed an advertisement which appeared some days ago in these papers relative to the evils of the city manager plan of commission government advocated by the Chamber of Commerce of this city. This advertisement, which was entitled "An Opening Gun," dwelt at great length upon the unsatisfactory results obtained under the commission form in other cities throughout the country. The advertisement was not [illegible] to the representatives of [illegible] given him and inserted the matter in the other dailies, who charged the advertisement to him.

Yesterday the unknown propagandists delivered further instructions to the newspaper man first mentioned, and the paper he represents carried another anti-commission government announcement last evening, which elaborated on the facts set forth in the first advertisement and urged the voters of the city to cast their ballots against the proposed change.

As before, the newspaper man who is acting as agent for the mysterious parties who refuse to make known their identity, handed the copy to the correspondents of other Syracuse papers for publication—but at this point the business offices of these papers intervened. Inquiry revealed the fact that the political announcement first published was charged to the newspaper man who originally received the copy, and while the average reporter is looked upon as a good fellow and responsible to a certain degree, the business offices of the other papers thought it wise to demand that some more responsible party vouch for the payment of the advertising, as the correspondents could find no one willing to admit membership in the league or to promise payment for the advertising, other than the newspaperman who first received the copy. It appears that this gentleman, realizing that he was gradually being placed in an unenviable position, declined to stand sponsor for the announcements, whereupon the other dailies refused to handle the advertising.

The correspondent who first received the copy and printed it, has steadfastly refused to divulge the names of the advertisers and their identity remains clouded in mystery. Whether or not the advertisements have been paid for, is yet to be learned, but the fact remains that newspaper man No. 1 is due to receive a large bill from the other dailies who printed the first advertisement, but who now believe in "Safety First," and it is safe to say he will begin a still hunt for the parties responsible in order to secure the necessary funds.

Some people are inclined to think this is a quiet move on the part of the anti-commission element to place the young man in a false position so that he may be compelled to resign, in which event they plan to secure a correspondent here who can be more easily

MEXICO TO RESENT GUATEMALA'S PART IN PEACE SCHEME

Declares Neighboring Republic Unfitted to Teach Good Government—Exception Also Taken to Adding All Other Countries to Conference.

Mexico iCty, via Galvesten, Texas, August 7.—The Washington conference between Robert Lansing, American Secretary of State, and South American diplomatists with reference to bringing about peace in Mexico has aroused the most intense interest here. The conferencese hav given rise to the most varied rumors, comments and reports, many of which are based, presumably, on private cable messages, which have been received here from the United States.

Members of the foreign colonies of Mexico City and Mexicans alike are awaiting with the utmost erpectancy the announcement of the result of the conferences at Washington and expect that definite steps will be taken to bring about the restoration of normal conditions in Mexico.

The best informed Mexicans here today expressed surprise that the Guatemalan Minister to Washington had been asked to participate in the conferences. They told me that the relations between Mexico and Gustamala always have been subject to the tension which usually exists between bordering Latin-American States and that the two countries never have been cordial toward each other.

The Mexican Herald, commenting on the Washington conferences, will say tomorrow:

"The great question in the foreign clubs of Mexico is:

"'Why has Washington added Bolivia, Uruguay and Guatemala to the A, B, C Powers?'"

Many of the Mexican newspapers, commenting on the conferences, declare that Guatemala is not able to give Mexico lessons in good government, in view of the fact that a dictatorship such as exists in Guatemala was overdrawn in Mexico.

José Manuel Cardoso de Oliveira, Brazilian Minister to Mexico, who has been representing the interests of the United States here, called on General Gonzales today and asked for a safe conduct to Vera Cruz, where, with members of his family and attaches of the Brazilian Legation, he will go on board the French line steamer Navarre, bound for New York by way of Havana. The Minister, it is said, intends to remain several months in the United States.

General Scott, With Large Body of Troops, at Border Line

Washington, August 7.—At least an important step looking toward the pacification of Mexica was taken by the government today.

Major-General Scott, chief of staff of the army, was sent to the border to take personal charge of the situation there.

Final decision to send General Scott was reached at a conference between Secretary Lansing, General Scott and Acting Secretary of War Breckenridge.

General Scott is noted as a peacemaker. He is well acquainted with General Villa, now at Juarez. He will confer with General Villa and later will try to see General aCrranz in an endeavor to persuade them to a conference with the other leaders.

Gneral Scott was accompanied by Colonel Robert E. Michie, of the General Army Staff. It was stated at the War Department that General Scott's mission pertains solely to the proper disposition of the American forces on the border. There is already on the border an officer of high rank, General Funston, who is in touch with the situation all along the line.

If intervention should be decided on, the great problem for the War Department would be the concentration of the troops at the proper places along the Mexican boundary. A complete plan of action has been determined upon by the War College, theoretically, of course, for the contingency of an invasion of Mexico. The plan

Opinions

ONE CITIZEN LESS.

If the population of the United State on Monday was one hundred millions—and it was more than that—then today we have 99,999,999 citizens in the "land of the free." The missing one is Henry James.

For, be it known to the world, Henry James is now a subject of his majesty, King George V. of England. Mr. James has joined William Waldorf Astoria and several other less well known expatriates, and renounced his American citizenship.

In doing this he has but accomplished legally what he had already accomplished from choice for 40 years Mr. James loved England, her people and her customs, British in everything but name, Mr. James chafed at the neutrality of his native country, and his determination to sever whatever ties that bound him to the United States was hastened by the war in Europe.—Schenectady Union-Star.

THE "PRISON RING"

Warden Osborne proclaims that some mythical "ring"—"outside," is trying to "discredit" him and his panacea for prison evils.

How can this be? The present status of the State Prison Department is this:

John B. Riley is superintendent of prisons, with absolute authority. Riley was appointed by Sulzer, with the approval of Osborne, who is now credited with saying that the superintendent is in favor of "reform" but that "Osborne's work has been misrepresented to him." Mr. Riley is supreme in the Prison Department.

The agent and warden at Sing Sing Prison is Thomas Mott Osborne, who, next to Superintendent Riley, has absolute authority in that institution.

The agent and warden at Auburn Prison is Charles F. Rattigan, who has the same degree of authority at that institution.

At all other prisons the men in charge are subject absolutely to the domination of the superintendent, who is declared to be fully in sympathy with the Osborne regime.

If there is a "prison irng," obviously the principal members of it are the Messrs. Riley, Osborne and Rattigan. They constitute the "ring," if there is one. They have had their own sweet way in the prisons going on two years. Nobody has said them nay.

The only man that can "discredit" Warden Osborne is Mr. Osborne. The only "ring" that can bring discredit upon the prison system and create prison scandals is the Riley-Osborne-Rattigan gang. Nobody else has a word to say that need be officially considered for an instant, except the governor of the state; and he, for some accountable reason, apparently is disposed to let scandals multiply.

The attempt to revive the familiar demagogy that there is a malodorous "prison ring" will not succeed, for the simple reason that all the props for that outrageous fiction have been removed. There is no "ring" that is capable of bringing discredit upon the Osborne administration except the Osborne ring. The idea that there is one is the concentrated essence of nonsense, and will not pass muster with people of average intelligence.—Auburn Advertiser.

A Clam That Pearl Divers Fear.

All sorts of superstitions prevail among the pearl fishers of Ceylon, and a large business is done by sorcerers who sell charms to restrain the appetite of the sharks and to drive away the diabolical stingrays. Another peril which the diver dreads more than either stingray or shark is the giant clam that weighs nearly half a ton when full grown. It will snap off a man's legs like pipestems if the victim chances to thrust a limb between its open jaws, or, at all events, will hold him until he drowns miserably.—London Globe.

PLAIN TRUTHS

The certainty of secrets being revealed, applies to other crimes than that of murder. The evil doer may imagine that he is covering his tracks so effectively that there will be no successful trailing, but he is often sure to leave some sort of a track that will lead to another, and what he has supposed was covered by darkness will come to light.

The case of the grafters at Nashville affords an illustration. In the news columns of The Evening Times of yesterday were to be found impassioned replies by four bankers of that graft-ridden city to requests for information made by the local Chamber of Commerce for information that would throw additional light upon conditions.

The replies came in the nick of time to nail the inferences that might be drawn from the statements made in the paid political advertisement which appeared in the Syracuse Herald of yesterday. In that same political advertisement it was stated that Nashville "went into bankruptcy under the commission form of government," but the same paid advertisement did not state as much as a fraction of the whole truth.

The case of Nashville is a pitiful one indeed. Its present condition was brought about by at least three factors, one of which was the inefficiency and weakness of the men elected as commissioners, and the fact that the men given authority were probably machine made. We all know that a machine knows who to name and how to elect, especially when it may have control of the election machinery. In fact, it is apparent that those in authority, when certain books had been lost, thought it would be impossible to uncover what had been done.

But the fact was overlooked that here and there a track had been left unconcealed, and by putting this and that track together, enough has been found to locate rascality and identify some of the rascals. Does the reader ask why this statement of conditions at Nashville? or, why not answer a question made in the Syracuse Herald's paid political advertisement last night? This is the answer:

The paid political advertisement dealt in questions; it did not answer a question; it did the very thing its sponsor asks the Chamber of Commerce to do, leaving the reader to figure out for himself an answer. Did the paid political advertisement tell "Mr. Voter" the indications are that when the Nashville investigation has been completed it will show enough to convince the people who are watching the course of events that Nashville has been victimized by a gang of grafters, who had deliberately made up their minds to get out of their positions all there was in it for themselves? Not much of it.

Did the paid political advertisement tell "Mr. Voter" that an investigation is afoot at Nashville? Was the voter told that if the investigation accomplishes nothing else, it will serve to convince those in other cities in other states, that grafting is not so easy and remunerative as some have thought it?

There is a lot that could have been told in the space bought and paid for by Fulton money that was not stated, but the lesson that is just now uppermost is, that if the form of government permits, the most possible to be had from the money paid into city treasuries by the taxpayers, must be by the election of officials who in spending the money will look more to the public welfare and less to their own political success.

There are hundreds of high-grade girls that go to the store, the shop, the office, every morning, with a firm determination of forging ahead in business. And to these business girls we must credit many superior traits.

A business girl is to be trusted with business secrets. She is always honest (the exception proves the rule), she is always polite, punctual, painstaking.

A business girl elevates the business office morally, socially.

Modern business could no more go without the help of women than a church.

Imagine, if you please, a telephone exchange run by men. Try to conduct an office with nothing but men in it.

It is no silly sentiment to say, women in routine office work are, in most cases, more satisfactory, dollar for dollar of cost, than men—much more.

True, girls get married at an inopportune time, but this only happens once, as a rule.

Men have so many ways of getting "hitched up" wrong, and being unable to get the load home in time to begin again, fresh in the morning.—Silent Partner.

OUR WASHINGTON CORRESPONDENCE

News Mostly of a Political Nature From the Nation's Seat of Government for Times' Readers.

Washington, Aug. 7.—(Special correspondence) Some startling facts, coupled with some good advice, have been laid before the Federal Trade Commission in its investigation into conditions in the lumber industry.

The disadvantages under which American lumbermen are now doing business embrace, first of all, a distinct element in favor of Canadian timberland owners in the matter of freight rates, it being shown that the Canadians, by reason of their strategical location, can send lumber into the United States by the lake route in foreign bottoms and make delivery for $2 a thousand feet to cities like Milwaukee, Chicago, Bay City, Detroit, Toledo, Cleveland, Buffalo, Tonawanda and New York, while the average cost of transporting the same grades of lumber by rail from Wisconsin or Minnesota is from $5.50 to $6.00 a thousand or about 200 per cent greater than from Canada. In some instances this advantage in freight rates is nearly 500 per cent in the Canadians' favor.

In addition to this, labor in Canada averages fully 15 per cent cheaper than in the United States. To aggravate the situation, Canada offers nothing in the way of reciprocal relations, having imposed a duty of 32½ per cent upon dressed lumber and 7½ per cent upon rough lumber, while the United States has removed the duty. By having removed the tariff on lumber the markets of our 100,000,000 people are thrown open for the benefit of the 9,000,000 of Canada, thus inflicting a useless loss upon this country, the American people, and the United States government. It would seem that the Federal Trade Commission would be warranted in recommending to Congress an adequate import duty as a partial protection to the lumber industry, to labor in general, and to the many diversified interests that depend for their prosperity upon the lumber trade in this country.

Defence and the Deficit.

The administration announces that it intends to lay before Congress "an adequate program" of national defence. This will cost money. The treasury deficit at the end of the fiscal year—June 30—was around $40,000,000. The deficit for the single month of July in the current fiscal year is close to half that sum. On the first of May, 1916, sugar goes upon the free list—which will entail a loss of revenue amounting to more than $10,000,000. On the 31st of December, 1915, the so-called "war taxes" will expire by limitation, entailing a decrease of many more millions in revenues. Therefore it is plainly to be seen that, whether we provide for national defence or not, increased revenue must be had. The Democratic leaders are considering this question. They plan to put a tax on tea, on coffee, on bananas, and on several other articles of common consumption. In other words, they intend to tax every man's table. When the Democrats took over the government they found a full treasury and ample revenues. They found, too, a steady program of naval construction and other items of national defence. In two short years they have emptied the treasury, have diminished the revenues, have crippled the navy and the army; until now, when the question of defence looms up they can deal with it only after they have dealt with a deficit. The real way to handle both questions, defence and the deficit, is to restore the Republican party to power.

* * *

The National Treasury continues to run behind about three quarters of a million dollars per day. By inducing early payments of income taxes and by urging prompt remittances by collectors, the Treasury Department made a book showing of a balance of about $82,000,000 on July 1. That this was a fictitious showing is now provey by the fact that from the first day of the new fiscal year, the expenditures exceeded the receipts and the balance dropped to about $67,000,000 at the close of business Saturday, July 24. On the corresponding date two years ago, with Republican revenue and appropriation laws in effect, the balance was $129,453,000.

Expert Advice for the Automobile Owner

Queries and Replies Covering Matters of Importance to the Man Who Runs a Car

There is a grinding sound in the rear axle or gears of my car which I cannot locate. When the wheel turns halfway around it grinds, and the rest of the way it runs smoothly. Can you explain this trouble?

It is a good plan to look for the simplest troubles first. If the sound is a rasping or scraping one it is probably due to dragging brake bands, or the drums may be out of true. If the brake bands are dragging loosen them up slightly. Unless the drums are not badly out of round it will be sufficient to loosen up the bands, but if this will not answer the drums should be trued up in a lathe or else replaced. The grinding noise may be due to a shaft that is bent, and it is more probable that an axle shaft instead of a transmission shaft would give trouble in this way. The bending of a shaft will cause any gear on it to alternately mesh too loosely and too tightly with its mating gear. This will cause a grinding sound. Whether this is the trouble can only be determined by inspection. The straightening of the shaft should be left to some man who has had experience, and probably you could not do it anyway because of lack of equipment.

Another possibility is that one of the roller bearings is causing the trouble. One of the rollers may be broken, although this is not very likely, or the roller race may be worn out of round.

I would like to replace my five passenger body with a seven. Will the extra overhang on the rear axle hurt the motor?

The extra load will not harm the motor if it is not allowed to labor on high gear. When it is evident that the car cannot climb a certain hill on high gear, rather than force it up, a shift to second should be made. The same applies when running on second gear and low gear is required. There is more danger of hurting the springs or wearing out the tires. Possibly it will be necessary to substitute stiffer springs. Unless the tires are amply large for the weight they are now carrying, oversizes should be put on, at least on the rear, where the greater load is.

Can you tell me of a solution to clean out a radiator which expels water that is very dark brown in color when emptying the radiator?

Dark brown water in a radiator is due to the suspension in the water of particles of dirt or rust. There is no [illegible] a solution to the radiator that will dissolve these particles because they can be very easily removed by flushing the radiator with large quantities of water.

I have four dry cells located in the tool box of my machine which are used for starting the motor. They will last only about three weeks, whereas one set should last the whole season. There is no short circuit, and the connections seem to be all right. Can you tell me the trouble?

One possible cause is that the cells you are using are defective, or it may be that the coil is out of adjustment. You do not state the type of coil that you have, but if it is that vibrator design it is quite possible that your high battery consumption is due to the tremblers being out of adjustment. If you have this type of coil try cleaning the contact points of the tremblers, and then adjust each trembler until it is working well and produces a good spark at the plug.

The most likely cause of your difficulty is that you are using too few dry cells. It would be much better to connect up five or six in series, as the voltage generated by four is not enough to do the work.

W. C. T. U. NOTES.

(Compiled by Local Union.)

The records of the courts of Northumberland county, Pennsylvania, according to the North American of cent of the 100 divorce proceedings now pending are due to the alcohol evil. In the majority of cases the husband is accused of being addicted to the use of liquor, which led to abuse, neglect or desertion.

* * *

It is announced through the general press that Coor's brewery, located at Golden, Colorado, on August 15, will discontinue the manufacture of beer, and employ the same force of men in the manufacture of malted milk. The plant is said to represent an investment of a million dollars.

* * *

The Associated Press reports that besides limiting the hours during which intoxicating liquor may be sold in towns where the government has taken over the control of the sale of liquors, the board of control appointed to deal with the munition areas has ordered that there shall be no treating and has prohibited the giving of credit for liquor. The sale of liquor in licensed houses is permitted only between the hours of noon and 2:30 p. m. and between 6 and 8 o'clock in the evening. No orders may be given or accepted for spirits to be consumed off the premises on Saturdays and Sundays and only between noon and 2:30 p. m. on week days. The penalty for contravention of the regulations is fixed at six months' imprisonment and a fine of $500.

* * *

General Gallieni, the military governor of Paris, is reported to have issued an order forbidding the purchase by or sale to soldiers or officers of whatever grade in the intrenched camp of Paris of any alcoholic liquors whatsoever.

Offenders will be cited to appear before the police courts and military tribunals. Liquor dealers violating this order will be punished by a temporary suspension of their licenses on the first offense and revocation on the second offense.

That alcoholic liquor is education's greatest enemy and stumbling block is the expressed belief of Mr. George T. Powell, president of the New York State Horticultural Society, as stated in an address before the graduates of the Horticultural School for Women at Ambler, Pa.

"Rum," said Mr. Powell, "has proved Europe's curse, and today America is spending a billion and a half dollars for alcohol. Our greatest institutions of learning find drink their chief competitor, as in all economic problems.

"Women's influence may bring about a solution o fthis momentous question. Her study of the support through the soil of inreasing population of the earth and her study of the unrest among the laboring classes are all signs of a better day. The day is not far distant when women are going to bring pressure to bear that will eliminate the drink evil."

Chautauqua Institution—World Famous For Forty Years

Popular Resort Combines Fishing and Philosophy, Recreation and Religion, Outdoor Sports and Inspiration.

ALL ROUND PROGRAM FOR 20,000 "FRIENDLY FOLKS."

FOR over forty years Chautauqua Institution on the Lake, at Chautauqua, N. Y., has been world famous as a summer resort, both for its educational features, which have been the pattern for all the home reading clubs, correspondence schools and the summer schools now connected with every great university, and for its general all round summer life.

Nowhere in the world can so extensive a program of lectures and concerts, dramatic entertainments, conferences of nation wide importance and platform entertainment be obtained, along with the equal of its bathing beaches, the twenty mile lake for boating, the golf course, fast roque and tennis courts, ball ground and a score of other athletic games and outdoor sports.

Not a Commercial Enterprise.

But Chautauqua Institution is not a commercial enterprise, as many suppose. It is incorporated as an educational and philanthropic project. The income is figured on actual cost and is supplemented by endowment funds and yearly donations from generous friends. Its summer schools and reading courses are also furnished at actual low cost figures.

Twenty thousand "friendly folks" make an average population at Chautauqua. They come from all the states of the Union. They come from China and Japan, from South America and from Europe, where Chautauqua, N. Y., has the reputation of an "American Mecca."

Chautauqua Life Is "Different."

One can be as quiet at Chautauqua as one chooses or as busy all day long. The long program of lectures by really great men, the diversity of the musical program and the platform entertainments by world celebrated artists will

BISHOP JOHN H. VINCENT.

The venerable founder of big summer assembly at Chautauqua, N. Y., whose foresight, humanity and energy developed an idea which has molded the national life.

satisfy the desires of every type of mind. The daily offering of outdoor sports, such as golf and tennis and roque, bathing and boating of all kinds, track events, tramping and riding and driving, give free play for those inclined to the athletic. The work of the summer schools occupies 2,400 adult students and runs the gamut from basketry to music through 300 separate courses under the best available teachers. Those with the religious bent will find many worth while conferences and lecture courses.

America's Greatest Forum.

Chautauquans—and there are millions of them—have a purpose in life. The ideal, which John H. Vincent, the founder, so sturdily cultivated in his people, was the balanced life, a strong body with a strong mind and a spiritual consciousness of life and its purposes which would give direction to each individual.

Nowhere in the world can so many great minds be met with in the same short space of time as at Chautauqua during the huge sixty-day program, which occupies the summer season through July and August. Without exception the greatest statesmen, the best known authors, the wisest educators, the foremost politicians, the most famous travelers and the most active propagandists have all found a place there and a friendly welcome to Chautauqua's platform.

The great amphitheater, which seats 5,800 people comfortably and can accommodate 7,500, has been the scene of many an important address dealing with the greatest issues of the day. Six presidents of the United States have graced this platform and praised the institution as the great world's forum that it is.

The acoustics of this huge outdoor amphitheater are well known to speakers of every nationality. The open sides give perfect ventilation and comfort during even the hottest days of the year. Five years ago a magnificent Massey organ, the gift of the manufacturer and worth at least $30,000, was installed.

To have been a member of this Chautauqua audience is to have enjoyed a tremendous privilege. To have been a speaker on this greatest of the world's public forums is a distinction which thousands covet and but a comparative few enjoy.

Expensive "Talent."

More money is spent on "talent" for Chautauqua's eight week program than would be suspected by the 50,000 people who get its full benefits for the small gate fee of $8 per season. The budget runs into the tens of thousands. But the very best is thereby obtained—statesmen fresh from their duties at Washington or the various state capitals, authorities on social and professional lines from the big universities, musicians just off tour, preachers whose names are household words and entertainers of the highest grade.

Very often there are forty events or more scheduled daily. And at least 120 lectures and 200 popular concerts are given during the period, so that every type of mind and individual taste may find something of information, education or inspiration to carry home for the coming year.

Chautauqua life brings speakers and audience close together with its air of comfort and informality.

WORLD'S GREATEST PUBLIC FORUM—CHAUTAUQUA, N. Y.

Sixty Day Assembly Will Have Big Speakers and Mammoth Program.

The leaders in American life and thought have always found the Chautauqua platform hospitably open to them, and there have been very few of the nation's great statesmen, authors, educators, travelers and propagandists who have not appeared before Chautauqua assembly at some time during the last forty years.

This coming season a noted and varied array of such talent is offered:

Mary Antin, world famous as a young Jewish author and champion of the immigrant, will lecture. E. J. Ward, Wisconsin's state adviser on civic development, will direct a week's work on "Community Service." Henry Turner Bailey, America's greatest exponent of art in every day life, just returned from his task of awarding prizes at the Panama-Pacific Exposition, will spend the summer at Chautauqua.

Mrs. Percy V. Pennybacker, president of the General Federation of Women's Clubs, will give general addresses and also conduct special exercises for her constituency. Charles Rann Kennedy and his wife, the well ... will give a series of recitals from his written plays, "The Servant In the House," "The Terrible Meek," etc.

Special addresses will also be given by Thomas Mott Osborne, warden of Sing Sing penitentiary, noted for his advanced prison methods; Hamilton Wright Mabie, literary editor of Outlook Magazine; Harold J. Howland, associate editor of Independent Magazine; Rabbi Stephen S. Wise of New York, Amos P. Wilder, Dr. Katharine B. Davis, New York's commissioner of correction, and Superintendent William M. Davidson of the Pittsburgh public schools.

The Chautauqua Players, under the lead of M. Benedict Papot, "the leading amateur actor in America," will present a series of well known plays, one each week. Music will be represented by the Chautauqua chorus of 500, under Mr. Hallam, and by the famous Russian Symphony Orchestra, with William Wade Hinshaw of the Metropolitan Opera Company and Ernest Hutcheson, noted pianist, as soloists.

The Religious Features.

The religious features of the program will be in the hands of Dean Shaller Mathews, president of the Federal Council of Churches and head of the Chicago Theological School at the University of Chicago. He has just returned from a special mission to Japan in the interests of international peace. Such figures as Dr. Frank W. Gunsaulus, president of Armour Institute; Bishop Charles D. Williams, Protestant Episcopal bishop of Michigan; Bishop John H. Vincent, chancellor of Chautauqua; Bishop Francis J. McConnell of Denver and Dr. Samuel B. McCormick, University of Pittsburgh, will also be on the program for a series of talks.

Special weeks this summer will be devoted to particularly live topics. Justice and the courts will be an open question for some 500 lawyers to wrangle over, under the leadership of Justice William L. Ransom of New York City's city court. George W. Alger will be featured with his series of lectures, based on matter recently published in the World's Work Magazine. And Dr. Katharine Bement Davis, New York city commissioner of correction, will speak on "Prison Reform."

Temperance week will bring a live discussion of the national prohibition campaign. Ex-Governor Malcolm R. Patterson of Tennessee will tell "Why I Changed Front on the Liquor Question," and Hon. J. Denny O'Neil of Pittsburgh will speak on "Prohibition From the Business Man's Point of View." Many other prohibition and temperance speakers will attend, and William Jennings Bryan has indicated his desire to be present.

Week of the Great War.

A week devoted to a study of the "War of Eleven Nations In Europe" will find several speakers of authority who are just back from the front. Dr. Lincoln Wirt, special representative for the World Peace Foundation and the Boston Herald, will return to make his first public report at Chautauqua. Norman Angell, whose books showing the logical fallacy of war upset modern ideas as to its necessity, will expound his widely quoted views. Dr. Herbert Adams Gibbons, special writer for the New York Herald and author of two recent books dealing with "Changes In Europe," will conduct summer classes and lecture on the subject. Director Arthur Bestor will describe Europe's war lords from his recent intimate studies of their personalities, and Sanford Griffith, who has just returned from Belgium, where he served as "special field investigator," will describe the horrors of war and life at the front as he saw it.

Community affairs will be discussed in every possible connection during a week in which sessions will be led by Mr. E. J. Ward, Wisconsin's state adviser on civic improvements and the like. Social centers in the city and public school centers in the country will be particularly featured. Internationalism and Christianity will be the final week, and the theme will be "What Is the Duty of Christianity as a Power In the Present Military Crisis?" Dr. Frank Gunsaulus, Dr. Charles E. Jefferson, Bishop James W. Bashford, Dr. Lemuel C. Barnes, Hon. Amos P. Wilder and Hon. John Lind, who was President Wilson's personal representative in Mexico, will be among the speakers.

Mammoth Auditorium at Chautauqua, N. Y.

Six presidents of the United States have spoken on this platform. The leaders in American life and thought have here found their most responsive audiences. This auditorium seats 5,300 people comfortably and will accommodate 7,500. Its open air sides afford perfect ventilation and comfort during the hottest days.

CHAUTAUQUA, N. Y.

Wonderful Amateur Company Produces Best Plays With Settings of Burlap and Pasteboard.

Few stock companies have ever attracted as much attention as the amateur company of Chautauqua Players, which produce the best obtainable plays, both modern and classic, in the big auditorium at Chautauqua, N. Y.

M. Benedict Papot, who is an instructor of languages at Chicago university, directs the company of twenty and, with the common combinations of burlap and pasteboard backgrounds, obtains effects that are pronounced marvelous by the best critics.

M. Papot has long been known as the "best amateur stage director in America" and has a wonderful capacity for contriving scenic effects. He is a hard worker and during the Christmas vacation took his company to New York city, where they produced their repertoire under the auspices of the House of Play Foundation, at St. Mark's church on the Bowery.

The New York Times gave them high praise, and their stay had to be prolonged to repeat several productions.

Everywhere there is now a great vogue for amateur theatricals and for simplicity in stage effects. Chautauqua has taken the lead in this respect, and her players have won applause wherever they have gone.

Pinero's "Sweet Lavender," Clyde Fitch's "Nathan Hale" and Grundy's "A Pair of Spectacles" will be given this season.

WOMEN INDORSE CHAUTAUQUA

Strengthened and Encouraged by It, Declares Noted Club President.

"From Chautauqua, N. Y., I go back to the million women of the General Federated Women's Clubs strengthened and encouraged and tell them of that place where a woman can be revigorated and sent back home proud of that noblest profession—being a woman," said Mrs. Percy V. Pennybacker, president of this largest organization of women, in a recent interview.

"Women everywhere are taking a live interest in public affairs, civic and social administration. Their minds are open to gather facts. At Chautauqua they find the greatest preachers, the best teachers, famous writers and statesmen.

"The democratic air of comfort and informality brings speaker and audience closer together. The rolling hills, the pleasant walks, the bracing highland lake air strengthen the careworn. This combination makes every one glad they are alive, whether woman or man or child."

Summer Schools at Chautauqua, N. Y.

For many years registration in Chautauqua's Summer Schools has annually exceeded all previous records. The reason is obviously in the excellent service which is given by the corps of university teachers and instructors along professional lines. Two thousand four hundred students and more were registered during July and August, 1914. The institution supplies 110 instructors, according to their regular catalogue. Ten college buildings and 300 separate courses are available. Nine hundred children are cared for in classes under their special department.

These schools were organized in 1885 by President William R. Harper of the University of Chicago and have since set an example which has been the standard for nearly all the great summer schools of this country.

Twenty scholarships entitling the holders to Summer School privileges are given out annually to teachers in Ohio, Pennsylvania and New York. Bishop Vincent's motto, "Education Ends Only With Life," has a real meaning for most people at Chautauqua. Men and women of all ages, one or two being in the eighties, are registered in the Summer Schools. All show a keen interest and a youthful enthusiasm.

CHAUTAUQUA.

What the Word Means and Where It Came From.

An Indian chief pulled a big muskellunge from the cool waters of a twenty mile lake and properly called it Chautauqua lake. Bishop Vincent and his coworker, Lewis Miller of Akron, O., sought a beautiful point on its shores for their convention of Sunday school teachers in 1874. And with Bishop Vincent's popular ideas for educating folks of middle age and teaching them how to enjoy life the place grew into an institution at Chautauqua, N. Y., that is now world famous.

The name is borne by five towns in Illinois, Kansas, New York, Texas and Washington, by many industries in western New York state, by apartment houses in New York city and by a sleeping car and a ferry on the Hudson. The name has been adopted by 3,000 popular imitations of the "original Chautauqua." The majority of these travel from place to place on a "circuit" and are managed by independent bureaus in the same way a circus is handled.

Chautauqua Institution has been incorporated on the spot made famous by Bishop John H. Vincent and is continued as an educational and philanthropic enterprise by a board of trustees under the presidency of his son, George E. Vincent, president of the University of Minnesota.

The world's greatest public forum and one of the world's largest summer schools are held here during the summer months of July and August.

The Straw Ride

Kiddies find Chautauqua Institution a veritable paradise. They are provided with day nurseries, kindergartens, playrooms and a big outdoor Playstead with sand piles and running water. Boys have a clubhouse and the girls do too. Straw rides and sunset picnics are a part of each day's program. Chautauqua, New York state, takes care of the whole family.

A CHILD'S PARADISE.

All Ages Cared For by Trained Attendants.

No summer resort in America plans more carefully for the children whether babies, half grown, or youngsters of twelve to eighteen, than does the big institution at Chautauqua, New York.

A great kindergarten nursery is provided for the little ones, with plenty of sunshine and fresh air. Here young women who are training themselves in the Summer School to become kindergarten teachers give them the best attention. Babies can be checked here like luggage, and the tired mother who wants to be free for the whole day can leave her baby in the morning and call for it at night, with the surety that it will be well fed and cared for.

A playground and elementary school take care of older children who must be kept busy at something, half study and half play. Then the great Playstead, with its steep, rocky walls for fencing, and its big piles of pure white sand, and its running brook makes the best sort of a place for children to romp and paddle about in.

The older children have an out of doors gymnasium in which are the usual collection of see-saws, ladders, natural slides, climbing poles, climbing bars and merry-go-rounds. Over 900 children are registered in the Summer School classes which are graded for all ages, and where individual instruction can be given if needed.

Studies of birds and animal life are emphasized, when squads of youngsters are taken for long walks over the hills or picnicking about the grounds. The Boy Scouts are most active in their program under a fine head master. And the Boys' Club House and Girls' Club House offer a fine place for gatherings, whether in the daytime or in the evening.

Few summer resorts cater to "family trade" as does this famous Chautauqua. Its object is to give happiness and health to every member of the family.

America's Greatest Music Festival at Chautauqua, N. Y.

Chautauqua Assembly at Chautauqua, N. Y., with its "twenty thousand friendly folk" has become America's greatest summer center for popular music. A chorus of 500 voices under the direction of Arthur Hallam is trained each season. This, with the Russian Symphony Orchestra with its full personnel of seventy-five musicians under the direction of Modest Altschuler, will be the chief attraction this year. Music Festival Week comes Aug. 8-15 and a large and varied program will be given by this famous orchestra and the equally famous chorus, including such famous operas as "Aida," "The Messiah" and "Parsifal." Also a dozen other programs at which such soloists as Ernest Hutcheson, pianist; William Wade Hinshaw, celebrated baritone of the Metropolitan Opera Company, New York city, and Sol Marcosson will appear. Hundreds of people make an annual trip to Chautauqua during Music Week for this festival on account of the low price of admission and quality of the program

TOWER OF CHIMES.

The bell tower erected in honor of Lewis Miller by Mrs. Thomas A. Edison, his daughter, and other children. A huge set of Meneely chimes tell the

hour, toll the curfew and play over popular airs and hymn tunes for the "20,000 friendly folks" at Chautauqua, N. Y. Its cupola offers a splendid view of Chautauqua lake.

Religious Conference Program at Chautauqua, N. Y.

Religious interest at Chautauqua Institution, Chautauqua, N. Y., has always been a "live" rather than a dominating factor in that remarkable assembly which Theodore Roosevelt has called "the most American thing in America."

Bishop Vincent, the founder, always attracted the ablest and most sincere men from all walks of life for his famous sixty day forum program, whether they were ministers or statesmen or presidents of the United States.

Most summer assemblies are either operated by some religious sect as a philanthropy or are launched as a commercial enterprise pure and simple. Chautauqua institution, however, was carefully kept on a nonsectarian basis from its very beginning in 1874. Every denomination has been invited to its platform and church houses are at present maintained by Congregational, Methodist Episcopal, Presbyterian, United Presbyterian, Protestant Episcopal, Baptist, Disciples, Unitarian and Lutheran societies.

Dean Shailer Mathews of Chicago Theological seminary and president of the Federated Council of Churches has charge of the religious department, its lectures and study courses. Other famous preachers, such as Dr. Frank W. Gunsaulus, president of Armour Institute, Chicago; Bishop Charles D. Williams, Episcopal bishop of Michigan; Bishop Francis J. McConnell of Denver; Dr. Samuel B. McCormick, University of Pittsburgh, take part at Chautauqua, N. Y.

FAIR TO HAVE NEW FEATURES

Secretary Kingsbury Exhibition Premiums and Rules for Contestants—No Poultry Exhibits Until Winter Time.

Secretary Kingsbury has furnished for distribution the year book of the Oswego County Agricultural Society. The book contains the premium list and rules for the 60th annual fair of the society which is to be held here August 17-20.

A new department added is that of stencil work in which the following premiums are offered: Premuim No. 1075, Pair Curta'ns, first, $1.00, second 50c; No. 1076, Sofa Pillow, first, $1.00, second, 50c; No. 1077, Work bag, first, $1.00, second, 50c; No. 1078, Table Cover, first $1.00, second, 50c; N.o 1079, Dresser Cover, first, $1.00, second, 50c.

The stock judging contest inaugurated last year, is announced as follows:

"One or more rings of cattle, horses and sheep will be furnished for contestants to judge as to first and second choice. The work will be reviewed by a competent judge.

"Classes One, Two and Three open to any resident of Oswego county, under 21 years of age, who has not matriculated at a college.

Class 1—For judge of cattle, first, $5.55, second, $3.55; Class 2—For judge of horses, first, $5.55, second, $3.55; Class 3—For judge of sheep, first, $5.55, second, $3.55.

Class Four—"Open to any resident of Oswego county under 18 years of age who has not been enrolled at a high school.

For judge of cattle, first, $5.55, second, $3.55.

"Contest to be held Wednesday at 1:30 p. m. Contestants to be registered by or before 12 o'clock noon Wednesday. Ten per cent. of the first prize will be charged winners."

The elimination of the poultry exhibits from this year's August fair is explained by Secretary Kingsbury, in effect that it has been deemed wise to put the poultry exhibit off until the Chamber of Commerce holds the winter fair in Fulton in Dec. because of the fact that so many strains of Oswego County birds are out of feather in August. He stated that heretofore the poultry exhibits had developed into benefits for out of county breeders of poultry only, due to the cause stated, and that inasmuch as the fair is for the benefit of Oswego County residents primarily it was thought best to put the poultry exhibit forward to winter and to devote the money and space in the August fairs to the schools in the various new adventures that have been mentioned.

The year book contains the complete organipation for the 1915 fair as follows: President, V. V. Vant, Fulton; vice-presidents, Noah Merriam, Byron Worden, Edward B. Tice, Z. B. Austin, Lawton Beardslee, Ezra B. Tucker, C. C. Wilcox, C. E. Sackett, John Talmadge, M. C. Hammond, James L. Brackett, Edward Quirk, Ray Davis, M. F. Crahan; secretary, C. I. Kingsbury, Fulton; treasurer, W. H. Merriam; directors, Orin Henderson, F. A. Moore, C. H. Lockwood, A. Gregg, H. Putnam Allen, W. H. Merriam; reception committee, C. H. Lockwood, Orin Henderson, A. Gregg; superintendents, C. I. Kingsbury; horses, V. V. Vant; spelling contest, W. S. Gardner; sports, W. V. Wilmot; flowers, fruit and vegetables, Mrs. W. M. Hinsdale; culinary art and domestic science department, Miss Edith Gregg, superintendent; Mrs. E. L. McClellan, assistant; school department, Miss Mary Farley; privilege committee, W. H. Merriam; grounds, buildings, W. H. Merriam; executive committee, V. V. Vant, H. Putnam Allen, C. I. Kingsbury.

No complimentary tickets.

In years gone by it has been customary for the Association to issue many complimentary tickets. This year, however, the directors voted unanimously to discontinue favoring friends and friends of friends, to the end that under no circumstances will there be issued a ticket to other persons than members of the press. In justification of this ruling of the Association it is contended that the intent is to be fair to all parties.

influenced to use his news-columns to further the ends they have in view.

Anent the league itself, one of the newspaper men who turned down the advertising hinted this morning that no such organization ever existed, pointing to the fact that no one of its members came to the front when the question of funds for the advertising came up. He classed the report that members of the league had subscribed $1,500, with whith to fight the proposed plan to change the city government as a fairy-tale.

A gentleman who refused to say that he was a member of the Business Men's League, but who evidenced a familiarity with the plans and personnel of the league which coulld only come from close association with its members, if not actual membership, intimated to a reporter of The Times recently that the league would announce the names of its members in the near future and intended to spare no expense in the fight against commission government; in fact, was even willing to import speakers from towns where this form had failed, who could tell the people of this city just what dire results they might expect if the commission plan carries.

THE LABOR DEPARTMENT BRINGS CIVIL ACTION AGAINST CANNING CO.

The State Department of Labor, through a state inspector, has brought civil action against the Fort Stanwix Canning Company of this city for violations of the state labor laws regulating the hours of employment for women in canning factories, it was learned today. The case will be tried before Judge Wilson in City Court next Wednesday.

The inspector for the state alleges that the local company has employed women after the closing hours regulated by the state.

A similar case was recently taken to the Court of Appeals, which decided that the Legislature had a right to regulate the hours of employment for women in factories.

Community Notes

Joseph Fitzgerald spent yesterday in Syracuse.

* * *

Mrs. Malvina Dearflinger of Clinton is visiting at the home of Mr. and Mrs. F. C. Boigel.

* * *

Mrs. Mabel Doyle and her children and Mrs. James Barnard of Frankfort yesterday.

* * *

Miss Alice Hill, who has been ill with tonsilitis at the home of Luey Pratt, is improved.

* * *

Miss Carrie Puttrell is ill at her home in South 4th st.

* * *

Mr. and Mrs. William Dunn spent yesterday in Syracuse.

* * *

Miss Lillian Waldhorn is visiting friends in Syracuse.

* * *

Marie Hallenbeck is spending a few days at the home of Mr. and Mrs. John Howard of Phoenix.

* * *

Mr. and Mrs. Arthur Sylvester returned from their honeymoon trip.

* * *

Mrs. Rose Wart is visiting Mrs. Joseph Bishop of North 4th st.

* * *

A daughter has been born to Mr. and Mrs. George Roebelard of Seneca st.

* * *

H. Putnam Allen has been remembered by his good friend, Senator James W. Wadsworth. The Senator has forwarded to Mr. Allen a large photograph of himself.

ALBANY GOSSIP DAY BY DAY

Chronicle of Events and a Forecast of What is Doing in Officialdom—Special Correspondence.

By Frederic T. Cardoze.

Albany, Aug. 7.—Delegate James L. Nixon, of Buffalo, who believes that the property of all religious, charitable and educational institutions should be subject to taxation the same as any other real property, has advanced a lengthy argument to support his contention.

"Churches and their institutions in the entire state are exempt to the amount of $277,023,685, about one-fifth of the total exemptions which should be with absolute justice be subject to taxation," says Delegate Nixon.

"Next to the churches, probably the strongest plea for continuing the tax exemptions which are unfair to the home owner will be made by the so-called charitable institutions. Exemptions are granted to this class of institutions to the amount of $75,691,-900, and it is safe to assume that the property of this class is not assessed at anywhere near its proper value.

"Now, if charitable institutions, so-called, were true to their names, it would not be so unreasonable to extend to them the charity of tax exemption, but it is a fact which cannot be successfully refuted, that these, in some cases at least, take on the resemblance of real estate associations. Land is bought at low prices and held under the plea that it is ultimately to be used for the purposes of the institution. This is true in a literal sense, for, in many cases, the property is sold for purposes entirely separate from the institution at a substantial advance in price, the profits going into the treasury of the institution. But how about the moral sense? How, naturally will legitimate real estate dealers, who pay their just taxes, regard the invasion of their rights?"

Delegate Nixon cites many instances where institutions have held real estate without being taxed for it and later sold it at a handsome profit. "A well known institution for moral and mental improvement (what a handy term) years ago bought a piere of property as a site for the proposed institution, paying for the same $50,000. And by the way, at this time its founders received from the City of New York the very handy sum of $50,000 as a donation. Later this property was sold, I am creditably informed, for $150,000, making a clear profit of $100,000.

"Another property, bought by the directors of the institution for a new site, was later sold at an even heavier advance from the purchase price. More recently a further investigation in real estate has been made by the same institution inan adjoining county, the purchase including 300 acres, which I am told is valued at $800 an acre or $240,000."

That the abuses of the privileges of tax exemption are numerous is vehemently declared by Delegate Nixon. He says that such abuses were not intended by the framers of the original exemption law. He points out that colleges and universities are revenue producing and yet few taxpayers who aid in their maintenance have been able financially to give their sons the benelt of such educational institutions.

"It seems to me to be entirely useless and a repetition to recite that no property shall be exempt from taxation except as expressly provided by law. It is my hope that that sentence will be stricken out, and I have moved that it be done."

JEWISH PEOPLE TO FAST ALL DAY, MONDAY

At a conference of Jewish rabbis, held in New York this week, a call was issued to the Jews of America to fast and pray next Monday as a means of expressing sorrow for conditions in Europe and protesting against "this unnecessary war which is costing the lives of so many men."

Special services, conducted only on the Day of Atonement, will be held and the bugle, used only on holy days, will be sounded. The announcement concludes as follows:

"A nation will fast, a nation will mourn, a nation will pray. May the prayers reach the Almighty."

The statement that the bugle will be blown and that special observance taken from the services of the Day of Atonement, will be held is considered most unusual. This has been done in times of great national distress among the Jews in Europe, but has never been done, as far as can be learned, in this country. Fasts such as this one will be were called during the times of the persecution of the Jews in foreign countries on such occasions as the Spanish inquisition.

The blowing of the bugle or the schoffer, as it is known in Hebrew, is carried out only on holy days and then only at specified times. The schoffer is a hollowed horn of a ram, twisted, and it makes a sound resembling a bugle. Different kinds of blasts are blown, a long blast to signify that the Jews were once a united nation, scattered blasts to signify that they are now scattered over the face of the earth and another long blast, significant of the belief that the Jews will again be united as a nation.

ATTENDING WEDDING TODAY IN SYRACUSE

Miss Cassie Wells of Pratt st. is in Syracuse today attending the wedding of Miss Martha Bourn of Syracuse to Otto E. Renman of New York City.

The wedding took place this afternoon at the First Lutheran church.

REV. MR. PECK AT CHURCH

Information pleasing to hosts of friends in this city comes from Sandy Creek, that the Rev. C. L. Peck, whose long illness has prevented him from attending church services, was present at the morning services the last two Sundays. His strength is increasing and he is able to walk around the streets of the village.

SOLOMON R. BURCH.

The funeral of Solomon R. Burch, aged 67, was held at 2:30 on Thursday afternoon at his home on the Granby Center road. Rev. Chas. Olmstead officiated. The interment was made at Lewis' Corners. Mrs. Burch who survives her husband, will make her home with her daughter and son-in-law who occupy the same house. Mrs. Burch's father, Mr. Martin, was buried from this home about a year ago. Mr. Burch's health has been failing for two years.

Your appetite for fresh-every-day rolls increases every time you eat the Black company's article. adv

POSTMASTERS HAVE BUSY WEEK

Pensions for Retired Carriers and a Change in Rules are Subjects Under Discussion at Binghamton.

Postmaster P. T. Conley is attending the state convention of postmasters, held this week in Binghamton. The convention opened Thursday and closed today. Yesterday was the big day of the session, when matters to be taken up at the National convention of letter carriers to be held in Omaha in September were discussed.

One of the most important matters to be taken up by the National convention that will affect local carriers as well as carriers throughout the country are a straight pension of 50 per cent, of salary and an amendment to the rule dismissing from service carriers absent from service more than 150 days in the year for sickness.

Much interest in the amendment to the 150 days' sickness rule is felt by Auburn carriers as well as others. As the law now stands a carrier who has been absent 150 days in a year on account of sickness is compelled to resign. This, the carriers believe, is not right in that a man stricken with a fever or some serious malady might be ill six months before able to take up his duties but on recovery would be as capable as ever and would need the job.

The pension appropriation is also being discussed by the carriers. Many of them have expressed their willingness to "double up" on the pension plan. In other words, they would retire carriers getting $1,200 a year on half pay, and put in a new carrier, a young man, into the service for the other $600 a year.

Carriers argue that in this way old men, who have been in the service long enough could be retired on half pay and new men could take their places without its costing the government any more. The carriers favor a straight or direct pension and are against aplan for them to contribute so much a year toward a fund. A strong effort will be made, it is said, toward securing the pension measure this year.

This Case Has a Hint for Many Readers

A Fulton woman has used Doan's Kidney Pills.

She has found them as represented.

She wishes her neighbors to know.

She publicly recomends them.

No need to look further for a tested kidney remedy.

The proof of merit is here and can be investigated.

Profit by Mrs. Ford's statement.

Mrs. Walter Ford, 474 W. Fourth st. Fulton, says: "I had kidney and bladder trouble and suffered from a lame and aching back and pains across the loins. Doan's Kidney Pills promptly relieved me, strengthening my kidneys and driving away the pains and aches. I haven't had to use a kidney medicine since."

Price 50c, at all dealers. Don't simply ask for a kidney remedy—get Doan's Kidney Pills—the same that Mrs. Ford had. Foster-Milburn Co., Props., Buffalo, N. Y. adv

WEATHER FORECAST.

Cloudy tonight and tomorrow; moderate southwest winds.

GEN. TRACY, 85, DEAD IN N. Y.

Active in National Affairs for More Than Sixty Years Helped Horace Greely Organize G. O. P. in State.

New York, Aug. 7.—General Benjamin F. Tracy, who was President Harrison's secretary of the navy, died of paralysis here yesterday in his 85th year, after a period of unconsciousness lasting nine days.

General Tracy's death occurred shortly after 3:30 p. m. and followed a fight for life that has amaded the physician at his bedside.

Three years ago General Tracy sustained a shock of paraylsis but rallied from it after a few weeks and was able to resume his law practice. He was badly shaken up in an automobile accident last Memorial day, but from this, too, he speedily recovered. The illness which resulted in his death was induced, it was believed, in worry incident through his having been detained a long while on a railway journey from Ithaca to this city, because of a heavy rainstorm and several washouts.

General Benjamin Franklin Tracy, lawyer, soldier, jurist and statesman, stood prominent in thep ublic eye for more than sixty years. At the age of 83 he argued a case before the Supreme Court of New York with brilliance undimmed by years.

"Some people have called me 'the father of the fighting navy,'" he had said recently. "I won't deny it. I believe I am. I tried to take the Navy Department out of politics and I believe I succeeded."

He referred to the days when he served as secretary to the navy under President Benjamin Harrison.

"At that time," said General Tracy, "the cruiser Baltimore was the largest and strongest ship we had, and she was only a protected cruiser. I saw the necessity of building ships which could fight if they had to.

"What's the use of building a ship that can't run away from a ship it can't whip?" demanded the secretary in his appeals. The phrase has become historic.

He won the public. As a consequence there appeared three new types of naval vessels; the armored cruiser, the armored cruiser, the armored battelship, and the scout cruiser. He also replaced all-steel armor with the presentday nickel-steel. This aroused England and literally "stripped the armor from the British navy."

ROWANS MEET OLD OPPONENTS TOMORROW

The Rowan Stars of Oswego will meet the Red Men of this city on the Fair grounds tomorrow afternoon at 3:30 o'clock. John Painter, the regular Indian hurler, will not be in the city, and George Snow and Tad Gaughn will form the battery for the locals, while Feeley and Fayette will probably be in the points for Oswego.

FINED AND IMPRISONED.

George Collins and Geletto Farendio, charged with public intoxication, were arraigned before Judge Wilson in City Court this morning. Collins was given 30 days in Oswego jail and sentence was suspended. Farenzo paid a fine of $5.

MARKETING, THE RURAL PROBLEM

Head of National Grange Says Distribution 65 Per Cent of the Cost---Better Markets Needed.

National Grange Master Oliver Wilson, in a recent interview, gave a most interesting talk on the farmer of today, farming in general and of

"Indirectly, agriculture in this country, will be affected by the war," said Mr. Wilson, in response to a question as to the effect of the world war on farming. "I believe that if one industry is affected in any way in this country, all the other industries will be indirectly acected. I do not believe that agriculture will be directly affected.

"The greatest problem confronting the farmer today is the financial problem. We need better and more remunerative markets. It costs the farmer 65 per cent. of the production for distribution. The reason for this is the long time of unnecessary middle men. This great percentage, I think, will be lessened in time. The merchants are not necessary. Co-operative marketing will solve the problem. The greatest cost should be the production, not the distribution, as it is now."

Young Men Awakening.

In Mr. Wilson's opinion the time has past when the boys and girls after becoming young men and young women, will leave the farm for the city. "The reason for this is that the young men are beginning to realize that farming is a science and not a drudgery. The agricultural schools have much to do with it. The farmer has to have more brains than men in any other profession. He must know the nature of the soil, botany, entomology and the various forms of insect life, destructive and beneficial, fertilization, pulverization. And then after the crop is safely harvested comes the greatest work of all, the disposition of the crop. The farmer must know the condition of all the markets, foreign and at home. In fact, he must have a general knowledge of everything. The farmer is gradually becoming to be considered a business man. Heretofore people were wont to speak of the business man and the farmer.

"The rural social life in the west is much better than in the east as far as I have observed. Here the towns are so close together that the farmers do not have to depend on the countryside for entertainment. In the west the distance between the towns is so great that the social life has to be much stronger than in the east in order to keep the young people on the farm.

"Farming is in its infancy. Although it is the oldest profession it is one of the least progressed. Agriculture is in a new era of progress. I believe that the arid lands of the west will to a very great extent be developed—that is, all the tillable land.

"I would like to have one thing emphasized and that is that theg range does not wish to put a burden on anybody. We want to co-operate so that the farmer will have a better social life, a bigger production."

Mr. Wilson was asked of the effect of the auto on the farmer, financially and socially. "The automobile is here to stay, and we have to reckon with it. It certainly does help farm life socially."

MINETTO BRIDGE CONTRACT TO BE SIGNED TODAY

County Superintendent of Roads, E. A. Howard, will meet with the town boards of Volney and Oswego, this afternoon to sign the contract for the new steel-concrete bridge at Minetto. The meeting will be held in the Superintendent's office in Oswego.

THE QUIRK.

This is the day that the famous play, "The Devil," from the pen of Franz Molnar, featuring the clever Bessie Barriscale, who was seen yesterday in "The Cup of Life," is produced on the screen for your approval in five complete reels. A good comedy reel is also supplied. Tomorrow, a ten-big-reel show all day is the offering, as follows: "Up From the Depths," a four-reel Mutual Masterpicture; Charles Chaplin in Work, a new Essanay two-reel comedy, Ford Sterling in "Dirty Work in a Laundry," two-reel Keystone comedy, and "The Man who Went Out," a two-reel Domino drama, comprising one great big show. Monday a five-act vaudeville act and six reels of masterpictures.

C. C. Watson, Pastor.

Sunday services as follows: Preaching by the pastor at 10:30, morning subject, "A good foundation." Sunday school at 11:45. Young People's meeting at 6:30. At 7:30 an address will be given by the Rev. Patrick Morgan of Ottawa, Canada. Mr. Morgan was formerly a monk of England and was converted to Protestantism about seven years ago. His subject will be, "From the Cloister to the Cross."

Tuesday evening class meeting.

Prayer meeting at 7:30 Thursday evening.

Congregational Church.

Chas. Olmstead, Pastor.

The theme for the service at 10:30 tomorrow will be "A Personal Message." The Sunday school will meet at 10 a. m. and there will be a brief service at 6:30 p. m. The prayer meeting will be held on Thursday evening.

The Delta Alpha class, which had arranged for a picnic at North Bay, spent the afternoon and evening at the parsonage. They were joined by several members of the Brotherhood class at the supper hour.

The members of the Woman's Missionary Union, with their husbands and friends, will picnic on Wednesday afternoon at the home of Mr. and Mrs. Chas. E. Anderson, in West First st., North. Attendants are asked to bring dishes and sandwiches for themselves and something else to eat.

The C. E. society will hold an ice cream festival on the church lawn this evening.

The consistent advertiser wins in the end. It may cost a dollar to get a dollar, but the deal wins prestige.

EVENING TIMES FEATURES

We will begin shortly the daily publication of

Easy and Practical Home Dressmaking Lessons

Prepared Especially for Readers of

The Evening Times

by

The Pictorial Review Company

of New York City

And in addition, each issue will contain

Beautiful Half Tone Illustrations of the Latest Ideas in the Art of Correct Dressing for All Occasions

These two features are designed to please and benefit the women readers of this Newspaper and are EXCLUSIVE.

The advertising value of the features is that Fulton Merchants will benefit, as the Patterns are sold in the leading stores of the city.

The Prosperity Dawning Upon Fulton is Reflected in the Amount of Increased Advertising Space Used by Merchants in

THE EVENING TIMES

The why and the wherefore of this lies in the recognition of a fact—that Success comes in "cans" and not in "can'ts," and our advertisers know that The Evening Times has in stock a big supply of "cans."

G. A. R. PLANNING BIG ANNIVERSARY

To Reproduce Pageant of Half Century Ago.

MANY THOUSANDS EXPECTED

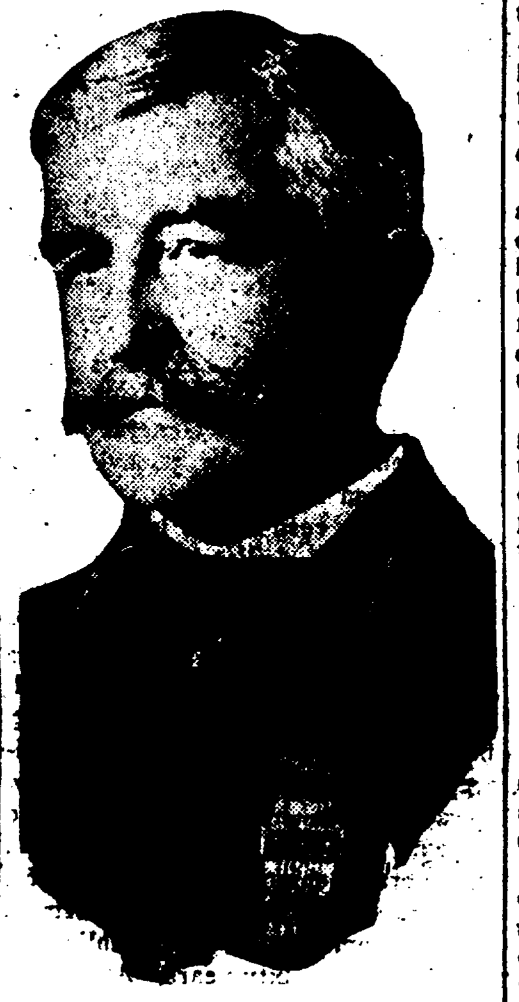
Big Features Will Be Campfires at Which Will Be Held Reunions of Various Corps—Opportunity Will Be Afforded Veterans to Revisit Celebrated Battlefields.

Washington.—Fifty years ago the Union armies, fresh from the battlefields of the civil war and the surrender at Appomattox, marched down Pennsylvania avenue in Washington.

It was a grand review of the war scarred legions of Grant and Sherman, of Meade and Sheridan, and the other famous commanders whose "boys in blue" had preserved the Union. President Johnson and General Grant were in the reviewing stand as the veterans swung proudly past to the exulting music of their bands, while the battle flags that had flown on a hundred bloody fields waved over the triumphant host.

This thrilling pageant of national interest will be reproduced as far as possible during the forty-ninth annual encampment of the Grand Army of the Republic, which will be held in Washington Sept. 27 to Oct. 3 next.

It will be the fiftieth anniversary of the grand review. Thousands of the same veterans who marched in that



COLONEL JOHN M'ELROY.

review a half century ago uniformed in the Union blue will again keep step to martial music down Pennsylvania avenue and pass in parade before President Wilson and members of his cabinet. It will be the last time the veterans will march in Washington and the last time that hundreds of them will ever again attend an encampment, as the aged men are fast passing away.

The Grand Army, which survived four years of campaigns and never surrendered, will soon have to lower its standards, defeated by time, the only enemy able to vanquish the veterans. Because of the increasing death rate and the feebleness of the survivors of the great war it is probable that the Grand Army will never again hold a great encampment after the Washington event. As this gathering is the last in which many of them will participate and as the anniversary of the grand review is of such historic significance to them and the country, they will make great efforts to be in Washington in September. The encampment will therefore be the largest and most successful ever held by the organization.

The navy department will have a fleet of torpedo boat destroyers, submarines, gunboats and a cruiser detached from the Atlantic fleet and sent up the Potomac river to Washington, where the ships will remain during the encampment. A big feature will be campfires, at which will be held reunions of the various corps of the Union armies.

Just below Washington, on the Potomac, is located Indian Head proving ground, where big guns for the navy or fortifications are tested before being placed on battleships or in our coast defenses. The veterans and visitors will have an opportunity to see the operations at Indian Head as well as scores of other places of interest in or around Washington.

During encampment week opportunity will be afforded the veterans to revisit Bull Run, Antietam, Appomattox and other celebrated battlefields.

At the last G. A. R. encampment held here in 1902 it was estimated by the railroads that about 70,000 persons attended the encampment. It is believed that because of the uniqueness of this encampment fully as many will attend the coming encampment. Colonel John McElroy, past senior vice commander in chief, has expressed great pleasure over the work of the accommodations committee, and he believes there will be no exorbitant charges by hotels, restaurants or rooming houses.

LIFE AND LONGEVITY.

Simply Prolonging One's Days on Earth Is Not Real Living.

What really constitutes life? Is it action, or is it merely existence? Who is the more useful, the man who gives his all in energy to service or he who conserves his forces and thereby prolongs his days? He lives most who accomplishes most. Activity in useful, productive or constructive effort is the real test of life. Length of years may content some, but restless, energetic souls will press forward, regardless of time, striving for a goal they may never attain, but always striving, and these only really live.

Life insurance presidents, being interested in the prolongation of existence of risks, bend their efforts to the teaching of elements of living, the avoidance of excesses, exposures or unnecessary risks of any kind and in this way really serve the world because they increase the productive years of man.

As a result of modern methods man really lives longer and better, but this is not the all in all of life. To live is to be active, to have a part in the creative effort of mankind, regardless of whether the span be long or short, so long as it is busy, for "an end is an end, whether it cometh on the winged heels of a week or the dull stretch of a century."—Omaha Bee.

STRUGGLES OF AN ARTIST.

Story of the Peasant Painter Millet and "The Angelus."

It was only after long years of struggle and dire poverty, through which Millet was consoled and supported by his wife, that the peasant painter was able to take the three roomed cottage at Barbizon and "try to do something really good."

It was then that he began to paint that most beautiful poem of poverty, "The Angelus," which is today one of the most valuable pictures in the world. Again and again he threw aside the picture in despair of ever finishing it to his satisfaction, and as often his wife replaced it on the easel and induced him to continue.

On one occasion he was so incensed at not being able to produce a certain effect that he seized a knife and would have destroyed the canvas and ended the matter once for all had not his wife fortunately seized his hand and induced him to give the picture another trial.

Thus it was that at last "The Angelus" found a place on the walls of the Louvre. The success it won encouraged Millet to paint many more pictures and thus place himself among the immortals in art.

A Sign of Rain.

An east side girl says she has come upon an infallible weather indicator. She can tell if it is going to rain without even glancing at the sky of casting her eyes over the weather forecasts in the daily papers. And it's the simplest thing in the world—just the disappearance of all umbrellas in sight.

"Umbrellas are perfectly safe in our office up to twenty-four hours before a storm," said she, explaining. "You can leave them anywhere. Even the pearl and gold handled ones are immune from abstraction. Indeed, one can hardly chase them away. So if I want to know the weather for a day ahead I must glance at the umbrella racks. If I find them becoming empty I make a bee line for the best rain shade of those that are left and make all other necessarys plans for rain."—Columbus Dispatch.

Scene Painting.

In the past half century and more, especially since the improvement of the electric light, scene painting has become very elaborate and very expensive. Instead of being kept in its proper place as the decoration of the drama, as a beautiful acessory of the action, it has often been pushed to the front, so as to attract attention to itself and thereby to distract attention from the play which it was supposed to illuminate. Shakespeare has been smothered in scenery, and the art of the actor has been subordinated to the art of the scene painter.—Brander Matthews in Scribner's Magazine.

Phonetic Spelling.

Phonetic spelling was evidently in fashion in the sixteenth century, when even Shakespease could not spell his own name consistently. There is a letter dug from the correspondence of a lady of the sixteenth century in the book of the "Cotswold Family"—the Hicks-Beaches. Juliana writes—it is a matter of debt between the cautious widow and "My lord a Kalder"—"My lord Ammaril and your wife I honour and love, but your false swearing and promise I hoterie a pore." What she really meant was "utterly abhor."—London Telegraph.

Fifty-fifty.

"Jinks gives his wife half his salary every week."

"And what becomes of the other half?"

"She still has to get that in the old way—out of the pockets of his trousers."—Richmond Times Dispatch.

Quite a Difference.

"Did I understand you to say the woman Dubbins married is well off?"

"No she was."—Birmingham Age-Herald.

The Uncomfortable Part.

"Has Brown a comfortable income?"

"Large, but not comfortable! His wife knows just how much it is."—Puck.

It is an abominable thing for a man to commend himself.—Sterne.

FUN RAYS

By Ray I. Hoppman

TO-DAY.

SOME people loll around in gloom, in sorrow and dismay, and howl about the wasted past and ill spent yesterday. Forget the past, I say, by heck! Be happy, free and gay, and live hard while the living's good—just live your life to-day. We've only got one life to live, one little act to play, one little ray of light to give, a little while to stay. Forget to-morrow and the past, and grab your chance to-day—just let your searchlight blaze forth like a firefly in May. Don't whine about that bygone chance, or yell alack-a-day! Don't let gloom get the upper hand—be like a bear at bay. When old Pop Sorrow comes around—just knock him to the clay—just uppercut him to the sod and make the critter stay. That bright smile under lock and key—that good time stored away—may never have another chance to burst forth in display. Now what's the use of living in the future when you may as well begin to live your life this minute, right away? You'll get the opportunities and chances ev'ry day, if you'll but take the hint, my friend, and cleave the rugged way. Those airy castles never may materialize, and, say, your life is growing shorter ev'ry single blessed day. So come to life—get on the job—give ear unto my lay:—Just let those future visions and the gloomy past decay. 'Tis dangerous, my valued friend, to linger or delay—forget to-morrow and the past and live your life to-day.

NOT A MATRIMONIAL BUREAU

Housewives' League of New York City Obliged to Announce Neutrality.

Well trained wives who can cook and keep house and who know more about sanitary conditions than "mother" ever dreamed of knowing are among the supplies that are being demanded of the National Housewives' league at its headquarters in West Forty-fifth street, New York city.

Two men called at the headquarters of the league within the last two weeks, and each of them wanted a wife. One of them was a widower with several children and no one to look out for them, and the other was one of the lonely young men of New York. He had no friends in the city, few acquaintances, and he felt that if he could only get a nice wife with domestic tastes, one who could manage the income of a rising young man, he would be happy.

Where can any one go to find a good, sensible wife if not to a place like the league? That was what the young man thought. New York has all the modern conveniences and more than enough modern amusements, but where can one go to find a heart and helpmeet? he asked.

That is what a good many young men—and young women, too—who make their homes in New York are asking, and the league would like to help them out, but that is where it has to draw the line. No matrimonial aspirants need apply, though the league appreciates their need.

"That men thinking of marrying should come to a place like the Housewives' league," said Mrs. Julian Heath, president of the league, "emphasizes the fact that one of the greatest needs of the present time is efficiency in the housewife. Women should be trained to spend the income of the family as the men are trained to produce it. Men are looking for real partners in the business of home making. Hitherto it has been a question of the husband supporting the wife and of the wife being supported. The majority of women are willing to do their share in maintaining, but they are not properly trained. This makes young men with moderate incomes hesitate before they even think of marriage.

"When the league started three years ago we were asked if we would do anything about the servant problem, and we said no. We intended to first train the mistress. Now we have come to the place where the mistress is on the way to obtain proper training, and we are extending our work, but not on the basis of 'mistress and maid,' but of 'employer and employee.' Statistics speak of the 'employment problem' and the 'domestic problem' as two separate and different subjects.

"When they are considered as one and the same thing then people will begin to think of hours and wages. I have very little use for the woman who goes to Albany to advocate the eight hour law for men and then comes home and works her own maid twenty-four hours a day."

Beauty the Most Enviable Gift.

Much more backing could be found for the doctrine that beauty is the most enviable gift for woman than for the like in the case of man. So far as he is concerned, authority inclines to insistence on the negative aspect. No horribly ugly man can be really happy, said Aristotle, and in spite of the Greek delight in beauty the philosopher would not go beyond that. The truth in Aristotle's contention can hardly be denied. John Wilkes, whose wit and manners so largely compensated for his hideousness, said he only needed half an hour's start to be a match for the handsomest man in England. But even he had to stipulate for that half hour.—London Spectator.

For the Children

Wild Lamb Which Looks Like Its Tame Relatives.

Nearly every child has seen at one time or another the gentle little lamb which frolics so gayly in the pasture with its mother. But here is a wild lamb that was captured in the mountains of Spain and which is said by scientists to be a member of the family from which our domestic sheep are descended. A beautiful and innocent little creature it is and differs slightly from the playful little fellows we all know so well. This lambkin is said to be of the Musmon family, which had its origin, so far as known, in southern Europe. Whether this is true or not, the fact remains that any person who had ever seen a lamb would at once pronounce this little animal to be a baby sheep. He doesn't look so very wild either. When wild animals are treated kindly they soon become tame and love those who are gentle with them.

Reconciliations.

You know there are many things always mentioned together, such as "Jack and Gill," "The Lion and the Lamb," "Stars and Stripes," and so on. A pleasant little game has been based on this and plays itself quite comfortably in a quarter of an hour. Assuming that twenty guests are expected to be present, the hostess prepares twenty sheets of paper, on which the first half of such couplings are written, the guests being required to complete them and so effect a reconciliation.

The following list of twenty will illustrate the game, the last part of each sentence appearing only on the key, which the hostess will keep until the competition is closed to correct papers. A prize may be given the one having the most correct sentences:

1. Early to bed and	early to rise.
2. Beauty and	the beast.
3. Man and	wife.
4. The lion and	the unicorn.
5. Oxford and	Cambridge.
6. Darby and	Joan.
7. Roast pork and	apple sauce.
8. Go farther and	fare worse.
9. Hook and	eye.
10. Jack and	the beanstalk.
11. Antony and	Cleopatra.
12. Bruce and	the spider.
13. David and	Jonathan.
14. The horse and	his rider.
15. Romeo and	Juliet.
16. Bat and	ball.
17. Hand and	glove.
18. Stars and	stripes.
19. Bread and	butter.
20. Pen and	ink.

Japanese Children.

Children have a good time in Japan. They are blessed by inheritance with a cheerful nature; they are dressed loosely, yet warmly; they are out of doors as much as possible, and inside their homes there is so little furniture they never stumble over it and are never warned against crawling up on the satin brocaded chairs or handling the bric-a-brac. The houses are always open to sun and air, even in cold weather. They are built dovetailed together, no nails being used, and are mounted on wooden pillars, so that when an earthquake occurs they will not tumble down, but merely shake and settle down again.

Hidden Trees.

One day we all started for the —. Bobby held the car fare in his —, and he looked so happy that we all thought that he and Mabel were a pretty —. Grandma shook like an —, but after the car started she did not care a —.

We sat under the old drooping —, and we had — pie for luncheon. I — for the sea, and the sight of the broad — brought the tears to my eyes.

Answers.—Beech, Palm, Pear, Aspen, Fig, Willow, Apple, Pine, Bay.

A Riddle.

The cause that first brought grief and death in the world,
And Adam and Eve from their paradise hurl'd,
Transposed will reveal you a dress of the fair
Which to hide while it heightens their beauty they wear.
Reverse it again, and you will soon find
A name known to us from time out of mind.

Answer.—Evil, veil, Levi.

Squeaky New Shoes.

No matter how I tippy toe,
No matter where I try to go,
My brand new shoes keep squeaking so—
You sneaky, squeaky, creaky shoe!
I really don't know what to do
With such a naughty thing as you!
You squeaky shoe!

You squeak like tiny little mice
Who've nibbled at the cheese and rice;
Now, tell me, shoes, is this thing nice?
You sneaky, squeaky, creaky shoe!
I really don't know what to do
With such a naughty thing as you!
You squeaky shoe!

You squeak like squirrels in a tree,
You squeak at mother, then at me;
Now what can all this trouble be?
You sneaky, squeaky, creaky shoe!
I really don't know what to do
With such a naughty thing as you!
You squeaky shoe!
[illegible]

Care of the Baby In Summer

Helps For the Country Mother In the Care of the Baby.

[Prepared by the children's bureau, United States department of labor.]

Thousands of young mothers living on the farms and in the sparsely settled rural communities of this country have to meet the problems of motherhood with little help. City mothers may have doctors and nurses without number at their service, as well as hospitals and dispensaries. In addition the infant welfare station has proved of enormous help to mothers situated so as to be able to avail themselves of it.

But the country mother usually lives too far away to make use of these stations, while hospitals and doctors are resources to be used only in illness or emergencies. Thus the country mother usually has had to learn from her neighbors or from her own, sometimes sorrowful, experience what to do or what not to do in the care of her baby. In this situation the mother should have at least one good book on this subject. If she will apply to the chief of the children's bureau, United States department of labor, Washington, asking for the publication called "Infant Care" it will be sent free of charge. This bulletin contains simple directions for the care of the baby and in addition gives references to the standard books dealing with the subject.

An encouraging prospect for the relief of the country mother has lately opened up in the coming of the rural visiting nurse, who travels about the farming communities with a horse or an automobile. She is employed by the families in her district, who contribute to pay her salary. The town and country nursing service maintained by the American Red Cross association, with headquarters at 1624 H street, Washington, will be glad to send literature and answer questions about such service.

The nurses ride about their districts, calling at each house where there is need of their assistance. They work under the direction of a doctor, helping the family to carry out his instructions in cases of illness or accident. Thus the nurse does dressings, gives baths, takes temperatures or whatever may be required in the case. If there is a baby she advises the mother as to his care, shows her how to give him a bath and how to prepare his food if he is already weaned. But in addition to giving bedside nursing and home care the rural nurse does many other things. If typhoid makes its appearance she may look about for a polluted water supply or trace back the milk the family uses to its origin to see whether this is the source of the infection and urge methods which will prevent further spread of the disease.

She stops at the country schools and looks over the children and sometimes detects beginning cases of infectious disease in time to prevent an epidemic. She also notes cases of probable adenoids, deafness or weak eyes and calls the attention of the child's family to the need of care by a physician.

In all of this she carries on a continual campaign of education toward a better standard of community life by showing the mothers how flies can be exterminated or at least be kept out of the house; how to take care of the milk and the baby's bottles; how to clean up the premises, dispose of the refuse and how to keep the streams of the community pure. Such a nurse is therefore, if she is as useful as she may be, far more than a nurse. She is teacher, hygienist, dietician as well, and her salary will be saved many times over in the course of years by the prevention of illness and suffering through her work.

A rural woman's club may be the nucleus from which the movement for a community nurse starts. Clubs of this sort interested in such a movement will find many suggestions in a bulletin published by the children's bureau on work of this sort which is carried on in New Zealand. This pamphlet is published by the New Zealand Society For the Health of Women and Children and is sent free by the children's bureau, Washington, to all who ask for it.

Yellow Is Popular.

Yellow is an extremely fashionable color this season, as is evidenced by the number of pale yellow dance frocks at every opening of importance and by the hats trimmed with yellow daisies and pale yellow frosted grapes. A particularly charming hat noted the other day at luncheon hour was of black milan in elongated sailor shape, with a trimming of white petaled, yellow centered daisies of exaggerated size all around the base of the crown and a simple bow of black moire ribbon across the back. Two short amber headed pins held this hat to the hair, which, by the way, was dark, and around the edge of the brim was draped one of the graceful sanpan veils, the latest veil notion of fashion. These veils are square or circular affairs, cut out in the middle to fit over the hat crown and with an elastic run through a casing, so that the veil holds itself on without aid of pins.

Fresh Beets Valuable.

Fresh beets are quite rich in food properties and may be eaten hot with a dressing of butter or cold with an oil and vinegar dressing. Pickled beets, one of the best loved picnic dishes, are invaluable as an appetizer and deserve a place on every table.

Easy & Practical Home Dress Making Lessons

Prepared Especially For This Newspaper by Pictorial Review

QUAINT MODEL FOR YOUTHFUL FIGURES.

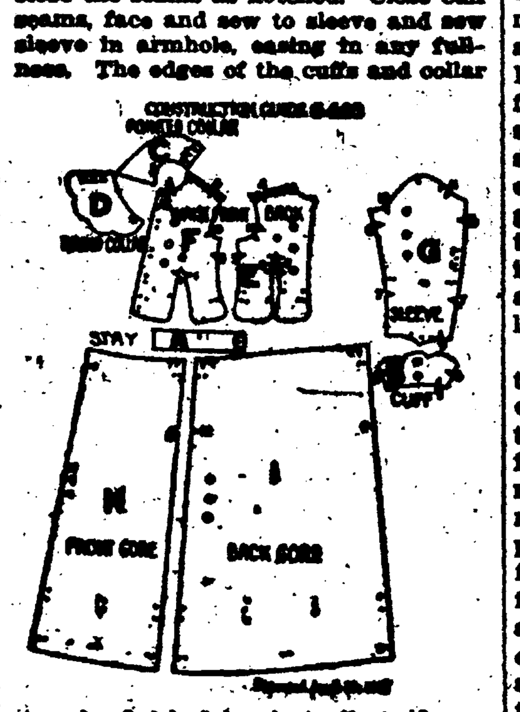
6413

Youthful costume in Panama blue silk poplin, the dart-fitted waist being finished in peplum style, taffeta piping outlining the square scallops.

A frock that is simple, attractive and inexpensive is shown here, and women who are their own seamstresses will admire it for these three qualities. Silk poplin may be used effectively in duplicating it, there being nothing more fashionable for the color scheme than Panama blue. The collar and cuffs are of organdy. The skirt is a three-piece model gathered about the waist-line and finished at the bottom with a hem and two corded tucks. Average size requires 4⅝ yards 44-inch material, with ⅝ yard organdy for cuffs and collars.

The waist is dart seamed, giving it a close resemblance to styles of a generation or so ago. In making, this seam, both at the front and back, is closed as notched. The seams must be graduated into nothing at the large "O" perforations in stitching. Now close under-arm and shoulder seams, then center-back seam. The dart, under-arm and center-back seams should be left free below single small "o" perforations so that the edges may be finished with corded piping. To finish the neck, face the round collar and sew to the neck edge, evenly matching the center-backs and large "O" perforations.

Bring "T" to corresponding small "o" perforations to pleat the sleeve and close the seams as notched. Close cuff seams, face and sew to sleeve and sew sleeve in armhole, easing in any fullness. The edges of the cuffs and collar



may be finished in picot effect, if preferred.

For the skirt, join gores as notched and close back seam from large "O" perforation to lower edge; finish edges above for opening. Gather upper edge between double "TT" perforations. Form corded tucks creasing on cross-lines of small "o" perforations; stitch ¼ inch from folded edges, inserting cord. Turn under lower edge 3¼ inches for a hem. If desired, omit the corded tucks in skirt and turn under 4⅝ inches for a hem.

Tiny corded tucks added to the collar and cuffs make an unusually novel finish for neckwear.

Pictorial Review Patterns No. 6413. Sizes 14, 16, 18 and 20 years. Price [illegible]

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.

DAINTY DANCE DRESS.

Maize Colored, Flowered With Pastel Figure and Lace Trimmed.

FOR THE SUMMER GIRL.

A dainty dance dress of pussy willow taffeta in maize color with pastel flowered figure is shown in the illustration. A lace trimmed drop peeps from under the circular skirt while a suggestion of a bodice with draped satin girdle and streamer ends afford a charming combination. Silk net in soft folds and plaited sleeve caps with dainty flowers supply all that is necessary to the bodice.

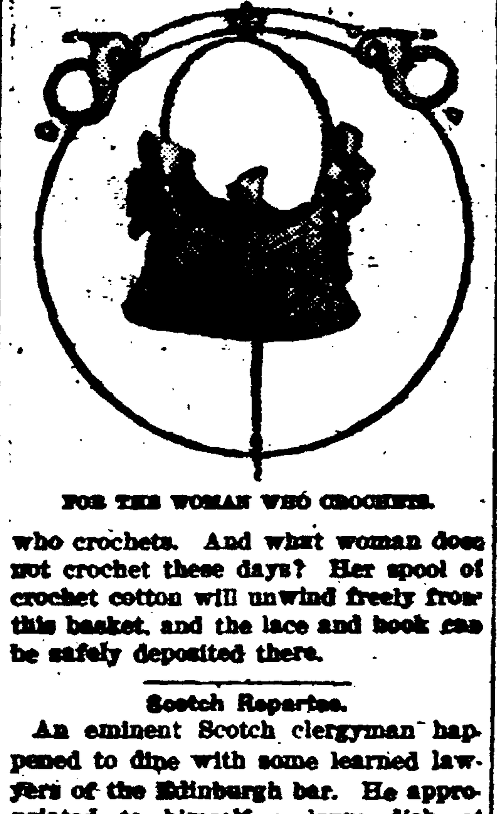
Had an Easy Job

Cy Warman, author of the song "Sweet Marie," was an official of the Grand Trunk railroad, but he was always [illegible]

CHARMING CONCEIT.

A Tiny Basket Holds Cotton, and Also the Lace and Hook.

A tiny basket of sweet grasses which can be hung on a convenient hook is an invention for the use of the woman



FOR THE WOMAN WHO CROCHETS.

who crochets. And what woman does not crochet these days? Her spool of crochet cotton will unwind freely from this basket, and the lace and hook can be safely deposited there.

Scotch Repartee.

An eminent Scotch clergyman happened to dine with some learned lawyers of the Edinburgh bar. He appropriated to himself a large dish of cress, upon which he fed voraciously. Erskine, wishing to admonish him for his discourtesy to the other diners, remarked:

"Doctor, you remind me of Nebuchadnezzar in his degradation."

"Aye, do I mind ye o' Nebuchadnezzar? Doubtless because I am eating among the brutes," answered the Scotch worthy.

PRACTICAL HEALTH HINT.

Care of the Mouth.

Decayed teeth or diseased gums may be the cause of poison circulating throughout the system. It may happen in this way: A series of canals, known as lymphatic tissue, connects the several parts of the body, including the gums. If the teeth are not cleaned and the mouth kept in good condition microbes or germs collect on the gums and teeth. When they become so numerous as to overpopulate the mouth they are pushed into the lymphatic canals, where they get busy developing disease in the body; hence the necessity for constant and scrupulous care of the mouth.

Hints for Housewives

French Toast Sandwiches.

French toast sandwiches are among the favorite tea room novelties that housewives find it easy to duplicate at home. These sauted slices of bread, put together in pairs, with any preferred filling have the advantage of being adaptable to any of the three meals of the day, while their particular mission is to afford something a little out of the ordinary for the Sunday night tea table or the after theater supper. The occasion must decide what filling is appropriate and whether the French toast sandwich shall be served crisp and dry from the griddle or accompanied by a suitable sauce.

The novelty consists in the fact that after the sandwich is made it is pressed closely together and then dipped in a thin batter made in the proportion of one beaten egg to a half cupful of milk. If the filling of the sandwich is a savory mixture of egg, cheese, fish, meat or fowl, a pinch each of pepper and salt should be added to the batter. If, however, the sandwich has a sweet filling, the batter should be slightly sweetened and flavored with a teaspoonful of sherry. Cook the moistened sandwich on a hot, well greased griddle, browning first on one side and then on the other. A shallow iron frying pan will answer the same purpose and olive oil will be found an excellent substitute for butter.

For those who like something more than the ordinary breakfast of fruit, cereal and eggs several variations of the French toast sandwich will be found appropriate to accompany the morning coffee. Flaked salt codfish, made a little less moist than in the popular dish known as creamed codfish, is an excellent filling for a breakfast appetizer of this kind. Half fish and half finely chopped hard boiled egg makes an equally good mixture, or a little finely chopped cold boiled potato may be used. Season well and dip in batter. When thoroughly browned on the griddle serve hot, either with or without a little white sauce.

A particularly appetizing combination, suited to serve at breakfast, luncheon or Sunday night supper, calls for equal parts of finely chopped cold boiled ham and tongue. This should be seasoned with either French or English mustard and moistened with a little cream or rich milk.

Lovers of cheese will enjoy a hot cheese sandwich, with filling of softened cheese moistened with cream and highly seasoned with Worcestershire sauce and paprika. The batter should also be seasoned, and the finished sandwich when toasted and served piping hot should have much the flavor of a Welsh rabbit.

As a simple sweet course at luncheon or family dinner French toast sandwiches with fresh fruit or jam filling will be found delicious.

The story goes that we are indebted to a thrifty housewife for this particular brand of toasted sandwiches. In her endeavor to utilize an oversupply of dainty sandwiches prepared for an afternoon tea the idea occurred to her to brown a few of them on the griddle for her luncheon the next day.

A French Dainty.

Tenderloin and mushrooms is the plain name in this country, but this way of doing the cookery is purely French.

Peel six mushrooms and take out the stems. Then drop them for five minutes in cold salted water. Take them out, dry on a fresh cloth and put them in the plat with a teaspoonful of butter. Cover the plat with a saucer or breakfast plate, set it over the blaze and saute the mushrooms for fifteen minutes without uncovering. Then dump them in a hot little vessel, cover that and keep warm until the steak is cooked.

Scrape the tenderloin steak with a knife, rub it over with the cut side of a lemon and put on a faint dust of salt and pepper. Then place the plat with all the mushroom taste and a little of the sauce over the fire and when piping hot put in the steak. It should brown a little on either side, but still be pink inside. When cooked pour the mushrooms back into the pan, add a pinch more of butter if the sauce has dried out, cover the plat, set it in the oven for three minutes and serve at once. As mushrooms draw their own juices, only enough butter to start them cooking must be used when they are first prepared.

Chocolate Cake.

One-half cake of chocolate, one-half cupful of sugar, one-half cupful of milk, one egg yolk and a pinch of salt. Cook in double boiler until smooth.

One cupful of sugar, one-half cupful of butter, creamed together well; add two eggs beaten light, one cupful of milk and one level teaspoonful of soda dissolved in milk, two level cupfuls of flour and one tablespoonful of vanila. Mix this with the other, beat well and bake one-half hour.

Tomato Eggs.

Beat one-half dozen fresh eggs lightly. Rub one-half cupful of tomatoes through a colander and mix with the eggs. Stir in one tablespoonful lemon juice, one small onion finely minced, one tablespoonful minced parsley, one teaspoonful each salt and celery salt and a generous dash of sweet paprika. Pour into a double boiler, place over boiling water and stir constantly until thick enough to serve on toasted bread.

TODAY'S FASHION NOTE

Tailored modes for autumn are appearing in pleasing selection, and practical effects are commanding attention. The skirt and shirt waist illustrated are typical of the latest modes. Short, full plaited at the sides, the skirt is handsome carried out in blue serge, 4 yards, 44 inches wide, being required for the purpose. The waist of crepe de chine has a flare collar and shoulder yoke. Deep cuffs finish the long sleeves. Two yards 40-inch make the waist.

Pictorial Review Waist No. 6133. Sizes, 32 to 42 in. bust. Price 15c. Skirt No. 6369. Sizes, 22 to 36 in. waist. Price, 15c.

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.

The KITCHEN CUPBOARD

SUMMER DISHES.

Cream of Asparagus Soup.

Cut off the tips of a bunch of asparagus. Cut the rest of the stalks in half inch pieces and cover with water. Add a small onion and a sprig of celery and simmer for an hour and a half. Half an hour before taking from fire add the tips in a little cheesecloth bag or small wire strainer. When the hour and a half is up remove the tips and put the rest of the asparagus through a vegetable press. Heat and thicken with flour and butter rubbed together—a tablespoonful of each to each cupful of asparagus stock. Then add to the same amount of hot milk and serve with the asparagus tips in it. Season with paprika and salt.

Clam Pates.

Drain a quart of clams and heat a cupful of the liquor. Melt a tablespoonful of butter, add the same amount of flour, and when cooked add a cupful of hot milk, a pinch of soda and a cupful of hot clam liquor. Chop the clams while the sauce is simmering, add them, and then add very slowly a beaten egg. Season with salt and pepper and put while very hot into puff paste pate shells.

Green Peas and Mint.

Shell green peas just before they are to be cooked. Line the top of a double boiler with green lettuce leaves, put the peas in, add a tablespoonful of chopped parsley, cover and cook until done, which will be about half an hour or perhaps forty minutes. Then drain, add a tablespoonful of finely minced mint, salt and pepper, and two tablespoonfuls of butter.

Sweet Pepper and Cheese Salad.

Wash a sweet red and a sweet green pepper and cut off the stem end of each. Remove all seeds and pith. Mix cream cheese with a little cream, pepper and salt and chopped parsley and nut meats. Stuff the pepper shells full and chill thoroughly. Then slice, about three slices to the inch, and serve a slice of each on each plate on a bed of white lettuce leaves. Dress with mayonnaise.

Watermelon Balls.

Chill a ripe, red watermelon, cut it in half and scoop out with a ball scoop rounds of the pulp. Sprinkle them with sugar and chill thoroughly. Then pile them in long stemmed dessert glasses, sprinkle with lemon juice and serve.

ESTABLISHED 1865

THE NARROW BOSPORUS.

At Its Greatest Width It Measures Only 9,838 Feet.

The Bosporus contains few dangerous submarine rocks or shoals. The locality of these few is indicated by lighthouses or buoys. The water is only slightly tinged with salt and is marvelously clear. The sands, glittering apparently near the surface, may be twenty feet below.

On a map, of whatever scale, each of those familiar straits, which cleave lands and continents asunder, seems hardly more than a silvery thread. Yet as one sails over their famous waters the opposing shores on either hand sometimes appear far away. The strait of Gibraltar, which wrests Africa from Europe, is sixteen miles wide; that of Messina, forcing its way between Italy and Sicily, is from two to [illegible]; that of Bonifacio, which, like a blade of steel, cuts Corsica and Sardinia apart, is seven miles in width at its most contracted point; even the Dardanelles expands from over one to [illegible].

But the illusion as to distance created by the map is reality as to the Bosporus. Off Buyoukdereh, where it attains its largest breadth, its hemmed in waters broaden to only 9,838 feet, or about one and four-fifths miles. Between Roumeli Hissar and Anadoli Hissar they shrink to one-sixth of these dimensions, or to 1,641 feet.—From "Constantinople," by Edwin A. Grosvenor.

THE MUDDY MISSOURI.

How the River Lowers the Surface of the Land It Drains.

The Missouri is the muddiest river in the Mississippi valley. It carries more silt than any other large river in the United States except possibly the Rio Grande and the Colorado. For every square mile of country drained it carries downstream 381 tons of dissolved and suspended matter each year. In other words, the river gathers annually from the country that it drains more than 123,000,000 tons of silt and soluble matter, some of which it distributes over the flood plains below to form productive agricultural lands, but most of which finds its way at last to the gulf of Mexico.

It is by means of data of this kind that geologists compute the rate at which the lands are being eroded away. It has been shown that the Missouri river is lowering the surface of the land drained by it at the rate of 1 foot in 1,036 years. The surface of the United States as a whole is now being worn down at the rate of 1 foot in [illegible] years.

It has been estimated that if this [illegible] action of the streams of the United States could have been concentrated on the isthmus of Panama it would have dug in seventy-three days the canal which was completed after [illegible] years' work with the most powerful appliances yet devised by man.—Geological Survey Bulletin.

Quarantined.

In one of the little mountain towns of the south a Chautauqua meeting was held last summer for the first time. The fact was advertised for some distance round the town, but the older negroes especially did not understand what it was all about.

Across the front of the little hotel of the village was flung a banner bearing the one word "Chautauqua."

Up to this hotel one day drove an old negro in a one horse wagon containing a few vegetables, which he hoped to sell to the proprietor, as he had done on former occasions. But when he saw the banner with its ominous word he was seized with fright and would not go into the building or even get out of his wagon. When the proprietor [illegible] the old fellow inquired nervously, "What disease is you all quarantined for, boss?"—Youth's Companion.

Tossing In a Blanket.

Tossing in the blanket is a very old sport or punishment. "Blanketing" Ben Jonson called it, and in Holinshed (1557) we find a denunciation of "jesting, plaicing, blanketing and such other filthie and dishonorable exercises." The French have a special verb, "berner," for it, "berne" being the name given to the sheet or blanket used. The verb "berner" is also used for the Moorish punishment, in which four men hold the victim by his ankles and wrists and send him as high as they can—presumably with no blanket to catch him.

Now He Has Millions.

"See that fellow in the limousine?" said one man to another at Washington and Illinois streets as a big car passed.

"Well, I can remember when he didn't have but one pair of socks; now he has millions."

"Gee, he must have some washings," replied the friend whose mind does not run to finances.—Indianapolis News.

Facts From France.

Building the best of roads in the world has cost France about $612,000,000.

A hollow wooden ball six feet in diameter, which is moved by the flow of the sewage, is used to remove obstructions from sewers in Paris.

In a billiard room in Paris is a table made of glass. It is much more difficult to make a shot on it than on the ordinary baize covered table.

BRIGHT BRIEFS.

Walk fast until you get there—then stand fast.

There is always room at the top of an argument—for more talk.

Courage is the yeast that causes a man to rise to the occasion.

All men are equal the day they are born and the day they are buried.

Theory looks good, but it doesn't always go when you try to crank it.

Every young man should be taught that there is something better than luck to trust to.

Many a man has sense enough to get a good wife, but hasn't sense enough to know it.

An optimist is a man who smiles at kicks, and a pessimist is a man who kicks at smiles.

A Chicago physician says that humans may grow fat by eating hay, thus making it a pleasure to remain skinny.

The respirators make a soldier of the trenches look like a death's head. But that's what war is trying to make of all of them.

Automobiles may have decreased the demand for horses, but military statistics show that the mule is as highly prized as ever.

It is to be hoped that some statistician has been keeping count of the number of times the "world's greatest battle" has been fought since last August.

Height of Annoyance.

"I'm mad at my wife. To anger her I shall flirt with some other woman."

"If you want to make her absolutely furious ask some other woman to sew on a button for you."—[illegible] City Journal.

CHIEF DYER PUTS BAN ON "A"-SHAPED SIGNS; RESULT OF CONTROVERSY

The edict has gone forth from Chief Dyer that all signboards of the triangular type which obstruct the sidewalks of the city at present be removed. This order will affect many groceries, drug stores, theaters and other business houses who advertise in this manner, and the officers were busy all afternoon putting it into effect, and thereby hangs a tale.

A certain livery stable owner in the city is ofttimes pressed for room and occasionally he leaves several of his wagons standing along the street near his premises. Adjoining his place of business is a billboard, controlled by a syndicate which rents the ground from a Fulton man. The billboard is leased by a local theater and used to announce feature films. The manager of the theater noticed one day that several wagons, the property of the liveryman, were standing in front of the billboard in such a way as to obstruct the view of passersby. The manager could not read his advertisement and promptly notified the billboard syndicate that their board was of little use to him as an advertising medium, inasmuch as no one could read the bills.

The syndicate appealed to the owner of the property and that gentleman asked the authorities to take action. The liveryman was ordered to remove his wagons and once more the billboard attracted the public gaze.

Acting on the principle that one good turn deserves another, the liveryman immediately complained of the triangular street sign before the theater in question, and since a city ordinance prohibits any obstructions of this kind on the sidewalks, the order was given by which all such signs were removed.

NOTICES OF SPECIAL ELECTION POSTED; TO BE HELD SEPTEMBER 17

Notices of the special election, which will be held September 17 and which will decide the question "Shall the city of Fulton adopt the commission manager form of government?" were completed this morning by City Clerk Scudder and will be posted about the city today.

The notice states that the polling places will be open on election day from 6 a. m. until 5 p. m. and the polls are located as follows: 1st ward, 1st district, Langdon's barn, Worth st.; 2nd dist. John Crahan's store, Kellogg and West Third sts.; Second ward, 1st district, Howe block, West Broadway; 2nd district, John W. Stevenson's barn, 557 West First st., South; Third ward, 1st district, Frank Dunn's barn, 460 South First st.; 2nd district, Paige's Marble works, East Broadway; Fourth ward, Foster's shop, 155 South Second st.; Fifth ward, 1st district, City Hall; 2nd district, Jenning's garage, South Seventh st.; Sixth ward, 1st district, Frank Hyde's barn, 114 North Sixth st.; 2nd district, Freeman's boathouse, 505 Seneca st.

General Staff Leaves Main Body to Guard Vistula Line

(Continued from Page One)

garrison it is not believed less than two army corps could adequately man the many positions that are woven together to form the greatest entrench camp. Against the two army corps—about half the number of men caught in Permysl when the Russians began their final siege of that Austrian stronghold—and against the modern guns they will control the Germans will send their great Krupp siege pieces that reduced Liege, Antwerp, Mauberge and Namur. And observers will watch the operations with the keenest interest to see whether the earthworks of Novo Georgievsk will be less susceptible to the fire of high explosives than the cupola forts of France and Belgium.

Russia officially announces that Warsaw was evacuated to prevent it suffering the damage that accompanies a bombardment. The retiring armies, after blowing up the Vistula bridges connecting the capital with Pragra, took up positions in that suburb. The Bavarians occupying Warsaw have made no effort thus far to follow them across the river. The hope of the Germans of trapping the opposing army here apparently rests on the ability of the forces that crossed the river at Matzievitza, twenty-five miles to the south, to get around in the rear of Praga.

General Scott, With Large Body of Troops, at Border Line

(Continued from Page One)

is to concentrate somewhere near Camacho on the border and proceed into Mexico along the Monterey route.

The departure of General Scott at this time indicates to some authorities that the Administration has in mind a plan of action within less than sixty days, and that the best place for General Scott in the event of intervention being forced by the obstructive tactics of aCrranza or Villa, would be at a definite headquarters on the border. The headquarters would in all probability be at Fort Bliss.

ODD FELLOWS INCREASE THEIR PER CAPITA TAX

Lockport, Aug. 7.—The 23rd annual meeting of the Odd Fellows' Home Association of the State of New York concluded with the election of the following officers; President, Samuel Stengel, Buffalo; vice-president, Florrd T. Mallory, Penn Yan; treasurer, Henry J. Rahl, Buffalo; secertary, J. M. Deyo, Rochester; trustees, John C. Fitch, H. H. Bingham and Mrs. Charlotte Nagel, Buffalo; I. J. Carmichael, Batavia. All were re-elected excepting H. H. Bingham. He succeeds James W. Buckley, Niagara Falls.

George E. Judge of Bucalo, deputy grand master of the grand lodge and incoming grand master, was present and addressed the delegates, congratulating them upon the success of the home and its flourishing financial condition.

Cash donations of $1,092.90 were received during the day. Two amendments were offered and will be voted on nert year. One fixes the annual per capita tax at 30 cents, payable semi-annually, and the other at 25 cents, payable annually. The present tax is 15 cents. President Samuel Stengel in his address to the association urged that some method be adopted for increasing the revenue as the home is growing and the disbursements are heavy due to the increased cost of living. In addition to the per capita tax the home now receives much in donations each year, which keeps its books even. President Stengel does not think it practical or advisable to depend upon this for income.

SENATOR PENROSE HAS NEW TARIFF BILL

Philadelphia, Aug. 7.—United States Senator oBies Penrose in a speech at a dinner here last night, announced that he would introduce at the next session of Congress a tariff bill that will contain reductions of 15 to 20 per cent. on many of the duties in the Payne-Aldrich tariff bill. The Senator said:

"For myself I intend to introduce at the opening of the next Congress a tariff bill protective in its nature, containing a horizontal reduction of 15 to 20 per cent. on many of the duties contained in the Payne bill, but reinforcing some of the schedules, like the chemical schedule, to the extent that may be necessary to secure these industries in our country.

"This bill will protect us from the collapse which will occur on the close of the war in Europe and will furnish us money to prepare for the national defence, should any nation of Europe in arms desire to invade or assault us."

Without a Guide.

"I went to Jonesboro to see my father and mother the other day, Percy."

"By Jove! And how did you find them?"

"Oh, I knew where they lived."—Wisconsin State Journal.

Those You Know

The Misses May and Gertrude Hoey of Oswego have returned home after spending a few days with the Misses Lillian and Carrie McNamara of North 4th st.

* * *

Mrs. A. W. Blann of Park avenue who has been ill for a few days, is slightly improved today.

* * *

Harold Elliott has returned to Fulton after a long stay in the South.

* * *

Mrs. Herbert Blann and baby, both of whom have been under the care of Dr. Halstead, a specialist of Syracuse, are getting along well.

* * *

Frank Walsh is visiting in Oswego.

* * *

Albert Russell and William Myers are spending their vacation at Skaneateles Lake.

* * *

Emmett B. McDonald of the firm of Bond & Schoeneck, attorneys, of Syracuse, is a guest today of Bernard T. Jones of this city.

* * *

Mr. and Mrs. J. V. Curtis of Hilton, N. Y., are visiting their daughter, Mrs. L. A. Palmer, of this city, for a few days.

* * *

The Y. P. B. will meet at the Congregational church Tuesday night, August 10, at which time plans for the annual picnic, which was recently postponed, will be completed. All members of the Branch are urged to attend.

* * *

Miss Doris Barnes of East Broadway is spending a vacation at Cottage High-Point, at Tully, N. Y.

* * *

W. Lester Singleton has accepted a position at the Onyx.

* * *

John W. Stevenson left last night for Buffalo, where he will spend a few days on business.

* * *

E. Rugg of the Water Department clerical force is enjoying his annual vacation.

THE KIDS' "JEDGE" SAYS TO STICK TO WARDEN OSBORNE

Denver Judge Believes That Governor Whitman Will Not Defeat Popular Will by Removing Head of Prison Reform.

New York, Aug. 9.—The Tribune yesterday asked leaders in prison reform who are supporters of Warden Osborne to give their reasons for upholding Warden Osborne. In reply Judge Ben B. Lindsey of Denver says in part:

"The idea of modern prisons is not only to protect society, but also to redeem the offender. I am satisfied that this is exactly what Mr. Osborne is trying to do. I also believe that he is succeeding.

"He is making of Sing Sing a laboratory or experimental station in which is being worked out the biggest economic problem of the day, a work that is little understood by those who have not had part in it.

"In this work Mr. Osborne is facing two dangers: One is the danger of brutality that responds with hate—that was the old order. The other danger is leniency that responds with contempt. He is trying through the Mutual Welfare League to step in between the two with a system of efficiency that will avoid the brutality of the old ideas of vengeance and also escape the pitfalls of sloppy sentimentalism for the criminal. There is a difference between kindness and leniency.

"He is trying to reduce his plan to a businesslike systematic scheme through appealing to the good qualities of men. These qualities are capable of wonderful development in about 70 per cent of the men in prison. The percentage may be higher in some of the prisons. In every prison there are men who are degenerates and feeble-minded or physically defective from caucess for which they may not be altogether responsible. But it is the minority in every prison to whom the kind of appeal made by the Mutual Welfare League is not always successful.

Says to Encourage Osborne

"Mr. Osborne's work and the experiment he is undertaking deserve every possible charity and consideration that some of the seeming mistakes that mar it. But the conventional mind is so hostile to anything new that it is fully capable of condemning without understanding. Thus it condemned me for trusting these boys and men because of the five that ran away without any thought of the 700 who did not run away.

"The public mind, or at least the conventional part of it, is also capable of being misled by those whose interests may be affected by any change, though that change be for the public good. Thus a great hue and cry was raised in Denver when it was charged that a notorious burglar and his pal that I had trusted to go 250 miles away to prison had made their escape.

In that case a deputy sheriff tried to frame up with those two boys to run away. That they had run away was actually reported under great scare heads in the public press and I was condemned for allowing them the opportunity.

The fact was that the men had not run away, that they went straight to the prison and gave themselves up for punishment, and

(Continued on Eighth Page)

ASA WELDON'S LIFE PROBABLY SAVED BY HIS COLLIE

Asa Weldon, the 18-year-old son of Mr. and Mrs. Edward Weldon, of Granby, norrowly escaped being gored to death yesterday in a pasture near his home, by a large Holstein bull, and probably owes his life this morning to the fidelity of a pet Shepherd dog, which attacked the maddened bovine just as his young master was almost exhausted.

The lad went into the pasture yesterday afternoon to get some stock and paid no attention to the bull, who had never shown signs of a bad temper, and had turned his back while working the other cattle toward the gate, when he heard the trample of hoofs behind him. Before he could dodge, the bull caught him on his horns and tossed him high in the air. One of the horns made a long gash in the lad's abdomen. When the boy recovered his feet he attempted to escape over the fence, but the bull bore down on him again and he was obliged to dodge the animal repeatedly. Just as he was so exhausted that he could hardly run any longer, the Shepherd dog, who had entered the field, leaped at the bull and caught the animal by the nose. The bull made frenzied attempts to shake off the dog, but the Shepherd hung on until Young Weldon was able to get out of the field and summon help.

Doctor F. E. Fox, of this city, was called and took several stitches in the lad's wound. The dog was uninjured.

RAYMOND PUTS PUNCH AND A LOT OF GINGER INTO HIS BRIEF BUSINESS TALKS

Frank Jewell Raymond of New York, manager of the Industrial department of the National Dry Goods Association, will be here tomorrow evening. His talk will be under the auspices of the Chamber of Commerce and will be given in the City Hall at 8 o'clock.

He has talked before advertising clubs and commercial organizations from coast to coast. Department stores in Boston, New York, Washington, Philadelphia, Cleveland, Cincinnati and St. Louis have used him. Most of these have used him twice. Wise department store managers do not repeat failures.

Mr. Raymond has talked in Auburn, Trenton, Boston and many other cities before the Chambers of Commerce. In the "Eye Opener," published by the Trenton Chamber of Commerce, appears this comment:

"Many of the merchants expressed themselves as greatly benefited by Raymond's talk. Said one, "It isn't only our clerks who need these talks, it's we proprietors. I learned something the first night I attended and you can make up your mind that Raymond told some truths to others as well. As he so forcibly said, 'every time you think some remark hits John Smith, apply it to yourself,' and that's the way I took his lecture. If we could have Raymond once a month it would surely put ginger into all of us."

The Chamber of Commerce is offering the merchants of Fulton an opportunity to hear a man who has made good for merchants elsewhere. It is hoped that there will be a large attendance of the merchants and their clerks.

Germans Capture Another Post and Occupy Fort at River's Junction

London, Aug. 9.—The most significant incident on the Polish battle front yesterday was the capture of of the fortress of Serock by the Germans, at the junction of the Bug and the Narew. This is one of the secondary fortresses of the Narew river, but it [illegible] portant position less than twenty miles east of Novo Georgievsk and about the same distance north of Warsaw.

The pressure of forces that occupied Serock has brought the Germans down to the Bug River at Wyszkov, 25 miles east of the fortress and the southern limit of the Lomza-Ostrow-Wyszkov line, on which the most intense battel of the immediate Warsaw campaign has been fought.

The Germans in this section have been advancing from a general northwesterly direction and apparently have cleared the Narew from Ossowentz to its mouth, the battle line running almost straight south from Lomza to the Bug at Wyszkov, thence at a right angle west past Novo Georgievsk. The Warsaw-Vilna-Petrograd railway crosses the Bug a few miles inside the Russian front but branch lines feeding the Narew fortresses are in possession of the Germans.

According to Petrograd the attacks on the Kovno and Ossowentz positions launched Saturday, lapsed festerday, but the Germans are pounding away at Novo Georgievsk, where the Russian garrison was left to withstand a siege. Two of the forts have fallen, one on Saturday and one yesterday, according to Berlin.

In the north General von Buelow is meeting with stubborn opposition. His forces that were moving on Riga, [illegible] were only 8 [illegible] They are halted in the marshy country that is the headwaters of the Aa, but to the southeast they are making rapid advance from the Jara in the direction of Dvinsk.

The Germans have crossed the Vistula of Warsaw, and further south General Woyrsch is advancing eastward. But Field Marshal von Mackensen is being stubbornly resisted and apparently making at the best very slow progress north of Cholm.

On the whole, the daring scheme mapped out by the Germans as a grand sequel to the capture of Warsaw—the destruction of the Russian army—is unfolding itself slowly, as must be the case from its very magnitude. With the three main railways, besides those built since the war, it is believed in military circles here that the Grand Duke Nicholas will be able to extricate his Warsaw army. The events in the east, however, will continue to rivet the attention of the world on them for some time to come.

There has been some rather heavy fighting in the Caucasus between the Russians and the Turks, but the official reports from the opposing camps are so contradictory it is impossible to say in whose favor it is going.

Crown Prince Gains; Found Weak Spot in French Line

Paris, Aug. 9.—Violent bombarding on the whole Belgian front was continued today by the Germans, who renewed also their attacks in the Argonne.

The Germans made minor gains in the Argonne forest, where the army of the Crown Prince has been trying for some weeks to find a weak spot in the French defenses.

At the close of the day they had pierced one of the French outworks in the western position of the forest, north of Fontaine and Hoyette. Counter attack regained most of this lost ground.

In desperate fighting in the Vosges the Germans were repulsed at Lingekopf, Shratz and Maenele with heavy losses. At one point 100 dead Germans were left among the barbed wire entanglements.

Soissions was again under heavy bombardment and there were vigorous artillery duels in the valley of the Aisne.

In the hand grenade attacks near Souched the French attempted to regain the arenches lost on Friday. The fighting there continues.

ITALY SOON TO DECLARE WAR ON TURKEY

Rome, Aug. 9.—Today's cabinet meeting discussed principally the Italo-Turkish relations which have grown more srtained after the discovery on board a Greek vessel of proofs showing that Turkey was directly inviting a Holy War and furnishing Tripoli rebels with funds, ammunition and officers.

WEATHER FORRECAST

Fair tonight and Tuesday, with north to northwest winds.

Broken Axle Sent Car Down Bank; Men Badly Hurt

Women Occupants Escape Injury but the Men Suffered Broken Bones, Cuts and Bruises—Whereabouts of Men Kept Secret.

Tearing along at a sixty-mile clip, a high powered automobile occupied by men said to be George Sylvester and Thomas Mood, of Syracuse, and two women who said they were Gussie Homer of New York and Grace Ford of Buffalo, broke a front axle along the east river road, near Black Creek, Saturday evening and plunged down an embankment into the river, several feet below. Sylvester and Mood jumped, according to the women, while they clung to the car which overturned when it hit the water, entangling them in the wreckage. They managed to cling to the car while they screamed for help, and escaped serious injury.

Mood and Sylvester were lying on the ground when other tourists and farmers of the vicinity reached the scene, and a doctor was hurriedly called. He found that Mood had a fractured skull, a broken left arm and had suffered internal injuries, in addition to cuts and bruises about the head and body. Sylvester's left leg was broken, his collar bone was fractured and his chest was crushed. He also sustained a long, deep gash on the head. Both men were unconscious when picked up.

The women told witnesses that the car was running along smoothly when suddenly the left front wheel was thrown off. The axle dug into the ground and the car swerved toward the river. Mood yelled to his companions to jump and Sylvester threw himself out of the car. The women were unable to move before the car went over the bank and hit a rock at the water's edge before falling into the water.

As soon as the women had recovered from the shock they disappeared and no trace of them has been found. Mood and Sylvester were placed in the automobile and driven toward Oswego, but the authorities at Oswego hospital deny that the men are there. A rumor is current in Oswego today that the men are in the Fulton hospital, but the superintendent of that institution told a reporer this morning that no one had been admitted.

The local police know nothing about the accident, according to Chief Dyer, and it is evident that the parties concerned are making great efforts to keep the matter hushed up.

A rumor was current this morning that the man Sylvester is an employe of the Hudson Groceries of Syracuse, and has been missing from his home for several weeks. The women told their rescuers that Mood was from New York and Sylvester from Jersey City, and that they had met the men in Utica Saturday. The women said they thought they were going to Rochester, and were surprised when they learned they were near Oswego. Another report states that Sylvester had a large amount of money, in checks and currency, on his person. It is evident that the name of Mood is fictitious, as inquiry in Syracuse this morning failed to locate any such person.

At four o'clock this morning Dr. Chaffee of Syracuse, accompanied by Officer Allnutt of the local police, and another Syracuse officer were making inquiries regarding the whereabouts of in the injured men in this city. They seemed to think that the men were in the hospital here.

The car has been taken to an Oswego garage and Sylvester, after having his injuries dressed, left that city in an automobile. Mood's whereabuts have not been learned.

HEIR TO LAKE ESTATE SUSTAINED CRUSHED FOOT

Elijah Lake, 10 years old, and heir to the Lake estate, suffered a badly smashed foot, when he fell off a large motor truck at the corner of West Broadway and Fourth st. yesterday afternoon, and the truck passed over his left foot. The boy was playing along the street in company with some other lads his age, when the truck came along. The machine is used to carry crushed stone out to the Bowens Corners road, now under construction, and as the lad lives in that section, it is believed that he attempted to catch a ride home. He missed his grip and fell and the rear wheel passed over his left foot.

Although he suffered great pain, the lad was game, and talked freely while he was carried into the office of Dr. Terpenning, who examined the foot with an X-ray. No bones were broken and after the wound was dressed the boy was taken home.

Unpopular Amendment

The constitutional convention has advanced by av ote of 105to 25 to third reading the amendment to increase the salary of assemblymen and senators from $1,500 to $2,500 and their traveling expenses going to and from Albany once a week during the session. Nearly everyone will admit that legislators ought to be better paid than theyare and that in some way they should have opportunity to visit their constituents at least once a week, but this amendment seemsto go too far. It will hardly have public approval. The twenty-five delegates who voted against it were among the strongest men in the convention, led by Hon. Patrick W. Cullinan, and included President Elihu Root, Their constituents will be pleased to note that Delegates Lewis H. Ford, E. N. Smith and Ledyard P. Hale of northern New York voted against the resolution. Itl probably well represents the sentiment of their constituency and they were in company with such men as Mr. Root and Jacob Gould Schurman.

Advantage of Protective Tariff Seen

The vast influence of the European war in the development of American industry is convincingly portrayed in an article by Edward Mott Woolley body's. While the author studiously avoids anything that savors of partisan politics, the array of facts presented leaves no room ford oubt that because the European war is a more invincible bar to imports from Europe than any Protective Tariff could be, ith as started American factories and given employment to Americvan labor in enterprises heretofore filling the pockets of workmen abroad. Beginning with dyes such as maganese, pottery, glass, creosote, potash, mineral waters, lenses for pocket flashlights, silver fluted glass, spectacles, rubber hose, cutlery, crockery, porcelain, paper novelties and toys, which wef ormerly imported in large quantities, but which America is now making for her home markets or finding substitutes. Not only that, but the American products are suppying South American markets, where imports from Europe have been cdt off. The extent to which home producers are profiting by the exclusion of foreign-made goods will be a serious stumbling block to the Democratic advocates of increased importations under low Tariff or Free-Trade, but facts aref acts, though only a war could forcefully impress them upon some people. Woolley says, "we haven't conquered American minds. Yet, it is true, as much of anything in the aggregate, though many things jn units. We are just beginning to fight." The real battle will be fought in November, 1916, when the American people will decide at theb allot box whether they will retain the advantages they have gained, by enacting a Tariff law that will keep out foreign products after the war is over.—Pierce (Neb.) Call.

DRUNKEN AUTO DRIVERS

Automobile accidents due to men at the wheel are as frequent in 1915 as in other years. Not only in wet states and wet counties, but in perfectly dry communities—through which folks from the outside tour with their stock of goods under a back seat—have been horrified.

Men who are not under the influence of drink at times are reckless and drive across railroad tracks without hestitating and without looking to the right or left. But these are in the minority.

When a man is intoxicated he throws caution to the winds. He doesn't know the difference between a railroad track or another occupant of the road and a bunch of bushes. Is it any wonder there are distressing accidents? An intoxicated automobile driver is not only a menace to himself, but to every one in his machine, and to those traveling in other cars who may meet him.

Intoxicated drivers are also a peril on roads and streets. They create accidents right along. While it cannot be said that the frequency of accidents and collisions in this vicinity is to be laid to the over indulgence in strong drink, the decision of the police department to retain an officer on the road until a later hour than has been the practice is a step in the right direction. It is a step to stop accidents before the inevitable occurs, which is the problem that demands solving.

CAN'T AFFORD IT

The other day a merchant said he couldn't afford to advertise in his home newspaper. If the man's view were not distorted, he would see he couldn't afford not to advertise. Refusing to advertise is the most expensive extravagance. That same merchant will spend hours telling of the "unfair" competition of the mail order houses who are his most aggressive and dangerous competitors, yet the methods employed by the mail order houses which succeed are the very ones which the merchant refuses to use. The mail order house first of all is an advertiser. Advertising is the life of its business. Every magazine that enters the small town and rural home carries the ad of the mail order house. Expensive catalogs are printed showing the illustrations of the actual articles. Occasionally sheets are scattered broadcast over the country as a special "come-on" for the bargain hunter. Instead of doing these things in a smaller way through the columns of his local paper, the merchant who can't afford to advertise sits down and cusses his tough luck and wonders why he can't get the business. He never thinks he has a better opportunity to reach the people in his neighborhood than the mail order house has. It doesn't cost him as much as it does the outsider, he can draw the people to hiss tore and show them the actual article he is advertising, and, when they buy, they can take their purchase home with them instead of having to wait for several weeks for it. Advertising is an investment. It should be charged to your selling cost. Figure what percentage you have to pay to advertise, then base a fifty-two weeks campaign on the computation. You can't lose. You can't afford not to advertise—Lewisburg Sentinel.

ALLEN FARNHAM ADVANCES IN MOTION PICTURE FIELD

Hannibal, Aug. 7.—Allen Farnham a son of Mrs. E. P. Farnham of N. Hannibal, and a graduate of the Hannibal High school and Syracuse University. where he took the art course has been appointed artistic director of the Lubin company, producers of highc lass photoplays, He supervises every production of the company so far as scenic surroundings, costumes and stage settings are concerned and iti s his duty to prevent anachronisms, contradictions and see that art and beauty rule.

Mr. Farnham began his photoplay career in the fall of 1909, when he went with the Kalem Company. The following season and in 1911, he was in Ireland taking pictures. In December; 1911, he sailed for Egypt. where he had complete charge of all technical details and designing costumes for the Kalem Egyptian and Palestinian pictures, even appearing as an extra when these necessary adjuncts were not available. He handled the entire "From the Manger to the Cross" production—the artistic and the architectural side —designed the costumes and furnishings —decided types and make-ups for characters, and carried the entire responsibility for the correctness of period and detail. Next, he returned to Ireland and England, where he helped to produce "Colleen Bawn," "Rory O'Moore," "Kerry Gow," and "Arrah-Na-Pough." Then he went to the Gaunties Company, for which he took more war pictures, and then to All-Star Film Company, which had Augustus Thomas as its artistic director, and supervised constructions for "Arizona," and others of this company's features.

OUR WASHINGTON CORRESPONDENCE

News Mostly of a Political Nature From the Nation's Seat of Government for Times' Readers.

Washington, Aug. 8. (Special Correspondence).—A large free list, not the European war, wasm ainly responsible for the falling revenues during the last fiscal year. Advance figures issued by the Department of Commerce show that the value of our imports for the fiscal year 1915 was $1, 674,220,740, which yielded a revenue of $209,268,000 or an average ad valorem rate of 12.5 per cent on all imports, compared with $1,893,925,000 for 1914, the first year of the Democratic tariff law, which yielded $292,128,500, an average ad valorem of 15.4 per cent. In other words, with our huge German and Austrian competition practically prohibited, exportation from all the rest of the world curtailed, and embargoes on food products and raw materials from Australia, New Zealand, Egypt and many other countries, we imported in 1915 only about $220,000,000 less than was imported during the first year of the Democratic tariff law.

If to this sum of $220,000,000 the average ad valorem for that year be applied —12.5 per cent.—it is plain that the loss in revenue due to the war up to June 30 last was but $27,500,000. The prime reason for the decrease inr evenues was not due to decreased importations, but to the fact that more goods were coming in under the free list. July, 1914, was a normal month under the Democratic law; so the $220,000,000 decreased importations must be charged to the 11 months, August, 1914, to June, 1915, inclusive, an average monthly decrease of $20,000,000. At this rate, the decrease in importations July to December, next—six months—would be $120,000,000, making a total loss of importations which the Democrats might consistently charge to the war of almost $340,000,000 for the 17 months. At the Democratic average ad valorem rate for 1915—12.55 per cent—this would mean a total loss in revenue for 17 months of war of $42,500,000. Or, going even farther, and applying the higher average ad vadorem for 1914, under Democratic law,—15.4 per cent —and the total loss inr evenue, due to the war would be $52,360,000.

On September 4, 1914, the President in a message orally delivered to Congress, appealed for additional taxation of the people, to the amount of $100,000,000, although possessed of ample authority to issue bonds for that amount. He based his plea on the statement that the revenues were falling off, due to the war. Mr. Underwood forced through Congress what was familiarly known as the "war revenue" measure, which burdened the people with $105,000,000 additional taxes. It was ac loak to cover the deficiencies of the Underwood tariff law, which had failed, and was rapidly becoming more impossible, as an adequate revenue producer in normal times. The bill was passed after a bitter fight. Every man who had to pay that tax willl recall the manner of its administration when hev otes next year. It was to run for a year.

On June 30, last , it wase stimated that the Treasury Department had collected $51,000,000 of this war tax, —nearly as much as the entire loss of revenue for the period up to December next, which could conceivably be laid to the war, and at the higher average ad valorem rate of 15.4 per cent. But, they are going right on collecting the tax, not because of decreased importations, which are again back to Democratic normal, but because more and more goods are coming in free, or at the lowest rates of duty.

Having relied on the war bogey to distract the attention of the country from the real reason for declining revenues, the Democrats then turned around and appropriated for the fiscal year 1916 something over $88,000,000 more than was appropriated by the last Republican Congress. Was ever such a Janus-faced political incubus wished on a suffering people as the Democratic party?

"The best seller," is the expression of merchants handling Black Baking Co.'s products. adv.

Queries and Replies Covering Matters of Importance to the Man Who Runs a Car

What is the reason for heating the mixture before it goes to the cylinders for combustion?

The only reason that we preheat fuel is to thoroughly vaporize it. In other words, for a given volume and a given mixture a great amount of heat units will be contained in the cooler charge provided that both are completely vaporized. The reason for this is that the heat expands the charge, thereby permitting a smaller number of units of discharge to be contained in a given volume. The fact that some of the heat units which would ordinarily be lost are returned to actual use by preheating the charge is a factor in the situation and does reduce the difference between the two conditions, but it is doubtful if as many heat units would be given up in this manner as would be lost by having a preheated charge. The practical side of the question, however, is one which must be looked upon. With the gasoline that we are now getting it is necessary to use heated air if the best results are to be attained; otherwise the fuel will not be vaporized, especially during cold weather.

How many teeth are needed for a two to one and two and a half to one ratio?

The gears should be such that there are twice as many teeth on the large gear as there are on the small gear, in order to get a two to one ratio. For a two and one-half to one there should be two and one-half times as many teeth on the large gear as there are on the small one. The ratio may be obtained with an infinite number of combinations. The size of the gearcase will determine the size of the gears, and then the shape and distance between teeth must be found to get the number of teeth needed.

Is there any possible way in which I can install a pressure feed oiling system on my car? It has a splash system at present.

It might be possible to install this pressure feed, but it would not be advisable. In the first place, a great amount of special engineering work would be required and many new parts, such as a hollow crankshaft and the pump itself. This would entail a great outlay of money which would not be justifiable, because, after the system had been worked out and installed on the motor, the undertaking would in every sense of the word, be an experiment. Any troubles you may have been having with your oiling are probably not due to the original design, but to some local defect which has come up and which can probably be readily cured in a much more simple way than by altering the entire system.

Should the clutch be thrown out on rough roads?

The clutch should be thrown out and the brake applied slightly when deep ruts are encountered, and many drivers make riding easier by periodically throwing the clutch on rough roads. If the motor will pull slowly there is no reason, however, for throwing out the clutch.

What valve timing should one use on a two cylinder opposed motor with a bore of four and a quarter and a stroke of four and a half?

Since the valve timing which will give ideal results for any given motor is a variable quantity and depends largely upon such details as manifold design, the only thing which can be done is to give an approximate timing, from which you can vary in one direction or the other until you attain the best results. If the cams are already made and in the motor you can only place them so that the valve openings will correspond with those given and allow the closing to take care of itself. A fairly average timing which should give good results is as follows: Intake valve opens ten degrees after upper dead center and closes thirty-five degrees past lower dead center. Exhaust valve opens forty degrees before lower center and closes five degrees past upper center.

Does it harm a high tension magneto —that is, where a car is run by one alone—to shut off the spark going down hill and brake with your gears? Is this the best thing to do on a steep hill? And could this harm the cylinders?

It does not harm a high tension magneto to do this, as no mechanical strain is put upon it, and naturally it does not generate current when switched off. The practice of using the motor as a brake will not harm the cylinders, but it is said to put considerable wear on the gears, due to the reversed action of the reduction—that is, if the car should be geared four to one when the motor is acting as a brake the reduction acts in an opposite direction and becomes one to four.

How can I stop rattling of scissors type shock absorbers without tightening up the bolts until the car rides hard?

To stop rattling of scissors type shock absorbers without taking up on the bolts until the car is hard riding, insert two thin rubber disks cut from an old tube, on each side of each wooden washer as furnished.

The consistent advertiser wins in the end. It may cost a dollar to get a dollar, but the deal wins prestige.

Some Facts About Birds.

Birds are covered with feathers because they need a covering that, while it will keep them warm, will also be light, so that it will not prevent them from flying.

Ostriches have small wings because their legs are long, and the wings are not needed for running. They are only used to steady the body while running.

Birds have sharp beaks because they have no teeth, and the beak seizes, holds and divides their food.

Birds that swim under water have web feet because the spreading out of the toes of the bird brings the thin membrane between the toes into the shape of a fin, and by striking this fin against the water the bird moves itself along.

Cleaning Day.

My goodness! What a dirty place!
There's doll clothes everywhere.
No wonder that I'm in disgrace—
You bad things, though, don't care.

I'll put you on this chair to stay
While I go get a broom;
Then you'll be safely out the way
Till I clean up this room.

I wouldn't b'lieve two babies could
Get their home so sad a sight;
If I was jus' to whip you good
'Twould only serve you right.

Well, if here isn't that Nellie's dress
I looked all over for!
Here underneath this awful mess,
And with the front all tore!

And there's that nice new rubber ball
I missed the other day.
Won't it be grand if I find all
The things we've lost in play?

WILL PROSECUTE THE OFFENDERS

State Department of Health Refers Violations of Vital Statistics by Physicians to District Attorneys.

Albany, Aug. 8th.—Active steps are being taken by the State Department of Health to enforce the law requiring the report of births by physicians within five days after they occur. Dr. Hermann M. Biggs, State Commissioner of Health, has sent to district attorneys throughout the State lists of physicians who have been persistently negligent in this matter. The county prosecutors have been asked to warn the offending physicians that further infractions of the law will be promptly prosecuted.

Still more definite action was taken in the counties near this city. The prosecuting attorneys of the counties in the Capitol district were called into conference by the Department. A large number of failures to obey the law were laid before them by Dr. Cressy L. Wilbur, Director of the Division of Vital Statistics. The county prosecutors present were practically unanimous in the belief that the offending physicians should be brought to trial and the Department was assured of complete cooperation in any proceedings that might be brought.

Section 382 of the Public Health Law provides among other things that:

"The birth of each and every child born in this state shall be registered within five days after the date of each birth, there shall be filed with the registrar of the district in which the birth occurred a certificate of such birth, which certificate shall be upon the form prescribed therefor by the state commissioner of health."

The same provision applies to midwives or persons acting as midwives in cases where no physician is present.

Section 393 of the same law requires local registrars to report all violations to the State Commissioner of Health, who is required to investigate such violations. This section further provides as follows:

"When he (the commissioner) shall deem it necessary, he shall report cases of violation of any of the provisions of this article to the district attorney of the county, with a statement of the facts and circumstances; and when any such case is reported to him by the state commissioner of health, the prosecuting attorney shall forthwith initiate and promptly follow up the necessary court proceedings against the person or corporation responsible for the alleged violation of law."

Upon conviction a physician or other violator of the Vital Statistics articles of the Health Law "shall for the first offense be fined not less than five dollars nor more than fifty dollars and for each subsequent offense not less than ten dollars or more than one hundred dollars or be imprisoned in the county jail not more than sixty days, or be both fined and imprisoned, in the discretion of the court."

THE QUIRK

Today presents Georgette and her four Orientals in a high-class vaudeville act that is from the big time circuit, secured for these dates, because they had two days open time. This is an act that is well worth more than the price of admission asked for it alone, to say nothing of the four-reel Mutual Masterpicture, "The Lonesome Heart," featuring Marguerite Eishcer. Two other reels of quality are also shown. Tomorrow Georgette and her four Orientals, a four-reel Mutual Masterpicture, "The Darkening Trail," and two others. Balcony, 5c; main floor, 10c.

Grove Sessions to Open Soon ---Program Indicates Many New Features---Admission Free This Year.

Dempster Camp meeting and Epworth League Institute, which will be held at New Haven, Aug. 20 to 29, promises to exceed in interest the sessions of former years. One reason for this is that the trustees have decided to charge no admission fee to the grounds. Expenses will be met by the generosity of the thousands of persons who will attend.

Special features will be the Old Settlers' Association meeting, Thursday, August 19, opening at 11 a. m., with an address at 2 p. m. by the Hon. J. T. Roberts of Syracuse; a rural church conference, under the auspices of that department of the Northern Christian Advocate, Friday, August 20, beginning at 10:30 a. m. and continuing through the day and evening, the Lord's Supper being administered by the district superintendent and ministers at the opening of the evening service; the Woman's Home Missionary society on Saturday, August 21, at 2 p. m., with an address by Miss Bertha M. Fowler of Folts Mission Institute, Herkimer, and the Woman's Foreign Missionary society's anniversary on Monday, August 23, at 2 p. m., the speaking being Miss Roselene O. Mayer of China. The W. C. T. U. of Oswego county will hold its anniversary Tuesday, August 24, at 2 p. m.

Good Lectures

The Epworth League institute will open Sunday morning, August 22, and close Friday evening, August 27. Beginning Monday, August 23, the lectures will continue through each morning on the above dates. Speakers at the institute will be the Rev. Wilbur F. Sheridan, general secretary, on Sunday, Monday and Tuesday; The Rev. Ismar J. Peritz, Ph. D., professor of Semitic languages at Syracuse university; the Rev. Wallace E. Brown, D. D., district superintendent, Geneva; the Rev. J. W. Wilson of the People's Home church and settlement, New York city; M. H. Dowd, rural life expert, Westmoreland, N. Y., and the Rev. A. G. Judd, pastoro f a Utica church. Miss S. Mildred Blount of Sandy Creek will have charge of the recreational phases of the institute, which include various outdoor games.

On Sunday, August 22, the services will open at 9:30 a. m. with a Love Feast, led by Rev. Walter B. Clementof Sandy Creek. At 10:30 Rev. Dr. W. F. Sheridan, general secretary of the Epworth League, will preach. At 2 p. m. Rev. Jabez and at 7 p. m. there will be a praise service and preaching by Rev. Frederick Maunder of Camden, with an "after-service" in charge of the district superintendent.

On Sunday, August 29, the Love Feast at 9:30 will be led by Rev. C. F. Miller of Minetto; 10:30, preaching by Rev. Dr. G. F. Shepherd of Rome; 2 p. m., preaching by Rev. J. W. Barrett of Fulton; 7 p. m., praise service, and preaching by Rev. C. E. Miller, the district superintendent. The closing after service will follow.

On Thursday afternoon, August 26, the Rev. L. P. Tucker will speak on the liquor question.

Wednesday evening, August 25, the Rev. S. J. Greenfield, D. D., of Utica will conduct the veteran preachers service and talk on the permanent fund

Every day at 4 o'clock there will be evangelistic meetings in the new young people's tent.

The music will be in charge of the Rev. and Mrs. H. D. Holmes of Fulton. Each evening at 7 o'clock, a praise service will be a feature. The "after-services" will be in charge of the district superintendent.

The popular "town meeting" will be on Thursday, August 26, at the close of the afternoon service.

The printed program has af ull description of the tabernacle, the glen, the boarding hall, the new lodging house, the store, the postoffice, and transportation rates and facilities.

Mail should be addressed to Dempster Camp Ground, Dempster, N. Y.

"TEX" RICKARD PROVES HIS HORSEMANSHIP

E. J. (Tex) Rickard, an employe of the Standard Oil company, stopped a runaway horse, property of the Greek, who operates a pop-corn wagon in this city, Saturday afternoon in Cayuga st. The animal fell down after Rickard grasped the bridle and several bystanders assisted in helping it to its feet.

LAY ASIDE SWORD

Hereafter the Uniformed Rank Will Carry Rifles---To Have Target Practice---Enlistments Extended.

Members of the Uniformed Rank, K. O. T. M., who followed the deliberations of the quadrennial national convention of the commissional officers at Jamestown, will be particularly interested in the decision made to discard the sword used by the companies in drill and adopt the military rifle instead.

The laying down of the sword and taking up of the riue is an important change in the Uniformed Rank of the Maccobees ffor the members will now be afforded greater military knowledge. Under the new plan rifle clubs will be organized and affiliated with the National Rifle Association and will probably receive instructions from officers of the standing army.

The matter of discarding the sword and adopting the rifle for the drill companies of the organization was first called to the atention of the convention by Major General William H. Sletzer of Cleveland, commanding the Supreme Division, when he presented his annual report. He urged that the rifle be apodted and that rifle clubs be organized and affiliated with the national Rifle Association. He potently pointed out that with this practical experience the uniformed ranks of the organization might be of real service to the nation in timeo f great need.

When the matter was taken up in the afternoon, N. F. Hemmingway of the Committee on New Business, called attention to the large amount of correspondencet between Col. F. W. Ross of Elmira, the United States War Department and the New York atSte National Guard, which had been carried on for the past two years.

The report of the committee recommended that the committee direct the Advisory Board of the Uniformed Rank, to, if possible, find some way in which to supply these companies, battalions and regiments free of cost to the members, that may desire to equip themselves with rifles and form rifle clubs within their ranks to be affiliated with the National Rifle Association and, if possible, to secure instructions from the standing army both as to rifle practice and manoeuvers.

One of the important matters decided upon was the three year enlistment proposition which was adopted. Heretofere when a man joined the order he jointed for no stated period. Under the three-year enlistment officers and men pledge themselves for three years' service.

GEORGE M. GILBERT—IS DEAD IN THE WEST

H. N. Gilbert of Academy st. received this morning a telegram which announces the death of George M. Gilbert. The death occurred yesterday at 4 o'clock in the afternoon at Warrensburg, Mo. Mr. Gilbert was 86 years old. He was born at Gilbertville, near here in 1829. Fuller details of the death and funeral will appear in a late issue.

IRVIN A. BAKER

Irvin A. Baker, 64, died Saturday evening, at his home 723 Oneida st. He was a machinist at the Battle Island Paper company and had been ill for some time.

Surviving is the widow and one daughter, Mrs. Grant Smith, of this city and one sister, Mrs. William Billows of Baldwinsvills. ¼

The funeral will be held Wednesday at 2 o'clock from the family home, Rev. J. W. Barrett will officiate. Burial will be made at Jacksonville.

The Rev. and Mrs. M. J. Peters have been entertaining Mrs. Harriet Dickerman and her daughter, both of Nashville, N. C.

* * *

Miss Bessie Palmer of 516 Freemont st. is spending a few days with her sister, Mrs. Ray Biddlecome at Oneida.

* * *

Loren S. Wells of 221 Seneca st. is entertaining Roy Barber of Greenwich.

* * *

S. W. Merrill of 215 Erie st. has gone to Detroit where he will visit his brother-in-law, G. A. Watts.

* * *

Mr. and Mrs. B. H. Sharp are spending some time with Mr. and Mrs. E. A. Raymond at the Dunbar bungalow in Hinmanville.

* * *

Miss Mary Cullen of Syracuse was the over-Sunday guest of her grandparents, Mr. and Mrs. John O'Grady.

* * *

C. D. Wilcox leaves today for a vacation to be spent in the North Woods.

* * *

B. G. Boigeol leaves today for New York where he will spend a few weeks.

* * *

Miss Esther Parsons is visiting friends in New York.

* * *

Miss Mary Snow spent yesterday in Syracuse.

* * *

Mrs. Elsie M. Post entertained the birthday club at her home in this city Saturday evening. About 12 people were present. Mrs. Cole of Oswego was the out-of-town guest. Cards were played and prizes were awarded as follows: Mrs. Allie Merton, first prize; Mrs. E. Trambley, second; Mrs. J. O'Brien, third; Mrs. Carver, fourth; Mrs. Parkes, consolation. Mrs. Susan Robarge will entertain the club's next meeting at the home of Mrs. J. M. Watson.

* * *

Mr. and Mrs. Thad Cole of Oswego, who have been visiting Mr. and Mrs. J. M. Watson, returned to their home last night.

* * *

Michael Byrne has returned from a business trip to Ilion.

* * *

Postmaster Peter D. Conley has returned from Binghamton, where he attended the state convention of postmasters.

* * *

Miss Emma Ives of Mt. Pleasant is spending the week with the Misses Mary and Catherine Otis.

* * *

Miss Clarice Bache of Hannibal st. spent the week-end at Cazenovia.

* * *

Edward Rugg of the Water department returned today from his vacation.

* * *

J. W. Stevenson returned from Buffalo last night.

* * *

William F. Sallaron, supervisor of vocational coures in the public schools of Elizabeth, N. J., is visiting Thomas Hopkins of 151 West First st., who is an instructor in manual training in the Elizabeth schools.

* * *

John J. ordan, manager of the Electric Co., arrived here Saturday from Scranton.

FINED FOR INTOXICATION.

William Larkin, Jesse [illegible] and George Dunbar, all charged with public intoxication, were arraigned before Judge Wilson in City Court this morning. Officer Smith arrested Larkin and Allen Saturday, and Officer Gordon picked up Dunbar on the same evening.

Judge Wilson fined Larkin $5, which was paid. Allen was given the choice of paying $5 or taking 25 days in Oswego jail. He has not decided yet which he will do. Dunbar was given the same sentence.

DAY BY DAY

Chronicle of Events and a Forecast of What is Doing in Officialdom---Special Correspondence.

By Frederic T. Cardoze.

Albany, Aug. 9—Secretary of State Francis M. Hugo has promised that the proposed amendments to the Constitution as advocated by the delegates to the Convention, will be sumarized in a handy booklet for the instruction of voters. This work is to be done by his department in the interim following the close of the Convention and the days of registration.

According to present estimates it will be necessary to print at least 2,000,000 copies of the booklet as they must be sent to the various Boards of Election throughout the State for distribution. When the matter has been received by the State printer, several presses will be devoted exclusively to them so that they may be available in the shortest possible time.

The summarized amendments will make it possible for voters to obtain a clear and concise meaning of each proposed amendment to the Constitution and thus prepare them for the expresion of a well based opinion whether there should be any changes in connection with the basic laws of the State. It will be remembered that upon previous occasions when propositions were submitted to the people the technical nature of the propositions led many who did not understand their purport to vote either in the negative or ignore the questions.

The fact that Secretary of State Hugo has informed the Convention that he must be in possession of some of the amendments approved by the Convention not later than August 15, has not spurred the delegates to any added activity for the reason that they regard hurry as foreign to the motive which called them to Albany. Much time is devoted to debate each day and if many amendments are to be submitted at the fall election the Convention leaders must needs speed up the delegates. There is no rule requiring the final adjournment of the Convention, in that the amendments adopted could be submitted to the people in 1916.

Two ballots proposing amendments to the State Constitution will be handed to the voters this fall in deal with the proposition as to whether there shall be a bond issue to the amount of $27,000,000; the womans' suffrage amendment; the amendment in relation to the Legislature being given authority to change the rate of interest on debts incurred by some specific work or object authorized by the people and ratified by the Legislature.

The second ballot will contain such amendments as the Constitutional Convention have endorsed, if there are any which seems most probable.

As to the form and size of the ballot which will be used in connection with the amendments which will be presented to the voters at the coming election, the matter rests upon the work of the delegates.

The booklet from Secretary Hugo will prove a boon to many. It will be of a size adequate to be carried about in the pocket and at odd moments it can be scanned and much profit willl result from the scrutiny, it is promised.

ALFALFA GROWERS FORM PERMANENT ASSOCIATION

Syracuse, Aug. 9.—The Onondaga Alfalfa association, an organization of hay and alfalfa growers designed to improve growing, harvesting and marketing methods among farmers of this county, was perfected Saturday afternoon at the Court House in this city. More than one hundred and fifty growers were at the organization meeting of the association, which has been in course of formation for several months. Edward S. Nottingham presided, taking the chair after the meeting had been opened by Stanley A. Martin, manager of the farm bureau.

Officers were not elected by the association at the meeting. The programme wase hanged, because the plans of incorporating theassociation had not been considered until late last week. Under the incorporation laws, all members signing the stock and have a vote in the election of directors.

The new association will act as a business office between the big market buyer and the farmer. It will convey orders from big buyers to its members, and receive bills of lading for recording accounts. There will be a nominal charge on each ton of hay or alfalfa given outlet through the association.

REBEKAH LODGES GAIN IN MEMBERSHIP

It developed at the twenty-third annual meeting of the representatives of the Odd Fellows' Home Association, held last week at Lockport, that four new Rebekah lodges were instituted during the past year.

Annual reports showed a lodge membership on June 30th, 1915, of 208 Subordinate Lodges, fifteen Encampments and 113 Rebekah Lodges a total of 336 bodies.

The total individual membership June 30th, 1915, was 38,647 Subordinate members, 2,691 Encampment members and 1,484 Rebekah members, of both sexes, making a grand total of 59,832 members, an increase of 2,160 Rebekah members, 291 Subordinate members, and a decrease of twenty-nine Encampment members, a net increase of 2,422 members.

President Samuel Stengel reported that moref unds were needed for local homes on account of the high cost of living.

HEALTH OFFICERS REMOVED FOR INCOMPETENCY

District Sanitary Inspector Sears has been advised by State Commissioner of Health Biggs of the removal of two Oswego county health officers—Dr. E. W. Crispell of Williamstown and Dr. W. B. Acker of Hannibal.

State Commissioner of Health Biggs accorded to Dr. Crispell and Dr. Acker hearings upon the charges of incompetency and negligence filed against them. Neither of the accused health officers answered the charges.

TOWN BOARDS APPROVE MINETTO BRIDGE BOND

The firm of Larkin and Sangster, the contractors, to whom was awarded the contract for building the concrete-steel bridge at Minetto, met with E. A. Howard, county superintendent, and the town boards of Volney and Oswego, Saturday. At that time the surety bond was approved and the contractors stated the work would begin in a few days.

FOR THE INFORMATION OF THE PUBLIC

The Chamber of Commerce Issues the Following Statement for the Purpose of Correcting False and Misleading Assertions of Unknown and Therefore Presumably Irresponsible Persons

The Chamber of Commerce is an organization of Fulton citizens whose object is to try to help the city. *It is not a political organization* and, its activities relative to the Commission-manager plan will be confined to presenting to the taxpayers and voters of the city the plain facts and all the information in its possession.

The Chamber of Commerce has no candidates and is not seeking political jobs for any of its members or their friends.

The Chamber of Commerce is not advocating and will not at any time advocate the selection of an out-of-town man for the office of city manager under the new form of government.

The Chamber of Commerce states herewith, once and for all, that it is not now, and never will be, subject, directly or indirectly, to any influence outside the City of Fulton. Its policies are dictated by its members only, and by no one else.

The Chamber of Commerce makes this statement, not to defend itself from cowardly unsigned attacks, but merely that the public, whose confidence the Chamber feels itself entitled to, may at no time be led into error concerning the Chamber and its purposes.

Relative to the merits of the Commission-Manager form of government, the Chamber announces herewith, that as soon as any responsible person or persons, appear in the open, so that their opposition to the proposed change may be looked upon as an honest difference of opinion, the Chamber will gladly debate the merits of the question in a public meeting at any time.

JUST RIGHT FOR THE HOME

SERVIA SAVED BY AMERICANS' WORK

Typhus Hospitals Almost Empty and Danger Past.

SIR THOMAS LIPTON BACK.

On Return From Second Trip to Near East, With Hospital Ship Erin Bearing Convalescing Doctors and Nurses, Noted Sportsman Describes Methods Used In Checking Epidemic.

London.—"Miraculous is the only proper adjective to apply to the work being done by American doctors and nurses in Servia," said Sir Thomas Lipton following his return from his second trip to the near east with the hospital yacht Erin.

"As usual," continued Sir Thomas, "the Americans excel in organization and preventive measures. The French and English units are doing good work in the hospitals, but credit for the work of sanitation, which is rapidly making typhus a thing of the past, must go to the Americans, whose magnificent efforts have made them loved by every Servian from the king to the lowest peasant, all of whom seem fully to appreciate the efforts of the Red Cross in their behalf.

"When I was in Servia on my first trip," continued Sir Thomas, "it was unsafe to travel in the country, which was then so badly infected as to make necessary the use of antiseptics night and morning. But on this trip no such precautions were necessary, thanks to the sanitation reforms enforced by Americans. The hospitals are now as

Photo by American Press Association.

SIR THOMAS LIPTON.

clean as any to be found in Europe, while hotels and dwellings are beginning to observe sanitary regulations.

"At the height of the epidemic there were probably 300,000 cases of typhus, but many typhus hospitals now have been closed for lack of patients. At Ghevgheli, where Dr. James F. Donnelly, now Servia's national hero, died, there were once 1,400 patients in the American hospital. Now there are only three that are suffering from typhus.

"At Uskub I saw in operation the machinery with which American doctors and sanitary experts are washing the whole nation. Near the town three long railroad trains were standing in the midst of a city of tents. From these tents there poured an army of naked men, carrying their clothing in their hands. Stopping at the first train, they deposited their clothes in a car, where they were thoroughly sterilized. Then the owner proceeded to the bath car, where an attendant placed him under high pressure water pipes. When he was completely scrubbed the next step was an inspection by an American doctor, after which the bather received sterilized clothing.

"Members of the Turkish population, which is large in this part of Servia, protested vigorously against disrobing for the bath on the ground that such a procedure violated their religious principles, but without avail, for the American sanitary commission has complete power to enforce its regulations. After the army of men had been treated during the day the women and children were given baths during the night.

"The next day I saw a whole regiment inoculated against cholera with a speed and efficiency almost incredible to any one who does not understand American methods. Cholera may come again, but it is no longer feared.

"Dr. Edward W. Ryan has 3,000 patients, mostly wounded, at Belgrade in a hospital pronounced by experts to be of the best. Dr. Ryan has not fully recovered from his illness with typhus, but manages to direct the big hospital.

"The whole task is in charge of Dr. Richard P. Strong of Harvard, to whom the lion's share of credit for the direction of the great work must be given. This is due as much to his magnetic personality as to his skill. While Dr. Strong was in Saloniki the Grecian queen sent for him to see the king."

Female Voters Blamed For the Shortcomings of the Men.

Judge Ben B. Lindsey of the Juvenile Court of Denver, writing in Harper's Weekly, says:

"It is true that there has been dissatisfaction, and I am ashamed to confess that I myself felt it here in Colorado. There was a general expectation that equal suffrage would usher in the millennial dawn. Out of recognition of his own failures, the average man felt that the women would achieve instant success, and when they failed to bring about every desired reform in the twinkling of an eye he groaned dismally.

"Every criticism of equal suffrage has its base in this feeling. It is not that the voting woman hasn't worked wonders, but that she has not worked EVERY wonder. In many ways and many things she has many of the stupidities of the man, and for this we have criticised her. It is absurd when one thinks about it seriously, yet it is true. In all the laws that I have proposed, the reforms I have suggested, I have looked to the women of Colorado, and when defeat has been the portion of these measures it never occurred to me to blame the men, for we have fallen into the habit of expecting little of them, I suppose.

"Take the case of the Colorado coal strike. According to the opponents of equal suffrage, the women of the state are not only to blame for its commencement, but for its continuance. As a matter of fact, it was a man's war, and upon men only rests the responsibility for the rejection of conferences and the subsequent wretchedness. Yet it was women, and women alone, who gathered in mass meetings after Ludlow, and forced the governor to ask for federal troops in order that bloodshed might end.

"Like every state in the Union, practically, Colorado is without political machinery for the adjustment of industrial disputes caused by private control of natural resources and absentee landlordism. The voting men of Michigan and West Virginia and New Jersey and Massachusetts are not blamed for industrial war, but by some peculiar process of reasoning the voting women of Colorado are expected to end every strike.

"Women live in the same world with men and are exposed to the same influences of environment. It is idle to assume that they will spring into the political arena with all the civic virtues and excellences. There is this to say, however. They ARE more independent, they DO look upon municipal government as municipal housekeeping, and they WILL strike much of the cruelty out of laws and put a finer justice in."

A PURE FAKE.

Thomas Mott Osborne Repudiates Anti-suffrage Interview.

An array of newspapers has come out within a few days of each other stating that Mr. Thomas Mott Osborne, warden of Sing Sing, had declared against woman suffrage on the ground that it "would increase crime."

Now, it seems that this story falls within the class of information which Artemus Ward said he hated to have. "I don't mind not knowing things," said he, "but I hate knowing so many things that ain't so." The trouble with the Osborne story is that it "ain't so."

A letter has been written by Mr. Osborne himself to deny the entire interview. He characterizes the incident as "faked up journalism."

"I wish to state that I never said anything of the kind; that the whole interview is imaginative, and I am credited with all sorts of expressions and ideas which are absolutely contrary to my views. I am not a suffragist, but as for suffrage increasing crime I think it is nonsense, and it is a pity that a paper which can report so well and accurately a meeting, such as the one in Mechanics' hall, will lend itself to such faked up journalism as this alleged interview."

Verses Muenter Wrote on "When I Am Dead"

Among the effects of Erich Muenter, alias Frank Holt, who tried to kill J. Pierpont Morgan, was found a poem, "When I Am Dead," which he wrote a number of years ago and sent to his sweetheart, Leona Sansabaugh, now his widow, in 1906. Several verses follow:

When I am dead
Perhaps kind memory will lose
The sad mistakes I've often made
And hold the good—yes, let the best
Reveal itself as errors fade.
Oh, Lord my God, I toil each day
That I may have some good to stay,
But will the blunders, then forgot,
Give balm to those that now are not?

When I am dead
And broken, heartless sods of earth
Will mark where last I seemed to be;
Perhaps—I cannot know—there will
Be heard the voice of praise for me.
Oh, Lord my God, help me be strong
In trials much, in labors long!
For me, who live in hunger great,
All praises then will come too late.

When I am dead
If I the silence of the tomb
Could break, I would not think to stay
The eager hand or loosened tongue,
But sadly I to all would say,
"Beloved, flowers now you cast,
No fragrance to hours past;
Belated words of love and tears
Will never ease the broken years."

The Question.

Stella—You have two proposals?

Bella—Yes. I can't decide which to marry first.—New York Sun.

ROMANCE OF A STREET CAR MISHAP

Careless Man Makes Amends For Thoughtlessness.

Miss Anderson was very romantic. She could make a love story out of any case where there was marriage or failure to marry. One day Mr. and Mrs. Buddington called, and as they passed out Miss Cartright came in.

"What a singular looking couple," remarked Miss Cartright.

"Do you think so? Poor things, they can't help it. That disfigurement is connected with their courtship. Sit down; I'll tell you about it."

Miss Cartright seated herself on a divan and Miss Anderson proceeded.

"Mrs. Buddington was not her husband's first love. That's where the romance comes in.

"But first I must tell you that Mr. Buddington was engaged to Miss Martin. It was one of those cases where a good, noble man, when he is too young to know his mind, falls in love with a pretty face and afterward meets one for whom he conceives a grand passion.

"Well, one day Mr. Buddington was in a trolley car. Mr. Buddington carried a silk umbrella. He didn't carry it as a lady would, by the handle, the point lowered, but just like a man, under his arm and at an angle. He was holding to a strap, with his back to the front of the car, when it came to a sudden stop. Mr. Buddington was thrown violently backward. There was a shriek directly behind him, and, turning, he saw a beautiful girl, with her nose bleeding profusely. His umbrella point had rammed it.

"Mr. Buddington apologized as best he could and, as the bleeding continued, suggested that the girl get out at a corner drug store. She consented, and at the next corner Mr. Buddington pulled the bell rope, the car stopped, and the two got out, attended by a sympathetic married lady."

"It wouldn't have been proper for them to go without a chaperon," put in Miss Cartright. "How nicely it all comes about!"

"Very. The drug clerk telephoned for a doctor, who came and bound up Miss Palmer's nose. That was her name. Then Mr. Buddington insisted on calling a carriage, and the three were driven to Miss Palmer's home.

"The next day Mr. Buddington called at Miss Palmer's house to ask how she was doing. Miss Palmer's mother came down into the drawing room and assured Mr. Buddington that her daughter was doing very well, but her nose was bandaged and a bag of ice tied to the end of it to prevent a recurrence of the bleeding. This [illegible] prevented Miss Palmer from coming down."

"I wouldn't have gone down for a fortune," said Miss Cartright.

"Mr. Buddington called often, but Mrs. Palmer always came down in her stead, making excuses why Miss Palmer did not come down herself. Mr. Buddington could not surmise what it meant. He was dreadfully worried. Finally, at one of his visits, Miss Palmer came down to see him, and what do you suppose?"

"What?"

"Her nose had been broken."

"How awful!"

"Mr. Buddington felt that he was to blame for the broken nose and was so sweet about it that he quite captivated the poor girl. He called frequently, always asking her 'What I can do to repair the damage?' You see her beauty was spoiled, and unfortunately her face was her fortune. He couldn't do anything to repair the damage; only a doctor could do that, and there was some reason why they didn't want to perform an operation in her case. I don't know what, so there was nothing that Mr. Buddington could do in the matter except"—

"To marry her."

"How did you know it was coming out that way?"

"I'm very good at seeing through impenetrable plots."

"But Mr. Buddington was engaged to Miss Martin. He passed many a day and night's anguish, often lying awake for hours struggling with himself like the good, noble man he was, thinking himself bound in honor to both girls, though he now knew he loved"—

"The girl with the"—

"Miss Palmer."

"What did he do?"

"Why, at last he decided that Miss Martin, not being disfigured, did not need him, and he wrote her a good kind note, telling her that he thought honor required him to marry Miss Palmer."

"What a high minded way to put it!" suggested Miss Cartright. "And what was her reply? Did she generously release him?"

"Why, no; she showed his note to her brother, who went to Mr. Buddington's office, and before he knew what the fellow was going to do Martin struck him in the face and"—

"What?"

"Broke his nose."

"The brute!"

"Mr. Buddington felt released after this."

"I should think so."

"So he went to Miss Palmer and proposed to her. And here's where a new complication comes in. He found that Miss Palmer was engaged to a man she didn't love. But since Mr. Buddington's nose had been broken in her behalf she broke her engagement with the other man and married Mr. Buddington."

"How lovely!"

TODAY'S FASHION NOTE

An exceedingly chic little dress developed in Burgundy red challis with a black dot. Revers, cuffs and pocket flaps of ecru silk are faced with red and the butttons are of self-material. The attacked four-piece skirt istrimmed with a tuck and deep hem. Medium size requires 5¼ yards 36-inch material. Pictorial Review Costume No. 6200. Sizes, 32 to 46 im bust. Price 15c.

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.

The KITCHEN CUPBOARD

HOT WEATHER MENU.

Indomitable menace of the sun,
When will your endless reign of fire be done?
Your armies with unconquerable stings,
When will they flee—for what do they have wings?
How long before brave autumn with a shout
Will succor me and put them all to rout?
—Oliver Herford.

BREAKFAST.
Cantaloupe.
Broiled Salt Mackerel. Rice Cakes.
Coffee.

DINNER.
Blackberry Soup.
Cold Lamb in Aspic. Corn.
Creamed Potatoes.
Tomato Salad. Cheese Straws.
Peach Ice Cream.
Silver Cake. Iced Tea.

SUPPER.
Omelet in Chafing Dish.
Nasturtium Sandwiches.
Blackberries. Chocolate Cake.
Iced Tea.

AMONG the breakfast dishes that have been found specially nice at this season as well as easy to prepare are the following:

Broiled Salt Mackerel.

Take the fish from the brine and wash it thoroughly. Put to soak overnight in cold water, taking care to soak it with the skin side down. About ten minutes before breakfast drain from water, pat dry on a clean cloth and wipe over both sides with olive oil. Broil under the gas flame, attending to the flesh side of the fish, as the skin side scorches easily and needs but a moment o: two to brown. Put on to a heated platter, pepper lightly, garnish with a little parsley and cut lemon and serve with creamed Irish potatoes, fried sweet potatoes, baked or boiled new potatoes, either of which go well with salt mackerel, if you care to have potatoes at all for breakfast. In a lovely country home a little bowl of crispy sliced cucumbers from the home garden always goes to the table on a hot summer's morning as an accompaniment for fish or omelet.

Rice Cakes.

Mix one cupful of cold boiled rice with the well beaten yolks of two eggs and half a gill of milk and two heaping tablespoonfuls of flour sifted with a half teaspoonful of baking powder. Whip the whites to a stiff froth, add the rice mixture slowly to the whites while beating constantly, and with a tablespoon turn portions onto a hot, well greased griddle. Bake a light brown on both sides and serve with marmalade, honey, maple sirup or jelly. If the batter seems too thick add a little more milk.

Anna Thompson.

Economy Hints

A penny saved is a penny earned.—Benjamin Franklin.

TEXTILES of one kind or another make an important part of the changeable equipment of a house. Carpets, rugs, curtains, furniture covering, household linen, blankets, etc., all come under this heading. A general knowledge of the different fibers—cotton, wool, silk, linen, etc.—of which these materials are made, the effect and durability of different dyes, the values of the different methods of cleaning, etc., would evidently be a help to the practical housekeeper. Much has been written regarding color, design and other matters pertaining to household textiles from the standpoint of the fine arts, but many of the other questions, especially regarding durability, strength, etc., have not as yet been systematically studied. Some of those which bear most directly on every day household processes are being investigated by the government by laboratory methods, and it is hoped that as useful results may be obtained as have been gained from the scientific investigations of food materials. In the meanwhile, general practical experience is a great help in selecting such furnishings.

Tacked down carpets and mattings mean too much work in cleaning to be recommended, and movable rugs of some kind are much to be preferred. Rugs large enough to cover the whole floor are not as easy to handle, but stay in place better than small ones. In choosing rugs, those which are firmly woven and which lie flat should be selected. If they are too thin or loosely woven they will work up into wrinkles or ridges, especially if they are large. Good oriental rugs are very beautiful and wear a long time, but they are too expensive to be generally used in the majority of homes. Carpet rugs are now manufactured in a great variety of shapes, sizes, materials and designs, and are very satisfactory. Some of the best are those adapted from oriental ones. Good Brussels and some of the firmer of the pile carpetings are excellent, as are also those which resemble the heavy, old fashioned three ply ingrains. Old fashioned rag rugs and their modern imitations have an attractive, pleasing style of their own. They are especially appropriate for bedrooms and bathrooms, but are often too thin for places where there is constant passing. Matting rugs, which now come in good tones of the standard colors, often prove useful, though they are not so durable as good wool. They are particularly suitable for warm climates.

Soft colors and inconspicuous figures wear better to the eye and harmonize better with the other furnishings than gaudy figures on a bright background. The rugs should tone in with the coloring of the walls and should ordinarily be darker in shade than the latter, not only because they show soil less, but also because they seem to bring the room and its furniture into their proper relations.

FOR HOME NURSING.

How to Care For Bottles and Medicines During Sickness.

One of the first lessons a nurse learns is to pour out medicine from the side of the bottle opposite to that on which the label is pasted in order that any drops of the liquid which escape down the side when pouring will not obliterate the directions and number of the prescription.

As soon as a medicine bottle is empty and if it is not to be replenished right away it should be marked and put out of the way until needed again. Many doctors insist upon the prescriptions being written on the label of the bottle by the druggist. This makes it easier for reference if he decides to go back to an old formula. It also makes it possible for the nurse to know what is being given and makes it less dangerous to have empty bottles or unused medicines around.

It is never safe to give medicine from a long unused bottle unless either the prescription is marked on it or it has been plainly marked for what purpose it was used before. Otherwise it is better to refer the prescription number to the druggist who made it up and get him to identify it. If these means of identification were always adhered to there would be fewer mistakes made.

After an illness is over and the patient convalescent, clear out all the medicines it is not necessary to keep. An accumulation of old prescriptions is rarely of use again and the bottles clutter up the medicine closet. Empty bottles are sometimes useful, but if they are kept they should be carefully washed out and the labels erased so that they will be ready for an emergency and not spoiled by the drying up of the contents.

How to Satisfactorily Clean Genuine Pewter Ware.

A shop which makes a specialty of genuine pewter ware says that in cleaning pewter whiting or any good silver powder can be used. The polish should, however, first be mixed with olive oil, machine oil or vaseline, or even kerosene, and then rubbed all over the object. Then wipe it off and polish with the dry powder applied with a soft cloth.

CAN BE A COAT OR REEFER.

A smart coat for a boy. It is made in double-breasted effect, with notched collar and two-seam sleeves. A hood also may be added.

The small boy's needs for autumn always include a topcoat. This model can be either a coat or reefer and provision is made for a hood. The latter is good to add when the coat is made of such heavy materials as chinchilla, with a view to hard winter service. The coat of such a model should not be great, for if wide material is used—say, 54 inches wide—only 1⅝ yards are required for the coat in medium size. Without the hood 1¼ yards will be sufficient.

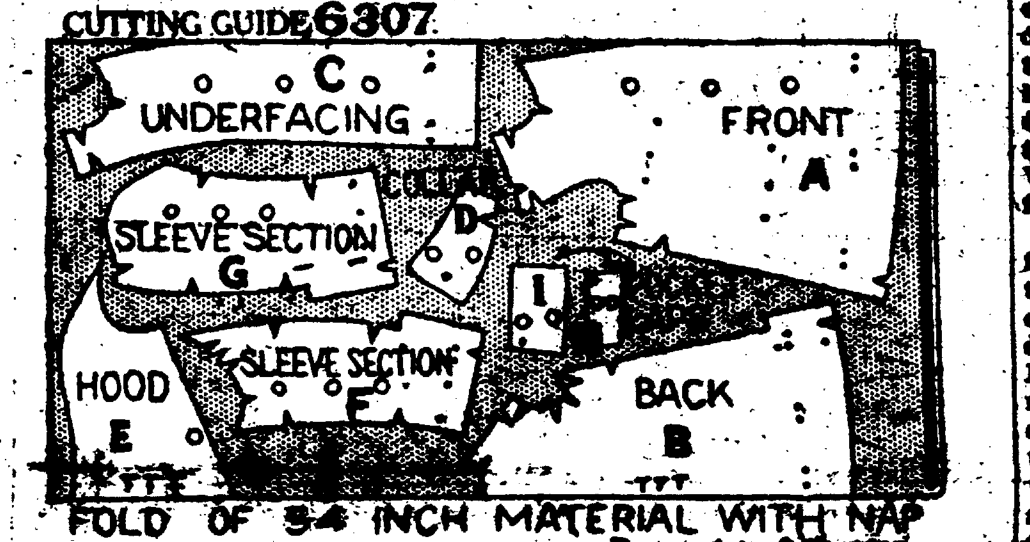
To cut out the coat, first fold the material and place the various parts of the pattern carefully into place so that there will be no errors. If reefer length is desired, cut off lower edges of the front and back and underfacing on double "oo" perforations, and also cut off extensions.

The hood is placed on a lengthwise fold of the goods, and if made of contrasting material this same rule is followed. Following the hood comes the lower sleeve section on a lengthwise thread of the material. The back comes next, on a lengthwise fold, but between this and the front, which runs along a selvage edge, there is room for the two pocket laps. The underfacing of the coat is laid along the selvage to the left of the front. Between the underfacing and the under sleeve section the upper sleeve section and the collar are laid on a lengthwise thread of the goods.

One always has the advantage of extra service in making clothing for the youngsters at home, for better material can be had at much less cost. The shops carry large assortments, it is true, yet when one gets something emphatically cheap in price the quality of the goods is apt to correspond with the cost.

Brown and gray are fashionable colors for youngsters this year, and there are certain tones of dark green that are effective. Some coats are bound with black silk braid, while others are perfectly plain, depending chiefly for smart effect.

CUTTING GUIDE 6307



Pictorial Review Coat No. 6307. Sizes 1, 2, 3, 4, 5, 6 and 8 years. Price 15 cents.

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.

ATTRACTIVE SPORT GARMENT.

Yellow and Blue Striped Silk Sweater With Sash of Self Material.

Nothing is more convenient than the lovely silk sweaters which come in the most brilliant shades imaginable. The one shown in the illustration is of bright yellow and sapphire blue, to be

FOR THE SUMMER PLAYTIME.

worn by a brunette, whose dark hair and eyes will be doubly beautiful with such a setting.

A plain strip of blue trims the front around the sleeves as cuffs and across the pockets. The sash is finished by blue tassels.

Good on Summer Menus.

A green salad served with cheese, nuts or eggs, and a French dressing with whole wheat sandwiches, can be made the main course for luncheon. A cheese souffle served with spinach makes meat unnecessary. Beets stuffed with creamed mushrooms and nuts are delightful, and a ring of mashed potatoes filled with creamed carrots and peas will please the most fastidious appetite. A cabbage bisque or puree made of fresh vegetables, or a cocktail made of mixed fruits, is a good beginning to either luncheon or dinner. Desserts should be fresh fruits, fruit ices or gelatin dishes.

Colors and Complexions.

Light blue makes blond complexions look ashen.

Dark blue sets off a blond complexion in high relief by supplying a suitable background.

Blue is unbecoming to a brunette unless her cheeks be florid. If she be sallow it makes her face look tawny.

Green has the same effect as blue upon brunettes, but makes the cheeks of a fair face look pinker.

Red heightens the effect of pale brunette beauty.

Yellow is highly becoming to a pale brunette, especially in artificial light. It softens an olive skin and gives it a creamy tint.—New York World.

A Billion.

In America, as in France, "billion" means a thousand millions. In Great Britain it means a million millions. The word was originally invented in France in the sixteenth century to denote the second power of a million, trillion and quadrillion being formed at the same time to denote the third and fourth powers of a million. In the seventeenth century the arithmeticians changed the use of the words, and "billion" came to mean a thousand millions, trillion a million millions, and so forth. England, not being a revolutionary country, clung to the meaning of the word that had the oldest pedigree. America, being a revolutionary country, followed France.—Exchange.

POCKETS AND SASHES ARE WELL LIKED.

Pockets are the proper thing these days, though not always used. The round and square patch pockets are giving place to slot pockets, sometimes back hip pockets in sure enough masculine fashion, while a new patch pocket is cut diagonally in half and stitched along its slanting edge.

Sashes, when they appear, are frequently weighted in various ways. That is why rosettes of the sash ribbon are found on the sash accompanying a French creation recently exhibited.

EMBROIDERY BY TOUCHES OF BLACK.

In fashions the touch of black is a recognized addition to a color scheme. The same is true of embroidery. Many a centerpiece or scarf that lacks tone may be improved by outlining the color design with black. This is especially recommended on the heavy linen and scrim covers where brilliant hues appear unfinished or need bringing out.

However, black outlining is very effective on the ordinary white linen centerpiece worked in plain white. One of these seen recently had a jewel pattern with conventional scrolls done all in white. The jewels and the scrolls were outlined with a thin black thread. The centerpiece was bordered with heavy white torchon, and the whole was very effective.

INTERIOR DECORATION.

How to Furnish Your Home Without Superfluities.

Most of our schemes of interior decoration as well as our ideas on dress originate in Paris. For some unknown reason the American woman refuses to believe that her own manufacturers are capable of turning out either house furnishings or gowns which possess the same amount of artistic chic as those designed in the French capital. And it must be admitted by even the most patriotic citizen that the Parisian designers are responsible for most of the new ideas in home decoration as well as in feminine costuming.

Take, for instance, the modern craze for black and white in the home. In the drawing rooms of the aristocratic Parisiennes this startling combination was seen and Poiret, the master designer of bizarre clothes for women, was the man who put this somber but smart scheme into execution. Also to the same designer must be credited much of the futurist schemes which now decorate our homes.

The present day Paris is a war center, of course, and from that city has come recently a new craze in interior decoration which reflects very frankly the effect of the war on Parisian homes. It is the cult of simplicity, the doing away with all furniture except that which is absolutely necessary. Whether or not the idea will meet with favor in America remains to be seen.

Fewer possessions and no superfluities will be the watchword for some time to come at any rate, and the principle embodied will not be altogether deplorable from an artistic standpoint. It will prevent the overcrowding of rooms with furniture and ornaments and will help to link the purposeful to the beautiful in that correlation of which true art never loses sight. And so the modern furniture designers may, through the chain of circumstance, have their opportunity, and in the new field [illegible] in which originality will have freer scope and the sense of fitness be given fuller play.

We cannot all be the possessors of the furniture of our forefathers, and while revering old traditions and acknowledging the romantic spell of old associations one can yet recognize that altered conditions make room for altered methods, and can welcome the freshness of new ideas evolved often from the adapted teaching of the past.

How to Save Time In Your Housekeeping Tasks.

Nowadays in the business world all the new inventions seem to have one end in view—the saving of time.

Housekeepers in their no less important field must keep pace with the men and be on the watch for new ways and new means to save not only time, but strength and energy. A good housekeeper says:

I shall be glad to share with you one secret I have learned, and that is to make several desserts at a time. You will be surprised to find how much little extra trouble it is when sugar, flour, vanilla, butter and eggs are spread on the table before you and the dessert for the day's dinner finished to make as well several cup custards and a pie or some jelly.

The refrigerator is stocked in this way for two or three days and the trouble of producing morning after morning the nine or ten ingredients necessary for the simplest pudding is avoided.

How to Make an Economical Cake With One Egg.

The most economical cake I know: Shave two squares of chocolate and pour over it one-half of a cupful of boiling water. Cream one cupful of sugar, one tablespoonful of butter and add well beaten yolk of one egg; stir well; add melted chocolate and water, one and a half cupfuls of flour in which is one teaspoonful of baking powder. Mix well, then add one-half cupful of boiling water in which has been dissolved one level teaspoonful of soda. Flavor with one teaspoonful of vanilla. Use white of egg for frosting.

How to Use Various Household Hints.

When roasting meat in an open pan wet a clean, white muslin cloth and lay over the top of the meat. This will keep it from getting hard and will not require basting so often.

A little salt or camphor put in lamps helps to give a better light; it also saves the oil.

Beans, rice, dried fruit and the like should be kept in glass jars; then any kind can be selected at a glance and [illegible]

Woman's World

A Titled Beauty Who Also Is Interested In Charities and the War.

THE COUNTESS OF WARWICK.

The Countess of Warwick, famous though she is for her beauty, has achieved quite as much distinction on account of her various and well directed charities, upon which subject she is as reticent as she is liberal. Two of the objects upon which her philanthropic energies are expended have assumed such proportions as to be beyond the power of concealment. These are the Easton School of Needlework and the Essex Needlework guild, both excellent organizations to aid the poor of England. The countess recently caused much talk by her criticisms of the social "butterflies" who make a pretense of nursing wounded soldiers—in reality posing and hindering the war work.

The countess is an optimist, as witness what she said in an interview not so very long ago.

"The best time of life is always after the age of thirty. Better than that is after forty. The very best time of life is fifty-three, which is my age. I just now am having the best time I ever had. At eighteen I was a pessimist. Now I know better. And because of what I've learned—by putting my experiences, my knowledge, to the best uses—I, like all women of my age, know better how to enjoy the days that are given to me."

This is what she thinks about the ballot for women: "The ballot in itself means nothing. What prompts the fight for the ballot in England and America is a fight for sex independence, a fight women are making—and which eventually they will win—because woman, given economic independence plus the ballot, will then be started on the road toward her right to exact a recognition of the fact that she is entitled to exercise her God given impulses quite as much as a man is."

The responsibility of the United States in the present war in Europe she voices thus:

"It seems to me that the greatest republic of the world has a serious duty, a grave responsibility. It has thriven on a gigantic scale without patronage or privileged classes, without titles, without such honors as are merely honors in name. Freed by the Atlantic from the domination of Europe, it has grown in power and given its citizens a life removed from the worst anxieties that beset the continent. It knows what kingship and unlimited power have cost Europe, and it embraces within its wide domain the children of every European nation, who dwell side by side in peace and amity. The freedom enjoyed by the republic would not be bartered for the wealth of the world, for that freedom is the secret of its eternal youth, its boundless energy, its untrammeled progress."

FURNITURE COVERS.

It is especially necessary to have looseness in a slip cover. There must be plenty of "give" to it. Otherwise when one sits on it it is apt to burst open, which would be most disconcerting, particularly if it happened to be some one else's chair.

The strip which runs from the extreme top of the chair back down to the seat, across the seat and on down to the required length, should be cut lengthwise of the goods without piecing.

Before cutting it should be tucked well into the crease between the seat and the back. The narrow fronts of the arms are cut separately.

The arm's inner side is cut lengthwise and extends over the roll, under which another seam occurs. The outside of the arm is cut in one with the side of the seat.

The rear side of the chair back is cut in two lengthwise pieces, with the opening up the middle. The back's "thickness" will also need a small piece, extending to the arm.

The fasteners are balls and sockets, or buttons and buttonholes, or, in some instances, little bows. The balls and sockets are used for the back openings or for little tabs when some openings are used.

D/34

SUMMER BAKING BECOMES A PLEASURE

THE "SCIENTIFIC STERLING"

THE GAS RANGE THAT BURNS COAL ◉ BRINGS COMFORT TO THE KITCHEN

Such crispy, crusty bread, delicious rolls, delicate cake, flaky pie crust, light muffins, savory puddings, roasts done to a turn.

And none of the steaming, humid heat inseparable from baking day with the old coal range—

Even less fuel expense than with the ordinary gas range, because the heavy oven walls of the "*Scientific Sterling*" hold so much heat.

Coolness, comfort, and economy are characteristic of the new "*Scientific Sterling*"—the Gas Range that Burns Coal.

The "*Scientific Sterling*" oven saves gas bills, and bakes even better than the usual gas oven; bakes evenly, because there is perfect circulation of the heated air; bakes just right, because the heat is perfectly controlled.

And this same "*Scientific Sterling*" for gas is a perfect coal range as well—cooks and bakes equally well with either gas or coal. It is absolutely safe, and proof against carelessness or accident. And it is more compact than the ordinary range burning one fuel.

To see the "*Scientific Sterling*" is to desire it. Our Club Plan provides an easy way for you to own the most perfect cooking apparatus ever designed.

A $5.00 PAYMENT

MAKES THE "SCIENTIFIC STERLING" YOUR OWN

You cannot afford to neglect this opportunity.

Our Co-operative Club Plan enables anyone to possess the "*Scientific Sterling*" on eight months extended credit—$5.00 sets up the "*Scientific Sterling*" in your kitchen—then you pay only $2.00 a week until you have paid $77.00—the regular cash price.

Try the "*Scientific Sterling*" for thirty days—take thirty days free trial—return it to us at the end of thirty days if it is not in every way satisfactory.

By the Co-operative Club Plan we are enabled to save a great deal of selling expense by making a large number of sales in a short time. We have cut our profit to the minimum, and given the saving to our Club Purchasers. While the Club is being filled, we install the "*Scientific Sterling*" free making all connections above the floor. Future purchasers will pay from $10 to $15 for their connections. Only Club Members will get free installations.

We give the Club Purchasers free insurance—if the Club Member dies or is disabled, we issue a bill of sale for the "*Scientific Sterling*" and cancel all further payments.

We give the Club Purchasers the Strongest Guarantee ever written on a Range of any kind, together with free inspection and instruction service after the range is installed.

These conditions will not be effective after AUGUST 24TH. On that date the Club will be closed. Future buyers will pay the regular cash price without any of these money-saving features. There will positively not be any alteration in this Club Plan under any circumstances.

Examine the "*Scientific Sterling*" for yourself—let us show you why it is the finest Range we have ever seen.

Then save money by joining the "*Scientific Sterling*" Club today.

REV. PATRICK MORGAN HAD MANY AUDITORS

A large audience greeted Evangelist Patrick Morgan at the Free Methodist church, in State st., last night, when that gentleman lectured upon his experiences as a monk.

He said in part:

"If there are those among us this evening who have come expecting to hear violent tirades or awful exposures," said Mr. Morgan in his opening remarks, "they are most certainly going to suffer disappointment.

"I might as well at the start make it perfectly clear that I have very little in common with the popular Protestant agitator.

"Many vile statements have been made of late by certain anti-Catholic evangelicals in regard to the lives of Roman Catholic priests in general. I am personally acquainted with over four hundred and fifty Roman Catholic ulergyman, and while I reject the claims of their church, I must in conscience state that out of that number there are many noble, self-sacrificing men."

Mr. Morgan's description of his mental and spiritual struggles during his university days, his difficulties in the seminary for the education of priests and later, his anguish of soul in the monastery, was most interesting. His fight for spiritual and mental freedom continued and he left his native land for Canada. The many trials he encountered and his final acceptance of evangelical Protestantism were narrated in a calm and dignified manner and were eagerly listened to by the large congregation present.

On the platform were Rev. H. D. Holmes, Rev. Charles Olmstead and Rev. C. E. Watson.

WATERTOWN VOTES ON COMMISSION GOVERNMENT

Watertown, Aug. 9.—With the commission government petitions held to be legal by County Judge George Reves, the common council had no resource at the special meeting but to pass a resolution setting September 4 as the day for a special election when the proposition may be submitted to the people, and the city treasurer was authorized to borrow $2,000 to finance this election.

A new question, however, has come up, which may mean that the matter will come up before the general election after all. That is whether or not there is sufficient time now to legally have a special election. The election law is rather obscure on the subject, and aldermen last night admitted that they were up against a knotty problem.

According to law registration must be held at least ten days before election. This would bring registration on August 24. The question then is whether or not there is legally sufficient time between then and the date to advertise the election and so on.

BOSTON PAPER SAYS AMERICAN PRODUCT SOLD

The Boston News Bureau says: Although in the natural course of events operations of the American Woolen company may have dipped down for a week or two in the "between-the -hay-and- grass -period" when the heavy weight goods season was ending and the lightleight season was about to begin, present business conditions and prospects of the big woolen company as evidenced by the sales figures are the best in several years.

Although the new selling season has been underway for only about a fortnight, American Woolen is today operating at eighty per cent capacity. If orders continue to come in at their present rate it is more than logical to expect capacity operations before the snow flies.

The woolen mills are already sold several months ahead, the present woolen business excelling any ever experienced by the big woolen company and marking as a matter of fact the best woolen business in the country's history.

As a result of the marked swing in styles to woolens this year the volume of worsted sales is increasing at a somewhat slower rate, but the situation is fairly satisfactory considering how little advanced is the selling season.

War order business of American Woolen, which in the first half year footed up to between $7,500,000 and $8,000,000, is strafing off in strong style this last half year. Following up its big contracts of a few months ago American Woolen has just closed the sale of 400,000 yards of cloth to the Belgian Government. In addition it was the lowest bidder for 600,000 yards of uniform cloth for the United States Government, the two orders making total sales of 1,000,000 yards of army cloth within four weeks.

This by no means measures the extent of the war order business, as inquiries from foreign governments for large scale. It can bes tated definitely that orders for over 2,000,000 yards are pending at the moment and inquiries for nearly as much more are shortly expected.

GERMAN PROFESSOR RELIES ON HYPNOTISM

Hague, Aug. 9.—Hypnotism and suggestion are being used to sure German soldiers of paralysis, convulsions, loss of speech and loss of hearing.

"Professor Nonne, of Hamburg, has worked miracles," says the Deutsche Medizinsche Wochenschrift, "curing with surprising suddenness many men whose cases were given up as hopeless. Prof. Nonne is especially proud of one case. A soldier had been blind for months and also lost the use of his limbs. Prof. Nonne cured him in three treatments. He restored his sight and the use of his limbs. The man, who had been declared unfit for any work, now has resumed his trade.

JUDGE WILSON APPOINTED REFEREE IN AN ACTION

Oswego, Aug. 7.—An order appointing Judge Herbert J. Wilson of Fulton as referee in the action of Newton, Johnson vs. William Bartholomey, to pay a mechanics lien from the surplus moneys of the action for the foreclosure of the mortgage of Charles R. Lee vs. William Bartholomey, was filed today.

Community Notes

Mr. and Mrs. V. C. Lewis and Mr. and Mrs. C. M. Allen and Mr. and Mrs. A. I. Morton left yesterday in Mr. Lewis' large touring car for a trip of 1,000 miles through Northern New England. They expect to be gone two weeks.

Rain interrupted the game scheduled between the Rowans of Oswego and the Red Men of this city at the Fair grounds yesterday.

Children Cry

FOR FLETCHER'S

CASTORIA

BEN LINDSEY SAYS TO STICK TO TOM OSBORNE

(Continued from Page One)

that at the moment the presses were running the story stuff off those men had been several hours in prison. We could not get that fact to the public through the publication that made the original charge. It had to be done through others.

"What Mr. Osborne is trying to do is not exactly new, though he is trying to accomplish his purpose in some new ways, notably the Mutual Welfare League idea. Nor is the treatment he is receiving new. I have been investigatd six times in the last two years and finally my court and all connected with it were abolished by the last Legislature. The bills were vetoed by the Governor.

Saved Taxpayers' Money

"We saved thousands of dollars to the taxpayers by sending prisoners alone, but what counts a great deal more is what we saved from 80 to 90 per cent of the prisoners to good citizens. Under the old system 75 out of every 100 prisoners returned to a prison a second time for other and generally more serious crimes, showing that after enduring the old brutal system prisoners left prison more dangerous to society than when they entered it and the state the greater loser.

"These things are not often taken into consideration.

"There is the godlike in men and the very devil incarnate in men. The big problem of the state is to know how to bring out the one and to overcome the other.

"As Governor Carleson of Colorado stood between the politicians and myself when the politicians sought to remove me from the bench, I sincerely hope that Governor Whitman will stand between the politicians and Mr. Osborne in the effort to remove him and thereby block the effort to discredit one of the most vital, interesting and important experiments in prison reform that the country has ever witnessed, and of which New York has every reason to be proud. On the other hand, if Mr. Whitman permits the politicians to interefere with Mr. Osborne, New York will have every reason to be ashamed of the triump of the politicians.

"I know the type, and I know how they are seeking to eliminate Mr. Osborne. It is the same type, the same kind of politician, that have constantly sought to destroy me in Colorado that is attacking Mr. Osbrone in New York. The methods are the same—the veiled innuendo, the half truth, the damning by faint praise, the annonymous attack upon character and upon motives, but never a straight-from-the-shoulder, man-to-man attack.

"I do not mean by this that all who have opposed me have been dishonest, any more than I believe that all who oppose Mr. Osborne are dishonest. There would be no more sense to a blanket indicement like that than there is in the vague, indefinte indictment that has been drawn against Mr. Osborne. But I do say that those honest persons who oppose Mr. Osborne oppose him because they do not understand what is being sought and what is being done, but are misled by the hue and cry of the opponents of decency in our prisons.

Sing Sing the Worst Place

"I have visited prisons in nearly every state in the Union. Sing Sing was the very worst that I ever saw. Ten years ago, when I went through the place and saw the conditions that existed, I said to the warden: 'Do you know what I would do if you kept me here for two years in one of those rotten, stinking holes? Why, when the time came for you to let me go and you gave me the $5 you say you give prisoners I would feel like using that $5 to buy a gun and run amuck.' If there was any brute in a man the old system of Sing Sing was calculated to bring it to out the highest degree.

"But when today I was in the prison and saw the wonderful changes in the looks of the men and every other influence about the prison over the horrible conditions that I formerly observed there, when I saw the men that are being saved to the state as good citizens, I could not help but think that Governor Whitman would get right out and fight to a finish before he would permit any influence to affect the removal of Mr. Osborne.

"If he does not fight for Mr. Osborne the people of New York State will. Do not forget that, for the people of New York State are interested in Mr. Osborne and his work. You in the city may not realize it, but let me tell you that outside the city Mr. Osborne's work is known and it is appreciated. In the last month I have talked at Chautauquas to 100,000 people of the State of New York about Mr. Osborne and his work. I have talked about children, the war, politics and all that, but no one thing has developed more real interest or as much spontaneous, overwhelming and enthusiastic response as the slightest word said in behalf of Mr. Osborne and his work and the Mutual Welfare League.

"The people are ready to fight for Mr. Osbrone. If Governor Whitman tolerates his removal he is going to bring on his head the biggest storm of protest and indignation that was ever visited upon a governor of any state. And there is neither excuse nor explanation that he can give that will appease the wrath of the people. I have been sensing their feeling and their sentiment, and I know what I am talking about.

"In the event of such a catastrophe there will be not riot in the prison. But I can tell you there will be a riot of feeling and indignation outside the prison. And there ought to be.

COUNTIES MUST PAY EXPENSES OF TREATMENT

The State Agricultural Department is sending notices to Boards of Supervisors, that bills for the expenses of treatment of the hoof and mouth disease in the counties, are, by law, a charge against the county. Bills for services of the deputy sheriffs in connection with the epidemic are also levied against the county.

CARLISLE HAS RETIRED.

Albany, Aug. 9.—John N. Carlise, of Watertown, has retired from the Highway Department with which he has been connected since he was succeeded by Edwin Ducy, a college mate of Governor Whitman. He will practice law.

The consistent advertiser wins in the end. It may cost a dollar to get a dollar, but the deal wins prestige.

BABY STRUCK BY COWCATCHER; WAS ALMOST KILLED

Little Italian Girl Remains Unconscious at Hospital. She is Badly Bruised and Scratched, but No Bones Are Broken Doctors Say.

Saraphina Cilone, 2 years old, daughter of Mr. and Mrs. Frederico Cilone, of Fay st., lies in the Lee Memorial hospital today between life and death as a result of injuries received yesterday afternoon, when the engine of the New York & Ontario Western train, southbound, which leaves this city at 3:15 o'clock, struck the child as she attempted to cross the tracks at Fay st. But for the fact that the train had just left the Broadway station and had gained little speed when it reached Fay st., the little girl must have been instantly killed.

The train, in charge of Engineer Borden and Conductor King, both of Norwich, was pulling out of the station and had just cleared a string of box cars along a siding near Fay st., when the little girl darted away from some of her companions who were playing [illegible] directly in the path of the train. The bell was ringing and the child must have heard it; but her friends are inclined to think she misjudged the speed of the train. Engineer Borden applied the brakes with force, and the train jolted to a standstill, but not before the cow-catcher had hit the child and dragged her several feet.

When picked up, Saraphina was unconscious and a passing delivery wagon was requisioned to take her to the hospital. An examination by Drs. Cusack and Schlappi disclosed no broken bones, but the child was painfully bruised and her face is badly scarred as a result of being dragged.

A claim agent of the O. & W. arrived in this city from Norwich last night, and the condition of the girl at that time was critical. She has never completely regained consciousness, and lies in a comatose state. This morning the hospital authorities stated that she was holding her own.

Her parents were almost frantic with grief and anxiety last night and it was with difficulty that they could be calmed when they learned that the child had shown no improvement.

Chief of Police Dyer and Dr. Cusack are making an investigation of the accident. The child's father is an employe of the Nestle Food Company.

SING SING PRISON WILL NOT LOSE ITS REFORM WARDEN

Plattsburg, Aug. 10.—Thomas Mott Osborne was not removed from his position as warden of Sing Sing today by Governor Whitman as was intended last week.

Governor Whitman, who regards the Osborne regime at Sing Sing in the same light that he views the Riley regime of the office of State Superintendent of Prisons, has not given his consent to the removal of Warden Osborne, and the warden may remain for many days to come.

The Governor, who spent last evening with Superintendent Riley and his friends as a speaker before the Catholic summer colony at Cliff Haven, refused to be drawn into the prison imbroglio, and would not talk for publication.

Mr. Whitman is tired of the whole affair. Complaints have come to him against both Riley and Osborne. He has been told that Warden Osborne's administration of Sing Sing has resulted in anarchy. He has been told that the Riley administration has resulted in plots unworthy of a state department.

The Governor has information that three members of the office staff of the State Superintendent of Prisons have been largely instrumental in bringing about some of the charges against Osborne.

It is not unlikely that before the week ends the Governor will

(Continued on Page Five)

Heavy Hitters of 'Way Back to Step to the Plate and Show That the Art of Batting Is Alive. Nothing of a Political Nature to Distract Thoughts of the Contestants

What shows promise of being the most highly entertaining sport event of the 1915 season will be perpetrated next Wednesday, in all probability, at Pathfinder Island, when two teams of city officials will lay aside, for the nonce, all their arduous duties and cares which tinge the hair with gray, and meet in a regular game of baseball, devoid of any suspicion of pink tea. Great care has been taken to keep the matter under the mattress until such time as the plans are completed, but a chance remark, dropped this morning in City Hall, reached the ear of the omnipresent Times reporter, and a few well-placed inquiries have resulted in really astonishing revelations.

Every man, who at present holds office of any sort, with or without remuneration, in the city of Fulton, will receive an invitation, equivalent to an order, to appear at Pathfinder Island on the date above mentioned, attired in [illegible] baseball uniform and ready for the fray. [illegible] the game will not be an elimination contest for the office of Mayor or City-Manager, nor will any speaker, domestic or foreign, dispense well-chosen words between the innings relative to the merits of the form of government now in vogue in Timbuctoo.)

Nossir! This will be a ball game, and the losing side, it is understood, will stand treat for a dinner, same to be served at some hostelry to be selected later. Applications for this honor will be received at any time.

If anyone has the slightest doubt that a game between city officials will prove interesting let him cast his eye over the array of talent exploited below. Imprimis, it is understood that the captains of each team are making frenzied efforts to sign up some of the most desirable candidates and among those most eagerly sought for is City Clerk Leon Scudder. In his college days Mr. Scudder was a second-sacker, but for versatility his friends say he has Otey Crandall looking like a piker.

John W. Stevenson, president of the Board of Public Works, is another old-timer whose services are greatly in demand. He used to bat .450 in the Publicity League and he himself admits that he still has a few spare wallops concealed about his ample person. Photographs of himself in baseball uniform taken back in '84 or '48, (we are not certain which), are among Mr. Stevenson's cherished possessions and prove conclusively that he has played the game. A. W. Wiltsie, a member of the Board of Works, whom the older residents will remember for his speed on the bases, is still proficient in that line, if we are to take the work of his fellow-commissioners, and is thoroughly conversant with the inside game. George Washburn, who Chamberlains the city books in his spare time, has turned down every tempting offer of a position at first base or in the outfield, and promises to prove a very efficient score-keeper under any form of government. John Painter, who will have returned from his wedding tour by the date of the game, imbued with new spirit, will be called upon to do the twirling honors for one of the two teams. Commissioner Lou Garrett of the Board of Public Works, and Superintendent Frank Rumsey are holding off for big inducements, but the announcement of their acceptance of terms is momentarily expected.

On the other hand, ladies and gentlemen, we have the members of our revered Common Council, or the revered member of our Common Council, as you wish, in the persons of Aldermen Distin, Sullivan, Baker, Gardner, Quirk, Foster and Mayor Fox. The Mayor says he has seen several ball games on his western tour and is firmly convinced that he knows all there is to know about it. Alderman Foster is perfectly willing to join in the sport, provided it doesn't require an appropriation. The other members of the council are practicing surreptitiously.

Dr. Whitaker, City Health Officer, and Dr. Kennedy, Meat Inspector, have not as yet decided whether or not they will pastime.

All the members of the police department, including patrol drivers, doormen, desk sergeants, detectives, roundsmen, patrolmen and

(Continued on Page Five)

MARY ELLEN ACT CHARMING; STREET SHOW SATURDAY

Seven Hundred Dollar Aggregation Replaces Feature That Was In Itself Great—Fair Officials Pleased at Outcome of First Disappointment.

C. I. Kingsbury, secretary of the Oswego County Agricultural Society received a letter this morning from the firm whose duty it was to furnish one of the feature amusements for the coming Fair, which, in itself, was something of a disappointment, but after all, all is well.

The act that was toc ome here is known as the D'Artagan Act, which comprises a horse, a dog, a woman and a wagon. Since the engagement of the act was made an accident befell the horse. While a new horse could be substituted, the animal would be rather green, hence the [illegible] act with one that costs in the ordinary course of events as much as $700. This latter act is far superior to the D'Artagan Act, and is known as the "Mary Ellen Animal Aggregation," the greatest elephant act in the world. Two dogs are included in the new act, and the whole aggregation is due to arrive here in time for a street parade Saturday next.

Saturday's street parade will take place rain or shine, and each day during the fair the "Mary Ellen Animal Aggregation" will be seen on the streets of Fulton. According to the information of the amusement bureau, the entire country will for years be talking about the act to be substituted for the D'Artagan Act.

In view of the information received concerning the new act, Mr. Kingsbury, in justice to the patrons of the Fair, feels duty bound to accept the "Mary Ellen" feature, and he has sent word to the amusement people to that effect.

In answer to a question concerning the decision of the Fair management to issue no free passes to the grounds, except to members of the press, Mr. Kingsbury states that universal satisfaction is expressed, for the reason that the thousands of patrons deem the action as an evidence of fairness to everybody.

SPELLING BEES, THE KIND WE USED TO HAVE, A FAIR FEATURE NEXT FRIDAY

On Friday, Aug. 20, beginning at 11 a. m., the Oswego County Agricultural Society will hold four old-fashioned spelling bees in the grandstand on the Fair grounds.

The first will be for the pupils of the public schools and one hundred silver medals have been purchased as rewards to the boys and girls of the county who win.

The second contest will be for a prize of $5 in gold, and those who survive the first contest will be eligible. The third contest, also for a $ gold piece, will be open to any resident of Oswego county, not a pupil in the public schools.

The fourth contest will be open to all and the prize is a scholarship of $25 in the Central City Business School of Syracuse. If the winner does not care to take the scholarship he may receive a Webster's Unabridged Dictionary. This prize is offered by L. B. Kyne of the Central City school.

All those who wish to enter any of the above contests may send their names to the secretary of the Fair association, stating which contests they wish to enter.

Opinions

WHY?

Why do some men succeed in business and others fail?

Why, when a business has been successfully developed by a brainy man, does it fail when it falls into another one's hands?

Why does a business that has failed under one management succeed under another?

Why do some men make fortunes by securing control of a bankrupt property and putting it on its feet?

Why does one family grow up with its members, intelligent, conscientious, clean and wholesome, while members of a neighboring family are indolent, improvident, dependent, and perhaps criminal?

Why does church membership grow smaller and the crowds around the demagogues at street corners grow larger?

Why does a man, receiving good wages and working comfortable hours listen to a wandering agitator who tells of a Utopia where labor is unnecessary and where the State will support the people?

Why? What's the answer?

—Leslie's Weekly.

The People's Longing

The people long for a constructive administration. They have been surfeited with the classic dissertations of Mr. Wilson, the platitudes of Mr. Bryan and the machinations of son-in-law McAdoo. They would like to see some real business; some real "change" coming across the counter; they would like to hear the whistles calling the men to work every week day morning instead of two or three mornings a week; they would like to see the smoke coming out of the stacks of all the country's industries and hear the whir of busy machinery.

For two years and a half Democratic leaders have been promising the country good times.

They told us first of all that the Republican protective tariff worked against the interests of the whole people. The Democratic tariff was put in effect and was fast working great financial loss upon the government when the administration embraced the opportunity to levy a tax, "due to the European war" to make up the deficiency.

The Democratic tariff opens wide the doors of the United States to the competition of foreign labor. The result is that it is, in at least some branches of trade, cheaper to buy the yoods abroad and pay the frieghtage than it is to buy them at home. This is because the goods in the foreign markets are produced by cheap labor while the goods in our markets are produced by well paid labor.

Thisc ountry elects a President in 1916. He will not be a Democrat.—Pottsville (Pa.) Journal.

Lindsey, the Foe.

Nobody outside of Judge Lindsey's Colorado enemies believes that the contempt proceedings against him at Denver had any other purpose than to silence a fearless and upright official and an undaunted foe of political corruption. The attempt to drag him into a criminal court and compel him to reveal statements made to him in his capacity as judge of the famous Juvenile Court of Denver was part of a vindictive and long-continued effort of politicians to "get Lindsey." Had he responded to the call and betrayed the confidence of the child who trusted toh is protection, he would have been guilty, not of contempt of court, but of a far greater crime. It is entirely to Judge Lindsey's credit that he has taken the stand he has, for upon the outcome of hisc ase will depend not only the future usefulness of juvenile courts throughout the land, but the continuance of his own invaluable service in a State which is sadly in need of such men as himself. The savage efforts of Colorado corruptionists to legislate Lindsey out of office have not been forgotten, and in his new fight he will have the sympathy and moral supporto f men all over this Nation who respeet him for the enemies he has made.—Philadelphia Public Ledger.

READING AND CLUB ROOMS

Only a few weeks remain until the long evenings call for the amusement of the young men of the city, and the same old question arises, What are you doing to provide a place wherein Fulton's youth may secure at least some of the advantages of a Young Men's Christian Association? It is impracticable to have all of the advantages of such an association, but this city can surely afford in a small sense the rudiments of a club with a purpose—that of developing the clean side of llife.

Whatever else may be said of Darkest Russia, there the Imperial government is at least awakening to the necessity of providing substitutes for the former drinking places. These places are called the "people's palaces" and are, in spite of the war, being built throughout the country. The minister of the interior has been so deeply impressed with the idea that he urges the introduction of a system whereby social centers may be established to contain such central features as reading rooms, rest rooms, tea and luncheon rooms, labor agencies and accommodations for travelers and their live stock. In these Russian "people's palaces" particular attention is called to good reading, for good reading matter and proper diversions under careful supervision are bound to spur toward greater mental activity.

In Fulton as in a great many other towns there is lacking that great blessing to all centers of population, community spirit. Although a change is coming over the land in this respect, it is not coming fast enough. The change is noticeable here, for instance, the chorus singing which has been taking place in the park on Sunday afternoons. But this is not enough. We need a common meeting place for the boys and young men, and we need it as badly as any industry that could be brought here, because the value of a young man to a community is not to be reckoned in dollars and cents.

It would be unwise to even think of establishing in this city anything more than reading rooms and gymnasium, but this feature would be the nucleus for ab igger and better venture. The basement of the library has been suggested. If that place is unavailable then why not rent one of the many large lofts in the downtown section?

There comes from Darkest Russia another lesson for local application. There the "people's palaces" will be provided with reading matter that has special bearing upon the conditions and interests of the community. For instance, in a mining district, books and periodicals of interest to miners will have prominent place. So, too, with manufacturing, stock raising, fruit growing and general agriculture. The idea is to replace bars with reading rooms, and demonstrate to the people that there is something else to be had out of life.

What a grand incentive for building up community interest in Fulton, with its surrounding acres of fertile land and its hundreds of young persons thirsting for knowledge of scientific farming. What a grand incentive could bem ade right at home—in Fulton— for the young men who want to know about the products of our factories—Fulton Made Goods.

Art is not a thing separate and apart—art is only the beautiful way of doing things. And is it not most absurd to think, because a man has the faculty of doing a thing well, that on this account he should assume airs and declare himself exempt along the line of morals and manners? The expression, "artistic temperament," is often an apologetic term, like "literary sensitiveness," which means that the man stuck to one task so long that he is unable to meet his brother-men on a respectful equality.—The Fra.

JUDGE LINDSEY'S OWN WAY OF DOING WRONG

Judge Ben Lindsey of the Denver juvenile court has been adjudged guilty of contempt of court by another Denver judge. Judge Lindsey had refused to tell, on the witness stand, what one of his kid "clients" had told him.

Undoubtedly, by the legal rules of the game Judge Lindsey was guilty. His offense lay in not charging the boy a fee. By the legal rules of the game any lawyer, or attorney at law, can treat as "a privileged communication" anything a client tells. "A privileged communication" is something that one can refuse to disclose or to testify to on the witness stand.

But Judge Lindsey has broken the lawyers' union's rules. He has assumed to act as adviser, without charge, and as confidential legal friend, mithoutc harge, of a large number of boys And he a member of the legal profession, too!

Judge Lindsey simply had tob e disciplined.—Kansas City Times.

PAPER CO. ENCOURAGES SERVICE IN THE MILITIA

Following closely upon the strong agitation for military preparedness in this country, comes the announcement by the International Paper company that its employes will be encouraged to join companies of militia. During summer encampments the employes will be given leave of absence and pay equal to their regular wage.

This announcement is made by Div. Supt. William F. Hazel of the company, and he says it may mean quite a sacrilce for the plants, for the order affects about 8,000 employes in 32 mills.

When you undertake to study human nature begin on yourself.

Some people who ask for a crust invariably want it over a pie.

A man can always find time to do a thing if he has the inclination.

Hope is all right in its way, but men who try to live on it are hopeless.

The Liberty bell has a crack in it, but fortunately its ring is no longer needed.

The easiest way to commit suicide involuntarily is to walk upon a railroad track.

"Safety first" is a good motto, but too many people wait until it's too late to be careful.

A lot of men expect the bread they throw on the water to come back to them in the form of cake.

During lulls in the fighting the belligerents ought to be able to think of some good excuse for quitting.

If Uncle Sam ever has occasion to do so he will issue a red, white and blue book, and it is likely to be the final word.

The changed national boundaries announced in Southwest Africa are manifestly subject to confirmation by the treaty of peace.

When one notes how much food has been exported to Europe during the last eleven months one wonders what would have become of it all if there had been no war.

The Royal Box.

Prince Henry of Prussia, brother of the German emperor, has just received a patent for an apparatus for cleaning the wind shields of automobiles.

King George V. must be the most widely traveled monarch in history. Beginning with a trip to Ireland at the age of eight, his majesty has visited Canada, the United States, Palestine, Egypt, the Crimea, Constantinople, Russia, France, Germany, Scandinavia, Australasia, South Africa and India.

The Empress Carlotta, as the Princess Charlotte was known after her husband was made emperor of Mexico, became insane after a mental breakdown in 1866. In 1879 she was pronounced incurable and confined by her family near Brussels, where she has been kept ever since. She is the aunt of King Albert of the Belgians.

Educational Notes.

There are 18,609,040 pupils in United States public schools.

A million and a quarter of dollars is on deposit in school savings banks in the United States, according to the national bureau of education. This money is distributed among 217,000 pupils, who thereby learn lessons of thrift for use in later life.

Two out of every thousand public high school boys receive military instruction in school as compared with five in every thousand fifteen years ago. While the total number of boys in public high schools has increased since 1900 from 216,207 to 541,486, the number of boys taking military drill has decreased from 10,455 to 9,532.

Wireless Whispers.

Regular wireless business is daily handled between Long Island and Germany and between Boston and Norway.

Massachusetts students of wireless have had good success with experiments in sending and receiving messages with aerials laid on the ground.

The United States navy will establish a wireless station on Cape Cod especially equipped to guide vessels along the Atlantic coast in time of fog.

Within a few months wireless messages have been sent from a station in this country to Paris. They are sent direct and not relayed from ships at sea.

Short Stories.

Biscuit comes from the Latin words "bis coctus" (twice cooked).

Perfect eyebrows are found in no animals other than mankind.

Of the 3,000 or more islands comprising the Philippines only about 400 are inhabited.

Costa Rica is nominally on a gold basis, but nearly all its gold has either been collected by a few financiers or shipped out of the country.

The Italian government has made strict regulations concerning the width of wheels on wagons and carriages. The breadth of its wheel depends on the gross weight of the vehicle.

Shot and Shell.

German soldiers carry small tin whistles to blow for medical aid should they be wounded.

It is claimed that half an hour of the goose step does as much for the muscles of the legs as half a day's route marching.

When shells are filled with shrapnel bullets there is poured in about a pint of boiling resin, which keeps all fixed until the discharge.

Guns with a bore of twelve inches or more can only fire ninety full charges. They are then considered to be worn out and have to be sent to the foundry to have a new core inserted.

Expert Advice for the Automobile Owner

Queries and Replies Covering Matters of Importance to the Man Who Runs a Car

What are the methods used in finding the tie rod bolt center position in relation to king bolt center on a front axle for both tie rod in front and tie rod in rear of the axle? Are the wheel base and tread of a car of importance in finding these positions?

The steering arms are aligned so that their center lines intersect at the central point of the rear axle. This alignment is independent to some extent of the wheel alignment, as both wheels may be correctly cambered and gathered, with one of the steering arms at a faulty angle. In moving straight ahead this would have no effect, but in turning the wheels do not run on a true circle, so that both wheels are subjected to a tire grinding. The same effect results from the tie being too short or too long.

To determine whether or not the steering connections are properly made it is necessary to know that the angle of the steering arms and the axle spindles is right, and that the tie rod is of the right length. Both of these depend upon the distance apart of the steering king bolts and on the wheel base of the car.

Measuring the angles of the steering car, as made with the axle, the correct angle that the steering arms on the car should make with the car is found. Frequently in lining up the wheels of a car the steering connections are thrown out by lengthening or shortening the tie rod to get the proper gather. This should never be done, as improper gather is usually the result of bent wheel spindles. The tire wear resultant from bad wheel setting is obviated at the expense of a serious wear on account of faulty steering.

How can I prevent the body of my car from squeaking, the body being all steel except the dashboard? The squeaking appears to be all in the dashboard.

Body squeaks can be eliminated by lubricating the rubbing parts that cause this noise or by stopping their relative movement. As a rule, though, it is extremely difficult to locate the exact point at which the noise occurs. Get some one to listen for the squeaks while you drive the car slowly over a rough road. Having found where the trouble is, a little lubricating oil or grease will stop the noise, or if it is due to the looseness of adjacent parts the squeaks can be stopped by tightening up these parts.

Can you suggest something which will clean out the radiator of my car, which has become clogged? Have tried soda without effect.

The proper solution to use in cleaning out a clogged radiator depends upon what particular impurity has clogged it up. Usually this happens through a deposit of solid material from the cooling water which forms on the interior of the entire cooling system. Soda quite frequently will dissolve this, but some deposits do not respond to this treatment. The situation is the same as that of steam boilers, and some of the boiler compounds probably will be valuable. It is suggested that you send a sample of the water employed to a water compound manufacturer, who can then, upon analysis of the water, determine the proper cleaning compound to supply.

There are a number of radiator cleaners manufactured especially for motor cars, and they may be beneficial.

Is the clutch of the disk type if the car is managed by the clutch coming against a round flat piece of metal?

No. The disk clutch consists of a series of metal plates, face to face, alternte ones being connected to the engine and the others to the transmission. When these are pressed together by a spring they all turn together. The device you refer to is the clutch brake to keep the clutch from spinning.

My motor overheats. It steams when driven eight or ten miles. Would too much oil causes this, as it smokes at the exhaust?

The use of too much oil for any length of time will cause carbon to deposit on the piston and cylinder head and thus cause the motor to heat. If misfiring is evident and loss of power, then treat the motor as one badly carbonized. However, the heating may be due to other things besides carbon. The motor should not be operated with the spark retarded too far, and the brakes should not drag. The water system must, of course, be free from obstructions. If the pistons are poorly fitted or the rings worn excessively the oil will work up into the combustion chamber, deposit carbon and cause heating. Try to do as little intermediate and low gear work as possible.

I have always considered that speed was an indication of power, but my car's performance on hills does not bear me out in this. Why is it?

Regarding the relation of speed and horsepower, there is no definite interrelationship between the two and no rule which states that the maximum horsepower is being exerted at maximum speed. In fact, the contrary is the case. The motor may continue to revolve at a greater speed after the power curve has reached its peak.

The consistent advertiser wins in the end. It may cost a dollar to get a dollar, but the deal wins prestige.

FUN RATS

By Ray I. Hoppman

THE U. S. A.

I'M doggone glad I'm living in old Uncle Sam's domain—this land of milk and honey and the bumper crop of grain. I wouldn't live in Europe for the wages of a prince—to live across the water, why, a man must be a quince. They're busy dodging cannon balls and sabre thrusts, and such. Will I live where the aeroplanes are dropping bombs? Not much! I think too much of this old hide of mine to take a chance—and live in England, Germany—in Austria or France. Let all who will reside in London grand or gay Paree. This good old land of Uncle Sam's is good enough for me. Let all who will eat wieners in Vienna or Berlin. I'd rather look from outside than peep outside from within. I'd rather live, my hearties, where the leaden pills don't whiz and scare you to a standstill as you go about your biz. I'd rather live, my brothers, where the cannon balls don't smash the prunes into the gravy and the milk into the hash. I sit within my cosey room and read about the war, and thank my stars I'm living where the leaden rain don't pour. We kick about the politics, the price of beef, and say that this old land of Uncle Sam's has surely had its day. But when we think of other folks across the briny deep, we're glad we're living here, you bet, and wake up from our sleep. Believe me, friends, the Stars and Stripes are good enough for me—I'm glad I'm separated from Dame Europe—by the sea.

Saving a Gunboat.

When the United States gunboat Princeton struck an uncharted submerged rock in the harbor at Pago-pago, Samoa, a very unusual engineering feat was employed to save the craft. A pinnacle of the rock which was struck entered the hold of the ship, filling the rent torn in the hull and preventing any progress being made. It was possible to keep the water out by means of canvas and plank sheathing. Then the projection of rock which had cut into the boat was cut from its ledge and by re-enforcing and cementing made fast so that it plugged the hole it had made. This accomplished, the Princeton was able to proceed to drydock for repairs.—Exchange.

Tree Planting.

A good tree well planted will usually grow whether the work is done in the spring or fall.

The [illegible] at Shortstops.

President Tener says the National league is better equipped with shortstops than the American. He names Bancroft of the Phillies, Maranville of the Braves, Fletcher of the Giants, O'Mara of the Dodgers, Herzog of the Reds and Gerber of the Pirates. President Johnson has filed a demurrer, declaring that his league boasts of real stars in Barry of the Athletics, Peckinpaugh of the Yankees, Scott of the Red Sox, Bush of the Tigers, Weaver of the White Sox and McBride of the Senators. Take your pick.

Players Pick Killifer.

National league players say that William Killifer of the Phillies is far and away the best catcher in that circuit, and they do not except Archer of the Cubs.

Suffrage Victories Prove the Cause Is Gaining Steadily.

The suffrage forces attacked much new territory last year. Thirty-one states considered the question of votes for women. This marks a tremendous advance in public interest. It means that out of the total population, which the antis are constantly advertising as more important than area, more than 65,000,000 people were brought face to face with woman's advancing cause. This, with the more than 13,000,000 in the suffrage states, left about one-tenth of the total population of the country not vitally concerned in 1914-15 with this question. Of the six states attacked by suffrage forces in 1914 two were irretrievably gained—not a bad advance for a party or an army. To aim at six trenches and gain two is coming, not going, in military language. This year suffragists aimed at thirty-one states. They gained seven for campaign purposes. Two states, Kentucky and Louisiana, have run ahead of their schedule. Popular approval has seized the woman's measure before it could get to the legislature. Three states returned actual legislative majorities for suffrage, although they missed the necessary three-fourths vote. The collective vote of Delaware, West Virginia, Tennessee, Arkansas, North Carolina, Florida, Oklahoma, Texas, was about two to one in favor of suffrage. In Minnesota there was an "anti" majority of one, in North Dakota of five, and so on.

Fire Protection In Hotels.

The guests of Raleigh (N. C.) hotels are given exceptional protection against fire hazard by the arrangement which the Raleigh chamber of commerce has made with the city commissioners for one of the city's paid firemen to inspect the hotels of the city hourly between 10 p. m. and 7 a. m. This protection is in addition to that provided by the hotels themselves.

PROTECTION.

The chamber of commerce of Raleigh has arranged with the city commissioners of Raleigh for one of the city's paid firemen to inspect this hotel hourly from 10 o'clock p. m. to 7 o'clock a. m.

This fireman carries a watch clock, and the watch clock stations are located at the end of each corridor on each floor, including basement, dining room and kitchen. The watch clock records are filed with the secretary of the chamber of commerce and are open to inspection.

This protection is arranged by the chamber of commerce in addition to that provided by this hotel that the guests may feel amply protected against hazard of fire.

The card here reprinted is tacked up in every room in the different hotels, thus informing all guests that the hotel is being afforded fire protection in the manner described and incidentally affording desirable publicity to the chamber of commerce.

Protecting Shade Trees.

Governor Walsh of Massachusetts has recently signed an act defining the powers and duties of tree wardens and their deputies and providing for the better protection of public shade trees. It includes a jail sentence for not more than six months or a fine of not more than $50 for any one who willfully, maliciously or wantonly injures a tree, shrub or growth which does not belong to him and which serves a useful purpose. The same penalty applies to cutting down a tree or shrub within the limits of a state highway without authority. Another section carries a $50 fine for attaching advertisements upon or painting or marking any tree located in a public place or highway except for the purpose of protecting it or the public.

Children Cry for Fletcher's

CASTORIA

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of Chas. H. Fletcher and has been made under his personal supervision since its infancy. Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic, all Teething Troubles and Diarrhoea. It regulates the Stomach and Bowels, assimilates the Food, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

GENUINE CASTORIA ALWAYS

FIELD FOR TALENTS

FAMOUS AUTHORS NOW WRITE DRAMAS FOR FILM COMPANIES.

W. H. OSBORNE THE LATEST.

Scion of Prominent Family and Noted Author Writes Great Serial for Pathe.

William Hamilton Osborne, author of the new serial "Neal of the Navy", is the latest of the modern popular authors to enlist in the moving picture line. He has already written five hundred short stories in the past thirteen years, and is also the author of several best selling novels, "The Red Mouse", "The Catspaw", "The Blue Buckle" and "The Running Fight." He never really attempted to write moving pictures straight

William Hamilton Osborne.

off—or on—the reel, until he tackled "Neal of the Navy," for Pathe. Mr. Osborne was attracted to the Navy as a fine background for a story of adventure, and for a year past he has been delving not only into the characteristics of the navy itself as an institution, but also into the records of the Secret Service, so far as the same were obtainable. He has coupled this authentic knowledge to his own imagination and is turning out a series, which, while it pictures the United States Navy from all its advantageous standpoints, also involves an exciting novel story of adventure in the toils of which the hero is constantly finding himself baffled. The heroine is a modern young girl whose ancestry is shrouded in mystery, but whose fortunes are bound up with an unusual trio of adventurers who are constantly under the surveillance of the government. Lillian Lorraine is featured as the heroine and Wm. Courtleigh, Jr., as the hero. The series is being produced by Balboa for Pathe, and will begin to appear on the screens in September. Permits for the taking of the naval pictures have already been obtained from the authorities at Washington.

Navy In His Family.

Both Navy and Army figure largely in the family of Mr. Osborne. The late Secretary of the Navy, George M. Robeson, now deceased, was one of his ancestors, and an uncle of Osborne's has, until his recent retirement, been an official in the Navy for many years. His great grandfather was quartermaster-general of the State of New Jersey. Another uncle was the youngest commissioned officer in the Federal army in the Civil War, Capt. Ellis Hamilton, killed at Bull Run, at the age of 18.

William Hamilton Osborne comes of an illustrious ancestry—his great grandfather and granduncle — two William Penningtons, were both Governors of the State of New Jersey and one of them at one time Speaker of the House of Representatives at Washington. Another ancestor was Chancellor Halstead of New Jersey.

His grandfather was a well known editor, and his father an old time lawyer of New York and New Jersey. He was born in Newark, N. J. and has always lived there. Mrs. William Hamilton Osborne is a well known clubwoman of Newark, being corresponding secretary of the Contemporary of N. J., the largest woman's club in the world.

FILM VERSIONS OF NOVELS.

It is probable that within the near future one will be able to see his favorite novel, whatever it is, in pictures. It has been well known for some time that Pathe has been in the market buying right and left the picture rights of famous novels and plays that seem to be best adapted for motion pictures. Among them are numbered: "The Beloved Vagabond" and "Simon, the Jester," by William J. Locke; "The Galloper," by Richard Harding Davis; "Via Wireless," by Paul Armstrong and Winchell Smith; "Comrade John," by Henry Kitchell Webster and Samuel Merwin; "The Closing Net," by H. C. Rowland; "Nedra," by George Barr McCutcheon; "The New Adventures of Wallingford," by George Randolph Chester; "The Weavers," by Gilbert Parker; "Mary's Lamb," by Richard Carle.

Great Organizations Strongly Pro-suffrage.

Unless there is a votes for women pennant waving from each window the antis are nearly sure that the people of the house don't want votes for women. Sometimes, according to anti arithmetic, it's 97½ per cent of all the women in the United States who wouldn't vote if they could, sometimes it's 90 per cent, and just recently it's 88 per cent.

The only time suffrage was ever submitted to a referendum of women in the east was in the case of the straw vote in Massachusetts twenty-five years ago. Twenty-five times as many women voted for it as against it, yet the legislators said that so many women didn't vote at all that it was proof that the women didn't want the suffrage and deliberately refused to abide by the women's decision. Having been tricked in this way, it is small wonder that women say, "No, thank you," when the subject of a women's referendum is broached. When a majority of the men who vote on a question are for it that settles the question. But when women vote 25 to 1 in favor of woman suffrage the question is not settled at all. It is merely shoved back to those who vote neither way. This is not, however, the only reason why women won't waste time over a woman's referendum. There is no legal provision for making such a decision binding no matter which way it goes. If every woman in New York voted in favor of woman suffrage that effect would have the legal weight of two chicken feathers. If woman's vote on such a matter were legal there would be no woman struggling for the suffrage; she would already have it.

In this connection it is rather interesting to note that every time you can get the general opinion of women concretely expressed, as through some great woman's organization, you find that organization going on record as overwhelmingly for suffrage.

In the United States alone the membership lists of the women's national organizations that demand suffrage total over 10,000,000. They include the United States contingent of the 7,000,000 women in the International Council of Women, the 237,000 women in the two orders of the Maccabees, the 1,600,000 women in the general Federation of Women's Clubs, the half million in the W. C. T. U., the woman contingent of the 300,000 members of the national grange, the 100,000 women in the Women's Trade Union League and hundreds of thousands of other women in other national organizations ranging in membership from 5,000 to 100,000. Even if these membership lists overlap to some extent, the net total of separate names runs into the millions. In so far as organized women can prove the case by numbers, they have done so by massing an overwhelming army of women in the line of march to the polls.

Original Pledge Card.

A novel suffrage pledge has been received by the president of the Virginia Equal Suffrage League among those returned at a recent meeting. On the card a man had written:

"I hereby pledge myself to contribute all the time I can spare from my everyday duties and employment to the Equal Suffrage League of Virginia. Payable as the opportunities are presented."

On the reverse side of the card the following lines were written:

"A man may hae an honest heart,
Though poortith hourly stare him;
A man may tak a neighbor's part,
Yet hae nae cash to spare him."

Women Admitted to Men's Union.

An important decision for women was the resolution passed by the National Union of Railway Men of England at their annual general meeting admitting women to the union. This means that women who are employed as ticket collectors, booking clerks and in other railway capacities where they are replacing men will have their wages standardized by the union.

Polish For Steel.

Sweet oil, one tablespoonful; turpentine, two tablespoonfuls; emery powder, one tablespoonful.

Kaffir Banking.

The Kaffirs have a simple method of banking. Before setting out to trade they select one of their number as their banker and put all their money in his bag. When an article is purchased by any of those who are in this combine the price is taken by the banker from the bag, counted several times and then paid to the seller, after which all the bank depositors cry out to the banker in the presence of two witnesses selected, "You owe me so much!" This is then repeated by the witness.

The general accounting comes between the banker and his several depositors when all the purchases have been made, after which all the natives go home.

Why He Wanted Wings.

Tommy's mother was an invalid, so his Aunt Lavinia looked after him and the house. And she never missed a chance of pointing out a fault or expounding a precept.

"Oh, dear," said Tommy one day after auntie had lectured him for ten minutes, "I wish I had wings!"

"Why, my pet?" asked mother, pleased at this angelic inspiration.

"Oh, I'd fly up in the air with Aunt Lavinia, and I'd fly and fly till I couldn't get any higher."

"Yes, dear," said mother proudly as the little chap paused impressively. "What would you do then?"

"I'd drop Aunt Lavinia!" said Tommy savagely.—Stray Stories.

Idol of New York Theatre Goers Takes Stellar Role in Screen Play.

Lillian Lorraine, who is to star in the serial, "Neal of the Navy," was born in San Francisco in 1892. Like a number of other of the popular stage favorites of the day, she made her debut before the footlights at a very early age, playing "Eva" in "Uncle Tom's Cabin," when she was only four years old. Subsequently she took a child's part with a stock company at the old Central Theatre while attending the public schools. At the age of fourteen she left San Francisco for New York, just three months before the big earthquake. She obtained a small part in a musical comedy under Richard Golden almost immediately on her arrival. Her next engagement was with Eddie Foy in "The Orchid," half time in chorus and half doing a small part. Because of her striking personality Mr. Foy soon took her out of the chorus and gave her a song. The impression she made resulted in her being given an engagement in "The Great White Way," with Blanche Ring and Jeff De Angelis. Her first real chance came when she was engaged by Florence Ziegfield to appear in support of Anna Held in "Miss Innocence." The next year saw a further advance in that she was featured in the "1909 Follies" with Nora Bayes and Jack Norworth. She remained with the "Follies" for the next three years, being starred in the "Follies of 1912," when Nora Bayes dropped out.

She became the sensation and favorite of Broadway in a remarkably short time. She broke into vaudeville with a six months' engagement over the U. B. O. eastern time as a headline feature in a single singing act with original songs. In 1914 she was featured in the big "Whirl of the World" cast, an all-the-season New York success. She was filling another U. B. O. vaudeville engagement when approached by H. M. Horkheimer, of Balboa, who induced her to appear in pictures for the first time in "Neal of the Navy," which he was about to put on for Pathe. Previously she had turned down many flattering offers from film manufacturers.

Miss Lorraine still preserves her fondness for musical comedy and expects to appear in New York in a big production this fall. She has been frequently offered stellar parts in drama and hopes eventually to be seen therein. Her screen work indicates a splendid fitness for this line of dramatic endeavor. Miss Lorraine is especially well known in New York for, like most of the great favorites of the stage, she has been featured there steadily in Broadway productions.

Crushed the Diamond.

Among historic diamonds one, the Piggot, has gone out of existence. The story of its destruction is a tragical one. It was said to be worth $200,000. The diamond came into the possession of Ali Pasha, who always wore it in a green silk purse attached to his girdle. He was wearing it when he was wounded by Reshid Pasha. Knowing that his wound was mortal, he immediately retired to his divan, gave orders that his favorite wife should be poisoned and then delivered the diamond to Captain D'Anglas with the order that it should be crushed to powder in his presence. His command was obeyed, and the beautiful gem was utterly destroyed.

Mouth Breathing.

Mouth breathing is a serious matter, as it is responsible for many physical ills and germ diseases. A sufferer from this evil should be examined by a physician. Adenoids consist of lymphoid tissue forming a third tonsil and are situated behind the soft palate in what is called the naso-pharynx. It is a perfectly normal structure until it becomes overgrown or infected. Adenoids more or less completely close the passage between the nose and throat and in this way produce the condition known as "mouth breathing."

HE WAS WIDE AWAKE.

Asleep He Might Have Wrecked the Train by Vibration.

An abnormally fat man lumbered into a Pullman on a westbound train and set up a loud protest when he found that his berth was at the end of the car.

"I can't sleep a wink if I'm over the car wheels. I won't close my eyes if you put me over the car wheels, porter."

"Can't help it, sah," said the porter. "It's the one that was sold you, and it's the only one they is. You'll have to take a chair car and set up if you don't take this."

The fat man finally decided to keep the berth, protesting to the last that he did not expect to close his eyes. Shortly his snores were heard above the rumble of the train, but it was not until the train had a long wait that the sounds issuing from his berth caused anything but amusement. In the silence they got on the passengers' nerves, and by request the porter prodded him in the ribs.

"My goodness, sah," demanded the porter, "if you makes noises like that when you'se lyin' wide awake over the car wheels, what would you do if you was sound asleep in the middle of the car?"—Lippincott's.

Just the Same.

A girl who likes to think and read,
Learn books by heart,
Receives from us a well earned meed,
We call her smart.

Yet take a girl who dodges books,
Knows naught of art,
And only lives for dress and looks,
We call her "smart."
—Kansas City Journal.

Too Much For His Constitution.

"I leave you forever," said Artemus Phipps.
He loved her, that wasn't the question;
The red stuff she smeared on her kissable lips
Gave Phippsy acute indigestion.
—Kansas City Star.

Hints For Housekeepers.

In case you have guests and they engage in a heated political controversy, start up the phonograph.

Burning a large onion on a redhot shovel will do away with the odor of tobacco in your drawing room.

Don't throw your coffee grounds away. Dry them and keep them for the use of borrowing neighbors.

Letting the children run barefoot in summer will save money in shoes, but it makes the soap bill larger.—Chicago Herald.

A Cobwebby Tale.

A gallant named Cobb met a maiden named Webb,
And straightway he sat down beside her;
And quickly proposed in a manner so glib,
That he caught her as soon as he spider.
—Ladies' Home Journal.

His Favorite Play.

Edith—That Mr. Phan is conversationally impossible. Ethel—Why so? Edith—We were talking about the theatre, and when I inquired what was his favorite play he said if he had any favorite it was seeing a man steal second.—Boston Transcript.

The "SCIENTIFIC STERLING"

The Gas Range that Burns Coal

Burns both gas and coal in the same range—takes up less room in the kitchen than the average one-fuel range—standard gas equipment of five burners—standard six hole coal range with covers on—equally efficient with either fuel—oven bakes perfectly with gas or coal without change—deep fire box, combustion chamber and ash pan—large, extra capacity water front—gas parts removable for cleaning—gas flame always in sight—no charge for high grade oven thermometer—safety oven damper makes accidents impossible—all products of combustion removed through a single flue—20 other features found only on this new range. The "Scientific Sterling" is the only modern range.

Easy Payments on Club Plan

For only Fourteen days more; cash price, $77—$5.00 down—$2.00 a week—30 days free trial—free installation that would usually cost at least $10—cancelled payments in case of death or disability—absolute guarantee against defects or repairs—free inspection service to Club Purchasers. These terms will not hold good after August 24, 1915.

Reserve your "Scientific Sterling" today.

AMERICAN MECHANICS AT STATE COUNCIL—YONKERS

Stars and Stripes Council, O. U. A. M. is represented at the State Council in Yonkers, by A. H. Parks, delegate. Mr. Parks was accompanied yesterday on his trip to Yonkers by F. G B.oigeol, and Mr. and Mrs. Russell J. Draper. Mr. Draper is the National delegate of the order in this district. Mr. and Mrs. W. W. Drury and John Richardson are also in the group, all of whom expect to be away the greater portion of the week. A pleasant time is anticipated by the Fulton delegation, particularly the feature provided as for the entertainment of the members of the State Council—the trip down the Hudson by boat from Yonkers to New York.

M. W. A. ORCHESTRA TO GIVE RECITAL TOMORROW

Every member of the local Council, Modern Woodmen of America is pleased to learn of the success attending the efforts of the musical element to organize an orchestra. As a treat of a special order the new orchestra will render a musical program for the benefit of the membership and their friends immediately following the work of adoption of several candidates at tomorrow night's session of the council. Other means of entertainment will be provided, which will include readings and recitations. Refreshments will be served also.

GIRLS WILL LEARN ABOUT LIFE IN THE OPEN AIR

Neahtawanta Troop, Campfire Girls of the First M. E. church are in camp at Fair Haven. They left the city yesterday and will remain in camp about two weeks.

The Troop comprises the Misses Margaret and Elizabeth Howe, Mary Joy, Harvia Wilson, Enla Switzer, Annabell Spencer, Gertrude Holmes, Helen Waugh, Pearl Smith, Florence Furness and Helen Austin.

While in camp the girls will be chaperoned by Mrs. Dunham and Mrs. J. Herbert Wilson.

PARISH AID MEETS

Mrs. John Henderson of 8 S. 3d st., will entertain the Parish Aid Society of Zion Episcopal church at her home tonight. The meeting is called for 8 o'clock, and everybody interested is invited to be present.

TO BE WEDDED

In Spite of Secrecy News Leaked Out This Morning —Wedding Occurs Tomorrow at Zion Church.

Miss Edna Painter, of 92 Worth st. entertained last night with a kitchen shower, in honor of Miss Anne May Rude, whose marriage to John T. Painter, of the Water Department will take place in the very near future. The house was decorated with flowers, and one of the many enjoyable features of the evening was the introduction of a floral poetry basket, containing bits of poetry recounting some event in the life of each guest.

Miss Rude was the recipient of many beautiful and useful gifts. The guests were: Misses Anna May and Eva Rude, Miss Laura Painter, Miss Grace Rugg, Misses Pearl and Ruby Church, Misses Helen and Theodosia Mahar, Mrs. Herbert Adkins, Mrs. John Donovan and Mrs. William Rugg.

In spite of Mr. Painter's vigorous denials, it became known at the City Hall this morning that his marriage will take place tomorrow, at the Zion Episcopal church, and Rev. M. J. Peters will officiate. Mr. Painter was the mark for much good-natured chaffing on the part of other city employes this morning, who have made desperate efforts to ascertain the exact time and place in order that they may do their colleague honor.

When called over the telephone this morning, Rev. Mr. Peters admitted that he was to marry a young couple tomorrow morning, but was reluctant to give their names, for they had requested that he forego mentioning it to anyone. Mr. Painter finally admitted this morning that tomorrow was the happy date of his entrance into the ranks of the Benedicts, and even went so far as to give details.

Miss Rude, who is the daughter of Mr and Mrs. J. Rude of the Chase road, will be attended by her sister Miss Eva Rude. The best man will be Floyd Colway of Syracuse. The couple are keeping their plans secret but it is safe to say they will have to make superhuman efforts to elude the vigilance of the other city officials who intend to keep Mr. Painter close ly shadowed for the next twenty-four hours.

According to City Sealer Harry M. O'Brien, Mr. Painter owes his future happiness to the Eastman Kodak Co. of Rochester, N. Y., in that the marriage is the culmination of a long friendship which began when Miss Rude and Mr. Painter became enthusiastic photographers. Mr. Painter has taken all the chaffing in good part and led his colleagues to believe that he would return from his wedding trip before next Wednesday.

The groom is well-known as an athlete of ability, and for several years has been prominent in local baseball circles, being pitcher at present for the Red Men of this city. He has been in the employ of the Water Department for several years.

In the event that the happy couple elude the watchfulness of their friends tomorrow morning, the municipal employes plan to give them a royal reception on their return from the honeymoon. It is also rumored that two other city employes are seriously contemplating matrimony and the announcement of their intentions is expected daily.

ODD FELLOWS PLANNING TO ATTEND GRAND LODGE

It is expected that a majority of the membership of Neahtawanta Lodge, I. O. O. F., will attend the Grand Lodge sessions, to be held this month in Syracuse.

Rome will present an invitation for the session in 1917. In 1916 the session will be held in New York city. The parade and contest for prizes adds a lot of interest to the coming session. The list of prizes follows:

Cantons, outside of Onondaga county, fifteen or more men in line; Canton having largest number of men in line, $25; canton having second largest number of men in line, $15; canton having third largest number of men in line, $10. Special: Canton bringing the best band, $50; canton bringing second best band, $25; subordinate lodges having largest percentage of membership in line, $20; lodge making most attractive appearance in line, first pride, $25; second prize, $15; third prize, $10. Rebekahs Lodges making best showing in appearance in line, first prize, $25; second prize, $15; third pride, $10. Pride committee will be named from visiting members.

ENGAGEMENT

Was Made at Reception Held Last Night---Wedding Date Not Set; Both Young Persons Popular.

Mr. and Mrs. Horace Staunton, of 517 South First st., East, entertained last evening in honor of their daughter, Hettie Elma, on the occasion of the announcement of her engagement to Chester R. Kempston of Park st., this city.

The announcement was made in a novel way, and to Miss May Roach fell the honor. Before supper was served, late in the evening, a large basket of flowers, from which were suspended ribbons decorated with miniature cupids, was brought into the dining room, and each guest was given a ribbon. At the end of one ribbon was an envelope containing the announcement card, and a given signal all of the guests pulled their ribbons. Miss Roach drew the card, and read the announcement.

The marriage of Miss Staunton and Mr. Kempston will take place in the near future, although the definite date has not yet been announced. Both young people are very popular among the younger set in this city, and have hosts of friends who wish them well. Miss Staunton is an operator in the employ of the Oswego Telephone Co. here, and Mr. Kempston is employed at Roberts & Wood's drug store.

Among the guests last evening were many employes of the telephone company and included were Miss Lelia Church, Miss Kathleen Meagher, Misses Bertha and Elizabeth Elkard, Miss May Roach, Miss Etta Hardwick, Miss Edna Hill, Miss Hazel Bonner, Miss Lottie Bennett, Miss Hazel Benway, Miss Mary Otis, Miss Pearl and Miss Edna LeMay, Miss Ethel Coleman, Miss Mary Snow, Mrs. Lillian Ottman and Mrs. A. Chapman.

REV. C. C. WATSON TO LEAVE THIS FALL

Very shortly after the closing of the fifty-fifth session of the Susquehana District conference of the Free Methodist church, which is to be held in this city September 8 to 12, inclusive, the present pastor of the Free Methodist church, the Rev. C. C. Watson, will leave the Fulton field for another scene of endeavor.

During Mr. Watson's term of pastorate here both he and Mrs. Watson have endeavored themselves by their disposition and hard work to a wide circle of friends who regret the parting. That the local church has prospered may be seen by the fact that between $2,000 and $2,500 has been raised for church repairs and accesories, and the congregation now feels that, perhaps, never before in the history of the church have conditions been as favorable for a continuation of good work.

When the annual conference takes place in this city next month, Bishop Burton R. Jones of Alameda, Calif., will preside, and at least 150 delegates will be in attendance. There are in this conference seven districts which are presided over by three district elders, all of whom will be here.

Your appetite for fresh-every-day rolls increases every time you eat the Black company's article. adv

THE QUIRK

Paramount Travels, No. 13, shows Ariquipa, Peru. This strange city, founded 1540 by the Spaniards, has now a population of 40,000. The llama, often called the "Camel of a strange bridge, suspended over a river in the Huancayo Valley, is over three hundred years old, and other wonderful scenes. The Mutual Masterpicture, "The Darkening Trail," in four parts, is another of those beautiful dramatic productions that have become features of the Quirk's programs. Georgetts and her four Orientals will be seen for the last time at 8 and 9:30 p. m. Remember the vaudeville act costs nothing, as the price is not raised. It remains just the same—5 and 10 cents. Tomorrow, "The Victim," that was booked recently and failed to arrive. It is a Mutual Masterpicture in three parts and the Dawn of Freedom is a first run Pathe drama of three reels of intense interest.

DAY BY DAY

Chronicle of Events and a Forecast of What is Doing in Officialdom---Special Correspondence.

By Frederic T. Cardoze.

Albany, Aug. 10.—An amendment to the State Constitution which will include compensation for industrial diseases, bids fair to be enacted. Delegate E. Clarence Aiken of the fortieth district has introduced such an amendment and is confident that it will receive a substantial vote when it comes up for final passage, or to be technically correct, adopted by the delegates upon its order of third reading.

In commenting upon his proposittion, Delegate Aiken places considerable stress upon the necessity of some provision to care for the men who contract diseases as the result of their daily occupations, and for their families as well. There are many industrial occupations, and for their families as well. There are many industrial occupations which are a serious menace to health, af act which the general public is ignorant of, he says.

Lead poisoning is perhaps the most prevalent disease which is met, with according to Mr. Aiken. Hundreds of men are employed in connection with products for the manufacture of which lead is used and lead poisoning has caused the death of many and the continued disability of as many more workmen, he says.

The employees of cement works are in constant danger of losing their health and statistics obtained by Delegate Aiken, show that the death rate in this line of work is very large.

In the present Workmens' Compensation Law, provision is made for the compensation of men whoc ontract disease as the result of their daily labor or for provision for their families,

"I have convinced many members of the Convention that my proposition is at least a fair one," says Delegate Aiken. "When I brough out my statistice and other datas howing just how many able-bodied men have died early as the result of lead poisoning alone, I imediately received the most interested attention. Of course there are other diseases which frequently result from certain occupations, but lead is used in so many different occupations and for such a wide variety of materials that from it perhaps the most number of disability cases and deaths occur."

It is the belief of Delegate Aiken that his proposition will be accepted without much opposition. He says that the well being of the working man is as near the heart of the delegates as any other subject under consideration. The health of the men who work with their hands naturally is the most vital problem to be considered in connection with industrial occupations. For some reason or another, compensation for industrial diseases was omitted from the Workmens' Compensation law as it now reads.

The enactment and the placing of the Workmens' Compensation law up on the statute books of the State chronicles an interesting series of attempts to round it out into a workable and beneficial as set for the great army of men who are employed in there was a flaw in the law and it was necessary to amend it. This was done after the waging of a lengthy fight when the question of insurance of an industrial nature became an important issue. This question was settled and now comes the final chapter, that of adding industrial diseases to the list of subjects for which aid may be received.

J. S. KNOX HAD WELCOME OF NORTH COUNTRY TOWN

Gouverneur, Aug. 9.—J. S. Knox thec ommunity builder, was the speaker. Every business place in the town was closed from 2:30 until 4, in order that all might avail themselves of the opportunity to hear the address. Mr. Knox emphasized organization and system as the first requisites for successful business. He gave much attention to the rapid growth of the mail order business in this country and in consequence the rapid decline of business in the villages of the country. In clinching his argument for community organization Mr. Knox pointed to the succese that has been obtained by the mail order concerns. He deplored the factthat our rural schools do not teach agriculture or business efficiency, and in consequence he declared these schools were a disgrace to the country. Mr. Knox spoke over an hour and a half.

At 6 Mr. Knox was the guest of honor at a supper given by the chamber of commerce in the banquet hall of the Masonic temple. A majority of the members were presentas well as several invited guests. Mr. Knox made a short address, during which he emphasized several of the points of his afternoon address.

COLUMBIA MILLS COMPANY TO MAKE STRONG PROTEST

Yesterday's Oswego Palladium says:

In preparation for a protest against the assessment on the Columbia Mills Inc., to be made to the Board of Assessors of Oswego Town on Grievance Day, August 17th, Attorney Torrey A. Ball is engaged at the County Treasurer's office filling out cards which will show the assessed value of every piece of property in the town in 1914 and the proposed assessment for 1915. In addition the cards will show the consideration paid for all property transferred during the year. This material will be used by the Columbia Mills in attempting to prove their contention that other parcels have not been assessed to their full value.

OSWEGO TO PROTEST AGAINST TROLLEY SCHEDULE

The Common Councill of Oswego will meet tonight to protest against the new trolley schedule, and other grievances, and it is likely that the matter will reach the Public Service Commission.

The people of Fulton have a grievance, also, which is the rate of speed maintain by the cross-town car between the D. L. & W. and Hannibal st. No accidents of a serious nature have yet occurred but the swift-moving cars give many an autoist cold chills. Narrow escapes from collision are not infrequent, and some action should be taken by the city authorities.

TO BUILD CEMENT BLOCKS FOR CHURCH THIS WINTER

It is the purpose of the Rev. Father McCormick, in charge of St. Mary's R. C. chapel in Mexico village, to have made during the winter months enough cement blocks for the new church which he is laboring hard to secure for his flock. He stated Sunday that he has nearly sufficient funds for a new church, but wants to begin with prospects of being clear of a heavy indebtedness.

SHERIFF BUCK GETS A LOT OF PRAISE

E. R. Case, assistant secretary of the Prison Association of New York, in a report recently issued showers a lot of praise on Sheriff Buck's administration of the County Jail.

Mr. Case suggests that the present system of paying $2 a week for a prisoner's board be abolished. Another suggestion is that prisoners be employed on good road work.

MELVIN S. CROMBIE

Melvin S. Crombie, who died in Oswego Sunday night, was in his 67th year. He had been ill for several years.

Mr. Crombie was born in Fulton, but has lived in Oswego forty-two years. He was bookkeeper for the Oswego Commercial Advertiser and Times for six years and then served under Collector Daniel G. Fort and John J. Lamoree in the Custom House, and served two years under Collector H. B. Poucher, when he went in. He became connected with the Oswego City Savings Bank twenty-seven years ago as a bookkeeper and later was made treasurer. When he retired last February, because of ill health, he was secretary-treasurer of the institution.

He is survived by his wife; one daughter, Mrs. William S. Woods of Montclair, N. J., and two brothers, twins, Dr. Walter, C. Crombie of Mechanicsville and Attorney William C. Crombie of Buffalo.

SPEAKER SWEET TO BE AT GRANBY FARMERS' PICNIC

Thaddeus C. Sweet, Speaker of the Assembly and acandidate to succeed himself in office, proposes to make an address tomorrow at the Granby farmers' picnic which is to be held at High Banks. Boats will ply at intervals between the landing near Stop 26 and the island to carry the visitors.

Bread as sweet as the "kind your mother used to bake," is the people's verdict applied to Black company's bread. adv

Sing Sing Prison Will Not Lose Tom Osborne

(Continued from Page One)

order Superintendent Riley to remove these three men. Should the superintendent refuse it may mean his own removal. These men are warm friends of Mr. Riley, and some persons think it will be impossible for him to discharge them.

If Superintendent Riley, who is a constitutional officer and cannot be removed, except on charges, would resign half of the dilemma would be solved, and if Warden Osborne would resign also the whole problem would be disposed of. But neither man shows signs of resigning.

Unpleasant stories are being cirdulated about Sing Sing and Superintendent Riley's office. Within a week, if the case of Warden Osborne against Patrick H. MacDonald, confidential agent of Superintendent Riley, is brought to trial, it is asserted, three prominenet members of the superintendent's staff will be fare to face with charges of a criminal character.

These three men, it is charged, conspired to blacken the character of Warden Osborne. It is said here that the whole alleged conspiracy will be unfolded at the hearing of the Osborne-MacDonald charges in Ossining on Thursday.

Office Holders and Members of Publicity League to Wage Battle

(Continued from Page One)

Chief, are on the quivive, and the lawless element will be asked to absent itself on the appointed date.

City Sealer O'Brien, Commissioner of Charities Woodbury, the members of the Civil Service Board and Fire and Police Commission will all be included in the invitation, in short, the complete municipal machinery will take a vacation on Wednesday next. (Have we missed anyone?)

Arbitration may be necessary to decide who shall umpire. Certain gentlemen of the cloth in the city feel that they should be honored with the office, while some of the players are inclined to think the services of Tommy Ryan's training camp of pugilists will be necessary. Efficiency will be the watchword in the selection of the official, and it is understood that Mr. Stevenson will be asked to name one man and Mr. Wiltsie the other.

The amount of the admission fee has not yet been decided, but it is safe to say that many citizens would pay almost any amount to see some of the men above-mentioned perform. If an admission fee is charged the proceeds will be donated to some public charity.

Community Notes

The body of Duncan Palen has been taken from his home at 166 S. 3d st., to Skaneateles for burial. Mr. Palen was 77 years old, and has been living here but a short time.

* * *

Soon the Barge canal employes who are under civil service, will be uniformed in blue serge, gilt braid and brass buttons. A neat name plate will adorn the cap to signify the position held.

* * *

Mr. and Mrs. J. V. Curtis, who have been spending a week at the home of their daughter, Mrs. Lay Allen Palmer, left for home yesterday.

* * *

Mr. and Mrs. Eugene Sullivan and children of New York are in the city and will spend the summer at Hotel Fulton.

* * *

Patrolman Gordon has mastered the mysteries and intracies of the department motor-cycle and he will now be found looking after the speeders and violators in general.

* * *

Rev. and Mrs. J. W. Barrett, who are enjoying their vacation, recently spent a few days in Carthage, where Mr. Barrett was formerly pastor of the First Methodist church.

* * *

Mr. and Mrs. Watson A Butts accompanied by the former's brother and sister, Mr. and Mrs. R. K. Butts, left the city today bound for the Thousand Islands. The trip is being made by automobile and a number of resorts along the St. Lawrence will be visited.

* * *

The Elks Lodge will meet tomorrow to make preparations for entertaining guests during Fair week.

* * *

Mr. and Mrs. John Foley have returned to their home in Cayuga st., after spending a pleasant week at Thousand Island Park.

AMERICAN MECHANICS AT STATE COUNCIL—YONKERS

Stars and Stripes Council, O. U. A. M. is represented at the State Council in Yonkers, by A. H. Parks, delegate. Mr. Parks was accompanied yesterday on his trip to Yonkers by F. G B.oigeol, and Mr. and Mrs. Russell J. Draper. Mr. Draper is the National delegate of the order in this district. Mr. and Mrs. W. W. Drury and John Richardson are also in the group, all of whom expect to be away the greater portion of the week. A pleasant time is anticipated by the Fulton delegation, particularly the feature provided as for the entertainment of the members of the State Council—the trip down the Hudson by boat from Yonkers to New York.

M. W. A. ORCHESTRA TO GIVE RECITAL TOMORROW

Every member of the local Council. Modern Woodmen of America is pleased to learn of the success attending the efforts of the musical element to organize an orchestra. As a treat of a special order the new orchestra will render a musical program for the benefit of the membership and their friends immediately following the work of adoption of several candidates at tomorrow night's session of the council. Other means of entertainment will be provided, which will include readings and recitations. Refreshments will be served also.

GIRLS WILL LEARN ABOUT LIFE IN THE OPEN AIR

Neahtawanta Trop, Campfire Girls of the First M. E. church are in camp at Fair Haven. They left the city yesterday and will remain in camp about two weeks.

The Troop comprises the Misses Margaret and Elizabeth Howe, Mary Joy, Harvia Wilson, Enla Switzer, Annabell Spencer, Gertrude Holmes, Helen Waugh, Pearl Smith, Florence Furness and Helen Austin.

While in camp the girls will be chaperoned by Mrs. Dunham and Mrs. J. Herbert Wilson.

PARISH AID MEETS

Mrs. John Henderson of 8 S. 3d st., will entertain the Parish Aid Society of Zion Episcopal church at her home tonight. The meeting is called for 8 o'clock, and everybody interested is invited to be present.

TO BE WEDDED

In Spite of Secrecy News Leaked Out This Morning ---Wedding Occurs Tomorrow at Zion Church.

Miss Edna Painter, of 92 Worth st. entertained last night with a kitchen shower, in honor of Miss Anne May Rude, whose marriage to John. T. Painter, of the Water Department will take place in the very near future. The house was decorated with flowers, and one of the many enjoyable features of the evening was the introduction of a floral poetry basket, containing bits of poetry recounting some event in the life of each guest.

Miss Rude was the recipient of many beautiful and useful gifts. The guests were: Misses Anna May and Eva Rude, Miss Laura Painter, Miss Grace Rugg, Misses Pearl and Ruby Church, Misses Helen and Theodosia Mahar, Mrs. Herbert Adkins, Mrs. John Donovan and Mrs. William Rugg.

In spite of Mr. Painter's vigorous denials, it became known at the City Hall this morning that his marriage will take place tomorrow, at the Zion Episcopal church, and Rev. M. J. Peters will officiate. Mr. Painter was the mark for much good-natured chaffing on the part of other city employes this morning, who have made desperate efforts to ascertain the exact time and place in order that they may do their colleague honor.

When called over the telephone this morning, Rev. Mr. Peters admitted that he was to marry a young couple tomorrow morning, but was reluctant to give their names, for they had requested that he forego mentioning it to anyone. Mr. Painter finally admitted this morning that tomorrow was the happy date of his entrance into the ranks of the Benedicts, and even went so far as to give details.

Miss Rude, who is the daughter of Mr and Mrs. J. Rude of the Chase road, will be attended by her sister Miss Eva Rude. The best man will be Floyd Colway of Syracuse. The couple are keeping their plans secret but it is safe to say they will have to make superhuman efforts to elude the vigilance of the other city officials who intend to keep Mr. Painter closely shadowed for the next twenty-four hours.

According to City Sealer Harry M. O'Brien, Mr. Painter owes his future happiness to the Eastman Kodak Co. of Rochester, N. Y., in that the marriage is the culmination of a long friendship which began when Miss Rude and Mr. Painter became enthusiastic photographers. Mr. Painter has taken all the chaffing in good part and led his colleagues to believe that he would return from his wedding trip before next Wednesday.

The groom is well-known as an athlete of ability, and for several years has been prominent in local baseball circles, being pitcher at present for the Red Men of this city. He has been in the employ of the Water Department for several years.

In the event that the happy couple elude the watchfulness of their friends tomorrow morning, the municipal employes plan to give them a royal reception on their return from the honeymoon. It is also rumored that two other city employes are seriously contemplating matrimony and the announcement of their intentions is expected daily.

ODD FELLOWS PLANNING TO ATTEND GRAND LODGE

It is expected that a majority of the membership of Neahtawanta Lodge, I. O. O. F., will attend the Grand Lodge sessions, to be held this month in Syracuse.

Rome will present an invitation for the session in 1917. In 1916 the session will be held in New York city. The parade and contest for pripes adds a lot of interest to the coming session. The list of prizes follows:

Cantons, outside of Onondaga county, fifteen or more men in line; Canton having largest number of men in line, $25; canton having second largest number of men in line, $15; canton having third largest number of men in line, $10. Special: Canton bringing the best band, $50; canton bringing second best band, $25; subordinate lodges having largest percentage of membership in line, $20; lodge making most attractive appearance in line, first pride, $25; second prize, $15; third prize, $10. Rebekahs Lodges making best showing in appearance in line, first prize, $25; second prize, $15; third pride, $10. Pride committee will be named from visiting members.

ENGAGEMENT

Was Made at Reception Held Last Night---Wedding Date Not Set; Both Young Persons Popular.

Mr. and Mrs. Horace Staunton, of 517 South First st., East, entertained last evening in honor of their daughter, Hettie Elma, on the occasion of the announcement of her engagement to Chester R. Kempston of Park st., this city.

The announcement was made in a novel way, and to Miss May Roach fell the honor. Before supper was served, late in the evening, a large basket of flowers, from which were suspended ribbons decorated with miniature cupids, was brought into the dining room, and each guest was given a ribbon. At the end of one ribbon was an envelope containing the announcement card, and a given signal all of the guests pulled their ribbons. Miss Roach drew the card, and read the announcement.

The marriage of Miss Staunton and Mr. Kempston will take place in the near future, although the definite date has not yet been announced. Both young people are very popular among the younger set in this city, and have hosts of friends who wish them well. Miss Staunton is an operator in the employ of the Oswego Telephone Co. here, and Mr. Kempston is employed at Roberts & Wood's drug store.

Among the guests last evening were many employes of the telephone company and included were Miss Lelia Church, Miss Kathleen Meagher, Misses Bertha and Elizabeth Elkard, Miss May Roach, Miss Etta Hardwick, Miss Edna Hill, Miss Hazel Bonner, Miss Lottie Bennett, Miss Hazel Benway, Miss Mary Otis, Miss Pearl and Miss Edna LeMay, Miss Ethel Coleman, Miss Mary Snow, Mrs. Lillian Ottman and Mrs. A. Chapman.

REV. C. C. WATSON TO LEAVE THIS FALL

Very shortly after the closing of the fifty-fifth session of the Susquehana District conference of the Free Methodist church, which is to be held in this city September 8 to 12, inclusive, the present pastor of the Free Methodist church, the Rev. C. C. Watson, will leave the Fulton field for another scene of endeavor.

During Mr. Watson's term of pastorate here both he and Mrs. Watson have endeavored themselves by their disposition and hard work to a wide circle of friends who regret the parting. That the local church has prospered may be seen by the fact that between $2,000 and $2,500 has been raised for church repairs and accesories, and the congregation now feels that, perhaps, never before in the history of the church have conditions been as favorable for a continution of good work.

When the annual conference takes place in this city next month, Bishop Burton R. Jones of Alameda, Calif., will preside, and at least 150 delegates will be in attendance. There are in this conference seven districts which are presided over by three district elders, all of whom will be here.

Your appetite for fresh-every-day rolls increases every time you eat the Black company's article. adv

THE QUIRK.

Paramount Travels, No. 13, shows Ariquipa, Peru. This strange city, founded 1540 by the Spaniards, has now a population of 40,000. The Ilama, often called the "Camel of a strange bridge, suspended over a river in the Huancayo Valley, is over three hundred years old, and other wonderful scenes. The Mutual Masterpicture, "The Darkening Trail," in four parts, is another of those beautiful dramatic productions that have become features of the Quirk's programs. Georgetts and her four Orientals will be seen for the last time at 8 and 9:30 p. m. Remember the vaudeville act costs nothing, as the price is not raised. It remains just the same—5 and 10 cents. Tomorrow, "The Victim," that was booked recently and failed to arrive. It is a Mutual Masterpicture in three parts and the Dawn of Freedom is a first run Pathe drama of three reels of intense interest.

J. S. KNOX HAD WELCOME OF NORTH COUNTRY TOWN

Gouverneur, Aug. 9.—J. S. Knox thec community builder, was the speaker. Every business place in the town was closed from 2:30 until 4, in order that all might avail themselves of the opportunity to hear the address. Mr. Knox emphasized organization and system as the first requisites for successful business. He gave much attention to the rapid growth of the mail order business in this country and in consequence the rapid decline of business in the villages of the country. In clinching his argument for community organization Mr. Knox pointed to the success that has been obtained by the mail order concerns. He deplored the factthat our rural schools do not teach agriculture or business efficiency, and in consequence he declared these schools were a disgrace to the country. Mr Knox spoke over an hour and a half.

At 6 Mr. Knox was the guest of honor at a supper given by the chamber of commerce in the banquet hall of the Masonic temple. A majority of the members were presentas well as several invited guests. Mr. Knox made a short address, during which he emphasized several of the points of his afternoon address.

DAY BY DAY

Chronicle of Events and a Forecast of What is Doing in Officialdom—Special Correspondence.

By Frederic T. Cardoze.

Albany, Aug. 10.—An amendment to the State Constitution which will include compensation for industrial diseases, bids fair to be enacted. Delegate E. Clarence Aiken of the fortieth district has introduced such an amendment and is confident that it will receive a substantial vote when it comes up for final passage, or to be technically correct, adopted by the delegates upon its order of third reading.

In commenting upon his proposition, Delegate Aiken places considerable stress upon the necessity of some provision to care for the men who contract diseases as the result of their daily occupations, and for their families as well. There are many industrial occupations, and for their families as well. There are many industrial occupations which are a serious menace to health, a fact which the general public is ignorant of, he says.

Lead poisoning is perhaps the most prevalent disease which is met with according to Mr. Aiken. Hundreds of men are employed in connection with products for the manufacture of which lead is used and lead poisoning has caused the death of many and the continued disability of as many more workmen, he says. The employees of cement works are in constant danger of losing their health and statistics obtained by Delegate Aiken, show that the death rate in this line of work is very large.

In the present Workmens' Compensation Law, provision is made for the compensation of men who contract disease as the result of their daily labor or for provision for their families.

"I have convinced many members of the Convention that my proposition is at least a fair one," says Delegate Aiken. "When I brough out my statistice and other datas howing just how many able-bodied men have died early as the result of lead poisoning alone, I imediately received the most interested attention. Of course there are other diseases which frequently result from certain occupations, but lead is used in so many different occupations and for such a wide variety of materials that from it perhaps the most number of disability cases and deaths occur."

It is the belief of Delegate Aiken that his proposition will be accepted without much opposition. He says that the well being of the working man is as near the heart of the delegates as any other subject under consideration. The health of the men who work with their hands naturally is the most vital problem to be considered in connection with industrial occupations. For some reason or another, compensation for industrial diseases was omitted from the Workmens' Compensation law as it now reads.

The enactment and the placing of the Workmens' Compensation law up on the statute books of the State chronicles an interesting series of attempts to round it out into a workable and beneficial as set for the great army of men who are employed in there was a flaw in the law and it was necessary to amend it. This was done after the waging of a lengthy fight when the question of insurance of an industrial nature became an important issue. This question was settled and now comes the final chapter, that of adding industrial diseases to the list of subjects for which aid may be received.

COLUMBIA MILLS COMPANY TO MAKE STRONG PROTEST

Yesterday's Oswego Palladium says:

In preparation for a protest against the assessment on the Columbia Mills Inc., to be made to the Board of Assessors of Oswego Town on Grievance Day, August 17th, Attorney Torrey A. Ball is engaged at the County Treasurer's office filling out cards which will show the assessed value of every piece of property in the town in 1914 and the proposed assessment for 1915. In addition the cards will show the consideration paid for all property transferred during the year. This material will be used by the Columbia Mills in attempting to prove their contention that other parcels have not been assessed to their full value.

OSWEGO TO PROTEST AGAINST TROLLEY SCHEDULE

The Common Council of Oswego will meet tonight to protest against the new trolley schedule, and other grievances, and it is likely that the matter will reach the Public Service Commission.

The people of Fulton have a grievance, also, which is the rate of speed maintain by the cross-town car between the D. L. & W. and Hannibal st. No accidents of a serious nature have yet occurred but the swift-moving cars give many an autoist cold chills. Narrow escapes from collision are not infrequent, and some action should be taken by the city authorities.

TO BUILD CEMENT BLOCKS FOR CHURCH THIS WINTER

It is the purpose of the Rev. Father McCormick, in charge of St. Mary's R. C. chapel in Mexico village, to have made during the winter months enough cement blocks for the new church which he is laboring hard to secure for his flock. He stated Sunday that he has nearly sufficient funds for a new church, but wants to begin with prospects of being clear of a heavy indebtedness.

SHERIFF BUCK GETS A LOT OF PRAISE

E. R. Case, assistant secretary of the Prison Association of New York, in a report recently issued showers a lot of praise on Sheriff Buck's administration of the County Jail.

Mr. Case suggests that the present system of paying $2 a week for a prisoner's board be abolished. Another suggestion is that prisoners be employed on good road work.

MELVIN S. CROMBIE

Melvin S. Crombie, who died in Oswego Sunday night, was in his 67th year. He had been ill for several years.

Mr. Crombie was born in Fulton, but has lived in Oswego forty-two years. He was bookkeeper for the Oswego Commercial Advertiser and Times for six years and then served under Collector Daniel G. Fort and John J. Lamoree in the Custom House, and served two years under Collector H. B. Poucher, when he went in. He became connected with the Oswego City Savings Bank twenty-seven years ago as a bookkeeper and later was made treasurer. When he retired last February, because of ill health, he was secretary-treasurer of the institution.

He is survived by his wife; one daughter, Mrs. William S. Woods of Montclair, N. J., and two brothers, twins, Dr. Walter C. Crombie of Mechanicsville and Attorney William C. Crombie of Buffalo.

SPEAKER SWEET TO BE AT GRANBY FARMERS' PICNIC

Thaddeus C. Sweet, Speaker of the Assembly and acandidate to succeed himself in office, proposes to make an address tomorrow at the Granby farmers' picnic which is to be held at High Banks. Boats will ply at intervals between the landing near Stop 26 and the island to carry the visitors.

Bread as sweet as the "kind your mother used to bake," is the people's verdict applied to Black company's bread. adv

Sing Sing Prison Will Not Lose Tom Osborne

(Continued from Page One)

order Superintendent Riley to remove these three men. Should the superintendent refuse it may mean his own removal. These men are warm friends of Mr. Riley, and some persons think it will be impossible for him to discharge them.

If Superintendent Riley, who is a constitutional officer and cannot be removed, except on charges, would resign half of the dilemma would be solved, and if Warden Osborne would resign also the whole problem would be disposed of. But neither man shows signs of resigning.

Unpleasant stories are being cirdulated about Sing Sing and Superintendent Riley's office. Within a week, if the case of Warden Osborne against Patrick H. MacDonald, confidential agent of Superintendent Riley, is brought to trial, it is asserted, three prominenet members of the superintendent's staff will be fare to face with charges of a criminal character.

These three men, it is charged, conspired to blacken the character of Warden Osborne. It is said here that the whole alleged conspiracy will be unfolded at the hearing of the Osborne-MacDonald charges in Ossining on Thursday.

Office Holders and Members of Publicity League to Wage Battle

(Continued from Page One)

Chief, are on the quivive, and the lawless element will be asked to absent itself on the appointed date.

City Sealer O'Brien, Commissioner of Charities Woodbury; the members of the Civil Service Board and Fire and Police Commission will all be included in the invitation, in short, the complete municipal machinery will take a vacation on Wednesday next. (Have we missed anyone?)

Arbitration may be necessary to decide who shall umpire. Certain gentlemen of the cloth in the city feel that they should be honored with the office, while some of the players are inclined to think the services of Tommy Ryan's training camp of pugilists will be necessary. Efficiency will be the watchword in the selection of the official, and it is understood that Mr. Stevenson will be asked to name one man and Mr. Wiltsie the other.

The amount of the admission fee has not yet been decided, but it is safe to say that many citizens would pay almost any amount to see some of the men above-mentioned perform. If an admission fee is charged the proceeds will be donated to some public charity.

Community Notes

The body of Duncan Palen has been taken from his home at 166 S. 3d st., to Skaneateles for burial. Mr. Palen was 77 years old, and has been living here but a short time.

* * *

Soon the Barge canal employes who are under civil service, will be uniformed in blue serge, gilt braid and brass buttons. A neat name plate will adorn the cap to signify the position held.

* * *

Mr. and Mrs. J. V. Curtis, who have been spending a week at the home of their daughter, Mrs. Lay Allen Palmer, left for home yesterday.

* * *

Mr. and Mrs. Eugene Sullivan and children of New York are in the city and will spend the summer at Hotel Fulton.

* * *

Patrolman Gordon has mastered the mysteries and intracies of the department motor-cycle and he will now be found looking after the speeders and violators in general.

* * *

Rev. and Mrs. J. W. Barrett, who are enjoying their vacation, recently spent a few days in Carthage, where Mr. Barrett was formerly pastor of the First Methodist church.

* * *

Mr. and Mrs. Watson A Butts accompanied by the former's brother and sister, Mr. and Mrs. R. K. Butts, left the city today bound for the Thousand Islands. The trip is being made by automobile and a number of resorts along the St. Lawrence will be visited.

* * *

The Elks Lodge will meet tomorrow to make preparations for entertaining guests during Fair week.

* * *

Mr. and Mrs. John Foley have returned to their home in Cayuga st., after spending a pleasant week at Thousand Island Park.

Economy Hints

A penny saved is a penny earned.—Benjamin Franklin.

SOMETIMES when a woman takes up the problem of house furnishing she has to buy everything new from the beginning, and sometimes she already has a more or less complete equipment which she hopes to improve gradually—that is, to continue the comparison with the factory, she has to do with a "going concern." In either case she must study the situation carefully and make sure of what she most wants before she begins to buy. It is impossible for her to select to the best advantage unless she has all the principal needs in mind to begin with and goes at the task systematically. Haphazard buying is always extravagant and nowhere more so than in connection with house furnishings. There is such a bewildering variety of things to be used in a house that unless the housekeeper keeps a clear idea of what she wishes most and plans her buying carefully she will find herself getting things which, though useful, are not the most useful or are not the best adapted to her particular needs. Two dining tables may be equally good of their kind, but one may be much better adapted to a particular house and family than the other. If it is a case of furnishing a house entirely with new things it is wise to go slowly and learn from experience what will best suit the special conditions, even if this prevents putting the whole house completely in order at once. For example, it might be well to see how one's belongings fit into the built-in cupboards before deciding whether to buy a sideboard or a china closet.

If only a limited amount of money can be spent at one time, it would probably be better to leave an extra bedroom unfurnished or do without an extra rug than to "skimp" on the quality of the necessary things. When it is merely a question of renewing or increasing old equipment, the thoughtful housekeeper considers the value of each article in connection with what she has or expects to have as well as by itself. If she has no convenient cupboard for her ironing supplies, an ironing table of the settle type with a box under the seat may be more serviceable than the ordinary kind; and if she expects to get a new set of table dishes soon and can then use some of the old ones in the kitchen, it is poor policy to stock up unnecessarily with kitchen ware.

In order to buy in accordance with a definite plan she must often steel herself against the allurements of bargain counters or of beguiling salesmen, not because the wares they offer are not intrinsically good or cheap, but because in spite of being good or cheap they may not be what she really needs most. It is poor economy for her to buy sheets which will not be used for several years instead of napkins which are needed at once, simply because the sheets happen to be a few cents cheaper than usual, or to be persuaded to take an omelet pan when what she had meant to get next was a new coffee pot.

How to Use Left Over Coffee For Various Culinary Purposes.

Here is a French recipe for a coffee blanc mange that differs slightly from the ordinary: Add to a glass of clear, strong coffee seven ounces of gelatin that has been soaked in water. Chop finely a pound of almonds and pound into a powder; soak this in three glasses of water and mix with the coffee. Pour the mixture into a mold and cook in the oven for half an hour. Serve cold.

Cold coffee boiled with sugar to form a coffee sirup is very palatable when served as a sauce with vanilla, coffee or chocolate ice cream. It also makes a delicious flavoring for whipped cream.

With the aid of a tin cocktail shaker many soda fountain drinks can be made at home from leftover coffee. A glass of milk, one egg, two tablespoonfuls of cream and four tablespoonfuls of sweetened coffee, well shaken together, furnish a delicious and nourishing drink.

Another beverage that is unusual is made with one part of coffee and three parts of cocoa. This is to be served hot with luncheon or as a substitute for afternoon tea.

How to Clean Some Particular Parts of the House.

When cleaning mopboards the wall adjoining may easily be protected by using a piece of cardboard held at the upper edge of the mopboard. This allows the cloth to soil the cardboard instead of the wall and avoids the streak one so often sees upon wallpaper or painted walls.

To freshen gilt frames, dust them carefully, then wash with one ounce of soda beaten up with the whites of three eggs. Scraped patches may be touched up with any gold paint.

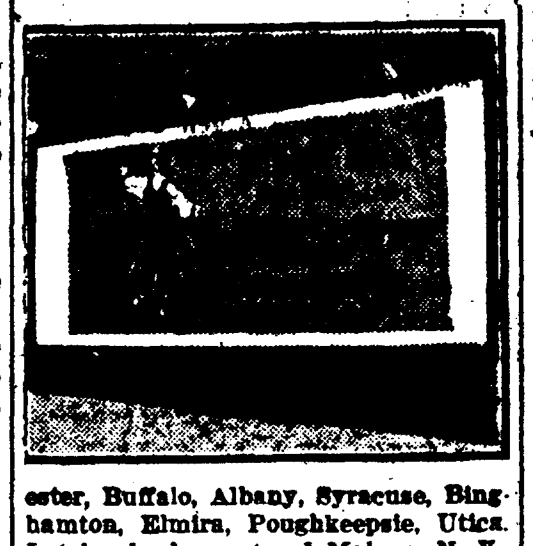
Castile soap and warm water with proper care may be used to clean oil paintings; other methods should not be employed without some skill.

To remove paint from window glass use strong hot vinegar.

A redhot iron will remove old putty or will soften it so that it can easily be scraped from window glass.

She Is Stepping Along.

She is stepping along, that girl in the striped skirt with her light, sure steps. One watched her first stand out in her glad, brisk way from the corner of Columbus circle, New York city. Now she has marched over the whole state. She has raced along the Hudson river, keeping in front of the Empire State express. She has beckoned to the commuters and hailed the passing tourists. She has gone into remote sections, where summer visitors will welcome her as a reminder of the city left behind them. Also, she has gone to Roch-



ester, Buffalo, Albany, Syracuse, Binghamton, Elmira, Poughkeepsie, Utica. Lately she has entered Malone, N. Y., and shrills her bugle from a broad expanse where the Franklin county men, who are already rapidly enrolling for suffrage, can hear her clarion call.

She is popular, for she is a beautiful young woman. She marches. The figure seems alert and intent on its task.

Tongue Caught Ermine.

"This stole is of tongue caught ermine, hence its high price," the salesman said.

"Tongue caught ermine, eh?"

"Yes, madam. You see, the ermine's coat is extremely delicate. A trap tears it horribly. So the trapper catches it by the tongue.

"The ermine is fond of ice. The trapper smears heavy knives with grease and lays them here and there on the snow. The snow white ermine, lithe and quick, rushes up in the zero weather, licks what he takes for a sliver of ice, and, lo, is doomed, for the steel of the heavy knife has frozen fast to his tongue."—Exchange.

VIVIAN NICKALLS ENLISTS.

Well Known College Rowing Coach to Become an English Soldier.

Vivian Nickalls, who is well known as a college coach and who is at present the coach of Pennsylvania university's crews, has declared his intention of abandoning his profession to join the British army. Mr. Nickalls is an

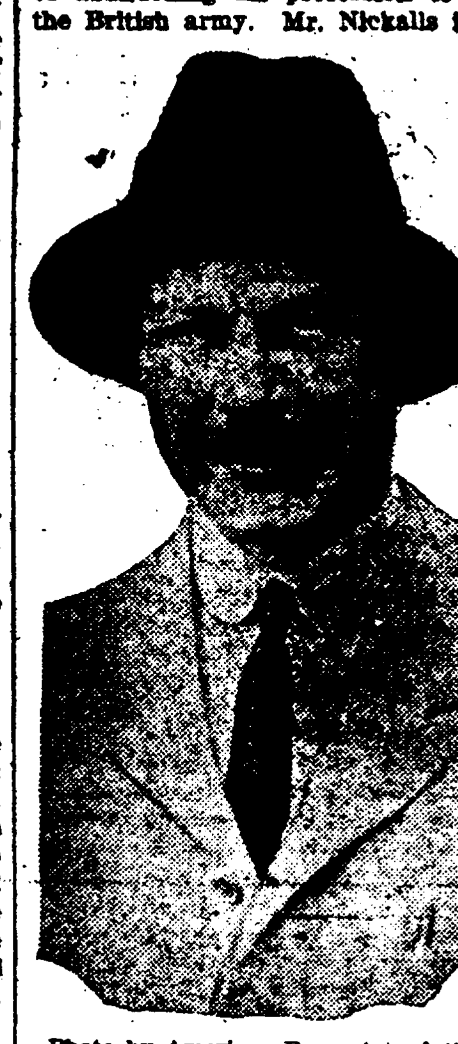


Photo by American Press Association.

VIVIAN NICKALLS.

Englishman and is the brother of Guy Nickalls, rowing coach of Yale, whose varsity eight won a notable victory over Harvard this year. Vivian Nickalls has accepted a commission in a hussar regiment and will sail for England about the middle of August.

Care of the Teeth.

Without good teeth there cannot be proper chewing; without proper chewing there cannot be proper digestion; without proper digestion there cannot be proper nourishment; without proper nourishment there cannot be good health. Without health what is life? Brushing the teeth is not enough for their good health. Let the mouth be purified for its rest by rinsing it with a cleansing mouth bath, else some good sterilizing agent, such as camphor, hydrogen peroxide, the proportion being a few drops to a glassful of warm water. Then fill the mouth with milk of magnesia, allowing it to permeate every corner of the mouth and all the crevices between the teeth.

The Arms We Buy.

For a peaceful and peace loving nation statistics develop the fact that Americans and residents of this country purchase annually a vast number of firearms. One authority estimates that nearly half a million shotguns alone are sold and about 900,000,000 cartridges, of which more than half are used for hunting purposes, of various kinds.—Argonaut.

WIFELY DEVOTION OF MRS. EDISON

She Watches Over Him Lest He Overtax Himself.

Thomas A. Edison, who has recently had a new honor thrust upon him by being selected by Secretary of the Navy Daniels to head the recently inaugurated department of invention and development for the United States navy, is the man above all others whom the nation will look to for new inventions of a defensive nature. Chief among the problems it is hoped this department will solve is meeting the danger of submarine warfare with new devices that will assure peace to our country by their effectiveness.

In announcing his acceptance of Secretary Daniels' invitation Mr. Edison said that he believed the proposal so important that it should be attended to at once, for the war in Europe emphasized the need of such a department.

Mr. Edison, as is well known, is crowded with work, and Mrs. Edison, who has always been more solicitous

© by American Press Association.

MR. AND MRS. THOMAS A. EDISON.

for her husband's health than is the great inventor himself, at first demurred to his accepting the new responsibility, but her scruples have been overcome.

"I think he has too much to do now," said Mrs. Edison in a recent interview, "straightening out the plant after the fire, building a new carbolic acid factory and his other everyday work that is itself far more exacting than that of most men. He works steadily from 8 o'clock in the morning until midnight. However, he tells me he would act only in an advisory capacity in this new position and would have to do little or no active work. I suppose that being the case I shall have to put aside my preferences and consent to his accepting Secretary Daniels' offer. But," Mrs. Edison sighed anxiously, "he really has too much work now."

Several times Mrs. Edison has "looked after" her famous husband when she believed "the wizard," who seldom sleeps more than five hours a night, was overtaxing himself. When the Edison record plating plant burned March 8 Mrs. Edison brought out to him a pair of overshoes and insisted on his putting them on while the fire was at its height. Several times she has refused to permit him to return from vacations when she feared he had not got enough rest, and many nights she goes out to his laboratory and makes him come in and get a little needed sleep.

She Needed Them.

"I wish, John," she said regretfully, "I had had sense enough not to destroy all the letters you wrote me during the year and a half of your courtship."

He smiled in a gratified way. "I knew you would regret that some time," he said.

"Indeed I do," she replied. "I need a little change the worst sort of way, and the man who buys rags and old paper was here today. How wasteful we are in our youth!"

He looked at her reproachfully, and almost involuntarily his hand sought his pocketbook. It is seldom, indeed, that a resourceful woman has to make a direct request for money.—Chicago Post.

Cheerful Inducements.

The following advertisement once appeared in the London Post:

"A rock built, crenelated castle, buffeted by the Atlantic surge, at one of the most romantic and dreaded points of our ironbound coast, in full view of the Death stone; shipwrecks frequent, corpses common; three reception and seven bedrooms; every modern convenience; 10 guineas a week. Address," etc.

Nice Business.

"I think I'll go into the real estate business."

"Looks good to you, eh?"

"Yes; the real estate business seems to be one in which two men can swap property and both make money.—Louisville Courier-Journal.

Natural Sequence.

"The prisoner was sunk in dejection."

"What sank him?"

"The fact they couldn't bail him out."
—Baltimore American.

TODAY'S FASHION NOTE

A very chic waist is pictured here, developed in cream colored chiffon cloth edged with black liberty satin, the black border being hem-stitched to the fichu and the collar. The skirt is a four-piecemodel in black velvet, trimmed with buttons. In medium size the waist requires 2 1-8 yards 36-inch material and the skirt 4½ yards 44-inch velvet.

Pictorial Review Waist No. 6349. Sizes, 32 to 46 in. bust. Price 15c.

Skirt No. 6341. Sizes 22 to 34 in. waist. Price, 15c.

[illegible] Patterns may be [illegible] M. Katz & Co. De[illegible] Fulton.

Advice.

"Nobody listens to advice."

"You're wrong. One fellow always does."

"Who's that?"

"The fellow who's giving it."—Cleveland Leader.

The KITCHEN CUPBOARD

APRICOT MARMALADE.

NOT only alphabetically first, but first in favor among the "confitures" of the French, stand all the forms of apricot preserve, of which apricot marmalade is the chief. This sticky, velvety, smooth sweet of not very positive flavor, but most delicate when made of fine fruit, is used in dozens of the different little cakes of the fine French pastry shop, sometimes to give the shiny top to the little filled tartlets, sometimes between the cooked creams, and a foundation of puff or other paste, and is an altogether serviceable and attractive addition, although not dietetically good with pastry. The French pastry maker often recooks it with a very heavy sirup to make it more shiny.

The Italians also use a great deal of such things as apricot marmalade with their "pasta frolla" (puff paste), sometimes covering a layer of paste with it, which thus becomes a background for figures cut from pastry like a rose branch with leaves, buds and roses.

The marmalade is made by reducing the raw apricot to a pulp by putting it through a sieve—a stout tin one with re-enforced bottom is one of the invaluable kitchen utensils—and then it may be cooked with the sugar or cooked separately to dry out the water and united with a thick sirup. The first method is probably the best for the inexperienced, and the following recipe adapted from the French describes it:

Apricot Marmalade Recipe.

Pour boiling water on the apricots, fine ripe ones, and let stand three or four minutes. Pour off, peel and take out stones, then press all through sieve. Add three-fourths as much sugar as fruit and cook from half to three-fourths of an hour. If over the fire directly, stir all the time. It is safer to cook it on an asbestos plate and stir frequently. A test for its being done is that it should stick the fingers together. Put in sterilized glasses; when cold cover as you would a jelly.

Anna Thompson

Hints for Housewives

American Housewives Can Mix Their Own Flour.

That the American housewife is herself quite capable of doing all the flour mixing desirable, is the commentary of Assistant Secretary of Agriculture Vrooman on the mooted mixed flour question. He says further that the American housewife could materially reduce the cost of living if she were to get the flour mixing habit.

"There are some thirty substitutes that can be mixed with wheat flour in making bread. Many of these are more nutritious than wheat flour; some of them are cheaper than wheat flour, and of these two or three at least are commercially obtainable almost any where.

"Potatoes, corn flour and rice (in certain sections) can be used with profit in mixture with wheat flour in making yeast bread. With wheat flour as dear as it is now, the careful housewife stands to effect quite a saving by using one of these products to eke out her wheat flour. Experiments have shown that the substitutes can be used successfully in the proportion of one part to three parts of wheat flour. At least three-fourths of the mixture must be good wheat flour.

"Potatoes have a certain advantage in this regard, since potato bread can be made without going to the trouble to get the commercial potato meal. Plain mashed potatoes, four parts of mashed potatoes to three parts of wheat flour, will serve the purpose quite well. If the dry potato meal or flake is used the ratio should be one part of potato to three parts of flour. Boiled rice can be used in much the same way as mashed potatoes, care being taken to allow for the water in the rice and to use about three times as much in bulk as would be used of the rice flour.

"In making potato bread the sponge should be used and just enough water to serve to mix the yeast with the potato, since the sponge becomes very soft after partial fermentation. The remainder of the flour is worked in afterward, care being taken to make an extra stiff dough, which should be raised till quite light. This bread is much moister than bread made of straight wheat flour.

"Corn flour, which should cost about two-thirds the price of wheat flour, may be mixed with wheat flour direct, one part of corn flour to three parts of wheat flour. Use the mixture just as though it were wheat flour, and mix it yourself.

"It should be remembered that the addition of starchy materials, such as potatoes, rice or cornstarch (which is sometimes used to adulterate wheat flour in baking), tends to make a loaf less rich in protein and hence less nutritious than the straight wheat flour. The addition of corn flour makes little if any change in the nutritive value of the bread, but makes it cheaper.

"There are other flour substitutes, such as soybean meal and pea flour, which serve to add greatly to the nutritive value of the loaf when mixed with wheat flour. These products unfortunately cannot be recommended in the present emergency, since they are not as yet common articles of commerce in this country.

"In this connection it should be said that a great saving could be effected if the housewife would emulate the professional baker and buy low grade wheat flours. There are flours on the market quite as good for home baking as the fancy patent flours, which cost in bulk from 25 to 40 per cent less than the fancy grades. Such are the so called 'second clear' and 'low grade' flours, which are graded lower than patents merely because they are darker, not because they are any less nutritious or less palatable. In fact, the darker color may be evidence that the flour is more nutritious than white flour.

Tossing In a Blanket.

Tossing in the blanket is a very old sport or punishment. "Blanketing" Ben Jonson called it, and in Holinshed (1557) we find a denunciation of "jesting, plaicing, blanketing and such other filthie and dishonorable exercises." The French have a special verb, "berner," for it, "berne" being the name given to the sheet or blanket used. The verb "berner" is also used for the Moorish punishment, in which four men hold the victim by his ankles and wrists and send him as high as they can—presumably with no blanket to catch him.

Now He Has Millions.

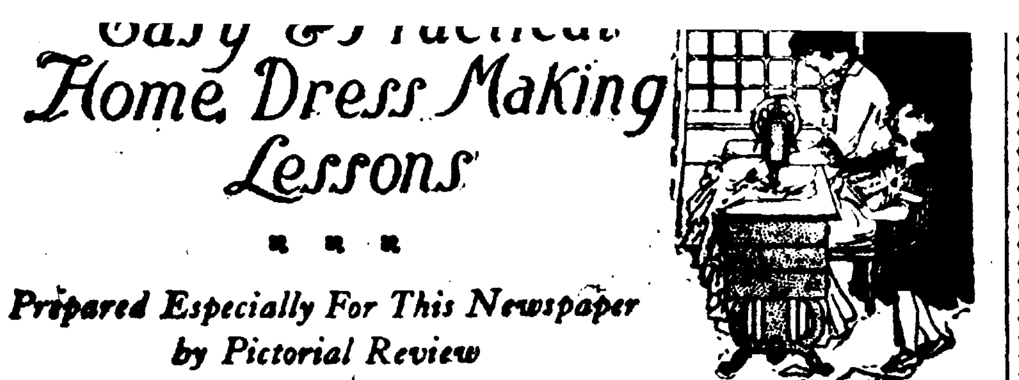
"See that fellow in the limousine?" said one man to another at Washington and Illinois streets as a big car passed.

"Well, I can remember when he didn't have but one pair of socks; now he has millions."

"Gee, he must have some washings," replied the friend whose mind does not run to finances.—Indianapolis News.

Percussion Caps.

Percussion caps (taking the place of the flintlock) came into use about 1820. Snider's system of breechloading was invented in 1859, although there had been attempts made at Snider's achievement several years earlier than that date. The muzzle loaders held on until the seventies, when they were practically discarded by all armies.



Prepared Especially For This Newspaper by Pictorial Review

MORNING FROCK IN GABARDINE.

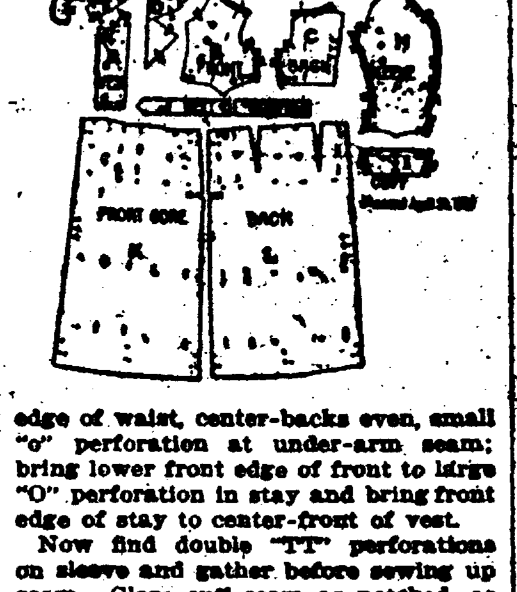
6304

A wonderful effect of refinement and good taste is shown in this morning frock of mastic gabardine trimmed with brown silk.

The more simple the morning frock, the more simple and becoming it will be regarded when inventory of early Fall fashions is taken. The accompanying model in gaberdine exploits the fashionable mastic tone and has the sleeves finished with brown silk cuffs. To duplicate the model in medium size requires 3 yards 44-inch material, with ⅜ yard silk for the cuffs. If the vest and collar are made of contrasting material, ⅝ yard will be required, if 27 inches wide.

The front and back of the waist are tucked and the tucks are stitched into position immediately after closing the shoulder seams. They should be about an inch wide. Before closing under-arm seams bring folded edge of tuck at lower edge of front to large "O" perforation and tack. Underface the front about an inch and close seam of square collar as notched, terminating seam at small "o" perforation. Face collar and sew to neck edge as notched.

Hem front of vest and adjust to position underneath front of waist, matching small "o" perforations. Gather lower edge of waist between double "TT" perforations; sew stay to lower



edge of waist, center-backs even, small "o" perforation at under-arm seam; bring lower front edge of front to large "O" perforation in stay and bring front edge of stay to center-front of vest.

Now find double "TT" perforations on sleeve and gather before sewing up seam. Close cuff seam as notched, as just under short sleeve, bringing small "o" perforations at upper edge of cuff to corresponding perforations in sleeve, and stitch to position along lower edge of sleeve. Sew into armhole.

The skirt comes next. Slash front fore to left of center-front on double "oo" perforations for opening. Join gores as notched. Form box-pleats, creasing on lines of slot perforations; bring folded edges to corresponding lines of small "o" perforations; stitch from upper edge to single small "o" perforations and press. Gather upper edge of skirt between the pleats. Sew to lower edge of waist over stay, center-fronts and center-backs even, large "O" perforation at under-arm seam.

The belt of self-material gains an odd finish by being secured with a buttonhole lapped over a button of brown silk.

Pictorial Review Costume No. 6304. Sizes 32, 34, 36, 38, 40, 42, 44 and 46 inches bust. Price, 15 cents.

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.

For the Children

Boys Who Took Part In a College Commencement.

Photo by American Press Association.

Sons of Princeton graduates of the class of 1910 had a fine time at the recent commencement exercises of that university. Of course they are pretty small boys, but that did not detract from the enjoyment they had nor the pleasure they gave to the older folks. The little fellows were dressed in Turkish costumes and took part in the parade around the campus. They attracted a great deal of attention from the spectators and were generally acclaimed the best hit of the day. The photograph shows two of the little fellows, who are decorated with the figures "1910," which denotes the year in which their fathers were graduated.

Game of Initials.

Provide a pack of cards upon which the letters of the alphabet have been conspicuously printed. There should be but one letter on each card and more than one alphabet will be needed. Four or five would not be too many, but Q, X and Z may be omitted.

Choose a leader and have him sit where he can be plainly seen by all. He must put the pack of cards face down on a table before him, or on a book on his lap. He then calls for the name of some general, novelist, country or city, or any object he pleases beginning with the letter which he turns up from the pack and holds up for all to see, reading it distinctly as he does so. He must name the object required before turning up the card.

Whoever in the company first names the object called for receives the card. When the cards have all been used the person holding the most has won the game. For example, the leader says, "Name a state of the Union beginning with"—here he turns up a card—"the letter 'D.'" Some one cries "Delaware" and receives the card.

"Name one of Scott's characters beginning with F."

"Name one of Dickens' novels beginning with G."

"Name a famous general beginning with G."

And so on. In case no one can give an answer the card is returned to the bottom of the pack.

SIRES AND SONS.

Mayor William H. Thompson of Chicago is a total abstainer.

W. H. Winans fills four public offices in Cleveland. He is twenty-six.

C. C. Herron of Philadelphia has completed twenty-five years in rescue mission work.

W. M. Smith has spent thirty-five years as a typesetter for the St. Louis Post-Dispatch.

The Hon. Austen Chamberlain, the new British secretary for India, is no tyro in public business and is regarded as a fine administrator. In 1902 he was postmaster general and afterward became chancellor of the exchequer.

Colonel Rogers Birnie, who recently retired as senior colonel of the ordnance department of the army, having reached the age limit, is one of the foremost ordnance experts in this country. He is a native of Maryland and entered the army in 1872.

General Carlo Caneva, commander in chief of the Italian forces in the field, is a man tried in battle in the war with Turkey. His is the highest rank in the Italian army. He is seventy years of age and was on the retired list until the war threat loomed on the horizon.

A Carlyle Retort.

An empty headed duke once said to Thomas Carlyle at a dinner:

"The British people, sir, can afford to laugh at theories."

Carlyle, scowling, replied:

"The French nobility of a hundred years ago thought that they could afford to laugh at theorists too. But a man came and wrote a book called 'The Social Contract.' This man was Jean Jacques Rousseau, and his book was a theory and nothing but a theory. The nobles could laugh at his theory, but their skins went to bind the second edition of the book."

MAKING THE BEST OF IT.

To make the most of all the dull hours, to make the very best of dull people, to like a poor jest better than none, to wear the threadbare coat like a gentleman, to be outvoted with a smile on your face, to hitch your wagon to the old horse if no star is handy—that is wholesome philosophy.—Bliss Perry.

ROOM ATTRACTIVE.

There is no reason why a storeroom should be a dingy, messy place, which must be hidden from every eye except the owner's. It is quite possible to make it an attractive, cheery place, which one may visit as freely as any parlor.

One woman uses her back bedroom as a combination storage and sewing room, and except for the faint odor of tar bags and moth balls one would never suspect the real purpose of the room. It has a big, roomy closet. In this she has a pole stretched from one wall to the other, and from the pole are suspended many tar bags holding all the furs and long heavy coats. On the shelves, wrapped in many covers of newspapers, are the winter hats, with a small bag of camphor balls between every two. This closet is kept tightly locked, as a rule, but once a month the bags and packages are removed, and the closet is well dusted and aired.

This housewife keeps two trunks with her most valuable possessions in this storehouse, also an old fashioned wardrobe with a mirrored door, a sewing machine and two chairs.

DAMES AND DAUGHTERS.

Mrs. Celia Stellman of Brooklyn recently found her son, Henry, who disappeared fifteen years ago, a sailor in the United States navy.

Miss Eva Ramstedt, a former pupil of Mme. Curie, the radium expert, has been appointed professor of radiology at the University of Stockholm.

First to win the iron cross from Emperor William in the present war was Fraulein Lonny Hertz von Vessen of Berlin, a cousin of the late Mark Twain.

In the fifty years she has been connected with the bureau of engraving and printing in Washington it is estimated that over $100,000,000,000 has passed through the hands of Miss Annie Roe, chief of the numbering division.

Miss Harriet A. Graham has been retired on a pension by the Pittsburgh board of education after having taught for more than fifty-three years in Pittsburgh schools. Miss Graham is said to be the oldest woman public school teacher in point of service in Pennsylvania and one of the oldest in this country.

Echoes of the War.

It seems to be millions for munitions, but not one cent for peace pacts.—Cleveland Plain Dealer.

Even the Swiss are running deeper into debt to pay the cost of their neutrality.—Boston Herald.

Reflections as to the causes of war have lost interest in the contemplation of the effects.—Washington Star.

"No change" in the military situation is beginning to awake a heartfelt echo from hollow war chests.—Washington Post.

The war will do one thing for the men who die in the trenches. It will relieve them of the burden of helping to pay the war debt. This will be a heritage to their children to the third and fourth generations.—Houston Post.

PITH AND POINT.

The more excuses a man makes the less he gets out of it.

The dictates of conscience are never recorded by a typewriter.

Since getting into the war little San Marino seems to have been lost.

Originality is a thing we constantly clamor for and instantly quarrel with.

Actions may speak louder than words, but most people prefer oratory to pantomime.

Work is terrible to some men and loafing is terrible to others, showing what habit will do.

War dispatches announce another gain of 200 yards, but fail to state who carried the ball.

Don't wait too long for your ship to come in. Better take a canoe and paddle out and meet it.

Speaking of infant industries, that of the home tourist finds better protection in war than in the tariff.

Short steps attained at terrific cost in blood and treasure is the monotonous story of the European hostilities.

One of these days there is going to be a great battle at Szcsebrzesyn, and then half a dozen compositors will commit suicide.

A New York woman aged ninety-nine attributes her longevity to having always had a good appetite. The eat-less campaigners will please note.

True Words.

"Ma, do you remember at the wedding how you said we shouldn't feel bad 'cause we weren't losing our daughter, but gaining a son?"

"Yes, pa."

"Well, them was true words, ma. He's just written me that they've decided to come home an' live with us."

Woman's World

Wife of New Secretary of State Occupies Mother's Former Place.

Photo © by Clinedinst.

MRS. ROBERT LANSING.

Not since the days when Mrs. John Hay entertained official Washington as wife of the secretary of state has a cabinet hostess of this rank appeared who is as well equipped as Mrs. Robert Lansing, wife of President Wilson's new premier.

Mrs. Lansing will enjoy the unique experience of succeeding to the very exacting social duties which were so ably performed by her mother back in the Harrison administration when John W. Foster, her father, was secretary of state.

Mrs. Lansing, then Eleanor Foster, was just making her bow in society, having been graduated from Smith college. Her interest in her mother's duties was sufficient to give her an experience which she will now be able to turn to practical advantage.

The wife of the secretary of state is called upon for many exacting social duties, and Washington expects to see Mrs. Lansing make a notable place for herself as a cabinet hostess. She is a good conversationalist, quick at repartee and somewhat of a wit. Furthermore, Mrs. Lansing is the youngest woman upon whom the duty of leading the cabinet's social affairs has fallen in many years.

Mrs. Lansing was married to Mr. Lansing in 1890 in the home of her father on I street, where the Fosters lived for many years. The Lansing wedding was attended by a notable gathering, including President Harrison and family, Vice President Morton and his family and other prominent officials and diplomats.

Mr. Lansing took his bride to a new home in Watertown, N. Y., where they have always lived except for the time spent in Washington. They spent many winters with General and Mrs. Foster before Mr. Lansing was appointed counselor of the state department, and since then they have continued to make their home with the Fosters, who have built a spacious and luxurious home on Eighteenth street, just opposite the Austro-Hungarian embassy, in Washington.

Mr. and Mrs. Lansing have no children.

Mrs. Lansing as the foremost of the cabinet wives will take precedence over many other women. She will take the lead in all things social in the cabinet circle. In social rank she comes next to the wife of the president or the president's hostess. Even the wife of the vice president does not have the social responsibility of the wife of the secretary of state. It is her duty to entertain the diplomatic corps, and it is to her that the wives and families of newly accredited ambassadors and ministers pay their respects after they have made their formal calls at the White House.

The most brilliant function of New Year's day next to the White House reception is the breakfast given by the secretary of state and his wife to the diplomatic corps.

Mrs. Lansing is known in Washington as a woman of exceptionally good taste, modesty and common sense.

Ways to Clean Silver.

One of the easiest ways to clean silver is to wash it with a soft cloth saturated with kerosene, then rinse it with scalding water. A long bath in sour milk will clean badly tarnished silver. If vinegar cruets are filled with it and left awhile the films on the inside will soon disappear.

Alcohol and salt will remove egg stains immediately, and alcohol and soda is also a good cleanser. Many prefer using alcohol to ammonia, though the latter does the work.

A chamois bag filled with powdered magnesia is very useful for polishing all silver articles. An old piece of velvet will prove wonderful for polishing silver, and a broken clothespin is a handy contrivance. Covered with a cloth, the flat, rounded tip will be more useful in working between the tines of the work and in moldings that require more friction than a brush can give.

Button Hooks.

For 5 cents buttonhooks with white bone handles can be bought. A supply of these might be laid in by many a housewife to advantage, for every room ought to be furnished with at least one shoe buttoner. Nothing is so aggravating as to be unable to find one's buttoner.

D/34

TEUTONS LEAVE 2000 DEAD

Milan, Aug. 10.—The fall of Gorizia is now considered a matter of only a few days. Its defenses have almost been swept away by the vigorous attack of the Italians, culminating today in a five hours' artillery and infantry attack.

Many of the Austrian batteries were silenced in today's battle and after a final bayonet attack the Austrian troops retired toward the town, leaving 2,000 dead and 800 prisoners. The damage within the town was enormous, the streets being impassable with wreckage.

10,000 Left of 40,000.

Refugees describe conditions in Gorizia as terrible. Living conditions are desperate. The Italian artillery fire prevents the arrival of supplies and the population is reduced from 40,000 to 10,000.

Lawlessness is rampant and the municipal stores and warehouses are empty. A mob burned a rich citiizen's residence in the hope of obtaining wheat. Bread is scarce and meat unobtainable.

The Italian center at Carso continues to advance the onward movement, each day representing small but methodical gains, although no large mass engagements have taken place. The Austrians seem to be convinced that all their sacrifices are useless, the steady, hard, stubborn fighting marks each day.

The Italian front is now a considerable number of kilometres east of Sagrado and Tugliano, the extreme positions at Doberdo are seven miles farther east than a month or five weeks ago. The area thus gained south of Goripia is extremely hilly and rocky and represents enormous difficulties, especially as it is defended stubbornly inch by inch by the enemy.

Shell Austrians on Heights.

An action of great brilliancy has been accomplished by the Alpini in the lofty glacier region of Tonalee in western Trentino, where mountain guns were dragged up to the heights of Punta Ercavalto, 366 metres, and shelled the Austrians out of their positions at Malga and Paluda in Val del Monte. Important lines and a camp held by the Austrians were taken along the heights overlooking Val del Monte and a considerable amount of material was captured.

Rome, Aug. 10.—Perhaps even more important than the actual advances reported in General Cadorna's bulletin is the fact that the Austrians are being kept in anxiety all along the front, not knoweing at what point the Italians will make the next push forward.

SUGAR TO DROP IN PRICE SOON

Sugar prices are on the decline, having fallen 30 points in the last few weeks. It is probable that they will go ten points lower by Saturday The jobbers are asking $6 a hundred and expect to drop to $5.90 tomorrow. A year ago jobbers wereg etting $8 a hundred. At the beginning of the European war prices began to boom upward, as a result of crop conditions and the demand from Europe. The European demand was not as great as was expected and home consumption fell off, causing a decline. The canneries use the bulk of the sugar sold in this country. This year only about one-half as much canned goods has been put up for the reason that dealers throughout the country are overstocked. The high prices have caused a falling off in the consumption in the homes. English imports of refined sugars for the first six months this year totalled 220,000 tons, compared with 464,000 tons the corresponding period last year.

Following is a Concise Explanation of Plan C, Under Whose Auspices Commission-Manager Form is to Work

LEGISLATIVE POWERS.

All legislative powers under Plan C are vested in the council of five which may pass ordinances covering all city matters. Each member has a vote, three constitute a quorum and three votes are necessary for the approval of an ordinance or resolution. Regular meetings must be held weekly, special meetings on call of any member on three days' notice, all sessions *must be open* to the public. Until superseded by ordinance all laws and charter requirements continue in effect. The council cannot repeal or alter provisions relating to the granting of franchises, the sale or lease of city real estate, or the incurring of debts, except to transfer the powers to officers under Plan C.

TERMS OF OFFICE.

The Mayor is elected for four years, the two councilmen receiving the most votes for four years each, the two councilmen receiving the next largest number of votes for two years each, their successors in each case to be elected for four years.

ASSESSMENT OF PROPERTY.

The council succeeds to the powers formerly exercised by the assessors, but the council may appoint one or more assessors.

CITY JUDGE AND BOARD OF EDUCATION.

These are not affected by Plan C. They continue to be chosen as at present.

CIVIL SERVICE COMMISSIONERRS.

Chosen by the council for terms of six years, one commissioner being elected every two years.

METHOD OF ELECTION.

The provision of the election laws of the state control at as present. There will be partisan nominations. The ballot will be of "office group" type as at present, that is, all candidates for Mayor will be grouped together and all candidates for the council will be grouped together with the party emblem opposite each candidate nominated by a regular party.

SALARIES.

The salaries of the Mayor and councilmen in cities with a population between 10,000 and 25,000 are $500 per year.

ADMINISTRATION.

All administrative and executive powers are vested in the city manager, appointed by the council to hold office during so long as his services are satisfactory. The duties of the city manager are to (1) be the administrative head of the city government; (2) see that within the city the laws of the state and the ordinances, resolutions and bylaws of the council are faithfully executed; (3) attend all meetings of the council, and recommend for adoption such measures as he shall deem expedient; (4) make reports to the council from time to time upon the affairs of the city, keep the council fully advised of the city's financial condition, and its future financial needs; (5) prepare and submit to the council a tentative budget for the next fiscal year.

APPOINTMENTS.

The council determines the number, the powers, duties and compensation of officers and employes, but appointments to all offices except the city clerk and the civil service commission are made by the city manager, and he is personally responsible for their efficiency.

MAYOR.

The Mayor is required to preside at all meetings of the council, as the official head of the city for civil proceedings, for the military law and for all ceremonial purposes. He has no veto power.

One of the important differences between the present method of selecting the city council and the method provided under Plan C, is that at present we chose our aldermen by wards. Under Plan C they are chosen to represent the whole city. This means that under Plan C every voter would vote for one man out of the three or four nominated for Mayor, and that he would vote for four men out of the fifteen or twenty likely to be nominated for councilmen. This gives every voter an opportunity to vote for all the council. At present he can vote for only the Mayor and one of the Aldermen.

GERMANS CAPTURE PRAGA AND BATTER TWO GREAT FORTS

London, Aug. 10.—The neck of the funnel through which Grand Duke Nicholas' Warsaw and Vistula armies are retreating has been narrowed to about thirty miles between the Vistula and Bug rivers. The time that has passed since the retirement began is believed, however, to have permitted the great body of troops to reach the open spaces east of Warsaw not as yet in danger of German envelopment.

That the Russian evacuation of Warsaw was more complete and successful than even the most optimistic had hoped is indicated in the Berlin official report of yesterday that "a few thousand" prisoners were taken in the city. It is regarded here as evident that the bag was exceedingly small or more definite results would have been announced.

Theoccupation of Praga yesterday brings to a dramatic climax thhe first phase of the drive at the Polish capital and the region of Eastern Poland of which Warsaw is the dominating center. Praga is essentially a part of the capital, with great railway stations on the running to Petrograd and Moscow. Few details have been received of the final Russian stand at Praga, but the indications are that the withdrawal of the Russians became imperative in order to escape from the German lines gradually drawing together in their rear.

Warsaw is now the apex of a vast letter V, the arms of which are the River Bug on the north and the Vistula on the south. The German lines spread along those rivers are contracting gradually as the armies in the north and those in the south approach each other.

Besides the enveloping movement immediately to the east of Warsaw, Berlin reports a steady hammering at the great Russian fortresses of Kovno and Lomza, the chief significance of which is their proximity to the lines of railway communications to Petrograd. Novo Georgeievsk is the only place west of Warsaw at which a Russian garrison remains and its fall seems imminent.

The attitude of the Poles toward the new German regime is arousing deep interest, as the occupation of Warsaw unites for the first time three branches of the Poles heretofore divided among Russia, Germany, and Austria. Under the Russian regime Poland has been a hotbed of disorder, and it remains to be seen whether control of this occupied territory will be as difficult a problem for Germany as it has been for Russia.

French Aeroplanes Make Daring and Dramatic Dash

London, Aug. 10.—The British have recaptured all the trenches they lost to the Germans in the region of Hoge on July 30, and have further extended their front to a distance of 1,200 yards, making a net gain for Sir John French's troops of fully a mile of front.

The English, after a protracted lull in which they were husbanding their ammunition against the possibility of a new German drive on the Iser front, resumed their artillery action about three days ago and, in co-operation with the French batteries, opened a terrific bombardment of the lost trenches.

By reckless expenditure of ammunition and accurate gunnery a number of the trenches were leveled, and the British followed through with the bayonet and hand grenades and carried the trenches by storm.

Night Attack Repulsed.

Repulse of a furious German night attack north of the railway station at Souchez, in which the invaders lost heavily, was reported from Paris.

The afternoon French report chronicled a terrific night bombardment by the batteries of the Crown Prince's army against the French line protecting Verdun, but the night report fails to mention any activity in this section.

Despite a heavy fog, a fleet of thirty-two aeroplanes, convoyed by speedier scoutp lanes, made a daring and dramatic dash on Saarbrucken, northeast of Metd. Twenty-eight of the machines reched their destination and dropped 164 bombs on the town, starting many fires.

The scout planes gave battle to German aeros which attempted to cut off the French air ueet and after a thrilling fight high up in the air, drove the Germans off.

These aeroplane squadrons are now made up exactly on thep lan of fleets of battleships. The machines are divided into classes, each of which has its separate function to perform.

Light Craft as Scouts.

The speedy, light aricraft are designated as the scouts and destroyers of the squadron, and swarm around the heavier craft, which, flying in battle formation, are equipped with heavy bombs and light cannon.

They carry only machine rifles and light rapid-fire guns and are designed to fight off attacks, giving the main squadron of air dreadnaughts opportunity either to veer and sail away or to prepare themselves for battle.

Instead of flying by twos and by threes, as in the beginning of the war, these aircraft now strike out on their raids in flotillas of thirty or more, the light aeros darting out in front and protecting the flanks of their heavier and slower brethren, which are burdened with heavy bombs slung in baskets underneath, which can be released by a shaft arrangement, like the gear of an automobile, close by the pilot's hand.

Flagship for Each.

There is a flagship for each squadron, from which the flight commander issues orders to his captains and lieutenants aboard the other aircraft. Even atmospheric conditions have, to a large extent, been overcome, today's raid being carried out in a bank of fog, the French machines laying a course of four miles through the fleecy curtain.

Partly cloudy tonight and Wednesday, with moderate winds, mostly northeast.

DUTCH GOVERNMENT PLACES LARGE ORDERS

New York, Aug. 10.—Although Holland, so far as known, has not decided to enter the war, it was learned yesterday that ammunition is being made in large quantities here for the Dutch government.

The war materials consist of steel jacketed bullets, three-inch shrapnel shells and brass and copper plate.

These are bing manufacture by the National Brass and Copper Company factories at Hastings-on-the-Hudson.

ONE DAY'S DRUNK IN ONE YEAR PERMISSABLE

New York, Aug. 10.—A man may get drunk one day a year without punishment by Magistrate Fitch, of Queens Borouogh. Sobriety for 364 days, he nformed Gottfried Johnsen, fifty, a carpenter, of Far Rockaway, entitled him to suspension of sentence

"Thanks. I'll not get drunk again this year," said Johnsen, as he hurried away.

CANADIAN LOSSES HAVE REACHED OVER 10,000

Ottawa, Ont., Aug. 10.—Announcement was made today that Canadian casualities up to date numbered 10,680, mde up of 1,877 dead, 6.738 wounded and 2,065 missing.

GOVERNMENT TO FURNISH HEADSTONES FOR VETS

Headstones for theg raves of all deceased soldiers, sailors, marines or nurses who saw war service will be furnished by the United State Government. Circulars explaining the offer and copies of the application blanks which must be filed to obtain a headstone for the grave of a soldier have been received in this city. The circulars contain full information regarding the plan of the Government and requests for headstones will be promptly acted upon, it is anounced. It is expected that the applications for headstones for graves will be filed through local organizations of veterans of the different wars.

These headstones are of the best American white marble, thirty-nine inches long, twelve inches wide, and four inches thick, the top slightly rounded, and the portion of the stone which will be above ground when set is sand-rubbed; each headstone is inscribed with the name, rank (if above private). company, and State regiment or other organization, to which the deceased belonged, cut in relief, within a sunken shield. No deviation can bem ade from these specifications which are prescribed by theh Secretary of War, and the law does not provide for any expenditure for fence or for any other purpose except for the headstone above described.

No money allowance is made in lieu of furnishing headstones.

Headstones will be shipped, freight prepaid by the Government, onlly to the nearest railroad station or steamboat landing.

BOYS ARE MASTERS OF FARM GRANGES

Sparta, Mich., Aug. 10.—Wilfred Cummings, nineteen, is the youngest grange master in Michigan, and, with the exception of Charles K. House, of Jackson County, O., who is but eighteen, the youngest grange master in the United States. He became a member of the Sparta Grange at fourteen and held various offices until he was elected master in 1914.

His grange is the largest in western Michigan and he is heading it toward a position of prominence when activities are conisdered.

Cookies and cakes and all things baked by the Black company, fresh every day, at your grocer's.

THE FULTON EVENING TIMES

"A Herald of Progress"

Volume 1, No. 200. | Established, Dec. 17, 1914. | WEDNESDAY, AUGUST 11, 1915 | Price One Cent

Frank Jewell Raymond Says: "Try Fulton First;" It's Better Than Slogans in Use; Asks Business Men to Follow Their Own Advice; Drop Religious Differences

"Gentlemen, before I start to talk I want to tell you this—I don't care whether or not you like what I say. Further—if I say something tonight which you think fits someone else in this city, let no man look around this audience and say to himself, 'Where's Dan? Gee—this just fits him! He ought to hear this.' No—I want you to take those remarks to yourself, and for that reason I place my hat right here in front of me so that I may look at it and say to myself, 'Raymond, these remarks are meant for you.'"

So spoke Frank Jewell Raymond, efficiency expert, in beginning his address on "Business Efficiency" last night at City Hall, before an audience of almost 100 business men and their employes. Almost every business house of any size in the city was represented at last night's meeting and Mr. Raymond's direct manner of expressing himself, coupled with his original ideas on business management, was a revelation to all present.

The speaker was introduced by David L. Lipsky, treasurer of the Chamber of Commerce, under whose auspices Mr. Raymond spoke.

"Who is Raymond? What do I know? Where have I been? Why am I here? These are four questions, friends, which naturally enter your minds," said Mr. Raymond, "and I will answer those before I go further.

"Raymond is a salesman, selling his ability. My mother taught me the alphabet and I learned what every boy learns in school. Whatever else I know I have learned through my associations with business people and by experience. I have spoken in 92 large department stores throughout the country; before employes of the Heinz company in Pittsburgh; the Simmons Hardware company; at traveling men's conventions and elsewhere. I am here through an agreement made with the National Dry Goods Association of New York City, which believes that some of my ideas regarding business methods would prove useful to retail merchants in smaller towns who cannot afford to engage me direct.

"I will talk for 40 minutes.

"It is said that life is divided into three stages—infancy, from birth to 25 years, when our bodies and minds have not matured; the development stage, from 25 to 50 years, [illegible] begin to store up knowledge and to learn things; and the harvest stage, from 50 years on. I have 14 years yet before I enter the harvest stage, and at present I am storing up knowledge, the results of which I shall reap when I enter the harvest period. As I said before, I have learned what I know through experience and from business associations, and I will simply tell you some of my experiences.

"Workers are divided into four classes—the indifferent class, the students, the skilled workers and the masters. The indifferent class is composed of 'Can't' people. Nothing can be done that seems hard. It is hard for them to be punctual. They duck in just a few minutes after their regular time every morning. By the way, how many of you men say 'Good Morning' when you enter your place of business? It costs nothing—try it tomorrow. The indifferent ones are always neglecting opportunities.

"The students are observing ways to grow. They use what they have to get what they want. Some of us don't know how to use what we have; others don't know what we want; and many of us don't know what we have. You hear of these very bright people who can tell you any statistics you want to know—who held such and such a championship in 1912—what is the batting average of Ty Cobb. We say these people are bright. They are not—they are storing up a lot of useless knowledge that will never get them anything or anywhere. The true student is the man who [illegible] choose useful information and [illegible]

"The skilled class are those who apply what they know—they use the useful information they have stored up.

"The masters are those who have complete control of things they know and use them. Newton Carlton once said, 'there are no really big men in the sense that some people think of big men, as men who do only big things. But big men are those who have done many small things well. They knew mastery.'

"There are four things necessary in business, if you wish to succeed—confidence in yourself—in your proposition—in your co-workers—and in the people you are doing business with.

"Have you fellows confidence in this town? A knocker never wins and a winner never knocks. If you don't like Fulton—get out! No man is too poor to get out of a town he doesn't like—all he has to do is knock hard enough and they'll ride him out. There is a difference between a knocker and a criticiser—the knocker suggests no way of improvement—and the criticiser does. Have you confidence in this town—in the people here? Or do you say, 'It may be done elsewhere—but you can't do it in Fulton?'

"Do you ever look within to find out what's wrong or do you say 'Things went well here for a while—but So-and-So stuck me last year, and this other fellow harpooned me not long ago?' That's the moss-back.

"Have you confidence in your business—in your proposition? Do you ever take the trouble to inspire your salespeople with confidence in your goods? Do you ever take the time to explain a piece of goods to them—why the purchase was made? Why you bought these handkerchiefs in place of others? Enthusiasm never rises any higher than its source.

"Have you confidence in your co-workers? The Athletics was a star team last year—this year it is a team of stars. The difference is that there is no team-work this year. Is there back-biting among your employes and jealousy?

"Have you confidence in the people you do business with? Are any of you fellows yellow dogs? (Here Mr. Raymond narrated an incident which illustrated the regeneration of a yellow dog, following the dog's battle with a bear, in which the dog was forced to fight and came out victorious.) Have you ever been that way or are you that way now? I have been. Working Ohio and Indiana for a certain company I got a letter from the salesmanager which read, 'Raymond, we have 32 salesmen and you are No. 32 in the list of sales. We'll give you two more weeks.' It was a case of succeed or vamoose. I had no confidence in my line, in the people or in the firm. Then one Saturday night I got a wire, 'Raymond. Eight days left!' I was up against it—I had to make good, and I did.

"I note that you have the slogan—"Buy at home" here. I don't like that—I prefer 'Try Fulton First.' Then if your customers are given service they will not need to be urged to buy at home.

"Do you fellows follow your own advice? Do you buy at home? How about town newspapers? Do you use them, or do you say, 'Well, the Syracuse papers have more news, and they reach the same people and I can get the same results.' Are you that kind of a man?

"But when your wife is going away—you want something more than a little reading notice—you want a little piece in the home paper—just to let the people know that your wife can go away. Then you call up the paper. In other words, you are always ready to use your home paper when you can get something for nothing.

[illegible] and this brings me to [illegible] question of religion—and I don't know a thing about it. But here—there are three routes from this city to New York. Some take one, some take another. They all go to the same destination. So it is with religion. Do not let religion or prejudice enter into business.

"Have confidence in the people of this town. People here are the same as people anywhere else. You have to give to get in this world. You have to give a pleasant smile or word if you want to receive one in return.

"Think over these things—put them into practice—say 'Good Morning' to your clerks—inspire them with the same feeling—urge them to give better service—brighten up your stores—anl you will find that the people here are the same as people anywhere else, and they won't go out of town to buy."

Following his address, Mr. Raymond made a proposition to the members of the Retail Trade division regarding a series of talks here. The first is entitled "Personal Inventory," and the second "Getting Results," explaining the difference between the order-taker, the order-maker and the order-shakr. One of these talks will cost \$125, two wlil cost \$240, and three, \$345. The division is to notify Mr. Raymond if it desires him to give the series, which would probably take place this fall.

BAND CONCERT

THIRD OF A SERIES BY ELKS' BAND
EAST SIDE PARK TOMORROW NIGHT AT 8 O'CLOCK.

March—American Cadet .... Hall
Selection—Chin Chin .... Caryll
Popular Hits:

Trombone Solo— .... F. Jess Newton
Medley Overture—The Grand Slam .... Witmark
Overture—Wanderers Zeal .... Suppe
Selection—High Jinks .... Friml
March—The Big Elk .... Newton

WOMEN AND CHILDREN KILLED IN AIR RAID ON ENGLAND'S COAST

London, Aug. 11.—Killed—1 man, 9 women and 4 children; wounded—5 cen, 7 women and 2 children.

This is the casualty list of a Zeppelin raid made on Monday night on the east cost of England, according to an official announcement made public last night. The location of the place or places attacked was not mentioned by the report, the text of which follows:

"A squadron of hostile airships visited the east coast last night and this morning between the hours of 8:50 p. m. and 12:30 a. m.

"Some fires were caused by the dropping of incendiary bombs, but these were quickly extinguished and only immaterial damage was done.

"The following casualties have been reported:—Killed, one man, nine women and four children. Wounded, five men, seven women and two children.

"One Zeppelin was seriously damaged by the gunfire of the land defences and was reported this morning being towed into Ostend. It has since been subject to continual attacks by aircraft from Dunkirk and has been under heavy fire, and it is now reported that after having its back broken and its rear compartments damaged it was completely destroyed by an explosion.

"The night was extremely dark and was accompanied by thick fog in places which rendered night flying by aeroplanes very difficult.

"It is regretted that Flight Sub-Lieutenant R. Lord, who was one of the pilots sent up to engage the enemy, was killed on landing in the dark."

Sub-Lieutenant R. Lord, who was a grandson of Sir Riley Lord, went to his death from a dance with his fiancee, Miss Violet Beever. Half an hour later she stood by his bedside, holding his hand till he died.

It is believed that four or five airships took part in the raid A dispatch from Holland says five more airships passed over that country, going in a northwesterly direction, this morning, so that another air raid on England is expected.

RUSSIA UNABLE TO MOBOLIZE RESOURCES

London, Aug. 11.—Warsaw was lost to the Russians simply because Russia has been unable to easily and rapidly convert her vast resources to the uses of war, says the Warsaw correspondent of the London Times, who, driven out of the Polish capital, has reached Petrograd, whence he sends to his newspaper the following dispatch:

"The capture of Warsaw undoubtedly represents the greatest German achievement in the war, and it would be stupid to minimize the character of the campaign or the bravery of the German soldiers whose sacrifices has placed them in possession of the goal for which they suffered approximately a million casualties in the space of a year. On the other hand, it would be stupid to exaggerate the importance of Warsaw.

"The city was lost not through the defective generalship or inferiority of the Russian army, but solely through the inability of Russia to convert its vast resources quickly to the uses of war. The evacuation of Warsaw was carried out from beginning to end without the slightest confusion, panic, demoralization or discouragement. For two weeks an unending train of transports passed in orderly procession out from the city, removing everything which might be of value to the Germans.

"There was no storming of the city, for the Russians blew up the bridges at three o'clock in the afternoon and the Germans did not arrive on the Warsaw side of the river until six o'clock. The Russians played their part virtually up to the last minute and the last shrapnel shells. Then they retired in good order, leaving the Germans to enter an undefended city.

"The army throughout acted on a systematic plan, following a time table, in conjunction with all the forces from Galicia to the Baltic, which enabled them to remain until the last moment to take the maximum toll from the enemy and still escape intact, ready to fight on indefinitely."

AMMUNITION MAKERS RESIST DEMANDS

New York, Aug. 11.—Strike threats by representatives of the International Association of Machinists have failed to move many munition makers in this and other cities from resisting demands for an eight-hour day. Labor leaders said yesterday that negotiations with many concerns are not progressing satisfactorily

J J Keppler, vice-president of the machinists' association, said last night the organization would fight the manufacturers to a finish.

Whitman Drops Case Against Tom Osborne; Riley Must Decide

Governor Whitman intends to let Thomas Mott Osborne continue at Sing Sing. What is more, he intends to see that nothing is done by any one to handicap the warden in his experiments in prison reform.

The Governor is not in sympathy with the way Mr. Osborne is conducting the experiment. He believes, however, that no real harm can befall the commonwealth in leting him continue with his convict self-government. This is what has impelled him to declare "hands off" now.

What is more, he believes that anything Warden Osborne does is not any direct concern of his. He has put the responsibility up to Superintendent of Prisons John B. Riley and has so informed him.

Superintendent Riley is a constitutional officer, and his subordinates are directly responsible to him.

Serene, smiling, and silent, Thomas Mott Osborne returned to Sing Sing Prison yesterday and assumed the direction of that institution just as if there had never been such a thing as a threatened decapitation or friction with any one

To the reporters who called the warden said: "I started to send out this note," showing a bit of paper on which was written, "I have nothing to say." Then he added, "But I thought I would be more courteous and come out and say so to you. There is not a word for me to say."

Questions bearing upon every angle of the situation were asked him, but he would not discuss the controversy in any way. His position is that everything is in the hands of Gov. Whitman and Superintendent Riley.

Mr. Osborne announced yesterday that Elihu Church, an efficiency engineer, who has been in the service of the Department of Water Supply, Gas and Electricity, would on September 1, become deputy warden of Sing Sing.

Opinions

Mayor Mitchel, "Rookie."

To Mayor Mitchell, "rookie" in the business men's military training camp at Plattsburgh, The Tribune presents its compliments and best regards. It trusts his hands will not become too blistered in trench digging to wield the pen of authority and final disposition in municipal affairs when he returns nor his back too strained to bear the weight of a reform administration's cares. But no matter how many blisters and how much back strain he accumulates he is playing an enlightened and patriotic part in undergoing this period of military training at a time when the country's great need is preparedness, not only in munitions and agencies of war, but in men.

Probably not one of the young men who have enrolled for this education, or of the thousands of others who would like to join them but can't, desires to see this country at war. Most of them have a stake in the community in the way of property owned, or business built up, professional standing acquired after arduous effort, so that war would hit them hard. They are not the professional militarists of the brand with which Europe is familiar—men who thrive, in some way direct or obscure, from the maintenance of huge armies and the fostering of a belligerent spirit. These are good Americans, who would hate to fight, but want to fight well and effectively for all that America holds dear if it ever becomes necessary:

The example which Mayor Mitchell and all his companions at the Plattsburg camp are giving is a splendid one. It should extend to all the land, and in especial be noted carefully at Washington, which must be the center of activity in national preparedness.—N. Y. Tribune.

Judge Lindsey on Osborne.

Judge Ben Lindsey of Denver is known all over the continent for his militant defiance of special privilege as it effects such problems as prisons, juvenile courts, child labor and related matters. He has fought many years and thrives on fighting. His latest battle is in behalf of a principle that a "kid's judge" has the same moral and legal right to safeguard the confidence placed in him by a child that a lawyer has in protecting his client, that a priest has in shielding from publicity the things confessed to him by those who seek consolation.

Judge Lindsey has observed the prison problems of this state with particular scrutiny in recent months, and he has visited Sing Sing. He spoke with unerring truth in New York yesterday when he gave the reporters these observations:

"As Governor Carleson of Colorado stood between me and the politicians who sought to remove me from the bench, I sincerely hope that Governor Whitman will stand between Warden Osborne and the politicians who are trying to have him removed. I hope the Governor will block the effort to discredit one of the most vital, interesting and important experiments in prison reform that the country has ever witnessed and of which New York has every reason to be proud.

"On the other hand, if Mr. Whitman permits the politicians to interfere with Mr. Osborne, New York will have every reason to be ashamed of the triumphs of the politicians.

"I know the type and I know how they are seeking to eliminate Mr. Osborne. It is the same type, the same kind of politician that have constantly sought to destroy me in Colorado that is attacking Mr. Osborne in New York. The methods are the same, the veiled innuendo, the half truth, the damning by faint praise, the anonymous attack upon character and upon motive but never a straight-from-the-shoulder, man-to-man attack.

"The people are ready to fight for Mr. Osborne. If Governor Whitman tolerates his removal, he is going to bring on his head the biggest storm of protest and indignation that was ever visited upon the governor of a state and there is neither excuse nor explanation that he can give that will appease the wrath of the people of the state. I have been sensing and I know what I am talking about.

"In the event of such a catastrophe there will be no riot in the prison. But I can tell you that there will be a riot of feeling and indignation outside the prison and there ought to be.—Auburn Citizen.

Children Cry
FOR FLETCHER'S
CASTORIA

The local band concerts are a mighty factor for pleasure in the city, and hundreds avail themselves of hearing the tuneful melodies the boys are so capable of producing. The only 'fly in the ointment" seems to lie in the fact that the concerts are not held in the same place each time. Many people forget the place designated and so miss the concert.

It would not be unappreciated by the people in general if a bit of community singing were introduced at each concert. Harry Barnhart, who led the community singing at the Chautauqua tent said Fulton has the material for one of the greatest community choruses. Then why not develop that power; why not use it? Aside from the get-togetherness of it, it might be a whole lot easier to raise the funds for band concerts another season.

Why not invite to the next concert a half dozen lusty-voiced young men who will lead in singing something everyone knows as, Old Black Joe, America, Silver Threads Among the Gold, etc.

Auburn has been experimenting with community singing, using a late hour on Sunday afternoon, and in place of a band an organ and coronet. The old songs are sung in which all present join. One of the Auburn newspapers says of this:

"The idea of reviving the community singing has met with favor and it will be continued for the remainder of the summer. The scene in itself is one worth going to see. No prettier picture could be found in Auburn than the one at Pomeroy Park as the people grouped about the glen sang the songs that are so dear to the hearts of all."

A TAXPAYER SEES THE JOKER

Editor Evening Times:

In your issue of Wednesday, August 4, under the caption, "Massaro's Obstacles Prove Costly," is presented a bit of municipal arithmetic which, to us who are not acquainted with every particular of the case, is quite out of the ordinary. It seems that Mr. Massaro was awarded the contract to perform a certain definite (?) amount of sewer construction for a certain specified sum, but is now awarded a large additional consideration because he was obliged to take out 125 cubic yards of rock in the course of the work, the presence of which he was not aware when he took the contract" for $2,445. "Miralule ditu." Here is a contractor fully protected from all risks because he was "not aware" of difficulties involved! The article further explains that every official questioner was completely silenced by the crushing information "that a clause in the contract protected the contractor if he encountered unusual obstacles in the course of the work." Many of our citizens would like to know who is responsible for the wording of this contract, and why the city should have protection from what might easily be irregular and excessive *extras*. The suspicion readily suggests itself that there was an attorney's fee following close upon the "information" given the questioning aldermen that the "protecting clause" saved Mr. Massaro from loss. Will some of our city officials please explain why such "protection" is put into public contracts?

For several years the writer has been engaged in business, much of which has been by contract, but he has his first experience ahead of him where he has been "protected" from "unusual obstacles." If a commission form of government will save the city from this kind of "frenzied finance," by all means let us vote it in. Will the bridge contracts referred to contain similar "protecting clauses?" Is our money thus to be juggled with under cover of this kind of contract?

Now, perish the thought that there has been any graft (!) in connection with this sewer contract, but the little joker "clause" contained in it appears very strange to at least one.

TAXPAYER.

Get a bottle today—enjoy this easy, pleasant laxative.

DAY BY DAY

Chronicle of Events and a Forecast of What is Doing in Officialdom—Special Correspondence.

By Frederic T. Cardoze.

Albany, Aug. 11.—The ambition of many of the delegates to the constitutional convention to have their names and speeches appear frequently in the record, is to be nipped in the bud to save time. It has been decided to limit debat so that the entire work of the convention may be finished by the middle of September. The rules which prevail in Congress are to be followed as closely as possible. Five minutes is presumed to be a sufficient length of time in which to present important points upon subject before the House.

Much of the lost time of the constitutional convention is attributed to needless verbosity, story-telling and the asking of questions. President Elihu Root is most desirous of dealing with nothing except the vital matters before the delegates, yet he does not wish to unduly offend those who wish to debate. The necessity of culminating the work of the convention has, however, made it imperative that some established rule be created so that all may be universally treated with reference to the time allotted to them to explain their attitudes.

It has been frequently the case that a single delegate has talked for more than an hour upon a single subject without resuming his seat. The delegates have been loud against any such repetitions now that they are required t osit every day in the week and on Mondays attend a night session in addition.

It is the plan of Leader Wickersham to so arrange it that the limit of time of a debate upon any single proposition shall be two hours . This plan will enable the delegates in favor of the proposition to have one hour and those opposed another hour within which to advance their cause.

Another reason for the determination of the leaders of the delegate body to prevent unlimited talk, is that it is the intention to force either the passage or rejection of propositions by September 4. When the propositions have all been disposed of in this fashion, a recess of a week will be taken. During this time the Committee on Revision will begin its work which will be that of preparing the propositions favorably acted upon for submission to the people at the fall election.

In that a constitutional convention is called but once in twenty years or so and is the most important legislative body in the state, the desire of the delegates to go down into history as having fathered some particular project is a most natural ambition. But, as it is pointed out, the work of the delegates should not be impeded by oratorical outbreaks when a few words might serve as well to explain a point having bearing upon the subject matter before the convention.

In the early weeks it was impossible for the lesser delegates to talk, in that the committees performed most of the work. It has only been for the past few weeks that propositions have come up for debate in general orders, offering those who have been silent a chance to be heard and to have their remarks chronicled in the convention record.

For the past week the burden of duty has fallen heavy upon the delegates T.wo sessions are held daily in addition to important committee hearings The majority of the members have arranged to remain in Albany from now until the end of the convention. Those who are compelled to leave return Sunday and leave on Saturday afternoon, for the Monday moring sessionsbegin at 10 a. m.

ADVERTISED LETTERS.

Fulton, N. Y., August 10, 1915.

A THING OF PAST

Not Regarded as Reliable Indication of Scholars' Capabilities to Do Work in Next Grade.

A Washington dispatch which appeared in the Syracuse Herald last Sunday, is reprinted by request. It follows:

"That head devil of our schooldays —the promotion examination—has received his walking papers. The school children of the next generation may hear about him, but they won't have to go through the misery of making his acquaintance.

"Discussing the horned terror of the pre-vacation days of our kidhood, W. S. Deffenbaugh, chief of the division of school administration of the United States Bureau of Education, in his annual review of school conditions in the smaller cities, says:

"Few schools now rely entirely upon examinations as a test for promotion.

Count Not More Than Half.

"In some schools examinations are made to count one-half, while in others they count only one-fourth.

"It is now recognized that examinations are not true tests of the pupil's ability to do the next grade's work, and that a pupil should not be promoted on what he knows, but on what he can do.

"Of seven hundred and fifty-six superintendents in the smaller cities reporting, 669 say that they are now depending on examinations much less than formerly."

How pupils shall be classified so that they may advance through the grades without loss of time is a question that is continually presenting itself to thoughtful superintendents, according to Mr. Deffenbaugh, and some cities are undertaking special experiments in this field.

System in Carthage.

In Carthage, N. Y., all those children who cannot read are started on their educational journey in much the same way. Gradually they are regrouped in three divisions:

The first, composed of the most mature and most capable, completes a certain amount of work in one year. The second is given one and one-half years in which to accomplish the same amount, and the third is given two years.

Before the close of the 1st year each of the three groups is likely to be divided into the higher and lower. Therefore each pupil who enters in the fall with no knowledge of the books has before him the possibility of being in any one of the six groups before the close of the first year.

Special Teacher for Misfits.

There is a special teacher in the lower grades who devotes her entire time to misfits—those pupils who for some reason cannot do all of their work to the best advantage in any of the regular groups. This teacher coaches backward pupils and helps the brilliant ones to jump to the next higher division.

In East Chicago, Ind., a child is promoted at any time the teacher and the supervisors believe promotion would be helpful.

The superintendent of schools of Williamsburg, Va., reports:

"We use the shifting group plan of grading pupils. The aim is to relieve the teacher of all the red tape and to insist upon a constant and sympathetic study of the child, particularly every child who is in danger of falling behind in his class. No percentages are accepted as excuses for promotion or demotion."

"If the child is weak," he adds, "thhe reason must be found and then the remedy will be applied."

"The best seller," is the expression of merchants handling Black Baking Co.'s products. adv.

DEAFNESS CANNOT BE CURED by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by Catarrh, which is nothing but an inflamed condititon of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

CONFERENCE TO NAME PLACES FOR FARMERS' INSTITUTES TO BE HELD

On Saturday, Aug. 21, 9:15 a. m., at Court House, Oswego, State Director of Farmers' Institutes, Edward Van Alstyne will meet in conference representatives from all sections of Oswego County, the purpose being to select places where farmers' institutes will be held next season. A limited number of days of institute work are allotted to each county and communities desiring institutes should present their applications at this conference. Localities where institutes are held are required to furnish a suitable hall and to co-operate in advertising and caring for local arrangements.

All expense of speakers and printed advertising is borne by the state.

The matter of locating at least one extension school to be held under the auspices of Cornell University will also be considered at this conference.

The Farm Bureau Manager will be present and act as the local representative of the Department of Agriculture.

HANNIBAL NEWS

Prof. H. Y. Welch and wife of Clarion, Pa., are guests of her father, Frank Goodroe.

* * *

C. W. Cox and wife were ill with la grippe last week.

* * *

Mrs. Sarah Johnson is quite ill with pneumonia. Her daughter, Mrs. Nellie Bachman, spent last week caring for her.

* * *

Mrs. William Wilson and Mrs. Roy Krantz entertained the Social Ten last Friday afternoon. Those present were Mrs. Grant Wilson, Mrs. O. J. Adamy, Mrs. William Cooper, Mrs. Harvey Wheeler, Mrs. D. Gifford, Mrs. Elmer Wilson, Miss Sadie Adamy, Mrs. Blaine Welling. The company was pleasantly entertained with games and contests and a delicious supper was served.

* * *

Mrs. Wayne Bidwell and daughter, are spending their vacation at the residence of Mr and Mrs. Oscar Clark, Hannibal Center, which has been unoccupied for the past year.

* * *

Miss Lucile Day of Sodus is the guest of her grandparents, Mr. and Mrs. Rufus Day.

* * *

Mrs. John Casey and children of Syracuse are the guests of friends in town.

* * *

Floyd Fullerton of Florida is spending his vacation with his family in town.

* * *

Miss Ethel Young spent last week with friends in Minetto.

* * *

Mr. and Mrs. Edward Fairley and son were guests of friends at Fair Haven last week.

* * *

Harry E. Hinman of Pulaski and Miss Mary Clark of Olean were married at the home of the bride Wednesday, August 4, 1915. Mr. Hinman was a former Hannibal boy and is now clerk of the Surrogate's Court, Oswego county.

* * *

Dr. Acker and Mrs. Rufus Day spentp art of last week in camp at Fair Haven.

* * *

A birthday surprise was given Mrs. L. M. Ecker Saturday afternoon and evening at the home of Messrs. Ritenburg and Davis, it being the 49th anniversary of her birth. About fifty friends were present. Mr. William Prosses, in a few well chosen words, presented Mrs. Ecker with a beautiful china closet in behalf of those present. Refreshments were served and the time quickly passed with music and songs, and a pleasant social time.

* * *

Mrs. Ella Curtis of Dexterville was was the guest of friends in town last week.

* * *

Miss Rena Burt entertained a number of friends at a lawn party last week Monday evening.

* * *

A party of young ladies from Hannibal expect to go into camp at Fair Haven Saturday for a week's outing. Misses Margaret and Martha Gray, Mary and Lulu Adamy, Rose Ford and Mildred Ford and Mildred and Rita German will compose the party.

* * *

Mrs. F. Barlow is the guest of friends in Rochester.

* * *

A very pleasant event of the week was the reception Monday night to Rev. B. A. Matzen and wife. Mr. Matzen and his wife have been untiring in their work in the church and community and have won the love and respect of a host of friends in this place, who regret his departure. As a slight token of appreciation a beautiful pattern of table linen and napkins was presented by the congregation. Refreshments were served, and a very pleasant social hour enjoyed.

* * *

Mrs. Frankie Scott of Bridgeport, Conn., has been visiting friends in town.

* * *

Mr. and Mrs. Frank Cooper were Sunday guests of Mr. and Mrs. Webb Cooper, Ira.

* * *

There will be a surprise program at Hannibal Center Grange Friday evening. A large attendance is desired.

* * *

The program given by the gentleman officers of the Golden Sheaf Grange was a decided success as given below:

Song— by Grange; reading — Worthy Master, Fred Manning; reading—W. Overseer H. Perkins; reading—W. Gate-Keeper, H. Wheeler; a very interesting and amusing story about attempting more than we know how to do Prof. W. G. Welch, of Clarion, Pa.; reading—Frank Wellington; recitation—Frank Goodroe; solo—George Crofoot. After the program the Worthy Master invited all to the dining-room where a watermelon treat awaited them. This week, what? Come and see.

* * *

John Brackett of the Syracuse Auto Works, who was seriously injured two weeks ago when a heavy box fell on his leg, is improving slowly.

* * *

Mrs. Mary Burdick of Syracuse is a guest of Mrs. Frank Reed.

* * *

Mr. and Mrs. Ray Stoutenger, of Hannibal Center, are rejoicing over the birth of a daughter.

Miss Betty Attwater of New York is spending the summer with her aunt, Miss Clara Hills.

* * *

Mrs. Gurden D. Trimble, accompanied by her mother, Mrs. James Jones, who have been spending a month as the guests of Dr. and Mrs. E. B. Guile, at their summer home on Lake Orion, Michigan, returned to their home here last Friday.

* * *

Mr. and Mrs. Ray Vrooman of Central Square were guests of friends here Friday and Saturday.

* * *

Mr. and Mrs. Glenn D. Trimble are entertaining their nephew, Ralph Graves, of Mexico.

* * *

Mrs. Charles Marshall has been spending a week visiting friends in Fulton. Her daughters, Mrs. Hattie Millard and Delma of Oklahoma, were also guests with her. They all returned to Mrs. Marshall's home here on Sunday.

* * *

Mrs. James Huff has been entertaining friends from Seneca Falls the past week.

* * *

Willis Jennings still continues very ill. He has been confined to his bed for several months. He is at the home of his son, F. H. Jennings.

* * *

Prof. and Mrs. Orin E. Page and son, Robert, of Adams, and Prof. and Mrs. Frank Smith and son of Montecello are spending a part of their vacation with their parents, Mr. and Mrs. Albert N. Graves.

* * *

Mr. and Mrs. Frank Merritt received the news last week of the death of their son, who is 21 years old, who died suddenly in the West. He was brought to Fulton for burial.

* * *

Miss Ferne Scudder has been the guest of her brother, City Clerk L. R. Scudder, in Fulton.

* * *

Mrs. Frank Marshall has been entertaining Thomas Smith, Mrs. L. Smith and daughter, Miss Blanch Smith, of Syracuse for a week.

* * *

Mrs. Willard Wallace was the recent guest of her son, Dr. George Wallace and family in Minetto.

* * *

Miss Lena Jennings gave a variety shower at her home on Wednesday afternoon in honor of Miss Flossie Ingersoll of Hastins, whose marriage to Arthur J. Craner of Auburn occurred on Sunday, August 8th. Among those invited to enjoy Miss Jennings' hospitality and meet Miss Ingersoll were Mrs. L. R. Scudder, Mrs. Harry Scudder and Miss Mary Frawley, all of Fulton; Mrs. Frank Smith of Montecello, Mrs. Winifred Coe of Hastings, Mrs. Harlan Collins of Gibbert's Mills, Mrs. Glenn D. Trimble, Mrs. Fred J. Trimble, Misses Minnie and Ivah Tooley, Bessie and Lucile Coventry, Maizie Gorman, Mrs. Matthew Frawley, Mrs. Bert Hollenbeck, Miss Inez Burrows, Mrs. Lulu Gilman, Miss Ferne Scudder, Miss Clara Hills, Miss Melrose Taft, Miss Clara Jennings and Mrs. Lee C. Loomis.

* * *

Mr. and Mrs. Frank Dolbear of Fulton and grand-daughter of Syracuse were Sunday guests of Mr. and Mrs. Frank H. Jennings.

* * *

Miss Melrose Taft of Volney has been spending a week with her aunt, Mrs. F. H. Jennings.

* * *

Mrs. Mary Vincent is spending a week camping at Sodus Point Bay, the guest of her son, Willis Hunnington and wife.

* * *

Mr. and Mrs. Lee C. Loomis were over-Sunday visitors of Mr. and Mrs. R. Vrooman of Central Square.

William Ruff of Wakaruso, Ind., writes: "Hanford's Balsam is the best liniment I have ever used and I cannot do without it."

Children Cry FOR FLETCHER'S CASTORIA

D/34

? ? ? ? ? ? ? ? ?

IS

The Business Men's League

?

ANSWER:---Fulton's leading politicians; Plus Fulton's lesser political lights who hover about the big candles like moths about the flames; Plus taxpayers whose assessments are lower in proportion than anyone's else; Plus more Fulton politicians.

Commission-Manager Form of Government

Would let the light of publicity into the city's affairs and would put an end to the present loose, secret and unbusiness-like methods of Fulton's city management.

Do the Politicians Want Publicity?

NO!

WHY?

BECAUSE---Publicity will enforce the giving of 100 cents worth of benefit for every dollar expended from the people's treasury.

Commission-Manager Form of Government

Will Result in Equalized Assessments

Citizens, look about you and realize that a few interests are profiting at the expense of the many. The assessments of these few are kept down by politics and the largest number of taxpayers have to pay the fiddler for them.

GET RIGHT TO THE HEART OF THE OPPOSITION TO COMMISSION-MANAGER FORM OF GOVERNMENT IN FULTON TODAY AND WHAT DO YOU FIND? POLITICS AND THE INTERESTS BENEFITTED BY POLITICS, and this opposition would use you merely as tools to benefit

Politics and the Interests

Get away from the politicians. Look into the matter for yourselves and with your own minds and you will be convinced that

Commission-Manager Form of Government

Play the Game for ALL the People, ALL of the time.

TAXPAYERS' COMMITTEE

MISS ANNE RUDE MARRIED AT NOON

Only Relatives and a Few Friends Present at Ceremony---Extended Honeymoon Trip Follows Wedding

Miss Anne May Rude, daughter of Mr. and Mrs. Jay Rude, of the Chase road, and John T. Painter, of 92 Worth st., were united in marriage at high noon today at the home of the bride's parents. The wedding took place in the parlor of the Rude home, before a high bank of ferns, and Rev. M. J. Peters, rector of the Zion Episcopal church, of this city, performed the ceremony. The house was beautifully decorated with golden glow and ferns, with yellow, gold and white predominant.

Only intimate friends and immediate relatives of the couple witnessed the ceremony. Little Miss Florence Painter, 4 years old, a sister of the groom, acted as ring-bearer, and the couple were attended by Miss Eva Rude, sister of the bride, and Floyd Collway of Oneida. The bride wore a gown of white embroidered net over white satin and carried white roses. The bride's maid wore white crepe de chine and carried pink and white sweet peas.

Following the wedding an elaborate wedding dinner was served under the direction of Mrs. M. Clauson. Only the members of the wedding party and guests at the ceremony were present. The couple received many beautiful and costly presents including a substantial gift from the bride's from Mr. Painter's associates at the City Hall, where he is an employe of theh water department.

Mr. and Mrs. Painter left shortly after noon on their wedding tour to Buffalo, Niagara Falls and Rochester, and expect to return to this city in one week, after which they will be at home at 401 Hannibal st.

EPWORTH LEAGUERS DEFER DATE OF THEIR SOCIAL

The State Street M. E. Church Epworthians have postponed the treat they had in store for themselves and their friends—an ice cream social, with all its trimmings, until next Monday evening, when W. H. Singleton's lawn will be taken over by the League members and converted into a bower of beauty; this of course, provided weather permits hanging elaborate decorations. The Singleton lawn is just the place for an event of this nature. It is located in East Broadway and convenient to nearly everybody. In addition to other features of interest Monday night there will be a fine large chorus of women who will sing; but wait for the real announcement in Saturday's Evening Times.

CITY OFFICIALS GAME POSTPONED ONE WEEK

Owing to the fact that next week will be well occupied with the Oswego County Fair, the ball game between city officials described exclusively in last night's Times, will be played one week from next Wednesday, at Pathfinder Island, according to an announcement made this morning by Chief of Police Edward Dyer, who will captain one team.

Much interest has already been shown in the contest and every indication points to a record crowd on that date. It is expected that the affair will assume the aspect of a municipal picnic.

TWO YEARS FOR TRUANT

Justice Jean L. Bunker of Volney has sentenced Arthur Jenkins, a truant to two years in the Jefferson Farm school at Watertown. Jenkins has already served a term in the school and this is a recommitment.

Mr. and Mrs. McGann of Schenectady are visiting the former's sister, Mrs. Fred Miller, of South 3rd st.

* * *

Mrs. Cassie Holden is visiting at the home of Mr. Chesbro on the Volney road.

* * *

Miss Melvina Dearflinger, who has been spending a few days at the home of Mr. and Mrs. F. C. Boigeol, returned to her home in Clinton yesterday.

* * *

Mr. and Mrs. Theodore Webb and Mr. and Mrs. George Chauncey spent Sunday at Mexico Point.

* * *

Miss Lillian Waldhorn has returned from Syracuse where she visited Miss Anna Bragman.

* * *

Mr. and Mrs. J. C. Hunter and family motored to Sterling yesterday.

* * *

Mr. and Mrs. Allen Foster of New York are visiting Mr. Foster's parents, Mr. and Mrs. L. C. Foster, of S. 4th st.

* * *

Mrs. Lemon Phelps of Buffalo st. is spending a few days with relatives in Mexico.

* * *

Glenn Trimble of Palermo village has secured the agency for the Dodge automobile.

* * *

Mr. and Mrs. George H. Sylvester of Syracuse were callers in the city last evening.

* * *

City Clerk and Mrs. Leon Scudder have been entertaining their sister, Miss Ferne Scudder of Palermo village.

* * *

Mrs. Whitaker's Circle of the Ladies' Aid Society of the Presbyterian church will meet tomorrow afternoon with Mrs. A. Clark in Wells st.

* * *

Mr. and Mrs. Oren Barrett of Delton, Michigan, wereg uests of Mr. and Mrs. Charles Richards Wednesday.

* * *

Mrs. Floyd Fullerton of Hannibal is visiting Mrs. A. Z. Wolever.

If your horse is poisoned by ivy use Hanford's Balsam.

ONEIDA STREET

CROP OF ONIONS TO FALL SHORT

Produce Dealers Say Blight Has Struck the Crop; Potatoes May Rot; Lettuce May Be Sold Direct.

The Produce Growers' Association met last night in Grange hall and several points of general interest to all farmers in this vicinity were discussed. It was announced at the meeting that the association members are shipping their produce now to three commission merchants only in New York City, and not broadcast, as was the custom in the past. The association members believe that better results are obtainabe when the produce is concentrated in that manner. Most of the produce now leaves this city on the 10:37 train via the D. L. & W. and on the 10:09 train via the New York Central, by Adams and American express.

Reports from onion growers throughout the state presage a shortage of from 25 to 50 per cent in the crop this year, and the average throughout Oswego county points to a 35 per cent shortage, which will send the price of onions soaring this fall. The shortage is due to blight.

Potato growers report that the recent rains and dampness will have the effect of rotting the crop and in some districts the rot has already become prevalent.

Lettuce growers have decided that it will be better business in the future to sell the crop on the ground or in cold storage, as is the custom with celery, in that the grower gets better prices and protection by this course than selling and shipping direct to commission merchants for immediate sale.

Last night's meeting was attended by 52 members of the association and several members made short addresses regarding the condition of crops.

BUNDY'S CROSSING.

Harry Canue and mother of Syracuse spent Sunday with Mrs. C. J. Echard.

* * *

Roy Dodge of Syracuse is at this place doing his haying.

* * *

Little Edna Wells is recovering from her recent illness.

* * *

Mr. and Mrs. Edward Coe, Sr., do not seem to improve in health.

* * *

Mr. and Mrs. James Stevens, Mr. and Mrs. Edward Echard went to Sylvan eBach one day the past week to pick whortle berries.

* * *

Mr. and Mrs. Edward Echard, Misses Bertha and Elizabeth Echard, Mr. Howard Simons all attended the party at East Minetto on Friday evening.

* * *

Miss Goldia Graham of Battle Island spent one day the past week with Mrs. Byron Wells.

* * *

A reunion picnic was held at Silver Lake on Sunday. Those present were Mr. and Mrs. Luke Smith and son, Roy; Mr. and Mrs. Frank Poorman and daughter, Jessie; Mr. and Mrs. Frank Calimer, Mr. and Mrs. Alfred Calimer, Mr. and Mrs. Roy Davis and daughters, Florence and Irene; Mr. and Mrs. Zopher Holmes and sons, Claude and Clayton; Mr. and Mrs. Harry Simmons and baby, Mr. and Mrs. Harry Russell, Mr. and Mrs. Frisby and son, Gerald, Mr. and Mrs. George Harris and daughter, Maud, all of Oswego and Maple avenue; Mr. and Mrs. Samuel Graham and daughter, Goldia, Hudson Graham of Battle Island, Frank Cloank of Rochester, Mr. and Mrs. Byron Wells and daughter, Edna, and D. E. Wells of this place. The day was spent in music and speaking. A fish dinner was served at 12 and ice cream and cake at 2. A photo was taken of the group. The picnic was held in honor of Frank Cloank, the occasion being his twenty-first birthday. All reported a veryp leasant time.

* * *

Mrs. Byron Wells entertained a number of friends from Mexico and Oswego on Friday.

* * *

Mrs. Edward Echard entertained recently her mother, Mrs. Brockway and son, Gardner, and her aunt from Syracuse.

THEIR HAPPINESS WAS DISTURBED BY SMITH

Frank Vesnarcke and Eleck Balazy, two Poles, and A. J. Clark, a farmer of Granby, met in a West Side hostelry last night and after consuming unknown quantities of liquor, started on a tour of the city. Frequent altercations between members of the party, followed by snatches of happy song, attracted the attention of Officer Smith, on post at West Broadway and First st., and he interrupted the ceremonies just as the men turned into Broadway again and started to search for more lubricant. This was about 10:30. The officer called the patrol and the party wound up at the police station. Some one hit Clark on the jaw in the scuffle, but he didn't know this morning who did it. One of the Poles was asked "Are you ready to plead guilty to public intoxication?" and he answered, "No, I was drunk; that's all."

The Poles required an interpretor and after they had given their version of the matter, Judge Wilson fined the trio $3 each, which was paid.

CITY CLERK RECEIVES DR. BIGGS' WARNING

Dr. Herman Biggs, Commissioner of Health, has sent a circular letter to all registrars of vital statistics throughout the state, which deals particularly with the violations of the law requiring the notice of the birth of infants to be filed within five days after birth. City Clerk Leon Scudder today received the notice from the State Health Department, which states that the notices of birth in this state are filed later than the required time in one case out of every five. The letter also orders the registrars to fill in the certificate with the date on which the filing was made. In cases of flagrant violations of the law, the Health Department proposes to put the matter in the hands of the District Attorney, who will prosecute physicians or mid-wives who are offenders. Nine hundred and sixty-five doctors have violated this law during the past year, according to Dr. Biggs.

"Black's white bread" and Black's cookies have won a place here. They suit the taste. adv

DO YOUR SUMMER BAKING

with the

"SCIENTIFIC STERLING"

The Gas Range that Burns Coal

Make your kitchen comfortable during the heated summer term—bake with gas.

Make your kitchen comfortable on chill, wet days, in early fall, or freezing winter—bake with coal.

Make your baking every day in the year as economical as you can—with either fuel more economy is possible with the "Scientific Sterling."

The "Scientific Sterling" uses either fuel in a single range; bakes as well with one as the other—better than most ranges with either. Perfect circulation of heated air makes baking even—heavy oven walls hold the heat. Oven is always perfectly controlled. Absolutely safe with either fuel—larger in capacity, but smaller in size than the average one-fuel range.

A $5.00 PAYMENT

Puts the "SCIENTIFIC STERLING" In Your Kitchen

Our Co-operative Club Terms gives you 30 days free trial —eight months' credit at $5.00 down, $2.00 a week on $77—the cash price; free installation; absolute guarantee; cancelled payments in case of death or disability; free inspection and instruction service.

These conditions will not be effective after August 24th.

Save money by joining the "Scientific Sterling Club today.

The KITCHEN CUPBOARD

THE THREE MEALS.

BREAKFAST.
Peaches and Cream. Cereal.
Shirred Eggs. Toasted Muffins.
Coffee.

LUNCHEON.
Corned Beef Hash. Rye Bread.
Lettuce With Mayonnaise.
Fruit. Currant Pie. Tea.

DINNER.
Green Pea Puree With Croutons.
Breaded Chops. Potatoes.
Spinach With Eggs.
Peach Pudding. Iced Coffee.

Peach Pudding.

ONE cupful of flour, one-quarter teaspoonful of salt, two cupfuls of breadcrumbs, one-half cupful of nuts, two tablespoonfuls of lemon juice, one cupful of sugar, two cupfuls of peaches and three eggs.

Mix all the dry ingredients, add the beaten eggs, lemon juice and peaches. Beat well, pour into buttered molds and steam two hours. Serve with cream.

Blueberry Pudding.

One quart of blueberries, two eggs, one and one-half cupfuls of sugar, two tablespoonfuls of cold water, one teaspoonful of lemon juice, three-fourths cupful of flour, one-fourth teaspoonful of salt and three tablespoonfuls of baking powder.

Put a quart of canned or stewed blueberries on the stove in a stew pan and let them get boiling hot, then cover the berries with a batter. To make this, beat eggs to a froth, add sugar, beat until light colored, then add water, lemon juice, and last mix in lightly the flour sifted with salt and baking powder. Cover tight and cook for about thirty minutes. Serve with good egg sauce.

Surprise Potatoes.

Choose five large and seven small potatoes, bake them, then halve them lengthwise; scoop out most of the center and rub through a sieve; season with salt and pepper, add one ounce of butter and a dessertspoonful of chopped parsley. Replace some of this mixture in each half of potato, leaving a hollow in each. Fill the center with the mixture given below, place the halves of the potatoes together again and place them in the oven to reheat. For the mixture peel and chop three mushrooms and cook them in one ounce of butter; cut up one pound of cold cooked meat, add it to the mushrooms, season nicely, heat thoroughly.

Rhubarb Pie.

One and one-half cupful rhubarb, one cupful sugar, one tablespoonful flour, two eggs, one tablespoonful butter.

Cover a pie plate with crust and fill with rhubarb mixture which is put together as follows: Cream butter and sugar, add the slightly beaten egg yolks, flour and the rhubarb, which has been cut fine, covered with just enough boiling water to cook it and allowed to boil one minute. Bake until firm in a moderate oven. When cool cover with a meringue and brown slightly in oven.

Anna Thompson.

MAKING LIVABLE PORCHES.

Privacy a Desirability When Constructing Piazzas, Balconies or Loggias.

Unfortunately up to the present time few Americans realize the meaning and desirability of privacy. Even in the country many houses are built near the road, without any attempt to screen private residences from the public gaze, and in the city, where porches are so rare a luxury, they are generally built around the main entrance of a house, where there is a constant coming and going and where a cozy retreat, hidden from every passerby, is almost an impossibility.

However, many houses have possibilities. For instance, roofs over pantries and additions or projecting extensions that are created as a result of architectural design could be made into charming little balconies without much trouble or expense.

A roof can be converted into a very satisfactory porch floor by covering and leveling it with wooden slats that allow natural drainage, and there need be no permanent wooden roofs for such a retreat when awnings and canvas curtains can be made to answer the purpose of protection quite as effectively. Is there anything more restful or more delightful than to be thus sheltered from the dust and bustle of streets? Is there anything more desirable than the security of such a retreat?

Indeed, a balcony, loggia or veranda need not be limited to the homes of the wealthy, for it can easily be brought within the scope of limited incomes and talents. The barest and bleakest of porches can be made an interesting spot—one that is essentially livable—with the help of awnings and screens, a few comfortable chairs, a swinging couch or hammock and, above all, a few flowers and vines. Flowers and green things are to a porch what an open fireplace is to a room. They form a nucleus, a charming center, around which the other things naturally group themselves.

One Thing Lacking.

He—Miss Oldgirl told me the other day she intends to be married.

She—That's right, she does. The trouble is she has never been able to induce a man to assist in carrying out the threat.—Richmond Times-Dispatch.

The United States has this to be proud of in contrast with most of the nations now at war in Europe—it has stood for peace all along because that was a reflection of the national mind. Some of the powers which engaged in recent world peace movements were accused of having an eye to the main chance. Not ready for war, they counseled peace. Later, on all too slight provocation for genuine peace lovers, they rushed into war. This country's peace principles date from a conflict which was relatively one of the fiercest of modern times. Not alone sentiment, but bitter experience was at the root of our hearty espousal of arbitration and peace. Convictions as profound would have discovered a better way to settle the European quarrels than appeal to the sword. But normal Europe thinks in terms of battleships and heavy guns and strong battalions. Like the ruffian with a gun, only slight provocation is needed to draw fire.

After yielding abjectly—or perhaps only diplomatically—to Japan the Chinese are raising a defense fund and preparing for national military organization. "Better late than never," and perhaps it is not too late. In ordinary times the relations between Japan and China would have aroused keen interest in the United States. Matters would not have been permitted to drift so far if the situation in Europe had been normal. But with all the great commercial nations preoccupied and with even the United States involved in foreign troubles Japan found a favorable moment for exerting pressure upon China and gaining concessions the extent of which is still unknown to outsiders. Japan is said to have given assurances that the treaty rights of the United States were not affected by the new Chino-Japanese arrangement.

The proposal at the pan-American conference in Washington for a joint marine fleet to promote closer trade and social relations, with a joint court to revise and establish suitable laws to regulate international transactions, looks good. It would be a sort of trading union, and all parties engaged would find a common interest in submitting to the rules without coercion. For the joint fleet a joint flag would be needed, and a suggestion has been made for a "pan-American flag," something new under the sun.

If this country ever undertakes to supply the Mexicans with good things in the place of the bad they now have it is going to be a costly job to include money. Every bunch of generals who set up government issue loads of fiat money. It is so easy to do it that enterprising private individuals don't wait for the distribution, but simply make imitations "just as good," and Mexico is flooded with worthless and all but useless money.

Probably a majority of thoughtful people outside of Mexico would like to see the man Carranza given half a chance to make good. Stubborn and erratic he may be at times, but his main course has been consistent. A better man can easily be imagined, but the two years of his leadership have failed to develop even the equal, to say nothing of the superior, of Madero's avenger.

Porfirio Diaz goes down in history as the "beneficent dictator" of Mexico. No champion would assert that he was not a dictator. Because he was that Madero drove him out. His beneficent work, alas, has been undermined by revolutions. Time alone can tell whether beneficent and dictatorial methods can work together for the good of the nation.

We can be proud, too, of our army in the field, the vast contingent, mowing, reaping and otherwise gathering the yield given to man by nature's bounty. How much better that than defacing nature and destroying man's handiwork with the blasts of war!

After all, the Fourth of July is our real "flag day," and the profuse display of the starry banner on the anniversary of our independence made that also unmistakably our "patriots' day."

Several sections of the country report more June weddings in 1915 than last year. None, however, recalls as a reason for the increase the old saying, "It is as easy to support two as one."

The high cost of living seems to have come to stay in the United States. But if the high cost for one element enables another element to live relatively better and easier the evil has its bright side.

The "fat of the land" has suffered little from erratic weather conditions, as shown by bulging markets of early fruit and vegetables at low prices.

Huerta was probably most fortunate in having Uncle Sam's brotherly hand hold him at the supreme moment.

This is the year to pay tribute to the fellow who first said, "Two swallows don't make a summer."

FUN RAYS

By Ray I. Hoppman

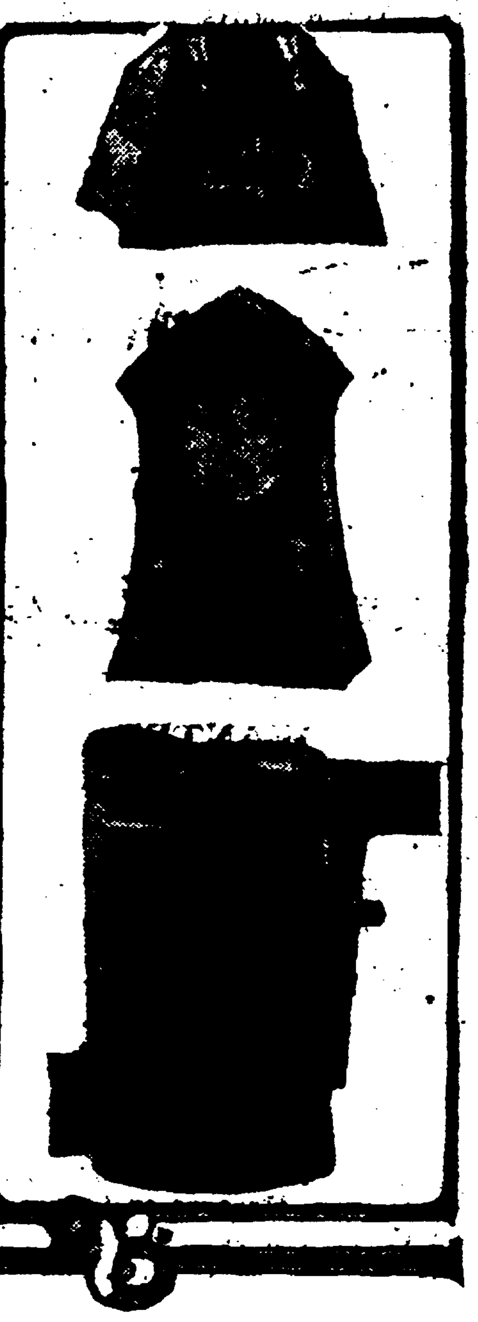
SUCH IS LIFE.

WHILE one-half, bejabers! toils steady and labors, the rest of the world lolls in ease. And when we feel happy, our neighbors are scrappy and do just about as they please. And, gosh! ain't it funny? Some people have money and others can't scare up a dime. Some mortals are lucky, while others, real plucky, lose out ev'ry dodgasted time. Some laugh long and loudly—some strut with mien proudly and others are chucking the bluff. And folks that are healthy, quite seldom are wealthy, and healthy folks lack the green stuff. If half the world knoweth not what this half doeth—a funny old world it is sure. It's full of the toilers, the crooks and the spoilers—the honest, the rich and the poor. Now, why should a favored old guy, money annexed, loll 'round in a big limousine? And why should another, his poor luckless brother, clean streets for a small stack of green? And why should a poet, a poor unwise "know it," write verse for the price of a prune, while others will squander the coin as they wander, and live in perpetual June? It does seem unequal; but hark to the sequel—the time that I finished this rhyme. One lives by his working—the other, his shirking, and thus will it be for all time.

ARTICLES OF VIRTU.

Ornaments For the Den and Boudoir of Unique Material and Design.

At the top of this illustration is shown a jewelry case of bronze ornamented with various Egyptian symbols in bas-relief enameled in old ivory. At the bottom is shown a smoking set consisting of a jar with a pipeholder attached to one side and a compartment for holding a box of matches on the other side. The inverted cover is fitted with two individual ash trays. The clock is of bronze, also ornamented in Egyptian symbols in bas-relief enameled in old ivory.



SUITABLE FOR BIRTHDAY GIFTS.

Handy Accessory.

A handy article to carry your crochet hook in, to prevent it piercing your work materials, is a cork covered with crochet made by starting with a ring crochet in s. c. until it is as large as the bottom of the cork, which should be the right size, when covered, to carry your thimble on.

Then 1 s. c. in each s. c. to cover cork.

Make a tight row at top to prevent slipping off, and finish by making 3 d. c. in each s. c. to form ruffle on top of cork.

Just What He Wanted.

A fresh sort of chap entered a restaurant the other day, and after he had ordered lunch the waitress, who was well known for her obliging disposition and ready wit, handed him a newspaper so that he might profitably while away the few minutes that would elapse before he was served.

"Thank you, Josephine," he said familiarly, "but I prefer something funny to look at while I am eating."

The waitress looked at him contemptuously, then replied:

"That need occasion you no inconvenience, Percy; there's a looking glass straight in front of you!"—London Mail.

Reversed.

"Who is that homely, little sawed off chap over there?" she asked.

"That is my husband," she replied, "but don't apologize. You can't make me mad by calling him names."—Detroit Free Press.

The short counters are full of inexpensive materials that would be suitable for the development of this one piece costume. The circular skirt is attached to a deep hip-yoke and the waist has revers of dark silk, piped with light braid. The design fits splendidly into the needs of a morning's duties. Six yards 36-inch material, with three-fourths of a yard of silk for trimming, makes the dress.

Pictorial Review Costume No. 5995. Sizes, 32 to 44 in. bust. Price, 15c.

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.

HOLLAND SUFFERS BUT GETS NO REWARDS

To the man in the street at Amsterdam the Rotterdam neutrality means "the hell of war without the compensating glory."

Holland at large now has the care of 300,000 Belgian refugees, who, living together a specially constructed villages, have to be fed and lodged and kept as happy as circumstances allow. The work is done with devotion, but European conflagration burns upon this single spot.

With its commerce hampered upon all sides, with its legitimate trade made impossible by the illegitimate rules of arbitrary neighbors, Holland continues in her self-imposed task. She has been abused by her neighbors for her lukewarmness in what they consider a holy cause, she has lost all chances of future political reward by her abstention from the conflict; yet future generations will recognize that during these very difficult days little Holland calmly maintained a just neutrality while ministering to those who innocently were made to suffer.

LEGAL NOTICES

Notice to Creditors.

In Purrsuance of an Order of Hon. Clayton I. Miller, Surrogate of the County of Oswego, New York, notice is hereby given according to law, to all persons having claims against Lucinda J. Curtis, late of the Town of Palermo, in said County, deceased, that they are required to exhibit the same, with the vouchers therefor, to the subscriber at the office of William S. Hillick at No. 59 South First Street in the city of Fulton in the County of Oswego, New York, on or before the 1st day of February, 1916.

Dated this 12th day of July A.D., 1915.

Prepared Especially For This Newspaper by Pictorial Review

A DAINTY EVENING FROCK.

6317

This dear little frock of blue silk crepe de Chine might have been taken from an old-time picture, it is so quaint. It will be a favorite for autumn festivities.

It is hard to get away from the subject of the soft silk frocks, because new models are constantly bobbing up to entice the woman who loves pretty clothes. The design shown here is developed in blue crepe de Chine trimmed with ruffles of self-material, which are arranged upon the skirt in tunic effect. The bodice is shirred at the front in simulation of a vest and the neck is cut in round outline. Puffed sleeves complete the details.

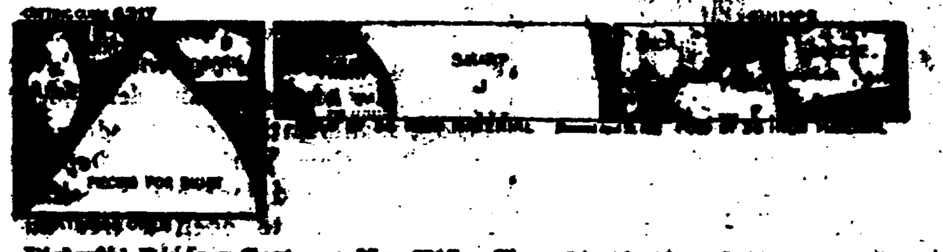
To reproduce the costume, in average size, one requires 4¼ yards of 36-inch material, with 1½ yard contrasting fabric for the guimpe. Chiffon, net or lace would be effective for the guimpe, and here a touch of contrasting color may be introduced with splendid results.

The skirt is partly cut from an open width of material; that is, it will be necessary to cut the picting on an open width of the crepe to avoid unnecessary seams. On this same section of goods, however, the puffed sleeve, the stay and the back of the bodice may be laid.

Now, taking a fold of material, place into position first the front. Follow with the skirt proper and the front of the guimpe. All of these are laid directly on the fold of the goods. Just to the left of the front is placed the collar and opposite the collar is the back of the guimpe, laid on a lengthwise thread. The sleeve, to the right of the front and partly resting along the selvage, is also arranged on a lengthwise thread of the material.

Small "o" perforations are provided to determine the shape of the neck of the guimpe, which may also be finished with a high collar.

This model is delightful for formal occasions, and later the exclusive shops are planning to launch it with great success. The spreading skirt and the neatly drawn in waist give a quaint effect that is always associated with modes of earlier days.



Pictorial Review Costume No. 6317. Sizes 14, 16, 18 and 20 years. Price, 15 cents.

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.

SOUTH GRANBY.

Mrs. Jennie Greenfield of Syracuse who has been ill with rheumatism, was improved and came to her sister's, Mrs. Carrie Hannam's, a week ago, and was taken with pneumonia Wednesday night and was very ill. She is somewhat improved. Her sister, Mrs. Anna Foster, of Fulton, is helping to care for her.

* * *

Charles Crockford and family visited his sister, Mrs. Nellie Dumars, Sunday. His daughter, Miss Eva, will stay and visit awhile.

* * *

Mr. and Mrs. Floyd Sickler and brother, Jay Sickler, visited their parents, Mr. and Mrs. George Sickler, Sunday.

* * *

Mrs. Edna Whitmore was an overnight guest of her cousin, Mrs. Alice Cook, Saturday. She came down to the Distin—Rowlee picnic with her cousin, Milo Austin and wife and returned to Syracuse Sunday; also her cousin, Mrs. Cook and her little girls Jennie and Mary.

* * *

Milo Austin and wife and Herman Austin were over-night guests of their mother Saturday.

* * *

Frank Darling and family visited his daughter, Mrs. Hazel Brown, Saturday and Sunday. They were accompanied by Mr. and Mrs. Mark Osborn.

* * *

Mrs. Ralph Brown entertained the Nehasane Rebekah Lodge of Fulton at her home in South Granby Tuesday, August 3. Although it was very rainy there was a goodly number. Following the dinner Mrs. Beulah Pingree of South Granby and Mrs. Greenwood and Mrs. Chapman of Fulton gave several selected readings, after which Masters Kenneth Darling and Ralph Pingree and the little maids, Violet Darling and Frances Pingree recited. Games and contests featured in the afternoon with Mrs. Pingree capturing the first prize for the smallest foot and Mrs. France Mead first prize in the Buster Brown contest, and Mrs. Hay Crandall received the booby prize. The guests were taken to the train in an auto and departed on the 6:30 train, declaring a splendid social time.

* * *

Mrs. H. Austin and Roy Austin and family and Herman Austin attended the Rowlee—Distin picnic on the Fair grounds Saturday. There was a big turnout, including the two new babies who had never been there before, Earl Foster's little daughter and Delos Rowlee's little son. They recorded nearly 150 present. All were filled, for they had a chickenpie dinner, besides plenty of everything good with cake and ice cream, followed by watermelon. If any went away hungry they alone were to blame. There were four deaths reported since last year; there was a number of strangers who had not been there in some time. The meeting was called to order by the president, John Distin. A report of last year's meeting was read by Mrs. Nellie Rowlee, the secretary, and somep retty verses in memoriam to those who had gone. Officers were elected. John Rowlee, president, and Milo Austin, vice-president. The other officers and committees were re-elected. Mr. and Mrs. William Skeel and little daughter were there from Providence, R. I. They had never attended one of the picnics before. Mrs. Josephine Distin Lindsley from Jersey City had not been with them in four years, and Mr. and Mrs. William Brown, Indianapolis, had not met with them in three years. There were a number who spoke and all seemed to have as good a time as possible.

* * *

Miss Gertrude Pardee from Vernon visited her nephew one day last week.

* * *

Mr. and Mrs. Fred Andrews visited his aunt, Mrs. Libbie Tompkins, in Hannibal Center Wednesday.

* * *

The Misses Florence and Mabel Hovey visited at Fred Andrews' last week.

* * *

We are sorry to hear that Mr. John Stege is ill.

Penetrates without rubbing.

IN THE FASHIONS

Coral Jewelry and Venetian Lace and Velvet---Italian Green English Woolens Promised.

6654

McCall Design

It was a safe guess that when Italy entered the war, her popularity with the French would lead them to view everything pertaining to the country with favor, and that the Italian note would make itself manifest in French fashions. Lewis, the well-known Parisian milliner, was first in this field with his Bersaglieri hat modeled on the hat worn by the Italian infantry. This is a jaunty affair with a crown of green coque feathers that sweep over the side and brush the cheek. Not much in line it would seem with Victorian fichus, tight basques and ruffled skirts, though more in harmony with the redingote styles that are approaching we bear.

The green of the Italian flag is another note in the same scale, and no doubt before long we will see a revival of other Italian fashions. Coral jewelry, Venetian laces, the rainbow ribbons of Naples, laced basques of black velvet, and striped skirts in wool, similar to the cotton ones we have had this summer. There is a perfect mine of such material to draw upon, and we will have a revival of bead embroideries, as well as ecclesiastical motifs, gold on velvet, and all the detail that marks early Italian art. Genoa and Milan have already been drawn upon for velvets, silks and ribbons and many other beautiful fabrics that her mills have been producing while other countries were paralyzed with the war.

Sleeve Vagaries.

Sleeves have been rioting for some time, and have assumed such various forms that it is impossible to account for their vagaries. What they will do next no one knows, but the transparent long sleeve of this summer has been a happy solution for comfort and appearance. How the men must have envied us when the mercury climbed unbearably, with their arms swathed in at least two thicknesses of material. So good looking has been this modest Bishop sleeve with its fullness confined at the wrist by a bracelet of silk, or a cuff of it, that the shape is likely to continue for some time, as the conservative note in sleeve fashions.

Belle shaped sleeves are gaining ground and some of the best types have the bell only a short way below the elbow and beneath it a puff of transparent fabric. The newer way, also Italian in motif, is to cover the lower arm with a long tight cuff of lace that exents from the elbow well down over the hand.

English woolens are promised much favor, and English homespuns, friezes, tweeds and the like are being imported in quantities for plain tailored costumes. The smoother surfaced cloths, and velvet surfaced wools, such as velours, dovetyn, and zibeline are ready in beautiful dyes, and will surely share with broadcloth and velvet the honors for more elegant street costumes

Braid Trimmings.

Braid trimmings are used effectively on silk crepes and chiffon cloth, carrying out the fad for the combination of heavy and light materials. Braid bindings are notable not only in tailored wear but on lighter dresses.

Where combinations of two fabrics are employed, buttons covered with one of the materials are an important trimming note. Jet buttons are increasingly favored, and silk bindings and cordings are an important part of the garniture of most fussy frocks. In fact, this season must be reckoned as pre-eminently a silk season, and the popularity of this class of fabrics bids fair to continue.

Very pretty, if a bit overdone, is the fancy open weave straw hats that suggest the cane weaving in a chair seat. These show the hair to advantage, or conceal it with linings of tulle or chiffon, and their trimming is usually flowers of some sort. Velvet hats have come in as usual when the Dogstar reigns, and are on the whole rather attractive as a contrast with a filmy gown if worn at the shore, or somewhere where the thickness of their fabric does not seem oppressive. They are decidedely in line with the summer furs that one sees everywhere and nearly as incongruous. VERONA CLARKE.

THE WAR MAY INJURE SCIENTIFIC RESEARCH

To insure the accurate dropping of bombs from aeroplanes the Germans have an airgun appliance which pushes the bomb out from the back of the aeroplane with the same velocity as that at which the aeroplane is flying, thus doing away with the curve with which the bomb would fall if merely dropped by hand.

Quite a number of small German aeroplanes are fitted with wireless apparatus capable of transmitting messages a distance of 30 miles, but another ingenious method of signalling is to blow puffs of a powder chalk through the engine exhaust.

The Krupp illuminating projectile is a shell containing two magnesium bodies filled with parachute, so that at night time it illuminates for a few minutes the ground over which it hangs.

Give your horses good care and you will be doubly repaid for the better work they will do. For sores, galls, and other external troubles apply Hanford's Balsam. Ranchmen, lumbermen and liverymen recommend it.

NEW YORK FRUIT SECOND TO NONE

Commissioner Dillon of the Department of Foods and Markets Wants the Apple Growers Aroused.

In an effort to arouse interest in relieving the early fall market of congestion, John J. Dillon of the Department of Foods and Markets, has issued the following statement to farmers:

You are producing a quality of apples second to none in the world; but inferior apples from other sections get the preference in both movement and prices in the New York market. When large dealers advance money on inferior apples they are not disposed to encourage the sale of your fruit, until the western apples are marketed and the money advanced is again in thep ockets of the dealer, with the added bonus.

The consumption of New York State apples is restricted in the early winter by high retail prices. This causes a sluggish market and keeps wholesale prices low. In the meantime dealers get out and buy at the low quotations from producers, and prices begin to stiffen as soon as the bul of the fruit is out of the hands of producers.

To overcome these conditions you need an open market from one end of the season to the other to establish a price. When this price is established in New York, it will also be the price for the other cities and for your local sales. Every grower who sells on the ground will appreciate the value of such a quotation. The prices in New York are the prices for the whole country. You are entitled to the price apples will bring you on the open market, when sold subject to the law of supply and demand, without manipulation or prejudice.

The New York State Department of Foods and Markets is making arrangements to open a free auction market in the city of New York, which will establish an honest price for New York State apples for every day from October 1st to the close of the season. Every day during the season it is proposed to auction apples in the heart of the city's apple market. This will establish the price for New York State apples. No commission house will dare to return less than the auction price to the shipper. There will be protests and attempts at manipulation for a short time, but ultimately all apples in the New York market will be sold at auction, and you will get more money for them.

Square Deal Assured.

These apples will be sold in the morning, and an account-of-sales, with check, will be on the way to the shipper before night. The auctioneer will be licensed by the department, and a representative of the state will take a record of every sale. The returns will be official. For the first time in the history of the state apple shippers will be sure of a square deal in the New York market.

One of the essentials of a successful auction market is a steady supply during the season. Buyers must know that the goods will be there and that the sale will take place. To accomplish this desired result it will be necessary to have absolute control of 800 carloads of graded apples. They may be either boxed or barreled, and graded under the state law. To make the market a success and get the right prices from the start, the trade must know that the supply will be regular and sure. The state will see that they are sold on the square, and that the shipper gets what the buyers pay, less the freight and actual selling charges.

The department proposes to increase the consumption of state apples in the New York City market by canvassing the retail trade and influencing the retailers to keep a constant supply of state apples on sale at reasonable prices, and to make proper display of them. Attractive illustrated signs will be furnished the retailers to advertise New York State apples.

The consistent advertiser wins in the end. It may cost a dollar to get a dollar, but the deal wins prestige.

JURY SELECTED TO TRY CANNING CO. OFFICER

The case of the State Labor Department vs. the Fort Stanwix Canning company of this city, on information given by Inspector Nash of the department, charging the local company with employing women before the hour of 6 a. m. in violation of the state laws, was called in City Court this morning before Judge Herbert J. Wilson.

Neither side was represented by an attorney this morning, but both the inspector and W. Lester Todd, of the company, stated that attorneys would be present at the jury trial, which will be held August 17. Mr. Todd and Mr. Nash selected a jury this morning.

The specific violations mentioned in the information are two in number. The company is charged with employing Mrs. Mary Hegman, of this city, in the factory at 1 a. m. and also with employing Hattie Longley, of this city, at the same hour, both instances being violations of Section 93-B of the State Labor laws.

William S. Hillick Sees In Commission-Manager Government Attempt to Abridge Popular Will--Favors Return to Village Methods--Praise for Provisions in the New State Constitution

In view of the prevalent discussion in this city regarding the Commission Government and its merits and disadvantages, the ideas of a man, who was at one time City Attorney, and who has been prominent in the local and county Republican organizations, will surely be of interest to many citizens and taxpayers who are eager for information on all sides of this question. W. S. Hillick, attorney for the State Comptroller in this county, and one of the ablest lawyers in this section, has consented to give his views on Commission Government and on the questions which are now being so widely discussed.

Mr. Hillick has been prominent in local politics for many years and aided materially in welding the strong Republican organization which now exists in this county. The following statement was prepared for this paper:

The present charter of the City of Fulton is too cumbersome and involved for a city of this size. There is too much distribution of authority. There are too many boards and officials for a city of this size and, a fault of even greater importance, the boards and persons having the authority and power over the municipal affairs, being appointed and being neither obligated to the common people for their position nor dependent upon the approval of the ordinary voters for their continuance in office, are not responsive to the desires of the common people but only to a particular few. Owing to the fact that the departments are entirely separate and are governed by separate boards, over whom the mayor has no real control. (He has simply the power to appoint them and nothing more.) It is impossible for the various departments of the city affairs to co-ordinate and interweave their functions and economize in the employment of men. This results in a great additional expense and loss of efficiency in the city business.

It is desirable that the power to determine what the city shall do, as to its streets and public affairs shall be lodged in a board, responsive and responsible to the people at large and that the supervision and direction of the executive matters should be lodged in one person unhampered by red tape and petty rules and regulations, but this of man, too, should be responsive and responsible to no one, but the people of the city.

Favors Small Districts

I think the members of the board should be elected from small districts and from the various wards because, under such circumstances, the responsibility for their election and their sense of obligation rests upon the common and ordinary people of their ward. The nominees elected from the city at large, in most instances, will feel under particular obligation to the organization or clique which promoted their candidacy.

It is true that the government is as good as its officials, but it is also true that the public officials are good in proportion as their acts in office are subject to publicity and their continuance in office dependent upon the approval, not of any board or clique of men, but of the people at large. It is true, also, to a certain extent that the form of government may limit or allow efficiency and that the form of our charter should be changed so as to permit all departments to secure efficiency and economy, but under any form, the efficiency of the executive of the city of Fulton is dependent, first upon his reliance and upon the approval of the whole people and his independence of any board or clique or organization whether it be a board of managers or a Chamber of Commerce or a political civic organization. (I think it fair to note in the connection that as far as my personal observation is concerned, I have observed with in- [illegible] and partiotic and practical and fair and satisfactory than any of the others.)

BAND CONCERT

TONIGHT'S CONCERT POSTPONED UNTIL TOMORROW NIGHT AT 8 O'CLOCK.

March—American Cadet .... Hall
Selection—Chin Chin .... Caryll
Popular Hits:
(a) One Step, "Somebody Knows,".... Von Tilzer
(b) One Step, "Cows May Come-Cows May Go".. Von Tilzer
Selection—Bohemian Girl .... Balfe
Waltz—Barcarole from Tales of Hoffman...... Roberts
Selected:
(a) Intermezzo "Tunisia" .... Laurendeau
(b) Song, "The Vale of Dreams".......... Roberts
Trombone Solo—...................... F. Jess Newton
Medley Overture—The Grand Slam.......... Witmark
Overture—Wanderers Zeal .... Suppe
Selection—High Jinks .... Friml
March—The Big Elk .... Newton

The People the Judges

The calibre of the Mayor and the effort which he puts toward efficiency in his office is dependent upon the intelligent interest and demand of the whole people as to the administration of that office. It should be dependent upon that and upon nothing else.

It used to be the American way in town and village affairs to leave the matter of appropriations and selection of officials directly in the hands of the people and, on the whole, this system was more satisfactory than the European autocracy and commissions. There came a time, however, when many people believed the common folks were not capable of passing upon these things and that powr should be lodged in some body or board to proceed with municipal affairs and improvements without regard to the ideas, and independent of the desires, of the people as a whole. This was based not upon any desire to cheat or to be unfair but upon the supposition that the people did not know what they wanted and were not properly informed and not in a position to intelligently express an opinion upon affairs. This was possibly true in a large city, but I am satisfied from my knowledge and contact with all the various people of the City of Fulton that the common man in the City of Fulton is capable of intelligently passing upon the affairs of the city, providing that publicity be given to all the affairs of all the departments.

Whether this direct responsiveness and responsibility makes a more efficient and desirable administration of municipal affairs or whether it does not do so, it must and should be, in all events, the theory and practice,—because it is settled that we should have the government of the people and by the people and for the people, no matter what the people want or how inefficient it may be, not government of a few and by a few for the benefit of some clique or organization which may happen to be in ascendency. We, in this country, must stand or fall upon this principle, for this is the principle upon which our institutions were founded and for which so much has been sacrificed and under it we will have the intelligent interest of the whole people exercised in municipal affairs and sense of responsibility and of civic virtue and public spirit will be preserved. No matter how efficiently our city affairs may be administered and no matter how fine our public improvements, if we lose the interest of the people in the city affairs, (and this we will by taking away from them the direct and common power and influence, we are lost.) This must be preserved at all hazard. In connection, note the change and loss of interest in municipal affairs and the dissatisfaction existing among the people in the city proper as compared to the same under the old, simple direct village charter and also note the increase in the expense of the administration of municipal affairs.

Believes System Destroys Interest

I am opposed to the proposed commission form of government because I believe that the method of selecting the members of the commission and their continuance in office for long terms will make them independent of the wishes of the ordinary citizen and dependent upon the desires of influential manufacturers and organizations. I believe with a board such as is contemplated, the ordinary taxpayer will have no more influence and no more interest in public affairs, than he has in the present charter. I believe that more efficiency in the administration of municipal affairs will be obtained under the absolute control of the mayor or managers, (whichever name you prefer.) The mayor merely exercising the controlling supervision. I believe that the mayor should feel responsible to the people as a whole for his official position and should be dependent upon the approval of the people as a whole for his continuance in office. I believe that the city manager appointed under a contemplated plan should feel obligated to and dependent upon the members of the commission and I believe that (the members of the commission being independent of the people and being regular, ordinary, human beings, looking out for their own personal welfare,) the manager would serve the special interests and help to grind the ax of the commissioners who appoint him.

For this reason, I am strongly opposed to the proposed commission form of government. For efficiency and integrity, in public affairs, we can only depend upon the direct dependence and responsibility to the voters. For high standard of officials and efficiency, we must depend upon the intelligent interest of the people as a whole. It is a mistake to elect officials in a small town for long terms and to create a government practically independent of the desires of the whole people.

We should take a step back to the old, direct form of village government, not a step onward in the direction of commissions and boards independent of the people. We have gone too far already. Many illustrations of these things come to my mind, but the people know them as well as I do and you have only to reflect over our experience as a city to see the truth of these things.

Deplores One-Man Power

Under the new constitution, we will have the power to make our new charter. I believe the proposition for commission government should be defeated and I believe that under the new constitution, which goes into effect on January 1st, a new charter should be framed. Under this charter, all the authority of all the boards as far as possible, should be lodged in the board of aldermen. That the board should be elected by the different wards. I believe the executive power and authority should be given to the mayor, with the power of appointing and removing subordinates at pleasure and

Making Prison Reform Absurd.

The warden of Sing Sing has done a great and good work in bringing to the attention of the public the brutalizing tendencies of the traditional prison management, and he has carried his theories into practice at the penitentiary in such a way as to revolutionize that institution.

But even some of those who have been most warm in their approval of the humanitarian purposes which have actuated Mr. Osborne's policy are beginning to wonder whether by making prison life too comfortable for the convict she is not sacrificing the penal aspects of the great social problem of which prisons are designed to be a partial solution. The inmates of Sing Sing were not sent there to have a "good time," and to permit the convicts to leave the prison even to attend the funerals of loved ones is a stretch of discipline that ought not to be made without the express authority of the court which sentenced him.

How much politics and prejudice may have to do with the recent controversies over Mr. Osborne's methods it is difficult at this distance to determine; but the latest revelations of laxity at Sing Sing tend to reduce prison reform to an absurdity.—Philadelphia Ledger.

Putting Columbus on the Map.

Municipal surveys sometimes undertaken by paid experts and sometimes by officials themselves to determine the progress a municipality is making and to uncover the evils which should be corrected are very instructive. The Ohio cities operating under a new home rule constitutional enactment have all more or less changed their charter regulations, some going in for the commission charter or the city manager plan, but most of them simplifying the federal form, restraining the legislative branch to purely legislative functions and concentrating administrative power in the Mayor.

The City of Columbus, operating under the federal form, has achieved as remarkable a progress in municipal endeavor as any city in the country. This must be a source of a great deal of satisfaction to the people of that Buckeye city, and is a matter of congratulation to Mayor Karb and his associates in the municipal government. Statistical reports on various municipalities show that the tax rate of Columbus city, county, school and state, is but $13.40 per thousand of assessed valuation, as we express it, and $1.34 as they write it. Their garbage reduction plant shows on the records a profit of $24,000 for the year; their water works shows an earning which supports the plant, pays for pipe extensions and all bond and interest charges. On these last two items they are abreast of Buffalo, and far in advance of most American cities. Buffalo likewise shows a profit in its garbage reduction plant, and is not only paying all expenses of its water plant but has still a duplicate plant and in a year or so will show a net profit and still furnish water to the people at a lower rate than any other city in the United States. The success of Columbus in keeping abreast of Buffalo, situated so advantageously as we are, is a matter of some credit to our Ohio neighbor.

Columbus has many municipal-owned services and not the least successful of these is its electric light and power plant. Very few cities own their own electric plant, and none we believe has reached the perfection of service and the revenue producing qualities of Columbus. Some cities under the direction of an especially forceful Mayor at times make rapid strides. Tom Johnson did much for Cleveland. Mayor Gaynor achieved remarkable succes in New York. The Commission in Galveston worked wonders in that city. Mayor Karb appears to be putting Columbus squarely on the map. But as we have our municipal success, we have also our municipal failures, as evidenced by the breakdown of the commissions in Denver and in Nashville.—Buffalo Times.

WHY THE ARGUMENT PERSISTS

If the question is asked why the argument over Commission-Manager Government persists, the answer is, because certain people want to believe in the efficiency plan; and certain other equally well informed people want to believe no good can come out of a change from the old to the new. Questions are asked and nobody is ready or willing to answer them, and the campaign resolves itself to—Why the argument persists? All the stories the people are hearing from both sides in the present campaign are believed by the people who want to believe them, and by nobody else—because they wish to accept them as the truth.

* * *

The battle for Commission-Manager Government is a battle for better business organization, and a business organization is the strongest of strong weapons. But the battle cannot be won without efficient handling of every gun in the battery of the organization wanting the change—it cannot be won accidentally. Commission-Manager Government is the result of study and effort. It is not a part of the creed of the "silk stocking crowd;" but is the outcome of the work of the best minds in the country who see in it the greatest good for the greatest number—and the taxpayers are in the majority, as they are the people who pay the rents as well as the people who collect it.

Efficiency is the result of maintaining the smallest possible unit consistent with the requirement. The city requires efficiency and a smaller unit than at present will secure it.

ECONOMY FOR THE U. S.

It would be a fortunate thing if knowledge of the destruction and waste going on in Europe would prompt the people of other countries, including the United States, to make a study of practical economy, and its benefits, not only to the individual in saving something for a rainy day, but to society as a whole in providing capital for industrial advancement. In these days of growing social consciousness perhaps not enough emphasis is laid upon the last named results of saving. No great undertaking, the purpose of which is to increase the supply of articles of common consumption, can be carried out without capital, and capital is provided by savings. If the war has checked the progress of the world, as we know it has, savings, wherever made, will help to counteract the effects.

There is a common but mistaken idea that people of wealth render a public service by spending money in extravagant living. This is on the theory that they are "distributing" it, but they would distribute it just as effectually if they paid it out of any industrial investment, and in that event instead of there being nothing to show for the disbursement there would be a permanent addition to the productive wealth of the country. Thus, if $10,000 is spent upon a dinner, there is, indeed, a "distribution" for music, flowers, service, etc., but if the same amount is spent for draining a swamp a similar "distribution" occurs, and there is also a permanent increase in the food supply of the community.

The people of this country are far more able than any other people to increase their savings, first, because their income is always much larger, and again, because they are now suffering less from the war than any other people. This country, therefore, has it in its power to do more than any other to repair the ravages and make good the losses of the war.

There are other reasons especially applicable to ourselves for encouraging saving at this time. There is now afforded the best opportunity this country will ever have to buy back its own securities from foreign owners, thus coming into more complete ownership of the properties they represent, and there is also the opportunity to make the United States a creditor nation by means of investments in other countries, particularly the developing countries of this hemisphere. The people of these countries are now, more than ever, expectant and hopeful that we will become interested with them, and relations may be established that will become of great mutual value. Furthermore, when the war is over, there will be extraordinary opportunities for the use of American capital in other parts of the world, not only for direct profit, but in ways that will create permanent outlets for American goods.

It would be a fine thing for every citizen of this country to save money enough to provide in comfort for his old age; that is an admirable purpose in itself, but when it is considered that in so doing he would not only protect himself but help to place his country in the forefront of the world's industrial progress, another motive is added, worthy in itself of a national propaganda.—The City Bank Letter.

OUR WASHINGTON CORRESPONDENCE

News Mostly of a Political Nature From the Nation's Seat of Government for Times' Readers.

Washington, Aug. 11.—(Special Correspondence.)—Not solely or chiefly for the purpose of disposing of surplus stocks is the "dumping" policy practiced by European countries; it is a recognized method of keeping their factories running at 100 per cent efficiency, thus reducing the unit cost of production to a minimum. Having supplied the domestic and continental trade at the lowest unit cost, there remains, as a result of this high rate of efficiency, a large accumulation of surplus stocks, the disposal of which is undertaken at little or no profit. This adds heavily to the disadvantages under which the American factories are placed, for the Democratic tariff law makes this country the dumping ground for these surplus stocks. It has been estimated that this handicap amounts to 30 per cent because of difference in cost, 20 per cent by reason of elimination of profits, and 15 per cent because of inferior quality of many foreign-made goods—a handicap far too great for any factory employing American labor under American conditions successfully to overcome.

It is apparent, therefore, that a tariff law which encourages such a high rate of factory efficiency abroad, by supplying a market here for surplus stocks, does that much toward increasing the unit cost of the American article at home, because of decreased output of the American factory which is obliged to meet this cut-throat competition. The efficiency of the foreign factory is increased at the expense of the efficiency of our domestic concern. The half-time article cannot compete with the full-time output. The American mill closes and the American laborer sits on the park bench and waits for the soup cart.

It was to meet such conditions that Canada enacted what is known as the "anti-dumping" clause, which has done away with most of the paralyzing effects of dumping. This clause provides that goods of a class or kind made in Canada are subject to special duty when sold for exportation to Canada at a less price than for home consumption in the country for export, whether such goods be otherwise free of duty or subject to specific or ad valorem duty.

A half-hearted attempt was made by the Democratic House when the Underwood law was being debated, to apply a dumping duty to articles on the dutiable list. The Republicans argued that it should also apply to the free list because many articles not subject to duty would be dumped into this country in unfair competition with domestic production. When the bill got to the Senate the whole dumping clause was thrown out, and should the end of the war find this country still burdened with a Democratic tariff law, we would be at the mercy of the industrial syndicates which will be organized all over Europe.

* * *

At the close of business Saturday, July 31, the net balance in the general fund of the United States Treasury was $68,173,462, as compared with a balance of $132,263,619 two years ago under Republican laws and appropriations. At the end of the first month of the new fiscal year, the disbursements had exceeded the receipts by $16,171,757, which is the amount of deficit accumulated during July.

Senator Phelan is wholly unfeeling in his report on the Sullivan case. He says nobody could ever have thought Sullivan fit for a diplomatic post, considering his education, training, temperament and antecedents. This is to be taken as a backhanded slap at the President, who strenuously insisted on appointing Sullivan even after Bryan had become suspicious of Sullivan's endorsements.

OSWEGO BOY SCOUTS GET FINE CLUBHOUSE

The Oswego branch of the Boy Scouts of America has had donated to them by T. P. Kingsford the use of his building at Water and Seneca streets, formerly the ticket office for the steamer Olcott, for a club room and headquarters. The announcement of the gift was made at the Scout meeting last night. There are fifteen members of the Boy Scouts in this city and the scout leader is Richard Wheeler.

Expert Advice for the Automobile Owner

Queries and Replies Covering Matters of Importance to the Man Who Runs a Car

My meter will not throttle down below fifteen or twenty miles per hour, which is very annoying, as I cannot stop with the motor running without it sounding as though it was coming out of the car. I recently had the magneto changed, but I still have to run on batteries, the magneto firing very irregularly. How can I remedy this?

The probable cause of this trouble is that you are not securing a rich enough mixture at low speeds. If you will change the needle valve adjustment on the carburetor, which will provide a rich mixture, and then if necessary cut down on the air supply the motor should run at low speed. Another possible cause of this trouble is that the spark plug points are so far apart that you do not get a good spark until the motor has speeded up to such a degree that a high current is generated. Possibly another solution to the problem would be that you have an air leak somewhere in the intake line, which permits too lean a mixture at low speed. Go over all joints in the intake line very carefully and see that there are no leaks there. A hissing sound when the throttle is opened suddenly is an indication of an air leak in the intake.

Will graphite grease between the leaves of my front springs keep them from squeaking?

The use of graphite grease between the leaves of the spring is very effective in preventing squeaks, and there can be no possible objection to its use for this purpose. It is intended that the leaves of the spring slip freely over one another.

What are the advantages and disadvantages of a transmission in the rear axle?

Engineers in favor of the rear axle construction state that this type is more quiet than the others; that the rear axle gearset unit, being heavier than the usual rear axle form, better traction is gained by the tires, which means less skidding. Further discussion brings out that the rear axle gearset requires a number of long control rods, which the unit with motor and amidships construction does not call for. A longer drive shaft is possible when the gearset is a unit with the rear axle, which means that there is less strain on the universals, in the opinion of a number of engineers. According to another, only one grease retaining reservoir is necessary, and this statement is supplemented by another engineer to the effect that the grease contained in the case is not thinned by the heat of the motor or the muffler pipe. With the rear axle type the clutch is usually accessible. One engineer, upholding this type, claims that in a certain make the gears of the gearset may be removed in a very short time by the removal of the tonneau floor boards. An advocate of unit with motor construction states that in his construction the entire gearset may be inspected and oiled without difficulty, whereas with the rear anxle construction inspection is not easy and lubrication difficult. That the rear axle with gearset weighs more than other types is brought forward, but is argued against by one maker, who adds that his rear axle weighs but twenty pounds more than does the ordinary form of rear axle. With the rear axle gearset the axle shaft must be heavy, which increases the weight on the tires, and it is stated that this extra weight means greater tire wear. The statement is made that the rear axle type simplifies the chassis, but an opponent brings out that the control linkage is not simple and the oscillation of the springs is communicated to the sliding gears, resulting in indefinite gear location.

How can I put a motometer on a car with a hard rubber filler cap?

In order to drill through the hard rubber filler cap the cap must first be softened slightly. This is done by placing it in boiling water and permitting it to remain there for about three to eight minutes. After being removed from the water it can be drilled without fear of cracking.

What is the formula for connecting rod length?

There is no formula for connecting rod length, this being determined arbitrarily. As a rule, the connecting rod is made about twice as long as the stroke. This particular figure has been chosen, because when a connecting rod is made longer than this the overall height of the motor becomes too great, adding weight and increasing the cost of manufacture. Increase in connecting rod length means greater reciprocating weight, and it is desirable to keep this as small as possible. When connecting rods are made much shorter than twice the stroke the angularity of the rod when the piston is in the center of its travel produces undesirable pressure on the piston wall.

How often should the front axle be greased?

You evidently refer to the front wheel bearings. These should be packed with grease every 1,000 miles and the steering knuckle and the tie rod connections oiled every week.

The consistent advertiser wins in the end. It may cost a dollar to get a dollar, but the deal wins prestige.

FUN RAYS

By Ray I. Hoppman

CUPID.

DID you ever hear a wise-guy clamor lustily and loud that he'll never fall for marriage to a wise and knowing crowd? And he'll chatter long and freely, until Cupid, on the wing, sends a dart into his bosom with a buzzing, whirring sing. Did you ever hear a maiden sling the chatter in your ear that she'd never let a parson interfere with her career? Oh, she jabbers like a parrot till a bandy legged bloke whispers sonnets to her softly—the career goes up in smoke. Yes, you've got to bow to Cupid, be you skinny, short or fat; handsome, shy on looks or stupid—paste this classic in your hat. For he does just as he pleases, gets us mated up somehow; and he sways us like the breezes with his arrows and his bow. Now, he nails some mortals early and he books some others late; but he'll catch you when you're napping if your name is on his slate. You may think it soft to dodge him and decline his aid with thanks; you may feel securely anchored in the free, unmarried ranks. But he'll get you if he wants you, and a doughnut to a prune that he'll make you step quite lively to a mushy, spooning tune. Now, of course, some want him badly, but I guess that Cupid thinks that they'd be all right for bracelets, but they'd never do for links. Some folks think they've cheated Cupid in their lonely singlehood; but it's soup to nuts that Cupid passed 'em by for better wood. Anyway, he's got us guessing, and a jitney to a dime, if the little rascal wants you, that he'll get you ev'ry time.

Turtles of the Amazon.

The fresh water turtle of the Amazon grows to a great size, especially on the upper river, where full grown ones three feet in length, two in width and weighing 200 pounds are often seen. Every house has its little pond or corral to hold a stock of these animals through the season of dearth, the wet months. Those who have Indians in their employ send them out for a month when the waters are low to select a stock; others purchase their supply.

WOMEN TO AID NAVY LEAGUE.

Seek Pledges to "Talk, Think and Work" Patriotism.

Washington.—The aid of women has been invoked by the Navy league to assist in the organization's campaign to convince the country of the advantage of stronger national defenses, it was announced here. All women's patriotic organizations have been invited to co-operate with the Navy league. It is said that many pledges of aid have been already received.

A vigorous campaign will be carried on through the summer and fall to obtain pledges of women to give their personal efforts to this program. It is hoped to have 100,000 pledges to "talk, think and work" patriotism, Americanism and adequate defense before congress meets next December.

A feature of the work of the women's section of the league, as it has been named, will be a series of patriotic pageants for the purpose of depicting the necessity of national defenses. A prize competition for pageant scenarios has been planned in which the judges will be David Belasco, Colonel George Harvey, Mrs. William C. Story, president-general of the Daughters of the American Revolution, and Mrs. Daisy McLaurin Stevens, president general of the United Daughters of the Confederacy

Among the founders of the women's section are Mrs. George Dewey, Mrs. Medill McCormick, Mrs. Finley J. Shepard, Mrs. George L. Carnegie, Mrs. Phoebe A. Hearst, Mrs. Ralph B. Strassburger, Mrs. Moncure Robinson, Miss Christine Biddle, Mrs. James H. Aldrich, Mrs. Charles H. Baldwin, Miss Marianne Biddle, Mrs. William W. Blackmar, Miss Mabel Boardman, Mrs. Willard H. Brownson, Mrs. William Brownson, Mrs. James Bulkley, Mrs. George M. Chester, Miss Fannie B. Coleman, Miss Corinne de Auguero, Mrs. Emily H. Emmet, Miss Mary F. Failing, Mrs. Fitzsimon, Mrs. J. E. Fuller, Mrs. Adolph Ladenberg, Mrs. Henry Lovering, Mrs. E. Rollins Morse, Mrs. William H. Porter, Mrs. Thomas Stevens, Mrs. Augusta Tyler, Mrs. Henry M. Warren, Mrs. John J. Borland and Miss Molly Elliot Seawell.

Did Him Little Good.

James W. Marshall, a native of New Jersey, was the first man to discover gold in California. It was in 1848 that he noticed a glistening object in the bed of a stream, which happened to be a nugget of gold. Notwithstanding this important find Marshall died in 1885 penniless and alone in his little cabin.

Children Cry for Fletcher's

CASTORIA

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of Chas. H. Fletcher and has been made under his personal supervision since its infancy. Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic, all Teething Troubles and Diarrhœa. It regulates the Stomach and Bowels, assimilates the Food, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

GENUINE CASTORIA ALWAYS

HOME TOWN HELPS

KEEPING THE CITY CLEAN

Washington Physician Tells of the Importance of the Work That Has Been Done.

"If Washington residents continue cleaning up this week as they did last week," remarked a Washington physician, "a long step will be taken in the direction of making the national capital a flyless, dirtless and diseaseless city during the coming summer.

"Dirt, flies and disease go hand in hand. Get rid of the dirt, and the flies have nowhere to breed and propagate. Eliminate the flies, and three-fourths of the sickness of summer will be prevented.

"There is no more reason for permitting accumulations of decaying rubbish, heaps of stable manure and the like to remain in alleys, on vacant lots, or hidden in back yards, than for allowing such refuse to exist in the front yard or the open public street," the doctor continued. "Property owners, householders and health officials alike would refuse to permit the continuance in exposed places of such debris and filth, the latter from sanitary reasons and the former out of pride.

"But often the health authorities cannot know of such accumulations hidden in back yards with high board fences, and inspectors fail to discover them in out-of-the-way alleys, etc. In such cases the householder or the property owner ought to take a sufficient degree of pride in his home or his property to see that the rubbish is hauled away; if he doesn't do it he ought to be prosecuted, the same as would be the case if he permitted any other nuisance to remain unabated.

"Flies carry disease of many kinds, all of them filth diseases. Typhoid fever is the chief among these, although a score of the so-called 'summer ailments' are borne by flies. Great progress has been made in Washington in the last few years in eliminating the fly by destroying the breeding places where the insects propagate and from which they spread to all the houses in the neighborhood. Much more can be done along this line if citizens generally will continue to co-operate in a whole-hearted manner in the clean-up activities, and it is not too much to say that continuance of campaigns such as that of this spring and several preceding springs may be expected, in a few years, to make flies as rare in the District of Columbia as buzzards are in Maine."—Washington Star.

In Setting Plants.

In setting any kind of plants make sure that the roots are well spread out. The most important thing is to bring the soil into as close contact with the roots as possible. The root can take no moisture from the soil in a natural condition until the soil is so close to the root that capillary water flows from the water film around the soil particles to the root. We water newly set plants for two purposes. 1. To keep alive the plant till it can get to taking in water naturally, without the help of water artificially supplied. 2. To wash the earth particles more closely about the roots and so help bring about an early contact of the roots with the soil. Some do not know this and try purposely to leave the soil as light about the roots as possible, thinking the roots can thus penetrate it easier. The penetrating power of roots is beyond the calculation of most people. Roots will go wherever there is food, moisture and air, no matter how firmly the soil may be packed. Corn roots are frequently found four feet below the surface, having passed through layers of earth very firm and which, of course, had never been disturbed by the plow.

Roses in Lath Houses.

In choosing roses for planting in lath houses or places somewhat shady, extreme care must be paid to choosing sorts known to be free from mildew. First-class drainage of soil will do much to overcome this fungus and it will prove a pleasant surprise to see how many roses will thrive in summer with little or no sun. A concrete building was erected on a lot adjoining a garden, on the south side. This threw in complete shade a half-dozen roses, and several others were thereafter in partial shade. It was a pleasant surprise to note that in three years but two have been troubled with mildew, not badly however, and only at such times as others in full sun were also affected.

Put Well Away From the House.

The old-fashioned idea of having the well in close proximity to the house is being relegated to the discard as fast as a growing knowledge of sanitary science can put it there. To locate the well away from the zone of possible contamination and at the same time meet the requirements of house, barn, garage and garden, is causing a decline in the demand for the long-popular cheap pump. The growing demand for modern conveniences in suburban districts is creating a demand for a better grade of pumps.

AT LEAST 44,000 MEN LABOR IN KRUPP'S WORKS.

Mightiest Organization of War in the World Built on Trade Secrets.

Krupp's is more than the greatest war factory in the world. It is the mightiest single industrial organization that has ever existed. Never in any industrial center has there been anything like the stupendous concentrated activity that now reigns in Essen, the Westphalian city that has grown up round the great works, says Reynolds Weekly of London. Essen is Newcastle and Sheffield and Barrow-in-Furness rolled into one, and more.

Before the war the company employed more than 70,000 men. About 40,000 were engaged in the gigantic steel works at Essen, where the 42 centimeter monsters come from, and where daily there streams forth a tremendous volume of guns and munitions for Germany's armies. Ten thousand men were digging for coal in their mines in Germany. Fifteen thousand toiled at their rolling mills at Annen and Grusen and the blast furnaces of Rheinhausen, Duisburg, Neuwied and Engers. An army of 7,000 was engaged in their shipbuilding yard at Kiel, and 5,000 miners dug ore in Spain.

Day and night in Essen work goes on without ceasing. In the great works spread over 1,200 acres, 235 of them under roof, at least 44,000 men toil in shifts of eight hours each. Some sixty factories make up the organization. Forty miles of standard railway link them together and carry their products out. Thirty miles of narrow lines are required as auxiliary for the shops.

More than 450 miles of cable and wire and over 600 telephone stations and twenty telegraph stations are needed to facilitate communication throughout the works. There are more than 300 steam boilers to generate the steam for the 7,200 different machines and 2,224 electric motors at work.

And the whole gigantic concern has sprung from a humble cottage factory with six workmen. Essen was a filthy, poverty stricken little hole of a town a century ago, when the Krupp firm was in its beginnings. Today it has more than 300,000 inhabitants and is one of the finest towns in Germany.

Flippant Flings.

The old Liberty bell, at least, is all that it is cracked up to be.—Boston Record.

"Is any man's love worth $2,000,000?" asks Clara Morris. Well, that's for the courts to decide later on.—Washington Post.

Some ingenious Yankee ought to turn an honest penny during this war by inventing meters for the gas bombs.—Cleveland Plain Dealer.

Officials in the California State Insane asylum assert that baseball cures insanity. One had supposed it caused it, but maybe this is a homeopathic principle.—Exchange.

Sense of Security.

"You like the movies?"

"Yes. When you go to the movies you feel absolutely sure nobody is going to come out and try to make an original 'Thank you one and all' speech."—Washington Star.

Birds' Eggs.

The largest egg laid by any European bird is that of the swan; the smallest, that of the golden crested wren.

PROSPERITY AT HOME

THERE IS NOTHING OF GREATER IMPORTANCE TO US THAN THE PROSPERITY OF OUR COMMUNITY.

PROSPERITY AT HOME IS BASED ON LOCAL BUSINESS CONDITIONS.

If our local merchants and storekeepers transact a large volume of business their prosperity is communicated to every person in the entire community.

The values of our real estate increase. Wages are increased. There is more money in circulation and it is more readily obtained for purposes of expansion, paying for improvements, buying luxuries, etc.

In every way we can discover better conditions on all sides when our business men are busy.

There is every reason in the world why we should spend our cash at home instead of sending it to the big cities. By keeping it in circulation in our home community we profit in many ways.

But if we send our money to the mail order houses, that is the last we hear of it. If enough money is sent to the mail order houses from our community we may easily put our local merchants out of business. By diverting our trade from our local storekeepers we can make it impossible for them to maintain their stores.

Every dollar sent out of our town to the mail order houses detracts just so much from our own individual prosperity, as well as from the prosperity of the storekeepers and from the community in general.

Think of the consequences if we should all send to the mail order houses for our necessities and our luxuries. How long would it be before our local merchants would have the "closing out sale" signs on their doors, to be followed by the "for sale" signs on the stores themselves?

AND WHEN THE BUSINESS HOUSES ARE ALL ADVERTISED FOR SALE WHAT WILL BE THE VALUE OF OUR OWN HOUSES AND LOTS?

Such conditions have actually prevailed in some communities. It has happened that the citizens became "mail-order-mad" and sent to the big cities for the greater part of their merchandise. The local merchants abandoned the field, because there was no business there for them. The burden of taxation fell on the various property owners, because there were no business concerns to bear the big proportion which generally falls to their share. Property values decreased until there were no bidders for undesirable real estate. The town became dead.

In the meantime the head of a big mail order house in Chicago was drawing an income of over a million and a quarter dollars, made possible by the business received by his concern, by mail, from such communities as the one above described and from our own community, as well as from others all over the United States.

Every dollar of this enormous income was diverted from storekeepers in small communities. Every dollar sent in to that great mail order concern, amounting to hundreds of millions of dollars annually, detracted from the prosperity of some community, struggling to become a center of population, but retarded by the short-sightedness of the citizens who sent their money out of town in preference to helping towards the prosperity of their own community.

Of course, it was all done unthinkingly. Those who sent their dollars to the mail order house did not stop to consider that these same dollars would add to the prosperity of the home community if expended at home. They did not stop to reason that by helping those in their own community they would be best advancing their own interests.

THIS COMMUNITY NEEDS YOUR HELP. YOU NEED THE HELP OF EVERY DOLLAR IN ORDER TO MAKE A BETTER COMMUNITY IN WHICH TO LIVE. YOU NEED THE PROSPERITY OF THIS COMMUNITY TO MAKE YOUR PROPERTY OF GREATER VALUE AND TO GIVE YOU THE BENEFITS OF A BETTER COMMUNITY IN WHICH TO MAKE YOUR HOME BRIGHTER, MORE DESIRABLE AND WORTH MORE IN DOLLARS AND CENTS.

We must all consider these matters. We must stop and think, before sending our dollars to the mail order houses, that our co-operation is necessary to the upbuilding of our community and that, for our own selfish advantages, even with no other motive, we must patronize home institutions and keep our dollars at home so that they can work for the advancement of our own prosperity.

We will all find that it is a fact, when we consider the question from every view point, that we can buy as cheaply and as profitably from our local merchants as from a mail order house, and we then know what we are buying, instead of buying a "pig in a poke."

COMING OR GOING?

Suffrage Victories Prove the Cause Is Gaining Steadily.

The suffrage forces attacked much new territory last year. Thirty-one states considered the question of votes for women. This marks a tremendous advance in public interest. It means that out of the total population, which the antis are constantly advertising as more important than area, more than 65,000,000 people were brought face to face with woman's advancing cause. This, with the more than 13,000,000 in the suffrage states, left about one-tenth of the total population of the country not vitally concerned in 1914-15 with this question. Of the six states attacked by suffrage forces in 1914 two were irretrievably gained—not a bad advance for a party or an army. To aim at six trenches and gain two is coming, not going, in military language. This year suffragists aimed at thirty-one states. They gained seven for campaign purposes. Two states, Kentucky and Louisiana, have run ahead of their schedule. Popular approval has seized the woman's measure before it could get to the legislature. Three states returned actual legislative majorities for suffrage, although they missed the necessary three-fourths vote. The collective vote of Delaware, West Virginia, Tennessee, Arkansas, North Carolina, Florida, Oklahoma, Texas, was about two to one in favor of suffrage. In Minnesota there was an "anti" majority of one, in North Dakota of five, and so on.

THE EARLY BREAKFAST

WITH THE "SCIENTIFIC STERLING"

Strike a match; turn a gas-cock; no fuss; no waiting; in fifteen minutes, while he is shaving, the coffee is bubbling; bacon done to a turn, eggs are just right—the early breakfast is the most pleasant meal of the day.

Perhaps the kitchen is a trifle chilly? While the coffee is coming to a boil, put a few kindlings in the fire-pot for coal, and the early breakfast is eaten in warmth and comfort.

There are mornings, even in the hottest summer, when a little fire in the kitchen is a real blessing. You can have it easily with the "Scientific Sterling" while not sacrificing the convenience of gas cooking.

For the "Scientific Sterling" is the Gas Range that burns both gas and coal in one compact range, and takes up no more room than the ordinary all-gas or all-coal range. The "Scientific Sterling" is a real gas range and a real coal range inbuilt into one scientific construction. Only one oven, baking equally well with either gas or coal, without any adjustment whatever.

The "Scientific Sterling" has standard five burner gas equipment, and standard six hole coal range—all in one range. Can you imagine anything more convenient?

OUR CLUB PLAN PROVIDES THE WAY FOR YOU TO OWN ONE

The "Scientific Sterling" is not sold on installments, but at a regular cash price of $77.00—the price that all future purchasers will have to pay. But, in order to give everyone an equal opportunity of owning the "Scientific Sterling," for the past Eight days, and for Twelve days to come, we are forming a Co-operative Club in order to save money for our purchasers. You, as a Club Member, can obtain advantage that will not be possible later.

You become a Club Member by buying the "Scientific Sterling" and paying only $5.00 down on the cash price. Then we extend you every liberal credit—your payments, or Club Dues, are only $2.00 a week until the cash price has been paid. In other words, by buying your "Scientific Sterling" within the next Twelve days, or before the Club is completed, your credit is extended for eight months.

Then, Club Members may have their "SCIENTIFIC STERLING" installed free of charge by our own workmen, and we furnish all necessary connections above the floor for gas, water, stove piping—setting up the range complete. The ordinary charge would be not less than $10—we positively will not offer free installation except to Club Purchasers who buy now. And then you get 30 days free trial!

If a Club Member dies or is disabled, further payments are all remitted—we issue a bill of sale for the range without asking any questions. We protect Club Members in their purchase.

We show you how to operate the "Scientific Sterling" to get more heat for less money, and save fuel bills. The "Scientific Sterling" is built for fuel economy. Our inspector will show you how to actually save money by using this wonderful range.

But don't forget—these advantages are for Club Members only—those who purchase the "Scientific Sterling" before August 24th. After that the "Scientific Sterling" will be sold only at the regular cash price, without any discounts or added inducements—it will be sold on merit alone.

May we book your order today?

L. P. SMITH COMPANY

G. H. SYLVESTER RUNS DOWN LIE

Makes Evident the Belief That Some One Had Malicious Intent---His Alibi Satisfies All Friends.

What now appears to be a deliberate attempt on the part of persons unknown to blacken the reputation of George A. Sylvester, a former resident of this city, but now of Syracuse, has been discovered as a result of an extensive investigation by Mr. Sylvester and some of his friends.

In the issue of last Sunday morning of a Syracuse paper appeared a story describing an automobile accident which took place on the east river road, north of this city, Saturday afternoon. The story did not definitely state where the accident occurred, but described the injuries sustained by the occupants of the car, two women and two men, and gave the names of the people injured. Among the names was that of George H. Sylvester, Jersey City, N. J., and later made the statement that this man's real home was in Syracuse.

The Syracuse office of the paper called up George H. Sylvester of that city and a reporter interviewed him Monday morning. In the meantime several of his friends had read of the alleged accident and had come to this city in search of him. Mr. Sylvester presented himself to a reporter and told the man he had not been injured in an automobile accident whatever. The account stated that the man Sylvester, who was injured, sustained a broken arm and deep cuts and bruises. George H. Sylvester of Syracuse was uninjured but the Syracuse daily handled the story again in spite of his denials that he was the man.

The Evening Times printed what information was available Monday evening, all of which information was received from a man who said he had talked with the Sylvester man who was injured.

After a thorough investigation all day Tuesday George H. Sylvester, of Syracuse, has been unable to find any place along the river road which shows a sign of any such accident. No trace of the badly wrecked car can be found, and Mr. Sylvester is convinced that either the newspaper man who first wrote the story is a victim of a hoax or that some one gave his name with the intention of injuring his reputation.

MAN TOOK MUDDY BATH AT HINMANVILLE

The quiet of Hinmanville was broken Sunday morning at 3 o'clock by some one calling "Denis, Denis," and upon investigation Denis Mullen of the region immediate in connection with his store porch and the canal, and found some one had fallen into the muddy water. A ladder was lowered and upon it ascended Jim Russell, muddy and very wet."

He had occupied the porch during the night and nightmare caused him to lose his mooring and he tumbled eight feet into three feet of muddy water.

Jim's friends are giving him the merry ha-ha.

AMARANTH PICNIC IS VOTED HUGE SUCCESS

Resterday's picnic of the Mary Patterson Court, Order of Amaranth, is declared a success by everybody who invaded Baker's grove at Minetto. Perfect weather contributed a share of the enjoyment for the 200 or more present, and the good fellowship, the supper and the dancing did the rest. The Mason's band of Oswego, with thirty members, gave the picnickers the proper amount of zeal.

ASSUMPTION DAY MAY BE CELEBRATED HERE

The Italian societies here may celebrate Assumption Day, which occurs Sunday, August 15

Italians make this one of the great festival days of the year and observe it with great pomp and ceremony.

THEATER MANAGERS GIVE UP THEIR OLD BILLBOARDS

Brooklyn, Aug. 12.—All students of the art or science of publicity will be interested in the statement that 18 Brooklyn playhouses have agreed to abandon billboards and to depend on newspaper advertising, with on exception, of course, of posters of their own property. The reason given is that the billboard people have increased the price for a week's display from four to five cents a sheet.

The color and illustration of an eight-sheet poster strikes the eye. They cannot make an argument or tell a story. The appeal to the mind is small. A ten-line newspaper advertisement explains more.

Cookies and cakes and all things baked by the Black company, fresh every day, at your grocer's. adv

THE COURT MILL BUSY GRINDING

Domestic Troubles Had Their Airing, and An Old Offense, Carrying Concealed Weapon, Received Punishment

Harrison Beals, of Granby, was arrested by Captain Norton yesterday afternoon, charged with disorderly conduct. It appears from the testimony given by Beals and Mrs. Beals in City Court this morning that their marital bliss is marred frequently by quarrels, some of which start in the house and finish in the street. Such was the case yesterday and Captain Norton interrupted a verbal battle between Beals and his wife by taking the man to jail.

Beals was fined $10 or ten days in City Court and asked Judge Wilson for a few hours in which to collect the money topay the fine. Beals promised to pay before 6 o'clock tonight.

* * *

Stauring Must Support His Wife.

Newell Stauring of Oak st. was arrested this morning by Officer Gordon on complain of his wife, who alleges that he does not support her. Stauring promised to pay his wife $5 weekly, the first payment to be made one week from date. James R. Somers represented Mrs. Stauring.

* * *

Reynolds Given Suspended Sentence.

Ernest Reynolds, arrested two weeks ago by Officer Brannigan, charged with carrying a concealed weapon, was given 60 days in the Oswego Jail this morning and sentence was suspended pending good behavior.

* * *

Charged He Beat Board Bill.

Daniel Woodside was arraigned in City Court charged with jumping a boardbill, contracted with Mrs. Crarie Sullivan of 221 Utica st. Mrs. Sullivan said Woodside gave her an order for wages on a local contractor in payment of his board bill and when she attempted to collect the money she learned that he was not employed by the contractor. Woodside says Mrs. Sullivan did not present the order for some time, and he lost his place shortly after he gave her the order, and was under the impression that she had received the money.

Mrs. Sullivan told Judge Wilson she did not wish to prosecute the man if he would pay her the money, and Woodside promised to pay her in installments, along with the costs of the action.

* * *

Carouse Costs Pole $5.

Mike Ulickz, a Russian, imbibed too freely last evening of malt products and was found with a badly bruised eye on West 1st st. by Officer Lewis. When arraigned in court this morning Mike was most apologetic and courteous and was fined $5 or 5 days in jail. Through an interpreter he solmenly promised to pay the fine in two weeks and he was allowed his liberty.

* * *

Countryman Lands in Jail.

Jack Cassidy of Granby wandered into town today to view the sights and reached Oneida and First sts. about the time the morning rush began. The immense crowds at that point had the effect of making Cassidy light headed and he felt the need of a bracer. He had several, and was found sleeping peacefully with a lamp post as a pillow by Officer Bray, who took him to the police station. He will be arraigned tomorrow.

MISS BROOKER SERVES TEA IN HONOR OF MISS HOBBS

Miss May Brooker, daughter of Mr. and Mrs. George Brooker, of South First st., entertained the L. O. P. H. club of this city in honor of Miss Ruth Hobbs of Hoboken, N. J., yesterday afternoon. Bridge occupied the greater portion of the afternoon and early in the evening.

Miss Hobbs is spending some time with Miss Brooker enroute to her home from the Panama-Pacific exposition at San Francisco.

CARPET RAG SOCIAL.

The Columbia Circle, ladies of the G. A. R., will hold a carpet rag social on the lawn of Mrs. J. W. Rice, 212 Gansevoort st. tomorrow afternoon. Every member of the Circle is requested to be present.

SPELLIN' BEE CREATES NUMEROUS INQUIRIES

The announcement made by C. I. Kingsbury that an old-fashioned spelling bee will take place at the Fair grounds next Friday creates a lot of interest. The bee will be held in the grand stand and the first one will be forp upils in Oswego county schools and 100 silver medals have been purchased for the winners. The second contest will be for the winners of the silver medals for a $5 gold piece prize. The third contest open to all residents of Oswego county, not pupils in local schools, for a $5 gold piece prize.

The fourth contest, open to all, for a Webster Unabridged dictionary for a $25 scholarship in the Central City Business school, at the option of the winner, offered by L. B. Kyne of above school.

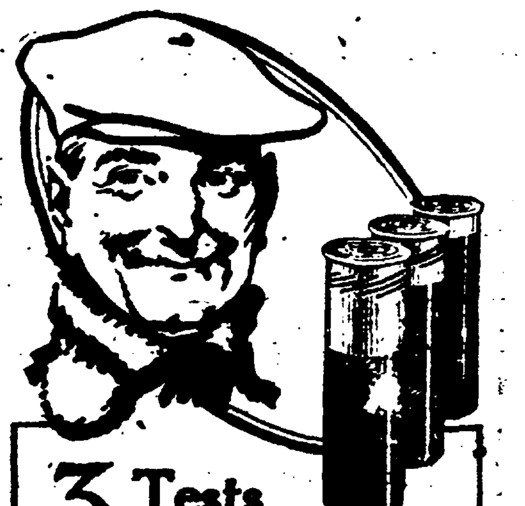
Contestants may enter by sending names and address and name of contest to C. I. Kingsbury, secretary of fair.

BARBERS TO HAVE OUTING AT EARLY DATE

The barbers of the city are making plans for a monster picnic and clam bake which will probably be held the latter part of this month. The affair will occupy an entire day and all the shops of the city will close on that date. A petition is being circulated among the boss barbers of the city and most of them have already signified their willingness to close for the day. This will be the first time in the history of the city that the barbers have had any social affair of this kind and no doubt the event will be most successful.

THIS WAS BARGAIN DAY AT O'BRIEN'S STORE

The largest crowd ever gathered together in this city through capable advertising and unusual values thronged the O'Brien department store this morning. An augmented corps of clerks could not cope with the crowd and it was two hours before the store was cleared to its normal capacity, and in that time more than 10,000 yds. of materials were sold, which stands as a record for a city of this size.



3 Tests for Shotgun Shells

Have you made your shell test yet?

You can get from us, without charge, a copy of a booklet giving directions for testing the primer speed, penetration, velocity, distribution and waterproofing of shotgun shells.

What reports we have had from local tests indicate the superiority of The Black Shells, made by the United States Cartridge Company.

The tests are interesting and simple. Call and get a booklet telling how.

The tests take only a few minutes' time, but are decidedly worth while.

CONVENTION ADOPTS SUFFRAGE AMENDMENT

Albany, Aug. 12.—The woman's suffrage amendment, as recommended by the Constitutional convention's suffrage committee, was reported favorably by the Committee on Future Amendments. It provides that the Legislature's suffrage referendum be made a part of the state's basic law in the event of its adoption at the November polls. Favorable report also was made of the Marshall amendment, making the new Constitution effective January 1, 1916.

T. D. LEWIS SECURES POSSESSION OF PROPERTY

A final order of possession was granted T. D. Lewis this morning in his summary proceedings for possession of the building now occupied by the Happy Hour theater. The defendants did not appear. Mr. Lewis alleges non-payment of rent.

Your appetite for fresh-every-day rolls increases every time you eat the Black company's article. adv

ALBANY GOSSIP DAY BY DAY

Chronicle of Events and a Forecast of What is Doing in Officialdom---Special Correspondence.

By Frederic T. Cardoze.

Albany, Aug. 12.—It may be of interest at this time, when the State Constitutional Convention is at its height, to give an insight into what transpires each day; perhaps the best way to do this is to quote in a haphazard manner from the daily record of the convention. The procedure is along this line:

The President—The Convention will please be in order. (Several gavel swats.) Prayer will be offered. (Here the name of the minister is given, but in the event that there is no ecclesiastic present one of the delegates is likely to be called upon. President Root and Rush Rhees, president of Rochester university, have acted in this capacity.)

The President—Are there any amendments to be proposed to the Journal as printed and distributed? There being no amendments proposed, the Journal stands approved as printed.

Presentation of memorials and petitions.

Mr. Ward—Mr. President.

The President—Mr. Ward.

Mr. Ward—In behalf of the United Spanish Uard veterans, I submit the following petition and ask that it be referred to the Committee on Civil Service.

The President—Mr. Ward presents a memorial from a committee of voters and residents of the Seventh Senatorial District, which will be referred to the Committee on Civil Service.

Mr. Westwood—Mr. President.

The President—Mr. Westwood.

Mr. Westwood—I offer a memorial resolution of the Western New York Volunteer Firemen's Association, bearing on the relation of volunteer firemen to the Civil Service.

The President—Referred to the Committee on Civil Service.

After the resolutions are all in the President announces another order of business.

The President—Communications from the Governor and other State Officers. The secretary then calls the roll by districts and reaches the forty-eighth district when he is interrupted.

Mr. Sears—Mr. President.

Mr. President—Mr. Sears.

Mr. Sears—Mr. President, I ask to be excused from attendance at the session tomorrow, on account of business engagements at home.

The President—Is there any objection to the excuse being granted to Mr. Sears? Without objection, the excuse is granted.

The Secretary—Forty-ninth district, fiftieth, fifty-first.

The President—Reports of Standing Committees. Reports of Select Committees.

Mr. S. K. Phillips—Mr. President, I hand up the following report of the Committee on Contingent Expenses and move the adoption of a resolution contained therein.

The follows cut and dried procedure attending the adoption or rejection of the resolution.

The President—Reports of Select Committees. Unfinished business of general orders. Social orders. The convention will come to order in Committee of the Whole on the special order of the day.

Then the delegates settle back for weary hours of debate in which all may join. At one o'clock a recess is taken until 2:30, after wrich there is a session until 5 o'clock and following that a night session.

The delegate's life is not a merry one at present.

CONGRESS TO TAKE UP VOCATIONAL EDUCATION

The Smith-Hughes Bill providing federal aid for vocational education bodes fair to attract more than usual attention at the forthcoming regular session of Congress. For years the subjest has been discussed in and out of Congress, but the efforts to enact a law have been defeated. Much talk is now being made about this country seizing opportunities which will put it to the front in industrial development and, by reason of the effects of the European war, to make it lead the world industrially, commercially and financially.

Few have any realization of the work which this attainment would mean throughout the United States and what systematic effort it would entail. Believers in vocational education are convinced that a system of this sort would in due time add enormously to the nation's industrial efficiency; and it is asserted that not one person in a hundred in this country has been rightly trained for the work he is doing. The American Federation of Labor has long advocated such legislation.

A little over a year ago President Wilson appointed a commission to study vocational education and national aid therefor. The commission prepared the Smith-Hughes Bill, which provides expenditures for about $1,7000,000 for the first year and increasing annually until a maximum of 7,200,000 is reached in 1924.

Some opposition has developed from the fear that its passage will interfere with state rights, but it is the opinion of the commission that federal aid to vocational education is of such importance that the general government ought to take hold of it. It further points out that Congress has passed annually more than 42 acts which conferred directly upon all states or upon specific states, national grants of either land or money to be expended for the benefit of education.

CONGREGATION OPPOSES A "SINGING PARSON"

Portland, Ore., Aug. 12.—That Rev. Frank W. Gorman, pastor of the Atkinson Memorial Congregational church may lose his job because he is booked this week at a local vaudeville house as "The Singing Parson," was intimated today by one of the deacons of the church.

Two women members of the board of deacons say the pastor's theatrical engagement was approved by the church. The three men on the board yesterday issued a statement denying it had been approved. "The singing parsons" says the job came as an answer to prayer when he was in financial difficulty.

APPLE CROP WILL BE LIGHT THIS YEAR

Rochester, Aug. 12.—The estimates of men who have watched apple crops come and go for many years with the closest interest, indicate that the New York state apple crop this year will be smaller than it has been for many years. Monroe county fruit growers generally concur that the yield will be from a quarter to a half smaller than it was last year. The shortage, they say, is chiefly in Baldwins, the crop which last year was ponderously large.

MASTER NICHT ARRIVES.

Mr. and Mrs. W. J. Nicht of Cayuga st. are receiving the congratulations of friends on the birth of a son, William Eugene. Mr. Nicht is a recent arrival in this city and is owner of the electric shop on South First st.

PHILATHEA FOOD SALE.

Smith's hardware store has been engaged by the Philathea class of the Baptist church for thep urpose of holding there a food sale on Saturday morning. The products of bake ovens will comprise the articles offered for sale.

MRS. LANGDON BURIED.

The funeral of Mrs. Fustina Langdon occurred today from the home of her sister, Mrs. H. H. Merriam, 60 West 1st st., the Rev. Charles Robertson officiating. Burial was made in Mt. Adnah cemetery.

MR. LOW FAVORS THE AMENDMENT

Believes It Practicable and Should be Adopted by the Convention --- Compromise or Otherwise.

Chairman Seth Low, of the Cities Committee, today discussed the proposed Home Rule Amendment submitted by the Cities Committee to the Constitutional Convention. In opening his address Chairman Low pointed out that in forty-five years no progress whatever had been made in relieving the legislature of the state of New York from theb urden of detail legislation for cities, and, he said, that the cities by consequence have but little larger measure of home rule than they had in 1870 Mr. Low discussed the proposal of the committee from many viewpoints, and, among other things, indicated the haste with which new charters had been prepared in the legislature. He told of a statement made by former Senator Nathaniel A. Elsberg to the effect that the revision of the Greater New York Charter of 1901 was amended so hastily at the end of the session, that the term of every official was reduced from four years to two, except that of Coroner, which was left at four years contrary to the purpose and intention of the legislature. In concluding his argument Mayor Low said, in part, as follows:

Exclusive Power.

"I confidently submit to the judgment of this convention that the amendment proposed by your Cities Committee does four things essential to any plan which is to solve the problem with which this convention is called upon to deal. (1) It grants adequate and exclusive power to the cities to deal at home with their own local affairs; (2) It provides the means by which cities may currently adjust the machinery by which they conduct their business to the changing needs of the hour; (3) It prevents the legislature from interfering in the details of the city action, so far as the city is acting in relation to its own affairs only. The legislature naturally cannot pass any law within the field of the city's exclusive power. Under the Cities Committee amendment, it cannot initiate any charter amendment, and, therfore, it will secure jurisdiction over such amendments only at the request of the cities; and lastly, in the twilight zone, where the cities act as the agent of the state, the legislature can pass special city laws only as to matters not included within the exclusive grant to cities, and even such action is subject to the suspensory veto of the cities. This so-called suspensory veto does not prevent the legislature from enacting, but it does secure for the cities the opportunity to be heard before the legislature takes final action. Its effectiveness as a protection to the cities needs no further discussion. (4) It makes sure, by providing that the legislature may continue to pass special laws affecting cities, of the character described, that the power is left somewhere, either in the city or in the legislature, to enact any law that may become necessary in the interest of either the city or the state. So much, for the benefit of those who are interested in the cause of Home Rule.

"Let me conclude by calling attention, for the benefit of those who are interested in maintaining the legislative sovereignty of the state, that this is done, first by leaving all cities subject to the "general laws of the state applying to all the inhabitants, or applying to all the cities or counties of the state without classification or distinction;" and, second, it is maintained by requiring that every revision of a city charter, and all amendments of city charters except minor amendments, must be submitted to the legislature subject to its approval.

Mr. Low's Experience.

"Gentlemen of the convention, I have been familiar with the problems of city government ever since my election as Mayor of Brooklyn in 1881, in which office I served for four years. I served as a member of the Greater New York Charter Commission, as to which I venture to point out that then, if ever, was the time to adopt a new charter for the city of New York, but that commission, like its predecessors, shrank from that vast undertaking, and I have served as Mayor of the city of New York for two years under the State Constitution as amended in 1894. I wish to say that I believe that the amendment submitted on behalf of the Cities Committee is practicable; that it will in effect secure to the cities of the state of New York as large a measure of Home Rule as is enjoyed by the cities of any other state in the Union. That it does not involve any serious element of legal authority than is inevitable in any solution of thep roblem in view of the peculiarities of American laws, and that it is at the same time so state-guarded as to make it a reasonable grant of power not only to the great city of New York, of which the Empire State is and ought to be proud, but also to the smaller cities, which, through the operation of this amendment should secure practically full control of their own affairs. That it may not be improved by discussion in this constitution I am very far from saying; but I do believe that it offers the basis of a plan of action which this convention may adopt with confidence as to the outcome. As you approach the discussion of this amendment in detail, let me remind you again, both the friends of Home Rule and those who remain yet to be convinced of its necessity and advantage, that all progressive legislation is the result of compromise.

"A city is not a little state that can take to itself all the powers there are. Neither is it like a state in the Union, which retains all the powers that it does not surrender. A city enjoys the powersg ranted to it, and when these are to be exclusive only as to its local affairs, the line must be drawn somewhere between the city and the state. However, this division of power is expressed, it can be made definite only by the courts. The Cities Committee will be glad if the convention can do it better."

OSWEGO MACHINISTS SATISFIED WITH HOME

In spite of the allurements held out by agents of the Watertown firms who want skilled machinists, the Oswego men who have been approached refuse to leave their present jobs and homes.

One local workman who had tempting offers made him said later: "I may not be getting full pay this week, or next, but I've never seen the time when I couldn't knock out enough hours a week to furnish a decent living for myself and my family. I know there is more work coming here in town and you can say for me that I'm going to stick right here. I'll be working full time at a regular job and living easy when these fellows who are always chasing rainbows are panhandling and hitting the bread-lines."

He certainly summed up thep resent situation in a way which left nothing further to be said.

Community Notes

A soloist who will lead in community singing is a probability at tonight's band concert in East Side park.

* * *

A food sale will be held by the Brotherhood of State Street church at the Palmer-Hope store on Saturday. The ladies of the church will conduct the event.

* * *

Singers will be welcomed at tonight's band concert, just to show that this city can have community singing.

* * *

Homer LaBeef has returned from Oswego where he sustained slight injuries by falling from a bicycle. His hurts were dressed at the hospital.

* * *

Supervisor Wade E. Gayer is a member of the publicity committee for the Board of Supervisors' picnic September 2.

* * *

Miss Mae Brooker entertained a few of her friends yesterday afternoon at her home in South 1st st. in honor of Miss Ruth Hobbs of Roselle, N. J.

* * *

Mr. and Mrs. Theo. Webb and family and Mr. and Mrs. George Chauncey have left for Mexico Point where they will spend the week-end.

* * *

Mrs. Mary Hall and daughter, Frances, of Boston, is visiting Mr. and Mrs. J. H. Howe.

* * *

Miss Frances Forsyth returned last week from a two weeks' vacation spent in the Adirondacks.

* * *

Mrs. John O'Brien entertained the Thursday Evening Euchre club at Long Branch yesterday. Euchre was played and a picnic dinner was enjoyed. Prizes were awarded as follows: First, Mrs. Ray Briggs; second, Mrs. John Winter; third, Mrs. R. E. Parks. The club meets next Thursday with Mrs. De Bois of South 7th st.

* * *

Mrs. M. E. Reynolds of Utica st. has as guests her sister, Miss Helen Drake, of Rochester, and Miss Lillian Murray of Canada.

* * *

Mr. and Mrs. G. W. Roy of Highland st. and their children left today for Buffalo, Crystal Beach and other points. Mr. Roy will return Monday, but Mrs. Ray will remain two weeks with relatives in Batavia.

ALL EXPORT TRADE SHOWS BIG GAINS

May Shipments of Products to Europe Were Large.

MUCH GOLD COMING HERE.

Statistics Show That $26,500,000 Worth of Iron and Steel Was Sent Abroad During One Month—Bill For Oil Amounts to $12,800,000, For Flour $9,800,000 and For Leather $8,500,000.

Official figures of foreign commerce for May tell a story with which the American business man has become very familiar during the past six months.

There has been a large increase in exports of all lines of goods that are required as war supplies, such as iron and steel products, packing house stuffs, woolen goods, chemicals, cottonseed oil and cake, all metal goods except copper, leather goods, automobiles and trucks, cotton goods and refined sugar. Some of these articles, as sugar, for instance, are not classified strictly as war supplies, but are in demand because of the shutting off of German, Austrian and Russian supplies from countries like England and Turkey that import all the sugar they consume.

The falling off in foreign trade during May appears directly in pig copper, which is 15 per cent less than in April; boards and planks, 50 per cent less; agricultural implements, 30 per cent less; electrical apparatus, 10 per cent less, and naval stores, 30 per cent less.

The principal increases, as shown in round figures, are given in the following table, the comparison being with the exports of May, 1914:

	May, 1915.	May, 1914.
Iron and steel manufactures	$26,500,000	$19,700,000
Refined mineral oils	12,860,000	12,600,000
Flour	9,800,000	4,300,000
Explosives	8,000,000	400,000
Leather	8,500,000	3,600,000
Cotton goods	4,800,000	4,000,000
Commercial automobiles	6,600,000	100,000
Passenger automobiles	4,000,000	2,900,000
Brass	4,100,000	500,000
Cars and carriages	3,400,000	1,100,000
Cottonseed oil	2,400,000	1,000,000

The volume of gold coming into the country during May was $31,136,000. In May, 1914, it was $1,755,062. During the past May gold came in at New York to the amount of $13,406,935, and at Ogdensburg to the amount of $13,516,808. The receipts of gold from Canada during the eleven months ended with May were $62,740,122, and from Great Britain in the same period $1,953,746. Canada's transfer of gold to this country during May was $14,494,536, as compared with $1,045,917 the same month last year. France sent us in May, this year, $11,590,000 of gold, having sent us in the preceding ten months of the fiscal year but $52,926. Our export of gold to all countries in the eleven months ended with May was $631,720. The total import of gold from all countries for the eleven months of the fiscal year ended with May was $119,227,015.

The grand balance of trade for the eleven months ended with May, 1915, is of interest to those who desire to take a broad view of the trade situation. The total exports for the period named were $2,500,041,924 as compared with $2,207,567,101 for the eleven months ended with May, 1914. Imports were down to the end of May, 1915, $1,516,475,600 and for the same months the previous year were $1,736,896,207. The total of exports and imports for the eleven months ended with May this year was $4,016,516,524, and the total of exports and imports for the same months ended with May, 1914, was $3,943,903,308, giving an increase for this year over last in the grand total of foreign trade, including both exports and imports, of $72,613,216. While this year exports have increased by $292,534,823 in the eleven months, imports have fallen off by $219,921,607. At the same time the balance of trade for the eleven months ended with May, 1915, had reached the enormous amount of $983,567,324 and, as is well known, with the balance for the following month of June, passed the billion mark for the first time in the history of the country.

COPS TO MEASURE SKIRTS.

Atlantic City Bathing Dresses Must Come Within Three Inches of Knees.

One thing of the utmost importance for the future guidance of summer girls in Atlantic City has been settled definitely and beyond recall. It relates to the minimum length of the bathing skirt. Chief Surgeon Bossert, director of the bathing beach, promulgated an order so explicit that neither summer maids, propriety police nor beach guards can fail to understand precisely what it means.

"Every bathing skirt worn upon the Atlantic City beach must not be shorter than three inches above the knee of the wearer," says the ukase.

It applies with equal force, Beach Director Bossert said, to tall girls and short sisters. A tape-measure has been added to the equipment of beach headquarters.

Her Peanuts Were Dope.

The mysterious "plumed lady" of Cleveland, who handed peanuts to friends she met in her strolls, has been sent to the workhouse for distributing cocaine in peanut shells.

BROOK TROUT.

Science Outdoes Nature In Raising the Young Fish.

The brook trout is a nest builder, but does not belong to the group of fish which cares for its eggs and young. When the function of egg laying is completed and the nest covered with gravel the parent fish seem to feel that their whole duty has been performed, and they depart, leaving both eggs and the young when they are hatched to the care of nature, and nature, it must be confessed, is generally neglectful of her charge.

Early in autumn the mature brook trout in pairs seek the gravelly bottoms of shoals and spring runs. Here with nose and fins they hollow out a shallow basin and make it scrupulously clean. This is their nest, and over the bottom the eggs are scattered, covered with gravel, and their duty to posterity is ended.

Only a small proportion of the eggs deposited naturally are fertilised, and many of these are destroyed by spawn eating fishes. Most of the tiny fish which do develop and succeed in punching a hole through the egg shell with their little tails and emerging into a watery world do so only to find quick lodgment in some larger fish.

As a foster parent the trout culturist is a greater success than Dame Nature. The latter, under the most favorable circumstances, rarely succeeds in hatching more than 10 per cent of the eggs deposited, while the former expects to develop into wiggling fishes nearly 80 per cent of the eggs obtained.

PERFUME OF MUSK.

The Odor Is Penetrating Because the Substance Is Radio-active.

The extraordinarily penetrating power of musk perfume is accounted for by the fact that it is radio-active. The United States consul at Chunking, China, writes that this property causes the odor to be carried through the air in a way that would otherwise be impossible. And he adds that this radio-active property "affects most peculiarly the natives who carry it. If it is held close to the body for any length of time it produces sores that are probably similar in character to those caused by pure radium."

Musk is a secretion of certain glands or pouches of the male musk deer and is secreted only during certain seasons of the year. It is difficult to obtain pure, and one of the largest French manufacturers of perfume keeps a representative at Tachienlu, near the Tibetan border, for the sole purpose of buying it.

Three thousand pounds of musk on an average are shipped every year from Chunking, and fully half of this has passed through Tachienlu, which is one of the principal musk markets of the world, though eighteen days' journey from Chunking, the nearest port.

The deer, which are seldom more than three feet long and twenty to twenty-two inches tall, are being slaughtered in such numbers that they are becoming more and more scarce and will eventually be extinct.

That Genius Whistler.

Of Whistler Lady St. Helier in "Memories of Fifty Years" writes thus: "He was a genius and had all the defects and qualities of one. To him everything was a joke, the subject of a bonmot. The lightest and daintiest of persiflage was what he excelled in, and one never had a dull moment in his company. He was always late for dinner, arranging the immortal lock of gray hair in its proper place as he came into the room, with apologies and excuses, none of them true, of which he was perfectly conscious and also that they were not believed. Wherever he was there would be a circle listening to him, and his ringing laugh would be heard all over the room as he sent his shafts right and left into the joints of the armor of those who were attacking him. It was a great surprise and almost a shock when he appeared as a benedict."

The Colossus of Rhodes.

The remains of the Colossus of Rhodes have been dispersed beyond possibility of recovery or even of tracing. It stood for little more than half a century and then, in 224 B. C., was overthrown by an earthquake. The Rhodians raised from benevolent outsiders large sums of money for its restoration, but divided the fund among themselves, asserting that the oracle of Delphi had forbidden them to set it up again. So there the ruin lay until 672 A. D., when the Saracens sold it to a Jewish merchant, who loaded 900 camels and went away—literally—with the brass.—London Spectator.

A Cruel Comparison.

"I don't make much," said the fond suitor. "My salary is $30 a week. Could we live on that, dear?"

"Ah," sighed the maiden dreamily, "just the price of a tire for father's motorcar."

Then something told the f. s. that he was wasting time.—Birmingham Age-Herald.

Engaged.

Stranger (impatiently)—Say, isn't that newspaper to be had yet? I've been waiting for it for two hours. Waitress—I'll see about it. Farmer Cross has it in the side room. He's teaching his little boy to read.—Fliegende Blatter, Munich.

And So It Is.

"What do you consider the greatest human paradox?"

A secret session of a woman's club."—Philadelphia Ledger.

Friends are lost by calling often and calling seldom.—Swift.

Her Sister's Elopement

By SADIE OLCOTT

My sister Clemantine is full of romance. Clem is four years older than I. She is twenty, and I'm sixteen. Phil Armitage has been lolling around her for a long while, and it makes me sick to see how they act.

The other day Clem came to me and said, "Fan, Phil and I are going to elope, and I want you to help us."

"Elope!" says I. "What are you going to elope for? You know well enough pa would be glad to have some one take you off his hands."

"Don't say that to Phil. I've told him pa expects me to marry a rich man or a big one of some kind. Don't you know that a man wants what it's hard for him to get? If Phil knew pa would be glad to turn over my support to him he'd cool off right away."

"Clem," I says, "I never knew before you had so much sense. You're dead right."

"And don't you forget it. When you come to a marriageable age and a fellow comes courting you make him think you're doing him a great favor if you just look at him."

I almost snickered right out at this. How patronizing of Clem! She doesn't know that I've got five beaus and could have as many more as I like.

Well, I asked her what she wanted me to do, and she said that just before I went to bed on the night of the elopement I was to go into father's room, feel in his trousers' pocket and steal the key to the wagon house, where he keeps lots o' things, unlock the door, get out the ladder and carry it around under her window, where Phil would have no trouble in finding it. I promised to do this and anything else that she wanted me to do, but she said there was nothing else. I asked her what were the arrangements for the wedding, and she said that at 11 o'clock Phil was to put the ladder up so that she could go down to him. He was to have a wagon at the crossroads and they were to go to Parson Miller's to be married. Then they were to take the 12:30 train on their wedding journey and the next day she would telegraph pa asking forgiveness.

I thought it was just too bad that Clem and Phil should have such a doleful wedding—no cake, no lemonade or anything—and I wondered if I couldn't help them out a bit. I just told four boys and three girls that I wanted them to have a moonlight ride with me in our democrat wagon, and they all agreed. I asked pa if I might have the horses, and he said I might and gave me the key to the wagon house. Johnnie Walker came round and helped me hitch up.

My riding party was arranged for the night Clem was to make her elopement. Johnny Walker came round about 8 o'clock and I told him what we were going to do. Just before we drove off to pick up the rest of the party he carried the ladder around to the side of the house, where Clem's room was, and laid it down on the grass.

We had a merry ride, singing most of the way, and shortly before 11 o'clock I told about Clem's elopement and proposed that we make a wedding party for her—poor thing! They were all mighty well pleased with the idea, so we drove past the crossroads, where we saw Phil's wagon hitched, and on to a short distance beyond the house, where we all got out and crept along under the fence out of the moonlight to a place where we could see Clem's room.

We had none of us ever seen an elopement before, and I tell you it was lots of fun. We saw Phil steal up, dodging under the trees, put up the ladder and Clem come down. Then they both started for their wagon and we went back to ours. It wasn't long after this till we were jogging along behind them.

They passed the parson's and, turning off the pike, took a dirt road that would lead them back to the parson's again. We turned, too, and followed them. They tried in every way to shake us, but we wouldn't be shook. When they came to the parson's next time they stopped and waited in the wagon for us to go on. We stopped and waited too. We could hear them debating what to do, and at last they concluded to go into the parsonage. They got out, Phil hitched the horse, and they rang the doorbell. We drove on with a laugh, and they thought they were rid of us, but as soon as they had been admitted we turned, drove back and, opening the parsonage door, all piled into the house.

You should have seen Clem when she saw me come in, followed by a lot of boys and girls. She looked daggers at me, I tell you.

"Clem," I said, "we didn't like for you and Phil to be married with no attendants, so we just thought we'd come and see you off."

Phil tried to laugh as if he thought it a good joke, but it was a mighty poor laugh. There was nothing for them to do but be married as they had intended, and when they had been tied together we all congratulated them, we girls offering to kiss Clem. Clem kissed them all except me, but when she refused I put my handkerchief to my eyes as though my feelings were awfully hurt, though I was laughing all the time. This melted Clem, and she put her arms about me and kissed me.

"You needn't waste money telegraphing pa," I said when we separated. "I'll tell him."

Easy & Practical Home Dress Making Lessons

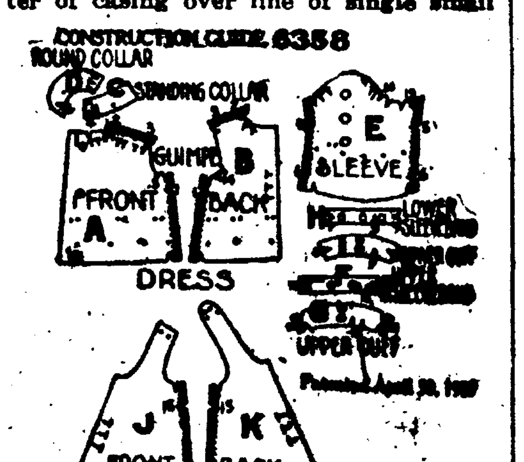
Prepared Especially For This Newspaper by Pictorial Review

A SENSIBLE, INEXPENSIVE AND ATTRACTIVE DRESS.

Any desired trimming may be added to the dress, but it is very effective without any ornamentation other than is provided in the illustration.

There is quite a formidable array of sensible and inexpensive models among the advance models in children's frocks. The design shown here is a guimpe effect, the guimpe being in two lengths, with two styles of collars. The dress with two styles of collars. The dress slips on over the head and closes on the shoulders. It is made of blue gingham, the guimpe being of white lawn. The frock for a child of four years requires 1⅜ yards 36-inch gingham. If a short guimpe is made with long sleeves 1⅛ yards 36-inch lawn is needed; for short guimpe and short sleeves 1 yard only of 36-inch lawn is required.

In the process of construction the guimpe comes first. Start by turning the hem in front on slot perforations, always following the large "O" perforations to find the center-front. Gather the lower edges, then close under-arm and shoulder seams as notched. If long guimpe is made stitch a casing ½ inch wide underneath front and back, center of casing over line of single small



"o" perforations; if short guimpe is desired cut off lower edges of front and back on double "oo" perforations; stitch a casting 1 inch wide underneath lower edge. Insert a drawstring through casing. Sew standing collar or round collar to neck edge as notched, center-backs even, small "o" perforation at shoulder seam.

Close sleeve seam as notched. Gather upper edge between double "TT" perforations and entire lower edge. Close seams of cuffs and sleeve bands as notched and face. Sew cuffs to sleeve bands as notched, seams even. Sew sleeve in armhole as notched.

Close under-arm seam of dress as notched. Turn hem at lower edge on small "o" perforations. If shoulder edge of back is desired in straight outline cut off on double "oo" perforation, turn under the edge on single perforations and lap on front to small "o" perforations for closing; if desired with rounded shoulder edge lap back on front, matching single small "o" perforations and close with buttons and buttonholes.

Pictorial Review Dress No. 6358. Sizes 2, 4, 6, 7 and 8 years. Price, 10 cents.

The KITCHEN CUPBOARD

MEATLESS DISHES.

DINNER MENU.
Tomato and Onion Pie.
Buttered Beets. Green Peas.
Lettuce Hearts. Red Dressing.
Raised Biscuits.
Huckleberry Pie. Cream Cheese.
Iced Tea.

Tomato and Onion Pie.

PARBOIL some onions, slice them and fry in butter until colored. Dip some tomatoes into boiling water, skin and slice. Lay alternate layers of tomato and onion in a pie dish, sprinkling each layer with breadcrumbs, small pieces of butter, salt and pepper. Cover with mashed potato. Score with a fork and brown in the oven.

Tomato Rice.

Wash two ounces of rice thoroughly and cook it in half a pint of milk until quite soft and flavor with salt and pepper. Take one pound of stewed and sieved tomato and beat together. Stir in one ounce of butter and cook until quite moist, but not wet. Serve very hot and, if liked, strew grated cheese over.

Tomato Rice and Eggs.

Serve the tomato rice in a fireproof dish with poached eggs on the top.

Stuffed Tomatoes.

Prepare the tomato rice as before. Take the necessary number of large dry tomatoes, dip into boiling water, skin, cut the tops off and remove some of the pulp (the tops and pulp can be used for the puree). Fill the tomato cases with rice. Scatter with fine browned crumbs, seasoned with celery salt and cayenne. Put a little piece of butter on each and bake on a greased tin in a moderate oven for about twenty minutes. Serve hot.

Vegetable Curry (Hot or Iced).

Weigh five ounces of margarine. Chop very fine four medium sized onions. Melt the margarine and cook the onions in it until they are a deep gold brown, a process which takes time. Meanwhile put on a saucer in the oven a tablespoonful of curry powder and leave it for ten minutes and then mix it smooth with a little milk or cream. Add to the onion mixture and cook gently for two hours at least, stirring now and then.

Cut into neat squares one small vegetable marrow, a small peeled cucumber, one raw apple, two tomatoes (peeled) and some French beans with the strings removed, all of which have been previously cooked. Place in the curry mixture and cook gently for thirty minutes. Serve very hot with well boiled rice or ice it.

Almost any leftover vegetables may be used in the curry, such as peas, cauliflower, broad beans, etc.

SHORT AND SHARP.

When you undertake to study human nature begin on yourself.

Some people who ask for a quilt invariably want it over a pie.

A man can always find time to do a thing if he has the inclination.

Hope is all right in its way, but men who try to live on it are hopeless.

The Liberty bell has a crack in it, but fortunately its ring is no longer needed.

The easiest way to commit suicide involuntarily is to walk upon a railroad track.

"Safety first" is a good motto, but too many people wait until it's too late to be careful.

A lot of men expect the bread they throw on the water to come back to them in the form of cake.

During lulls in the fighting the belligerents ought to be able to think of some good excuse for quitting.

If Uncle Sam ever has occasion to do so he will issue a red, white and blue book, and it is likely to be the final word.

The changed national boundaries announced in Southwest Africa are manifestly subject to confirmation by the treaty of peace.

When one notes how much food has been exported to Europe during the last eleven months one wonders what would have become of it all if there had been no war.

The Royal Box.

Prince Henry of Prussia, brother of the German emperor, has just received a patent for an apparatus for cleaning the wind shields of automobiles.

King George V. must be the most widely traveled monarch in history. Beginning with a trip to Ireland at the age of eight, his majesty has visited Canada, the United States, Palestine, Egypt, the Crimea, Constantinople, Russia, France, Germany, Scandinavia, Australasia, South Africa and India.

The Empress Carlotta, as the Princess Charlotte was known after her husband was made emperor of Mexico, became insane after a mental breakdown in 1866. In 1879 she was pronounced incurable and confined by her family near Brussels, where she has been kept ever since. She is the aunt of King Albert of the Belgians.

Her Objection.

She—I don't mind late callers. He—Oh, thank you! She—It's late stayers I object to.—Philadelphia Ledger.

Care of the Baby In Summer

[Prepared by the children's bureau, United States department of labor.]

Food For the "Runabout" Baby.

For the first nine months or more of a baby's life, when he is growing at a very rapid rate, nature has provided a perfect food in mother's milk. With such babies a healthy development usually goes steadily forward with little trouble. But after being weaned all too many babies seem to suffer from a setback, while accommodating themselves to digest a new food.

A list of the foods suitable to this period of the baby's life is given in greater detail in a bulletin called "Infant Care," published by the children's bureau of the department of labor, Washington. This publication is sent free to all who care to ask for it, sending their name and address to the bureau.

The average healthy baby of one year of age should be taking five meals a day at four hour intervals. At this period he should have about one quart of milk daily. In addition, he may have well cooked cereal twice a day, squeezed beef juice or broth once a day, some fruit juice once or twice a day, unless the bowels are loose, and dry bread or toast to chew.

As the baby grows and thrives various things may be added to his diet. The following are sample meals for a day for a healthy child from eighteen months to two years old (an ounce is two tablespoonfuls):

7 a. m.—Milk, 8 to 10 ounces, piece of swieback, toast or dried bread.

9 a. m.—Orange juice, 2 ounces.

10 a. m.—Cereal, 2 tablespoonfuls; cupful of milk, toast or dry bread.

2 p. m.—Broth, 6 ounces; meat, 1 tablespoonful; vegetable (spinach), 1 tablespoonful; stale bread, 1 piece; baked apple, 1 tablespoonful.

6 p. m.—Cereal, 1½ tablespoonfuls; milk, 6 to 8 ounces; toast or bread.

10 p. m.—Milk, 8 ounces in cup. (May be omitted).

The following rules for cooking and preparing certain of these articles may be helpful to mothers:

Toast.—Bread one day old, cut in very thin slices; slices placed on edge in a toast rack in an oven to dry. Leave oven door partly open.

Broth.—Of round steak, one pound; of water, one pint. Put the meat on in cold water and allow it to come to a boil; then lower the flame so that it barely simmers for three or four hours. Remove the meat and add enough water to make up the original amount of liquid; strain through a wire sieve and set aside to cool. When cold the fat is removed in a solid piece, leaving a clear liquid or jelly. Heat a small portion when it is time to feed the baby. Keep the jelly covered and on ice.

Meat.—One tablespoonful. Take meat, round or sirloin steak, scraped with a silver spoon. When you have the desired amount shape into a pat and broil on a hot, dry spider. When done add a little salt. Or a piece of rare round or sirloin steak, the outer part having been cut away, is scraped or shredded with a knife.

Spinach.—Cook spinach in salted water until tender. Pour cold water over it and drain. Then rub through a fine sieve.

Baked Apple.—Apple baked three-quarters of an hour; skin and core removed; two tablespoonfuls of pulp strained through a fine sieve.

Cereal (four preparations).—Cereal preparation three-quarters of a cupful cooked with one quart of water for three-quarters of an hour in a double boiler. Add enough water to keep moist.

Oatmeal.—Have a pint of water boiling in the top of the double boiler; add one-half teaspoonful of salt and drop in gradually one-half cupful of oatmeal flakes, stirring all the while. Cook for three hours and strain through a wire sieve. Pour on it one or two ounces of milk.

The following are some of the things a baby should not have: Candy, cakes, doughnuts, pastry, fresh bread, griddle cakes, sirup or molasses, pork or tough meat of any kind, bananas, overripe fruits, pickles, tea, coffee, soda water or beer nor tastes of foods from the family table.

CHILDREN'S TEETH.

Take Them to a Dentist Regularly and Insist Upon Use of Toothbrush.

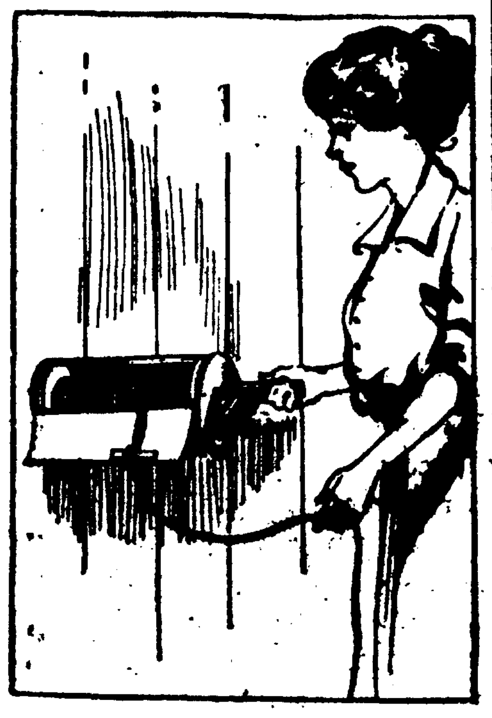
It is most important to get young children into the habit of regularly cleaning their teeth. This should be done after every meal, but sometimes that is not possible. At least the children should scrub the teeth as a matter of routine after breakfast and the last thing at night.

Dentists are advising that the gums as well as the teeth should be scrubbed carefully. First, because it is just at the place where the gum and tooth meet that decay begins and, second, because friction of the gum brings a good supply of the blood to the part, and that, of course, nourishes the teeth and preserves them. Any simple tooth powder can be used, and after scrubbing the children should rinse the mouth out with clean cold water.

The mother should remember how important it is to preserve the first teeth. Any spot of decay should be stopped immediately. The wise mother takes her children regularly to the dentist, perhaps once in six months, to have the teeth inspected. This is a real economy in the end.

HINTS FOR THE BUSY HOUSEWIFE

Reel For Keeping Clothesline In Good Order.



The proper way to take care of a clothesline is to house it in such a way that it will be protected from the dust in the air and other causes which are likely to contaminate it. Thrown around in a loosely made hank formed over the hand and elbow, as it is most frequently done, the line becomes soiled and makes its mark on the clothes which are hung upon it to dry. By the new method the line is permanently secured to a spring reel, which is mounted on a cylindrical case, where it is protected from the weather. The usual size is supplied with 100 feet of rope, which may be drawn as desired and passed over the pulleys and hooks. It has also a crank and ratchet by which the rope may be tightened after being arranged for the clothes. The device is secured in place by a couple of hooks, and when it is desired for any purpose to remove it the apparatus may be taken down without the use of tools.

Cottage Pudding.

One-half cupful of sour milk, one level teaspoonful of soda, one cupful of sugar, one egg and flour to make a batter as stiff as ordinary cake batter. One-half cupful of sweet milk and one and one-half teaspoonfuls baking powder may be used instead of the sour milk. Flavor with any spice or vanilla. Bake in a wide, shallow pan and cut into two-inch squares. Have ready a sauce made with one pint of water, four tablespoonfuls of sugar and two level tablespoonfuls of flour rubbed into enough warm butter to make a cream. Have the water boiling, add the sugar and then the flour and butter, stirring rapidly. Flavor with lemon or vanilla. Put the cake squares into cereal dishes or saucers and pour the sauce plentifully around them.

Asparagus Salad.

Cook asparagus, taking large heads, until tender. Drain and chill; then cut in inch pieces. Make in the salad bowl a dressing in which the yolks of two hard boiled eggs are used with a teaspoonful of English mustard, salt, pepper and paprika to taste, a large spoonful of vinegar and three to four spoonfuls of olive oil, beating until thoroughly blended. Toss the asparagus in this and serve on lettuce leaves and on each plate put a little heap of minced hard boiled egg and some minced cucumber pickle.

Candied Cherries.

Make a light sirup, using half a pint of water to each pint of sugar, and let it come to a boil; cook for two minutes. Pour this over the fruit and let it all stand a day and a night. Drain, add to the sirup half the quantity of sugar used the day previous, and boil until it is dissolved. Pour this over the fruit and let it all stand for forty-eight hours. Repeat the process, letting the fruit stand in the sirup four different times. Then drain and pack in layers in boxes between waxed paper.—Country Gentleman.

Cafe Frappe.

Make one quart of very strong black coffee, strain and cool, and to this add a pint of cream stiffly whipped and sweetened. Turn into a freezer, pack in ice and salt and let it stand one and a half hours. Serve in tall glasses with a rosette of whipped cream on top, and with it serve macaroons or lady fingers.

Cocoanut Pie.

Beat together thoroughly two eggs, three tablespoonfuls of sugar and a pinch of salt. Add two cupfuls of sweet milk, pour into a deep pie tin, well lined with good pastry. Sprinkle over the top two tablespoonfuls of grated cocoanut. Bake until the custard is firmly set and serve cold.

Mending Woolen Goods.

When mending wool goods, use threads pulled from the same goods, and darn closely on the wrong side, being careful to follow the weave of the material. When it is finished, press under a damp cloth on the right side. If carefully done the darn will be hard to detect.

Removing Grease Spots.

For removing grease spots on black woolen clothing the following is excellent: Make a solution of borax and warm water and wash the soiled article in it, then rinse in clear water and dry.

[illegible] DEAN STREET, DIED

Mrs. Rose Northcott Street, 55, wife of Prof. J. Richard Street, dean of the Teachers' College of Syracuse University, died Monday night at her summer home on an island in the St. Lawrence river, near Gananoque, Ont. The body will arrive in Syracuse at 11:40 o'clock this morning and will be taken to the family home at No. 755 Comstock avenue.

Mrs. Street had been in ill health for several years and her death was not unexpected.

Mrs. Street, with her husband and three sons, left for the summer residence at the Thousand Islands about July 6.

Mrs. Street was a member of the First M. E. church and until her death became impaired was an active member of the congregation and a teacher in the Sunday school.

Mrs. Street is survived by her husband; three sons, Lockwood W., Walter and Northcott Street. The eldest, Lockwood, is a graduate of the College of Engineering, Walter is a student in the College of Medicine and the youngest will enter the university in the fall. Three sisters and ont brother, all of Belleville, Ont., also survive.

ALASKA SALMON CATCH ONLY 60 PER CENT NORMAL

Seward, Alaska, Aug. 11.—A poor year for salmon packers with a falling off of 40 to 50 per cent from a full pack was reported today by Captain Hansen, of the steamer Santa Ana, here from Bering Sea ports.

The Bristol Bay canneries, according to Hansen, lacked 40 per cent of their usual pack, while at Kodiak, Uyak, Seldosa and Port Graham the season closed with only a hlaf pack. A full pack, however, is expected from Chignik and Port Muller.

The heaviest run in Bristol Bay came July 4, while fishermen were celebrating. One fisherman caught three thousand salmon.

WORKING ON ADDITION TO TUBERCULOSIS HOSPITAL

Pulaski, Aug. 11.—The work of excavating for the addition to the Tuberculosis Hospital at Orwell has been started, under the direction of A. E. Olmstead, of Orwell, the general contractor. The work will be rushed in order that the addition will be ready for occupancy this fall. Hennessey Brothers of Oswego have the heating and plumbing contract and the Electric Construction & Supply Co. will do the electrical work.

Don't Hate the Rich.

"Don't hate a man because he has lots of money," counsels a Eureka philosopher. "Cultivate his acquaintance, and see if there isn't some honest way you can separate him from some of it."—Kansas City Star.

TODAY'S FASHION NOTE

Sport coats are particularly attractive as shown in the designs for early Autumn. The design illustrated is in grey, stripped with bright green and black to form a stunning plaid. The collar is of black velvet, but cuffs and belt are of the same material. Four yards of 54-inch material, with one-quarter yard of velvet make this coat.

Pictorial Review Coat No. 6376. Sizes 32 to 46 inch bust and 16 to 20 years. Price, 15 cents.

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.

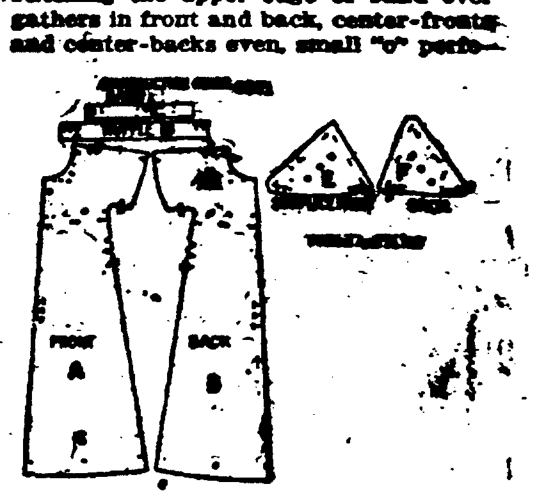
PRETTY NIGHT GOWN IN KIMONO STYLE.

A novel design for a nightgown. It is made in kimono effect and gathered into a band at Empire waist-line, with a straight ruffle.

It has become quite the perfunctory thing for lingerie to be fashioned after outer garments, hence the introduction of the peplum effect upon this kimono nightgown of fine nainsook. The neck is finished in round outline, eyelets being embroidered below the band for the accommodation of narrow ribbon. This treatment is repeated on the short sleeves. The embroidery on the front of the gown is done in eyelet and satin stitch.

To make the gown for a person of average size requires 4⅛ yards 36-inch material, with 1⅛ yard beading for the waist, 2 yards of 1½-inch wide ribbon and 4 yards of ½-inch wide ribbon.

The kimono effect is exceedingly simple to cary out, and the home dressmaker will be delighted at the quickness with which it can be put together. First close, the under-arm, sleeve and shoulder seams as notched. Turn hem at lower edge on small "o" perforations. Gather on crosslines of single small "o" perforations. The large "O" perforations in ruffle indicate front edge. Close back seams of ruffle and band; gather upper edge of ruffle between double "TT" perforations. Sew ruffle to band, center-back seams even, and bring front edges of ruffle together at center-front. Adjust band to position, stitching the upper edge of band over gathers in front and back, center-fronts and center-backs even, small "o" perforations in band at under-arm seams; leave the lower edge of band free.



This model may be adapted in two or three different ways, being equally pretty in straight effect, with a square neck, or finished with fichu lines front and back.

Nighties show many innovations. Ruffled shoulder capes are among the most unusual.

Pictorial Review Nightgown No. 6371. Sizes 32, 34, 36, 38, 40, 42, 44 and 46 inches bust. Price, 15 cents.

Russia Refused Offer of Galicia for Separate Peace With Germany

London, Aug. 12.—A special dispatch to the Times from Petrograd reaffirms Germany's overtures for a separate peace with Russia. It says Germany offered to Russia Galacia and the Dardenelles, with a guaranty of the integrity of her frontiers, Germany stipulating for Egypt, on a pretext of ceding it to Turkey, and for a free hand dealing with Russia's allies.

Because Russia contemptuously spurned the offer, the correspondent says, Germany apparently is endeavoring to develop and annihilate the Grand Duke's armies, is storming Kovno and beginning an advance whose objective is Petrograd, hoping the capture of the capital will frighten Russia into a pitiful peace.

Even if Petragrad is captured, which, in view of the neutral obstacles, seems impossible, the correspondent adds that Russia will continue to fight on to a final victory.

All the British newspapers this morning declare this is the unchangeable determination of every nation in the quadruple entente and appeal to President Wilson and the American people not to assist the German game by talking peace, as there can be no peace until the would-be destroyer of the democracies of the world is beaten.

The silver bullet, according to the Daily Telegraph, is finding its billet, and says this accounts for the pro-German movement for peace. To provide an ample supply of those bullets will be the object of a joint conference of the finance ministers of all the allied Powers, which is to be held here or in Paris within a few days.

GERMAN WARSHIPS SINK 15 SHIPS ON ONE DAY

London, Aug. 12.—German submarines renewed their activity and with other German warships yesterday sank fifteen vessels. Ten were British trawlers, four belonged to neutral countries.

The British patrol boat Ramsey was sunk by the German auxiliary cruiser Meteor in the North Sea. Four officers and thirty-nine men were saved. Five officers were drowned.

The commander of the Meteor, realizing escape from pursuing British vssels was impossible, abandoned his ship and blew her up.

The crews of the trawlers and of the neutral vessels were saved.

The Meteor was formerly owned by the Hamburg-American Steamship company, and was built at Hamburg in 1904. She was of 3.613 gross tons, 328 feet long, 44 feet beam and 18 feet deep.

Among the vessels sunk was the French bark Francois, the Norwegian steamer Garringer, the Norwegian bark Norma C. Asforia, the British steamer Oakwood and the Russian bark Baltzer.

The Francois sailed from Portland, Ore., March 22 for British ports. The Norma also sailed from Portland, Ore., on March 28.

The Norma carried 81,897 bushels of wheat valued at $131,-837, and was bound fos Queenstown for orders.

The cargo of the Francois consisted of 111,293 bushels of wheat, valued at $178,070. Both cargoes were exported by M. H. Houser, of Portland.

The British steamer Rosalie, which sailed from Shelds on August 10 for Portland, Ore., to load grain, has been beached. Her crew was saved.

Requests for Change of Government Out-Numbered All Others

"Why is the Chamber of Commerce interested in Commission Government?" This question has been asked by a great many citizens within the last few weeks. An explanation of the real reason may be appropriate.

When the Chamber of Commerce was reorganized last spring, the members were promised that they would have the opportunity to determine the policy of the new organization and, accordingly to each member was sent a blank requesting him to write down what in his opinion would most help the city, and what would most help his business. The replies to these questions were grouped and indexed and they are the basis of the program of work for the Chamber of Commerce.

A study of those replies shows that 32 members asked the Chamber of Commerce to secure more industries for the city, and that 54 members asked the Chamber to secure the Commission Form of Government, more equitable taxation and better financial administration. In addition to these 33 more asked for permanent improvements which can only be had by an economic and business-like administration. In other words, for every member who asked for new industries there were three members who asked for improvements in the City Government.

When the City Government Division first met they took up the study of taxation, but so insistent were the members, that they took up the larger and more inclusive problem of commission government. Among the factors which caused them to take up the study of Commission Government, when they did, were the repeated expressions of members of the Industries Division who said, "We cannot help present industries or get new industries as long as we have the present wasteful, unbusiness-like government, with high tax rate. We must have a business-like government like the commission form if we are ever to lower the tax rate and secure new industries."

For these reasons the City Government took up the study of the commission form, not because the directors of any outside organization suggested it, but because more members asked for that than asked for any other item or series of items.

The names of the members of the Chamber who asked for Commission Government, better city administration, equalized assessments, more permanent city improvements and a better financial policy, are on file in the office of the Chamber and may be seen at any time. They and they alone were the cause of the Chamber's making a study of Commission Government.

W. S. Hillick Opposes Plan to Swap Present for Better Government

(Continued from Page One)

of reorganizing and co-ordinating various city departments. He should be elected by the people at large and under no circumstances should he or any of his subordinates be appointed by any board. He should give such attention as is necessary to the proper supervision of such affairs. He should receive a liberal salary, proportionate to the amount of time necessary for him to devote to his duties. This, is that he would be desirous of being continued in office and would seek the approval of the whole people. I do not think any man is good enough to be given independent power and I do not think (if the matter is put within their control, so that they can easily voice their sentiments,) that the people of the City of Fulton are sufficiently intelligent and sufficiently interested in city affairs so that they will support a mayor, if he is efficient and exercises his office for the benefit of the whole people and I think they will remove him very quickly, otherwise.

In short, I believe in a board, responsive and responsible to the people. I do not believe that the commission is such a board. I believe in a city manager responsive to and dependent upon the ordinary people. I do not believe that the proposed city manager is such an official.

I do believe we need a change, but I think that the change should be made in the direction of the old village methods and that more authority and power should be given the voters and not less influence and authority as proposed by the commission government.

WARSHIPS AND DOCKS ON THAMES WERE SHELLED

Berlin (via Sayville), Aug. 12.—The German airships which raided the east coast of England Monday night and early Tuesday morning bombarded warships, docks, torpedo boats and buildings on the Humber, according to an official communication issued by the Admiralty.

The report says:

"During the night of August 9-10 German airships attacked fortified places and harbors on the English east coast.

"In spite of a strong defense, British warships on the Thames, the London docks, torpedo boats at a point near Harwich and important constructions on the Humber were bombarded. The results as observed were good. The airships have returned from their successful expedition."

It was officially announced in London yesterday thirteen persons had been killed and twelve wounded by this Zeppelin raid. Nothing was said about an attack on British warships and docks.

CARNEGIE AIDS GERMAN CAUSE, SAYS GAUTIER

Paris, Aug. 12.—"Would it not have been better if aCrnegie had remained poor?" So says Emile Gautier in the leading article in France De Demain, wherein he arraigns the "Steel King" as follows: "It is Carnegie who subventions innumerable lectureres and pamphleters to spread the German gospel in the two Americas, even in Europe and to our very doors.

"It is Carnegie who inspires and maintains agitation in favor of some sort of peace where of the whole profit will belong to the incendiaries, executioners, pirates and wreckers to whom immunity will thus be assured. He will know what the meetings recently held in Geneva to elaborate his plan for international peace congresses will have cost him. He knows, too, the cost of the attempts that have been made to corrupt certain politicians and party chiefs in neutral countries.

"Such is the outcome of the existence dedicated to the benificence, justice and fraternity. This Crbesus who has been pointed out to our millionaires as a model will in the end be dishonored as the accamplice of a new Attila banned by humankind and history."

EASTLAND OWNERRS ARE FOUND GUILTY

Chicago, Aug. 12.—Unusual in that employes are not made the scapegoats, indictments charging manslaughter and criminal carelessness in the Eastland disaster were returned before Judge Kersten, in the criminal court. The captain and engineer of the excursion steamer are charged with the minor offense, but four officials of the St. Joseph-Chicago Steam ship company are indicted for manslaughter.

Bonds were fixed at $20,000 each for the company officials. W. C. Steele, secretary and treasurer, has submitted to arrest. Counsel for George T. Arnold, president; William H. Hull, vice-president and general manager and Ray W. Davis, assistant secretary and treasurer, announced that they would resist extradition. They are residents of Michigan.

The officials were named in a joint indictment. Separate bills were returned against Harry Pedersen, the captain, and Joseph M. Erickson, the engineer. Bonds were fixed at $10 000 each.

'BITE THE BUBBLE,' NEW HEALTH RULE

Washington, Aug. 12.—After watching consumptives, persons with eruptions on their faces and men chewing tobacco using the new bubbling drinking fountains, a health inspector reported today that if improperly constructed or used the fountains might be a greater menace to health than the common drinking cup.

The inspection was made in Union Station, Washington. One boy seemed to be trying to swallow the metal ball from which the water spurted, while the lips of the drinker in almost every case were placed almost completely around the ball.

In using such a fountain an official of the Public Health Service declared the rule should be "bite the bubble," and the lips should not be permitted to touch any part of the fountain.

MAKING SHRAPNEL EMPLOYS 200 MEN

Watertown, Aug. 12.—About 600 men are now being employed at the plants of the New York Engine company and the New York Air Brake company in the manufacture of shrapnel, and new men are being daily added to this number as the new installation of machinery makes the increase of output possible. Of the total 600, there are about 300 at both places.

THE QUIRK.

The offering today isy our favorite, Henry King, in a two reel feature, "Dolfs of Intrigue;" "The Life Chain" "Soaking the Clothes," a one-part comedy. Tomorrow you will enjoy without extra charge, Rowles and Gilman, a clever singing and talking act, as an added attraction to the regular photoplay program, which consists of Charles Chaplin in "The Property Man" and a Mutual Masterpicture, "The Failure," in four parts, which features John Emmerson.

WELFARE WORK IS ARDUOUS

The Salary Connected With Administration of Mothers' Pension Law---Much Time Required.

Apparently there will be a sufficient number of duties to keep the cembers of the Child Welfare Committee busy wren it is appointed and cases begin to arise under the widowed mothers' pension law. Inquiry has revealed that fact that many persons, including some of the members of the committee, are in ignorance as to the duties the officials will be called upon to perform.

County Judge H. D. Coville, who appoints the officials as provided by law, explans that their duties will embrace looking into cases of children whom it is proposed to leave in the custody of dependent widowed mothers instead of placing them in institutions. The law provides that dependent widows with children may apply to the board for relief to care for children, in cases where it seems good to the members that the children should remain in the care of the mother rather than go to an institution.

In no case, according to the law, may the application be granted where it appears that the cost of maintenance at home will exceed that at an institution for homeless children. The commissioner's members are to meet at least once each month. Although the law gives them power to establish an office, it is believed that because of the county superintendent of poor being exofficio head of the board they will use that official's office for their purpose.

No compensation is provided for the members, but they are to have reimbursement for traveling expenses, and other necessary expenditures made in the performance of their duties. The commissioners are to serve six years.

CROP PROSPECTS.

When it comes to the sinews of war as distinct from its accoutrements, Uncle Sam can give the world an example of preparedness unexampled in history. Whatever the deficiencies and anxieties should he go to war, he at least need not worry concerning his food supply. No conceivable combination of enemies from without his borders could starve him into submission. So much for the military significance (and in these evil days it is military significance which first suggests itself) of the governmental crop report.

But most fortunately there seems little immediate likelihood that he need treat his vast food supply as other than simply a bountiful surplus of the good things of life to be knocked down, once his own needs have been met, to the highest foreign bidders. As for its financial significance, then, it seems obvious that no country could wish a more fundamental basis of prosperity. A fat list of record crops and a lively foreign market have been at the bottom of more than one boom in this country's history. They saved us from thed umps last fall long before the "war orders" began tickling the stock market, and they promise to lead the way this fall in a return to the good times of a decade ago. As against their overwhelming pressure for prosperity, affecting directly thep ocketbooks of a third of the population, the traffic in munitions seems an incident of merely local interest.

There is just one more item in the present program of self-congratulation which deserves mention. Coincidentally with the government's crop report as of August 1 has come the announcement that the Interstate Commerce Commission has decided to grant an increase of rates to the Western roads, affetting particularly the grain-carrying roads of the Northwest. This should help decidedly to hasten the diffusion of the wealth that is to pour in upon the farmers. It would seem to be the last necessary drop of oil on the machinery of national industry.

How brilliant the outlook compared with that of a year ago!—N. Y. Tribune.

Bulgars Looking for German Victory to Make a Decision

Sofia Government Considering Whether Teutonic Gain Against Russia Offsets New Drive at Dardanelles; Greece Is Firm.

London, Aug. 13.—The situation in Poland and the Baltic provinces is changing but little from day to day, and public interest is being turned to the Near East, where the diplomatists of the Quadruple Entente Powers are endeavoring to revive the Balkan League and bring all the Balkan states over to their side and to the armies of the Allies which are battling against the Turks on the Gallipoli Peninsula and in the Caucasus.

The diplomatists of all the belligerents for the moment are concentrating their attention on Sofia, for Bulgaria holds the key to the situation. It is said she is being smiled upon and offered territorial concessions as an inducement for her to join one side or the other or to remain neutral. Both the German and Entente Ministers are declared to be finding their endeavors hindered by their friends. Greece and Serbia are unwilling to concede to Bulgaria the parts of Macedonia which are her price for joining the Allies, while Turkey is opposing concessions which Austria and Germany desire her to make to insure the continued neutrality of the Sofia government.

Bulgaria, it is asserted, is weighing the victory of the Austro-Germans have gained in Poland against the renewed attacks of the Allies in the Dardenelles and the reported signal victory which the Russians are said to have won over the Turks in the Caucasus and which the military experts here believe will keep the Turks quiet on that frontier for some time.

The Balkan capitals are showing the liveliest interest in the reports that the Germans are preparing to launch a campaign against Serbia, according to special dispatches from Bucharest, Sofia and Athens. Several of the correspondents declare the proposed German offensive against Serbia would be a "blessing in disguise," because it probably would bring about a union of the Balkan states.

In an interview printed in one of the newspapers the Serbian Minister at Rome is quoted as saying:

"I do not believe any concession from Serbia would remedy the situation in Sofia. Even if we ceded all Serbia Bulgaria would still find a pretext for non-intervention. Only one event can possibly unite the Balkan states in the present situation, and that is a German attempt to force a way through Serbia. Such a step would impel Roumania to come to the rescue, and it probably would bring in also Bulgaria and Greece. As a Serb I cannot with for a German invasion of my country, but I should consider it providential for the welfare of Europe."

The editorials in the newspapers this morning express the belief that the Balkan situation is hopeful for the Quadruple Entente Powers. The general impression conveyed by the editorials is that Serbia will be pressed successfully to yield to the Bulgarian demands and that the diplomatists of theh Entente Powers apparently now are engaged in trying to arrange a suitable compensation for Serbia. The assertion is made that if the Allies win Serbia probably will receive the whole of Bosnia and Herzgovina, with an outlet to the Adriatic and an indirect outlet through Croatia to Fiume. This, it is declared, will represent at least ten times the value of the concessions which she is asked to make to Bulgaria.

Germans Prepare for Fresh Drive Against the Russians

London, Aug. 13.—The arrival of reinforcements for the German armies operating in the Baltic provinces has brought about a renewal of activity north of Kovno. The Russians in this region also seem to be gathering fresh troops to check whatever movement toward Riga and Dvinsk the Germans may elect to undertake.

An intense bombardment of the Russians in the Kovno fortress, followed by assaults on the forts, apparently has had no effect on the solidity of the positions. The great Krupp guns that reduced the Belgian fortresses are meeting with less success here, although military observers say it probably is due to the exceptional strength of the outlying Russian infantry.

The Russians continue their retirement in Poland, but all the while they are retarding the German advance, which now is regaining momentum, by repeated counter-attacks and stubborn resistance wherever the conditions are favorable. There still is considerable distance between the German armies to the southeast and northeast of Warsaw, so that seemingly the Russians will be able to make good their retreat.

The strength of the German offensive north of Kovno has led to the assumption by some of the military observers here, as told in a dispatch to the Herald yesterday, that the Germans now are aiming at Petragrad. It is believed, however, that the great stretch of marshy country between the present battlefields and the capital would make the adventure a dangerous one. Besides the Germans would first have to capture Vilna, Dvinsk and Riga, all of which the Russians are defending with strong forces which at any time are able to take the offensive.

There was no news from the armies on the Gallipoli Peninsula last night, but the British Admiralty issued a report on the operations of a British submarine in the Sea of Marmora, one of the fleet, which is interfering with Turkish communications by sea. This under water craft, which recently sank the Turkish battleship Kehyred-Din-Barbarossa, also has sent to the bottom the Turkish torpedo gunboat Berk-i-Satvet and an empty transport. Nothing was said in the Admiralty communication of the one-time German cruisers Breslau and Goeben, now owend by the Turks, both of which unofficially are reported to have been sunk.

CITY OFFICIALS APPEAR LOTH TO MEET RIVALS ON BASEBALL DIAMOND

Late reports from the training camps indicate that most of the city officials who were to have engaged in a game of baseball at Pathfinder Island one week from next Wednesday, have suddenly been attacked with violent cases of modesty, demureness and lack of confidence in their ability,—all of which is quite a surprise to their many friends who had expected great things of the game. The report is current that most of them fear undue publicity, and the well-known aversion of some to any notoriety bears out this statement.

George Washburn, however, is made of sterner stuff, and he announced this morning that he had accepted the managership of a city team, which will play the Pathfinder Boat club team on the date set for the city officials' game. Mr. Washburn will not only manage the team, but will supervise all rehearsals and receive all donations, having had long experience in both lines of work before he entered politics.

The probable line-up of the city team will comprise City Judge Wilson, Fred Feeley, City Stenographer John Pointer of the Water Department, John Allen of the Fire Department, Chief Dyer of the Police Department, and Officers Bray, Gordon, Pare and Smith.

Earl S. Brown, captain of the Pathfinder forces, said today that the club line-up was still undecided. He admitted that he had an abundance of good baseball material on hand and could not see where the city team had a possible claim to victory.

Selection—High Jinks .... Friml
March—The Big Elk .... Newton

AUBURN GROCERS PATRONS OF PUBLIC MARKETS

Auburn, August 13,—Two hundred bushels of potatoes were purchased in wholesale lots from gardeners on the trial public market this morning by buyers from Auburn grocery stores The wholesale trading today broke all records previously made. In addition to potatoes the buyersp urchased a large quantity of other products, especially corn.

Trading was brisk, especially early in the morning. On this account the volume of business today was greater than at any time since the market opened, although not so many people were present.

Announcement was made that the wholesalers would be at the market regularly from now on and that they would purchase in large amounts from the farmers. The producers have been making a special price to the grocers.

FINED FOR TAKING CARE OF WOUNDED EAGLE

Auburn, Aug. 13.—For performing what he considered was a humane act Fred. York of Sayre, Pa., a railroad man, was compelled to pay a fine of $20 before Justice of the Peace Louis K. R. Laird last evening. He was charged with having an American eagle in his possession, a violation of the game laws. The bird had been picked up by York badly wounded, and when he tried to nurse it back to health, it died.

Fruit Should Not Rot On Ground or Trees; Auction Market Now

As An Extra Inducement to Shippers a Low Commission Will Be Charged; Farmers Must Co-operate With Department.

Produce growers in this section and particularly those who have fruit crops this season, will be interested to learn that a contract has been closed in New York City by the State Department of Foods and Markets with the Fruit Auction company of 204 Franklin st. to handle all auction sales of peaches, apples and pears shipped from the farms of this state this fall. Ezra A. Tuttle, Commissioner of the State Department, in an address to the Grangers at their annual picnic on the Fair grounds two weeks ago, forecasted this event and explained the plans of the department for handling fruit this fall. If the auction mart proves successful other produce will be handled next year.

Beginning about Sept. 1 all fruit shipped from farmers in this locality and throughout this state will be sold at auction on the New York Railroad piers on West st. and samples will be on view in the Franklin st. salesrooms.

Commissioner John J. Dillon, of the department, closed the contract with the auctioning company yesterday. As Commissioner Tuttle explained in his address here, the project is part of a definite plan of the department to lower the retail prices of fruit in New York City, and to handle fruit which otherwise would be allowed to rot in the fields because the commission dealers did not wish the market to be overstocked. At the present time commission dealers are in command of the situation and the farmer can sell only what they wish to buy. If the fruit is plentiful he cannot sell it all, as the commission dealers wish to keep the prices up. Commissioner Tuttle gave some startling statistics in his address here, which prove that the New York public pay tremendous prices for foodstusff which are purchased at low prices from the producer.

Even if the auction market has the effect of lowering the wholesale price of fruit, the department is certain that the increase in sales necessitated by the popular demand will more than repay the farmer, who will get the best price, and fruit will be within the reach of many people who cannot buy it under present conditions.

The auction market will handle all fruit this year on a commission of 5 per cent., and the only extra charge will be for cataloging and handling samples, which may possibly amount to 2 cents a barrel.

Commissioner Tuttle suggested that all the farmers in one section of this county appoint one of their number to correspond with the department, which will explain the shipping rules and the time for shipments to him, and he may in turn impart this information to his neighbors. It is thep lan of the department to have every district represented by one man who shall act as agent for the department. The department must guarantee five carloads daily, according to Commissioner Tuttle, and the farmers must co-operate if they wish the department to be a success.

CITIZENS' UNION JOINS MAYOR COX AGAINST HOME RULE AMENDMENT

The Citizens' Union of New York City and Mayor Rosslyn M. Cox of Middletown, who passed through this city last month on a tour of the state in the interest of the Home Rule amendments to the State Constitution, have written letters to the Constitutional Convention criticising the Home Rule provisions in the amendment. Mayor Cox's letter is addressed to Hon. Seth Low and that of the Citizens' Union to Elihu Root, President of the convention.

Both letters embody practically the same arguments against the amendment as it now stands. A perusal of the amendments shows that cities are permitted to make laws for themselves by vote of the people and that the charter may be revised every eight years, at which time the people will be asked to vote on the question of revision. However, after the people of a city have decided that they wish change in the charter made, or that they wish a certain law amended and if the legislature does not take adverse action within specified time the resolution becomes a law.

The critics hold that the grant to the cities of power over their local affairs is inadequate, and that their powers to initiate legislation is valueless. Under the proposed amendment, they claim, partisan control of local politics will be perpetuated because all plans of the city must finally be submitted to the legislature as is the custom now.

The Citizens' Union urges that the presen amendments be abandoned and that others be substituted which will embody an adequate grant of powers of self-government to the cities of the state.

Opinions

To be Independent.

As a memorial in celebration of the coronation of the Emperor of Japan in the fall, it is proposed to erect a laboratory at a cost of some $5,000,000, in which the Japanese will develop their own dyestuffs and medicines in the future and arrange for their manufacture The funds will come partly from the government and partly from individuals whose income warrants the tax.

Japan intends to put herself in position to provide her own supplies of this nature in the future. Japan, like most of the other countriesof the world, has been depending upon Germany, and has been paying smartly for the goods. It is felt that it is just as well to keep that money home, and at the same time be independent of the German monopoly. The price of certain medicines has gone to exceedingly high figures, not only in Japan but in all other countries, and it is felt that something should be done to relieve the pressure that is sure to come at intervals when dependence is placed upon one source of supply.

One cannot help sighing sometimes for the ease with which they arrange these great projects in Japan. It is decided upon, and almost immediately it is set about. If government aid is needed, it is given in such form as will be most helpful. In a measure, the Japanese are about as good organizers as the Germans, and they most assuredly have an eye to business.—Utica Observer.

At Plattsburg.

The Plattsburg camp for business and professional men, like the Panama-Pacific Exposition before it, will have to take a back seat in the news columns as the days wear on and the novelty wears off. But for a day or so, while the uniforms and the Mayor's blisters are fresh, the Plattsburg bugles will sound reveille and taps for the wholel and. From the Atlantic to the Pacific men will devour detailed descriptions of the glad manual labor of the distinguished recruits, of their tent life in the rain, their early risings and aching limbs, with an envy skin akin to that which Tom Sawyer inspired in his playmates when he began whitewashing his aunt's fence.

And how many of our old and half forgotten friends are turning up in their khaki for their day in the limelight! There are Rhineleader Waldo and Lewis Stuyvesant Chanler, to name only two who have answered the call of country from their political graves, and, it must be confessed, looking none the worse for their burial. Several of the sons of great men. forever fitting into the shadows, stand out for the moment in bold relief against their army tents. And former heroes of the gridiron, of the diamond and of the court, whose names stir strange recollections of the century's infancy, have found at Plattsburg another instant of national attention. Not that national attention is what these gentlemen are seeking in their self-sacrificing desire to make competent soldiers of themselves. We do them the honor to believe that their indifference to it approaches that of Edward C. Kindred, the young man charged with stealing $22,000 from his contractor employers, who is thought now to make one of their number.

But the brief publicity will do them no harm, while helping mightily to recommend to the imagination of their countrymen the necessity and duty of military preparedness. It is indeed a fortunate thing for the cause of national defense that among the Plattsburg rookies are so many whose names will help consecrate the camp mud in print.—N. Y. Tribune.

An Ineffective Law.

In its present form, the so-called Sullivan law which makes it a penal offense to possess a revolver without a permit issued by a duly authorized officer, has very little effect that is good. Occasionally its penalty is imposed on someone who happens to be caught violating it, but more often a violator remains immune from arrest until after he has used the weapon which he unlawfully possessed to commit a crime for which the penalty is greater than that for the carrying of the revolver without permission. Sometimes the violator escapes arrest after commission of the greater crime.

The law does not restrain any one who wants to carry a pistol for criminal purposes. It is the simplest logic that a man whom fear of law does not turn from thoughts of crime that he may commit with the weapon will not be affected by fear of the penalty for carrying it.

However, the law may easily stand in the way of possession of a revolver by a reputable citizen who may some time need it for defense, since such a man is reluctant to apply for the permit.—Albany Journal.

RIDING VS. WALKING BACKWARDS

Readers of The Evening Times could not help a feeling of interest at the lengthy article which appeared in last night's edition, and which was prepared for publication by Attorney W. S. Hillick.

In the lead of Mr. Hillick's letter the present city charter suffered by comparison. Said Mr. Hillick: "The present charter of the City of Fulton is too cumbersome and involved for a city of this size. There is too much distribution of authority." And Mr. Hillick opposes Commission-Manager form of government, which is a concentration of authority—the authorities being elected by the whole people and not by the wards, making the aldermen subservient to a small portion of the city only.

Now that Mr. Hillick has been given an opportunity of expressing his opinion of a question that is in advance of the present time in Fulton, but not a whit in advance of the times elsewhere, it is not amiss to point out his advocacy of a return to the village form of government, that once was, but which is being supplanted even in National affairs, because the people are clamoring against unwieldly instruments of government.

Before returning to the village form of government, let us remember that riding backwards in a railroad train is distinctly injurious to the brain and nervous system. It is responsible for headaches, vertigo and many disorders. If we must go backwards then let us be prepared to cure the disorders that would eventually ensue. Let us not go as fast as we should were we to embark on a train. Let us walk backwards. Walking backwards instantly relieves the congestion that results from seeing a city administration change every two years, or before it has had time to "get the swing of things;" before it has had time to become equipped with administrative intelligence.

The city's nervous system is disordered. This city has been riding backwards—not walking backwards. Its frequent changes of complete sets of officials are conducive to one condition, and one only—chaos, with consequent inefficiency, and a state of nausea is the result. The taxpayers are nauseated and after a brief term in office the officeholders get a strong feeling of the same disorder, just as would any manufacturing plant in the city were its executive head to be changed once in two years.

In the face of Mr. Hillick's admissions and contentions for the adoption of the Home Rule charter, which is admittedly an inferior article—a subterfuge, why continue to ride Why not walk back to the village form of government? In time the walking will do us good. It will force upon us the conviction that to get efficiency from a board of aldermen the people of the entire city must vote for that board. In this way only shall we secure representative government.

THE IGNORANT MAN

The ignorant man is a dangerous factor, a menace to any community or any country. The ignorant man is a tool, and can be used to do things that a clever man will side-step.

The ignorant man is an animal, and this means his passions are strong; and the stronger his passions, the more feeble his conscience, the more dangerous the man.

We are indebted to Europe for a lot of valuable American citizens and accessories; but when the inflammable individual from Russia, from France, from Germany—when the women of England walk in crowds through our streets to teach us how to reorganize society, how to run politics and business in this country, it is time for us to begin to teach.

The nihilists, communists, socialists, anarchists, have a right to be here and to be heard, and this increases our responsibility to teach. They are not so much to blame as we are.—Silent Partner.

WHOM DO WE SUPPORT?

WHAT if we should go to one of our local storekeepers and say: "Here is a ten-dollar bill; I want you to buy for me such-and-such an article, made so-and-so, this color, that size, and deliver it to me at your convenience—say 30 days."

Along comes another townsman, and another, still another, until 50 of us, all living here in our community, shall have placed in the hands of the storekeeper a sum amounting to a thousand dollars, with similar instructions.

We would then have treated our local storekeeper with the same liberality as we, who have been buying of the mail order houses, have treated these monopolistic concerns. We would have then supplied him with cash capital sufficient to buy what we ordered and give him a fair profit on his deal.

Yes, we would thus enable him to take a trip to the city, buy from the manufacturers the articles desired, ship them to us, spend a day or two enjoying himself if he so pleased, and leave him a fair percentage of profit over and above the cost of the articles and his expenses.

DO WE DO THIS? YES, WE DO—NOT.

But this is exactly what we do with the mail order man in the big city. We send him the money in advance. He has the use of our cash for the purchase of his merchandise. He sends us whatever he chooses and if we do not like it we can whistle for our money.

He takes our money and buys that which we have ordered. Then he may take a trip to Europe if he so wishes, all at our expense.

Few of us realize that we, the people outside the big cities, furnish the capital for the conduct of the big mail order houses. We do not stop to think that it is our money which is building those great structures which are the pride of Chicago and some other cities. We do not stop to consider that we are the capitalists who are supplying the sinews of war against our own local business men.

JUST THINK OF IT—DIVIDENDS OF FIFTEEN MILLIONS OF DOLLARS PAID TO THE BIG MEN IN THE MAIL ORDER BUSINESS AS A PROFIT EACH YEAR ON OUR MONEY.

We send the cash in advance to them. They require practically no investment except for the printing of their catalogs and other stationery. They are doing their business on the money which we, poor, deluded country dwellers, send to them, when we are only cutting our own throats and helping to diminish the prestige and strength of our local tradesmen.

What would be the result if we should hand our dollars, in advance, to our local storekeepers and give them the same chance to make profits, without investment? What would be the effect on our community?

It would mean prosperity for us all. It would mean more taxes to be paid by our business men, improvements of a municipal character, better school facilities, better street lighting, better paving, etc.

Of course, our local storekeepers do not expect us to do business in this way. Yet why should we not? We do it with the mail order houses and when we are fooled we take our medicine because we are ashamed to let our friends know how we have been buncoed.

But we should do this—we should give all of our business to those men who have made their investments in our town, who are trying to build up the community, who are paying the taxes and who are helping us to increase the value of our real estate holdings. We all know that the value of our houses and lots, here in town, will be increased as the community advances in prosperity, and the only way for the community to advance is for our business men to do an increased business.

WE SHOULD PATRONIZE THE MEN WHO ARE TRYING TO HELP OURSELVES. We all hope to advance. We all hope to become prosperous.

When we buy from the mail order house we are helping monopoly to put our storekeepers out of business. When we send a dollar to the big city, instead of spending it at home, we are depriving our children of some of the opportunities for education which they are entitled to.

Let us spend our dollars here at home, with the merchants who are trying to keep up the schools and other local advantages which we cannot have for our children unless we have a prosperous community.

Let us not forget that the mail order man does not pay any of our taxes in this town. The taxes are paid by the local business men, at least the greater proportion, and the more business we do with them, the more taxes they must pay.

LET US WAKE UP TO A CONSIDERATION OF OUR BEST INTERESTS.

LET US SUPPORT THOSE WHO HELP US, AND OUR CHILDREN.

NOTED DOCTOR CLAIMS CURE FOF MENINGITIS

Melbourne, Australia, Aug. 13.—The discovery of a specific for cerebro spinal meningitis was announced today by Dr. Richard Bull, director of the Bacteriological Laboratory of the University of Melbourne. Dr. Bull stated that eucalyptus would destroy the germ.

The medicinal properties of the oil obtained from leaves of the eucalyptus tree have long been used in recognized treatments. It has been used in treatment of microbe diseases of the lungs and bronchi, and employed as an antiseptic.

Assistant Secretary of the Treasury Byron Newton is reported in the Washington Herald of July 29th as saying that there was a working balance in the treasury of $125,000,000. That assertion must have been made July 28th. The statement for that date shows that the net balance in the general fund was $65,793,048.65. Either Mr. Newton was sadly mistaken, or the Democrats contemplate a raid on the gold reserve fund.

OUR WASHINGTON CORRESPONDENCE

News Mostly of a Political Nature From the Nation's Seat of Government for Times' Readers.

Washington, August 13.—"As it now appears, the big task confronting the resolutions committee of the next Republican national convention will not be the framing of a declaration on the tariff. The country will await with far more interest what is proposed in connection with our foreign relations." The foregoing is the opinion of the Cleveland Plain Dealer (Dem.). But we fancy the Republican national convention will have no difficulty in dealing with the question. The Republican party is coming back into power. It will bring back with it a foreign policy such as was practiced by Seward, by Blaine, by John Hay and by Elihu Root. 'That's all the platform need to say on the subject. The country will understand and endorse a declaration like that. And so will the Plain Dealer, 'way down in the bottom of its heart.

* * *

The treasury department has ordered a further withdrawal of government funds from the national bank depositories, and by the end of this month more than eight millions will have been thus transferred from the local banks to the regional reserve banks. The government will lose 2 per cent interest which it now receives on these deposits, but it is believed that the transfer will have the effect of forcing the national banks to rediscount their commercial paper with the regional reserve banks. This would enable the reserve bank system to pay expenses, which it has never yet been able to do. But it can hardly be argued that a banking system which requires artificial forcing of this kind to make it profitable is altogether an unmixed success.

* * *

As one contribution toward the fulfillment of the Democratic promise to reduce the high cost of living, the Bureau of Mines announces that it can now produce radium for only $36,050 per gram. This will enable the impoverished speculators in "war order" securities to have radium on their tables at least once a day, and will be of tremendous encouragement to workers in other enterprises who are now on reduced time, ower wages or laid off altogether.

* * *

Theodore Douglass Robinson, once chairman of the Progressive State Committee of New York and always nephew of the Colonel, advised all Progressives in New York State to enroll with the Republicans this year upon the ground that the advanced principles which they espouse "can best be carried forward through the medium of the Republican party." This is sound common sense. It has already been put into active practice by most Progressives and in 1916 there will be no Republican division which will again put a minority party in control of national affairs.

* * *

The Republican argument against free trade is well given by Representative Humphrey of Washington, who said: "Under free trade you stop production. You stop the demand. You throw men out of employment and stop the payment of wages. You paralyze the entire industrial system of the country, and under a Democratic administration you can neither buy at home or abroad. Cheap goods are of no value to the idle without money."

Children Cry FOR FLETCHER'S CASTORIA

HOME TOWN HELPS

DECRY THE WOODEN FENCE

Many Cities Are Working for the Abolition of What Is Generally Called a Nuisance.

War is being declared upon the wooden, tight-boarded fences which disfigure the back yards and alleys of so many cities. Such fences are declared to be "time-honored breeders of fires, crime and disease," and officials of the health, police and fire departments everywhere are urging that they be prohibited by law.

The wooden fence probably came into use when lumber was cheap and privacy seemed attainable by this sort of screen. But with the building of rows of two and three-story and even higher dwellings, privacy is invaded by the eye of the neighbor in the upper story and is no longer a valid excuse for the evils promoted by the wooden fence.

Statistics show an unusually high percentage of serious fires in localities where the wooden fences abound. A fire starting in one block may easily be carried through a whole block by the fences.

These fences also are a great hindrance to the police. They prevent the proper inspection of a neighborhood, serve as screens behind which crimes can be committed in safety and supply hiding places for burglars and sneak thieves while waiting their opportunity to break into houses.

Other charges in the indictment of the wooden fence are that it is unsightly, that it encourages the accumulation of disease-breeding rubbish and that it shuts off the light and air from what would otherwise be attractive playgrounds for children.

WOMEN WANT A CLUBHOUSE

Efforts in Tacoma Are Worth Imitation in Every Town and City in the Country.

The clubwomen of Tacoma, Wash., are making a quiet but consistent effort to have a clubhouse. Their association has already more than $1,000 in its treasury, and is constantly adding to the fund by means of entertainments, sales, subscriptions, etc.

Tacoma has a larger number of women affiliated in clubs than any other city in the state in proportion to its population, yet it has no clubhouse. In Seattle the clubwomen have a fine structure that fills many wants as a place for lectures, concerts, regular club meetings and a central gathering point, uniting the interests and efforts of women. Bellingham has two woman's clubhouses, and Olympia has a woman's clubhouse that serves many needs in the capital city.

The Tacoma women feel certain that their activities and their usefulness in civic life would be increased had they a meeting place of their own. The experience of other cities has taught them that, outside the initial expense of purchase or erection of a building, the revenues from rentals make such a clubhouse self-supporting after it is once completely paid for.

Wild Flowers in Your Garden.

Wild flowers, always so attractive in the spring, should be taken up later when the weather becomes warmer, with roots attached, and planted on the north side of the house, where they will bloom for years to come. If not planted on the north side they must be sheltered in some manner. Take up a considerable amount of earth with each plant and do not disturb the roots any more than can be helped, and plant as soon as possible in deep trenches partially filled with fertilizer and rich garden soil, for they demand rich soil. Violets will flourish in almost any part of a garden, but the spring beauties and other fragile blossoms demand mixed shadow and sunshine. All wool ferns should be planted on the north side of the house. Maidenhair fern does best when planted in a crock and kept on the porch.

Ornamental Flower Boxes.

Ornamental flower boxes placed in conspicuous places on the roof form a feature that is fast coming into favor among bungalow owners in southern California. In shape and finish these boxes are made to harmonize with the architectural treatment of the building, and when filled with plants produce a striking effect. The general use of these boxes is made possible through the fact that most of the bungalows in this section of California have flat roofs.—Popular Mechanics.

Muffler Should Be Used.

In several American cities societies have been formed for the prevention of unnecessary noises. It is a good idea, and should be encouraged. It is remarkable how many of our city noises are avoidable. They tend to increase nervousness, and to mar the enjoyment of life by those whose sensibilities have not been blunted.

The Contentious Kind.

"Doppel seems to take a great interest in government statistics."

"So I've noticed."

"But I fear he's prompted less by patriotic motives than by a desire to get a basis for an argument."

Meals on a Man-of-war.

All food served on board a man-o'-war is carefully inspected and prepared under the close supervision of the commissary officer. Here is a typical Sunday bill of fare:

Breakfast.—Baked pork and beans, bread, butter, coffee.

Dinner.—Roast veal or roast beef and gravy, stewed tomatoes, mashed potatoes, bread, butter, coffee.

Supper.—Bologna sausage, cheese, potato salad, bread, butter, tea.

The menus of every ship are forwarded to the flagship every week so that the admiral may observe whether the men are being supplied with the proper food.—New York World.

Money and Politics.

In his reminiscences of Grover Cleveland George F. Parker tells a story of the prodigal expenditures in politics. A rich man who had been nibbling at the Democratic nomination for governor of New York asked William C. Whitney's advice. This is the advice: "Of course you ought to run. Make your preliminary canvass, and when you have put in $200,000 you will have become so much interested in it that you will feel like going ahead and spending some money."

Our Eyes and Reflected Light.

The human eye has passed through thousands of years of evolution until it has become best adapted to sunlight or skylight coming obliquely from above and resents strong illumination from any other direction. It is apparent that snow blindness, distress from white sand or water is not caused by the intensity of the light so much as by the fact that it is reflected up instead of down and is not stopped by the rather transparent lower eyelid. If the lower part of the eye is guarded with goggles no difficulty is found.

RILEY SCOUTS CONVICT ORGY "FRAMEUP."

Albany, Aug. 12.—John B. Riley, State Superintendent of Prisons, tonight branded as ridiculous the charge of Warden Osborne of Sing Sing that Patrick H. McDonald, the superintendent's confidential agent, had sought to frame up a convict "orgy" with an Ossining saloon keeper.

Riley had McDonald before him today and went very carefully into the charge of the "frame up," which Osborne presented to the Governor.

"Mr. McDonald has never been in a saloon in Ossining," said Riley. "It seems to me the admission that such a "frame up" was possible is a serious reflection on the prison management. If it is possible for convicts to be in the back room of a saloon the warden ought to be removed."

It is known that Riley has heard that convicts have visited an Ossining saloon, though not the one run by the man who is alleged to have told Osborne that the proposed "frame up" was suggested to him.

It is said here tonight that some time ago a convict complained to a keeper at Sing Sing that the convict's wife was being held as a white slave in the house which is a Raines' Law hotel. This story could not be verified by agents of the superintendent.

LOCOMOBILE COMPANY TO SETTLE WITH MEN

Bridgeport, Aug. 12.—W. H. Johnston, international president of the machinists' organization, said today indications were for a settlement of the labor differences with the Locomobile company of America without strike. The answer of the company is expected to be made tomorrow.

The reply of the Lake Torpedoboat company to the demands of its employes was delayed twenty-four hours.

ALBANY GOSSIP DAY BY DAY

Chronicle of Events and a Forecast of What is Doing in Officialdom---Special Correspondence.

By Frederic T. Cardoze.

Albany, Aug. 13.—Automobilists throughout the state are interested in the proposed amendment to the Constitution which would permit the State Department of Highways to let contracts for the construction of good roads within the forest preserves. The most important of these roads is the proposed highway from Old Forge to Raquette Lake and thence northward to Saranac Lake.

For many months the New York State Motor Federation has been doing its utmost to secure favorable action upon the above proposition by bringing before the delegates its argument that there is great necessity for the particular highway in question. Heretofore the State Highway Department has been prevented by law from opening a highway into the Adirondack mountains in that fully eighty per cent of the land there was controlled by the State Conservation Commission and was within the forest preserves of the state.

It is the object of the New York State Motor Federation to establish the fact that the Old Forge-Raquette Lake highway is a most desired link in the chain of highways through the state and George C. Donahue, secretary of that organization, has personally presented the argument of the federation to more than one delegate and to Commissioner Duffy of the State Department of Highways as well.

If the proposed route is authorized as the result of an amendment to the Constitution which would make it possible to build a state highway in the forest preserve, it will connect the Eastern Adirondacks with the western rnage of that mountain system and the consequence would be that automobile tourists could tour from Albany to Lake George, up the St. Lawrence valley into Lake Placid and the very heart of the mountains and thence proceed westward by way of Old Forge and Utica and yet not be obliged to return to Albany and tour westard up the valley of the Mohawk.

It would also be possible for tourists enroute to Buffalo and Utica from the various transcontinental trains to go directly to the heart of the Adirondacks without making a circuitous journey by way of Albany.

Another argument presented by the New York State Motor Federation is that if the desired change is made in the Constitution and the road contemplated is built, it will open the door to over one hundred thousand New York State motorists who have long desired to explore the beauties of their state. It will also permit thousands of people who do not travel by automobile to gain access to the Adirondacks.

But there are delegates who do not look with favor upon the proposed scheme. They hold that in order to preserve the Adirondacks it is imperative that the woods shall not be thrown open to the public and feel that a state highway would bring about this result eventually in that jitney busses and higher priced vehicles would soon swarm through likt flies dropping off picnicers daily. This position may, however, be argued away by the advocates of the change.

The Constitutional Convention has adopted nothing finally as yet and the impression which prevails that the highway amendment has gone through is erroneous. As to its prospects conjecture alone may be resorted to at this time.

FOUR STATES WON, IS THE SUFFRAGISTS' VERSION

New York, Aug. 13.—"You ask me which of the four campaign states we are surest to win this fall? All of them!"

That was the conclusion Mrs. Carrie Chapman Catt, chairman of the Empire State Campaign Committee brought away from the conference among suffrage leaders of Massachusetts, Pennsylvania, New Jersey and New York at East Orange yesterday The conference is in connection with the celebration of the anniversary of Lucy Stone's birth, and the unveiling today of the tablet on the house at 16 Hurlburt street, Orange, where she lived during some of the most strenuous of her work for woman's rights.

MARY ELLEN ACT HERE TOMORROW

Takes Place of Another---Elephant Whose Mammoth Form Is Included to Be Decked With Banners.

There was a spirit of activity on the Fair grounds today that will be quickened each day for one week. Tomorrow one of the Fair's greatest show features will be here—the Maty Ellen Act, which embraces a man, two dogs and a monster elephant. The outfit will parade the city's streets each day for a week, all bedecked with advertising banners.

Many of the midway features are already installed on the grounds and more of them are due to arrive tomorrow and Monday. The agricultural exhibit, in charge of E. Victor Underwood of the County Farm Bureau, will be installed in a separate booth. Mr. Underwood is hopeful of securing a creditable collection of fruit, etc., even though the season is not advanced and many fruits have not ripened. Should the Farm Bureau manager be disappointed in his expectations in respect to securing fruit for show he will make of his booth an educational center for the farmers and their families. The correct and incorrect methods of fertilizing land and demonstrations of the effect of lime upon meadow grass; what to do when a field of oats becomes afflicted with smut, and numerous other topics are selected by Mr. Underwood for the enlightenment of Fair visitors.

The farm exhibit to be made here next week by Mr. Underwood will be seen at the State Fair, Syracuse, wherel ast year the Oswego County exhibit won many first prizes. While weather conditions in this county have not been favorable to growing fruit for market or exhibition purposes, it is believed that with the encouragement afforded by the Farm Bureau last year will result in bringing to this year's Fair a collection of fruit unequalled in former years.

ENGAGEMENT ANNOUNCED

Mr. and Mrs. Simon Frawley of 224 West 3rd st. have announced the engagement of their daughter, Miss Agnes, to Michael McGowan of Granby. No date is set for the wedding, but it will probably occur this fall.

"SCIENTIFIC STERLING"

The Gas Range that Burns Coal.

Ten o'clock, and the housework is all finished for the day. Breakfast cleaned up, luncheon laid out, dinner all prepared ready to put into the gas oven at five o'clock. The rest of the day for shopping, embroidery, the club meeting, or the movies. The "Scientific Sterling" makes it possible.

The "Scientific Sterling" is the very latest achievement in range construction—not a "double" or a "combination" but one range that burns both gas and coal, and takes up no more room in your kitchen than the ordinary coal range. Everything that you can do with either gas or coal is done even better with the "Scientific Sterling."

The "Scientific Sterling" does save labor, time, and fuel—it is easy to keep clean—and it does make housework easier.

Buy On Our Club Plan

Cash price, $77—$5.00 down—$2.00 a week—8 months to pay—30 days free trial.

Free delivery and free installation, which would usually cost not less than $10.

Free insurance—remitted payments in case of death or disability.

Free inspection and instruction service—and the strongest guarantee that we can write.

You will want the *"Scientific Sterling"* because it is the most perfect range ever built.
Isn't this offering you terms that are worth while?
Remember—the Club Plan selling is limited to *Three* weeks. There are only *Eleven* days more.
Make your purchases now, while you can obtain these many money-saving advantages.

TONIGHT'S BOUT AT ARENA CLOSES SERIES

Tonight's program at the Arena winds up with a six-round bout between heavyweights, Bert Dwyer, who has knocked out his man in the last three matches, meeting Charles Gouse, a heavyweight from Rochester. Young Fisher, another heavyweight, meets Joe Grimm, of Rochester, in what will undoubtedly be a short fight, it being a case of who gets over the winning punch, as both boys will mix from the tap of the gong.

Young Meaney, of Fulton, is selected as a substitute in a four-round affair, and while he may not take part tonight, there is no doubt but what Tommy Ryan will have to yield to the clamor of his patrons and put Meaney on soon, as a number of times lately the fans have called from the ringside for the local lad's appearance.

BIRTHDAY SUITS, BATHING SUITS

Twin Girl Suffragists Shocked New Englanders Who Fled In Fear of Losing Their Morals.

September Morn has invaded Massachusetts, and New England is up in arms.

To be exact, there are two September Morns. They are the twin daughters of Mrs. Beatrice Forbes-Robertson Hale, Rosemary and Clemency, and with their older sister, Sanchia, and their mother, they are spending the summer at Scituate, Mass.

Swinburne Hale, the father, is alternating between Scituate and his law office in New York.

Like the rest of the colony, the family take a daily plunge in the surf, and Mrs. Hale, who holds strong views on the development of the physical, thought it would be good for the twins to dispense with bathing suits.

Unfortunately, Mrs. Hale, in her maternal ardor for her children's health, forgot that the young ladies had reached the mature age of nineteen months and could no longer disregard convention. Probably, absorbed as she is in writing and lecturing on suffrage and feminism, she had failed to heed the lapseof time and did not realize how grown-up Rosemary and Clemency were. Anyhow, she sent them out to bathe without a stitch of clothing from the ends of their dimpled toes to the tops of their fuzzy blonde heads. And the twins—such are the dreadful influences of a suffrage home—never had the remotest suspicion either that they might debase the morals of the poor, innocent, virtuous New England.

So it happened that one day last week they were having a lovely time chasing the waves and watching the drops sparkle on their little pink bodies, when along came Mrs. Peter F. Tague, wife of Representative Tague. Mrs. Tague told the nurse who was watching the gambols what New England thought of such doings. There were other bathers on the beach, Mrs. Tague intimated, and it was wrong to thus endanger the morals of the community.

The startled nurse pleaded that Mrs. Hale believed in allowing her children the utmost freedom of their limbs. She said that at Forest Hills Gardens, their home, they played all day in the simplest cambric rompers, and that in retired Scituate she didn't suppose there would be any harm in dis- and Clemency simply gurgled, and horrified New England fied, covering its eyes in chaste horror

The picture, recently taken at Scituate, shows how mature the babies are. Rosemary and Clemency are sitting in front, with four-year-old Sanchia behind. Sanchia wears a bathing suit when she takes her plunge. Rosemary and Clemency, owing to their outdoor life and sensible garb, are big for their age; in fact, suffragists point to them with pride as admirable instances of what a suffrage mother can produce in the way of children. But what do health and vigor and beauty avail if they are to be the means of destroying the morals of New England?

SURVIVORS OF TWO REGIMENTS TO MEET SOON

There are a few members in this city of the regimental association that comprises survivors of the 110th and 147th New York Volunteers who are looking forward to meeting their comrades in reunion in Mexico village on Aug. 25.

The program is being prepared and indications are that the affair will be one of the most elaborate held by the regiments in recent years.

The meeting will open at Washington Hall at 11 o'clock, and all veterans of the Civil War are invited to attend. An address of welcome will be given by Dr. L. D. Pulsifer of Mexico, with a response by George H. Lester of Oswego, president of the 110th Regiment Association.

A musical program will be given under the direction of Willis J. Ure. Dinner will be served by the Melzar Richards Relief Corps at 12:30 o'clock, followed by a social and business meeting at 1:30 o'clock. At the business session reports will be read and officers elected. Clark H. Norton of Syracuse is president of the 147th Regiment Association.

CONCERT AND SINGING BY BAND AND PEOPLE

Fulton's most excellent musical organization, the Elks' band, had to announce at a late hour yesterday a postponement of the East Side park concert until tonight, when the audience may be invited to join in chorus singing. The beauty of chorus singing as a part of community spirit was demonstrated by Harry Barnhardt during Chautauqua week. The demonstration made then left a pleasant recollection in the minds of hundreds of persons who desire to see a perpetuation o fthe scheme.

BIRTHDAY PARTY HELD ON WEST SIDE TODAY

Thirty little men and women are the guests this afternoon of Mr. and Mrs. Theodore J. Wilson of 70 West Second st. The party is in honor of their daughter, Lillian Wilson, who is celebrating her seventh birthday. Each child brought a birthday gift. During the course of the afternoon games will be played on the lawn, and a number of selections will be rendered by a Victrola.

At four o'clock refreshments will be served, at which Mrs. Wilson will be assisted by several neighbors.

REV. MR. HOLMES TO ADDRESS THE B. T. C.

Next Monday's session of the Borrowed Time Club has the promise of being unusually interested—from the fact that it is quite a while since a meeting was held; and too, because one of the club's favorite speakers will be present—the Rev. Mr. Holmes. The meeting is called for 2 o'clock in the afternoon.

The secretary has a very special reason for desiring the attendance of every member of the club.

MRS. JAMES FULLER.

Mrs. James Fuller, 75, died suddenly while on the porch of her home at Central Square on Tuesday evening. Mrs. Fuller had been in the garden and returned, when upon reaching the porch suddenly collapsed. She was born in New Brunswick, N. J. One brother, Robert Simpson, of Oneida, and a sister in Seattle, Wash., survive. The funeral was held today at Central Square.

JOSEPH MURPHY LOST ONE OF HIS THUMBS

Joseph Murphy, a local ironworker, engaged on the structural steel work for the new mill which is being built for the Oswego Falls Pulp and Paper company, had the thumb of his right hand entirely severed yesterday afternoon while engaged with other workmen in removing the blocks beneath a heavy steel rail.

Dr. Joy treated the injury and Mr. Murphy went to his home.

COMMISSION GOVERNMENT COMES BEFORE CITY CLERKS

Troy, Aug. 13.—City Clerk Joseph S. Hanlon president of the New York State City Clerks' Association, opened the annual convention of the association at Troy with an address yesterday. The clerks were welcomed by Mayor Cornelius F. Burns, who presented Mr. Hanlon with the keys of the city.

The clerks were entertained by the Troy Elks at their club quarters. Today Fred W. Streator of Watertown discussed methods of paying for public improvements, and Peter Collins of Mount Vernon presented a paper on conduct and rules of order for common councils.

This morning John P. McNamee, clerk, of Troy, discussed the new marriage license law, and Thomas Hogan of Niagara Falls spoke on commission form of government for cities. Both subjects are of great interest to the clerks. B. A. Taylor of Middletown, will take up the subject of municipal accounting.

ELKS TO HOLD OPEN HOUSE NEXT WEEK

At the regular meting of the Elks last night it was decided to hold two band concerts at the club house next week, on Wednesday and Thursday evenings. An ice cream festival will be held in connection with the concerts, which will begin at 8 o'clock and conclude at 10. After the concerts a special orchestra will play for dancing in the ball room until midnight. It has not been decided whether the dances will be open to the public or subject to invitation.

The band is rehearsing a special program for next week and the committee in charge of the ice cream festival is also making extensive plans for the affair.

DUBOIS' FAST TROTTER ARRIVES FOR MICHIGAN

Michigan King, 2:10 1-4, fresh from numerous victories on the Michigan Fair circuit, arrived in this city this morning from Monroe, Mich., and will become one of the string of fast travellers owned by George DuBois of this city. The racer is entered in the Oswego County Fair events next week and Mr. DuBois expects his new friend to clean up with everything in his class.

More than twenty horsemen have shipped their strings to the track already and the late arrivals are coming in daily. The oval is the scene of some lively brushes these fine mornings and there is every indication of some spirited competition next week. Among the local owners who will be represented are Charles K. Jones, Sherwood Magee, of the Boston Braves, and John W. Stevenson, who may enter his erack filly, Jerushiaville.

LOCOMOBILE COMPANY GIVES IN TO WORKMEN

Bridgeport, Conn., Aug. 13.—The Locomobile company of America capitulated to its workmen when the President, Samuel T. Davis, Jr., announced that virtually every concession demanded by the employes of the firm will be granted.

The eight-hour day, a 15 per cent. bonus and the same pay for piece workers in forty-eight hours as they receive now for fifty-five, were granted. The men were to strike today.

JUST RIGHT FOR THE HOME

IN AMERICA.

Sample of Ribbon Making by an American Manufacturer Which Compares Very Favorably With the Ribbons Which Come From the Looms of Europe. Ribbon Woven at Big Fair.

WAR, which brings with it so much of gloom, bloodshed and heartache, is never wholly an unmitigated evil. It is interesting to trace in history its economic effect upon our own country, and in one particular case the distribution of the silk industry in our own country after the French revolution.

Prior to the French revolution France had almost a monopoly of the silk industry, but when that country was torn by one of the terrible wars of modern times France was found by the silk weavers to be uncongenial for their peaceful occupation, and they sought refuge in other countries, some of them eventually coming to America.

Of course prior to this time the Earl of Southampton, who was treasurer and counsel to the Company of Virginia, was authorized by James I. of England to breed silkworms and manufacture silk in Virginia. This was about the year 1608 or 1609, but a

A SECTION OF RIBBON.

shipwreck overtook an expedition sent out by the Virginia company, and it was four years later that the actual beginning of silk culture was made in America.

Silk is unique in this respect. Its raw material is produced by the cheapest labor in the world, the silkworm being the busy little weaver, but the finished product is among the most costly of merchandise.

To the genius of Charles Marie Jacquard we owe our present facility in the weaving of figured silks and ribbons. Before the Jacquard invention silk weaving of figured goods was indeed a complicated labor.

At the Panama-Pacific exposition there is a ribbon loom in operation which shows great strides in the easy handling of figured ribbons. The section of ribbon shown here is acknowledged to be a masterpiece of ribbon weaving. It would be impossible to give in so short a space any adequate notion of how the weaving is done, but a person interested in the subject could get much information and entertainment out of either the encyclopedia or by obtaining a book which treats of the silk industry in the United States.

PREPARATION OF LETTUCE

When lettuce comes from the market clean in cold water and look it over carefully to see that all dirt and insects are removed. Place on a piece of dampened cheesecloth, then roll up and put on the ice, when it will be ready for use and will often stay fresh for a week. Some persons complain of sleepiness after eating lettuce. This is due to the lactucin in lettuce, which the milky juice contains. This juice may be removed by cutting from the lettuce the lower end of the heads or stalks and then standing the lettuce in cold water for several hours before using. Keep the head intact when you wish to quiet nerves or induce sleep.

The following is a pretty lettuce relish for luncheon or dinner and may be served in a small cut glass dish: Line the dish with lettuce leaves, upon which place either ripe or green olives and tiny red tomatoes. Chill with cracked ice. The olives and tomatoes may be taken with the fingers at any time during the meal.

Ham Balls.

One cupful of boiled potato, one onion and one cupful of ham, chopped. Season with salt and pepper, add a well beaten egg and a little milk. Form into small balls, roll in meal and fry in hot deep fat. Serve on buttered toast.

New Jersey.

New York.—Eunice Holmes, a full blooded Indian whose tribal name was Laughing Waters, was married by Alderman William F. Quinn in the marriage chapel in the municipal building to August Charles Erbach, a German farmer of Summit, N. J.

The bride, who is twenty-four years old, was born in Cherokee Indian territory. She does not know the names of her parents, both having died when she was a small girl. Until several months ago, when she came east, she lived with relatives.

Erbach is twenty-five years old and has been in this country five years. He gave his address as 312 East Fourteenth street, this city, but has a large farm in Summit. The couple will make their home on the farm.

MONKEY PAID COURT FINE.

Organ Grinder, Pleading Poverty, Had Gone to a Cell.

New York.—When John Fiorelle was arraigned in the Flatbush court, Brooklyn, charged with playing a hand organ in the streets at a too early hour, and was fined $2, he said he did not have the money. He was sent to a cell with his trained monkey, "Jocko." Later Fiorelle sent out word that his fine would be paid. When the organ grinder and the monkey were brought out, "Jocko" hopped on to a chair and handed up a two dollar bill to the clerk.

"Where did he get this money?" asked the court.

"Who, Jocko?" returned Fiorelle. "Oh, 'Jocko,' he carry his own roll, boss. I pay him back some time."

SING SING'S WICKED MUST WEAR YELLOW

Glaring Stripes to Punish All Refractory Inmates.

Ossining, N. Y.—Prisoners in Sing Sing who offend against the rules of the Mutual Welfare league, the self rule organization of the inmates, will no longer go unpunished. Recently the league held a meeting and arranged a system of colors whereby offenders will be disciplined.

The basis of each punishment inflicted by the league will be suspension from the rights of the league, but that is not all. Offenders suspended for five days or more will have to wear a yellow circle about as big as an orange on their neat gray sport shirts over their hearts; if suspended for ten days or more the shirts will be decorated with a yellow stripe straight down the back; if suspended for twenty days or more the other adornments will be supplemented by a yellow stripe down the front of the left leg of the trousers and a similar stripe down the rear of the right leg. If the offense is so severe that the punishment for it is suspension from the league for over thirty days the head of the offender will be shaved, and he will have to wear all the yellow decorations besides.

"My boys thought of the idea themselves," said Thomas Mott Osborne, the warden, "and I think it is fine. Their idea, of course, is that if a man offends against the rules he shows the yellow inside of himself. Therefore to punish him they have devised this scheme to show the yellow on his uniform."

Furthermore if an offender is made to wear any of these yellow decorations he cannot indulge in plaited shirts, white collars and the like. He must wear the prison shirt, practically the same as a gray outing shirt. Two offenders have already been sentenced to the yellow.

"They were found drunk," said Warden Osborne. "They said they had been drinking a mixture of alcohol, sugar and water, but you don't have to believe that if you don't want to. They were suspended for ninety days each and will receive all the yellow stripes there are and have their heads shaved as well.

"The executive committee of the league is still considering the case of Daniel O'Day, who escaped a short time ago."

BIRD HOUSE AT GRAVE.

Chicago Woman Places It at Husband's Tomb Instead of Headstone.

Chicago.—Near a shady nook in the Lake Forest cemetery, beside a large oak, stands a fountain. In the waters that tumble from its mouth a family of wrens play and sing.

Suspended from the lower branch of the oak is a handsome bird house where the wrens live. On the bird house and the fountain is this inscription:

"In Memory of Edward L. Hasler."

Beside the font is the grave of Mr. Hasler, who was fatally hurt several weeks ago in Suburban Lanes, when his horse shied and threw him. Mrs. Hasler decided to deviate from the custom of placing a headstone at her husband's grave and instead built the bird house and the font.

Dies Praying For Dead.

New York.—While Meyer Walerstein, seventy-five years old, of 336 East One Hundred and Twentieth street was offering a prayer for the dead in a synagogue at 337 East One Hundred and Twenty-first street he fell forward unconscious. Worshipers called Dr. Gorden from Harlem hospital. He said Walerstein was dead.

Spoiled

By SADIE OLCOTT

Miss Margaret Lawrence was an elderly maiden lady who, having pined for a mission, finally decided to take one upon herself. She selected the amelioration of the criminal classes. She visited them in prison, and many of them talked with her so persuasively about the unfortunate circumstances that had led them to become criminals that she came to believe they were all victims of their surroundings. This led her to advocate mercy toward them.

Miss Lawrence, who was wealthy, founded a society for helping criminals to lead a better life. Her society was really a corps of young women who were proud to be her assistants. They worked with her in the cause and though during a term of years they succeeded in lifting only a very few criminals up into a better sphere permanently, they persevered.

One of Miss Lawrence's objects was to induce persons against whom crimes had been committed to refrain from prosecution and to take the offender under their protection with a view to accomplishing his reformation. She found this a difficult matter. When one had been victimized by a confidence man he was usually bent rather on punishment than sympathy. When a woman lost her jewelry at the hands of a dishonest servant she considered it her duty to the state to prosecute the thief. Miss Lawrence spent much of her time in endeavoring to induce such persons to forego revenge and help bring about a new birth in those who had injured them.

Whenever Miss Lawrence saw an account in a newspaper of a theft or a robbery she would go or send one of her assistants to the injured person to induce him or her to be merciful. One day, hearing that an elderly butler had been caught purloining his employer's valuables she went to the jail, saw the thief, who had been arrested, and found him to be a man of fifty, of good appearance and, according to his account, the victim of unfortunate circumstances. His name was Homer Hawkins. When asked how he came by the name of Homer he said that his father had been a pedagogue and an admirer of the great poet. Homer Hawkins wept bitter tears over the condition in which he found himself and so worked on Miss Lawrence's feelings that she went to his late master, secured a promise that he would not prosecute the case and took Mr. Hawkins under her own especial care for the purpose of giving him an opportunity to show how cruel fate had been to him.

Hawkins was made major domo of Miss Lawrence's household. He seemed too respectable to be called butler or to perform the menial services of a butler. The truth is he did very little of anything, because Miss Lawrence had nothing for so respectable a person to do. He attended to the purchase of household supplies, and since his mistress paid cash for everything she bought her major domo was intrusted with the funds used for the purpose.

Never was a man more particular in rendering his accounts. If from the multitude of payments at any one time he was at a loss to account for a dime or a nickel he was so much troubled that his mistress sometimes expected that he would burst into tears. On such occasions she assured him that so trifling an amount was of no consequence, but in vain. He would mourn over the fact that after the unfortunate condition in which she had found him she would surely think him dishonest. He refused to be comforted.

One day Hawkins went out to do the morning's marketing. He did not return at the usual time and in the meanwhile a lady called on Miss Lawrence and she sought her kind offices in the matter of a criminal who had robbed her. The lady was willing to forgive the culprit, but asked Miss Lawrence to undertake his reform. The ladies' car was at the door, and she begged Miss Lawrence to go with her to a police station to see the prisoner. Miss Lawrence consented and on the way the lady told her that the criminal had called on one of her maids the evening before and had gone away with some valuable silver. He had been arrested in the morning.

When Miss Lawrence reached the jail, and the culprit was marched out of his cell the good lady was astonished. He was Homer Hawkins. His benefactress was at a loss what to do in the matter, but, turning to the lady who had suffered, was about to plead for the prisoner, when an inspector showed her a number of articles belonging to her that had been found in Hawkins' possession.

There was a difference in Miss Lawrence's neighbors losing valuables and losing them herself. She turned upon Hawkins, called him an ungrateful man, and then, after promising the inspector that she would appear against the prisoner, walked out of the office the picture of indignation.

This ended Miss Lawrence's individual work in the reformation of criminals. She disbanded her society, but in time joined one in which the work carried on was rather general than particular. Even this organized effort met with a very limited success. Nevertheless Miss Lawrence found that while particular reformations were not achieved, the condition of the criminal classes was bettered by the efforts of the society.

Easy & Practical Home Dress Making Lessons

Prepared Especially For This Newspaper by Pictorial Review

THIS BLOUSE HAS A TOUCH OF COLOR.

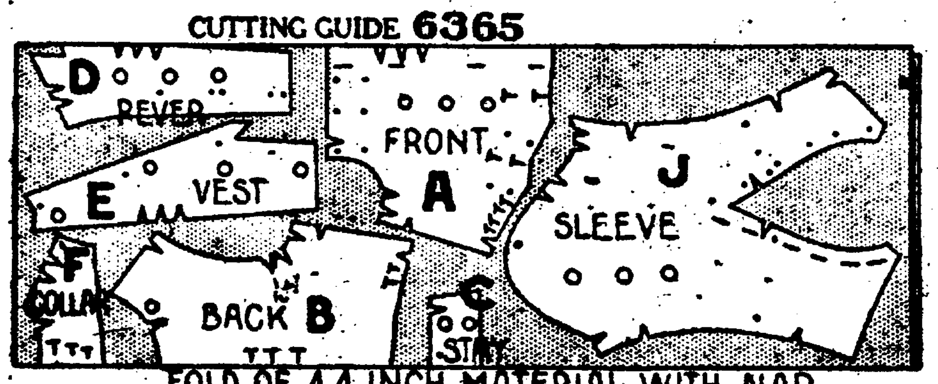
In the search for a smart blouse for autumn wear the fastidious woman will find nothing more attractive than this design in white silk crepe de Chine trimmed with blue satin.

The blouse designs for early autumn show even more than their usual variety, and the woman is hard to please, indeed, who cannot by diligent search find the model she wants. So many of the advance designs are impractical or unbecoming or frightfully expensive that the fastidious shopper may look over hundreds of blouses without finding just exactly what she wants. The accompanying model, however, is sure to please. It is developed in white silk crepe de Chine trimmed with revers and collar of ciel blue satin and a vest of lace. The back of the waist extends over the shoulders at the front, forming a yoke effect. In medium size the blouse calls for 1¾ yards 44-inch crepe de Chine, with ⅝ yard satin for collar and 1⅛ yards embroidery edging for the vest. The lower edge may be finished with a straight band or with a peplum.

Only two parts of the pattern are laid on a lengthwise fold of the material in cutting—the collar and the back—these being placed in the order named. To the left end of the crepe, opposite the collar and back the revers and vest are laid, if made of the same material. Where satin is used, however, care should be taken to place the sections of the pattern on the trimming fabrics in the same manner as on the waist material. If the vest is desired made of lace edging turn under the edge on small "o" perforations and place on material with the folded edge along the bordered edge of lace or trimming. The front, stay and sleeve are laid on a lengthwise thread of the crepe, and small "o" perforations indicate the shape of the neck outline.

There are many delightful effects among the new blouses, many of which are comparatively inexpensive. Even the handsomest of the autumn offerings may be copied by the home dressmaker by following well-given directions regarding the purchase, cutting and making of materials.

CUTTING GUIDE 6365

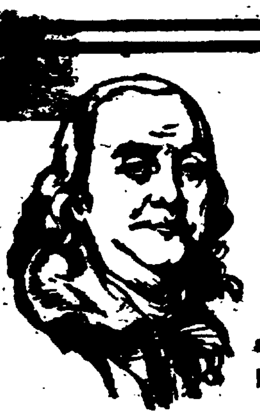


FOLD OF 44 INCH MATERIAL WITH NAP

Patented April 30, 1907

Pictorial Review Waist No. 6365. Sizes 32, 34, 36, 38, 40, 42, 44 and 46 inches bust. Price, 15 cents.

Economy Hints



A penny saved is a penny earned.—Benjamin Franklin.

THE finish of the woodwork and walls of the house is part of its permanent equipment which plays an important role in its general attractiveness and the ease with which it can be taken care of. Woodwork of the baseboards, doors, window casings, etc., should be easy to dust and wash. This means round corners and no elaborate moldings. Whether or not such surfaces should be painted or stained and varnished depends partly upon how good the wood is and partly upon personal taste. As a general rule, varnished woodwork is easier to keep in order than painted, but paint covers up poor wood better and can be used in lighter colors, a point which is often in its favor in rooms where there is insufficient light or where a "light" treatment in color and furnishings is desired. Good enamel mixed with the last coat of paint prolongs its life and makes it easier to clean.

For floors, paint is less durable and harder to clean than well finished waxed varnish, but if the boards are old and rough it would probably be better to paint them. Carpets or mattings tacked down close around the baseboard may be warmer in winter than rugs which do not cover the whole floor, but they are less desirable, because it is so difficult to take them up and clean them. Not only must the tacks be removed from the carpet, but their larger size makes them more difficult to handle than rugs. For months they remain full of dust and dirt which flies into the air when they are walked on, and for this reason they are very insanitary. If a floor is too bad for ordinary rugs, it is better to paint it and then lay down a carpet rug large enough to cover all but the edges than to tack a carpet over the whole floor. For the floors of kitchens, bathroms and passageways which must be washed frequently some material less absorbent than wood is desirable. Cement is sometimes used for back entries, pantries, etc., but it is hard and cold underfoot for the kitchen. Good heavy linoleum is perhaps as satisfactory as anything for kitchen, laundry and bathroom, as it is comfortable underfoot, easy to clean and very durable. Oilcloth is cheaper, but not so durable.

Happy Toast.

The happiest bridal toast was when a speaker wished a deaf and dumb couple

FOR HOME NURSING.

How to Care For Bottles and Medicines During Sickness.

One of the first lessons a nurse learns is to pour out medicine from the side of the bottle opposite to that on which the label is pasted in order that any drops of the liquid which escape down the side when pouring will not obliterate the directions and number of the prescription.

As soon as a medicine bottle is empty and if it is not to be replenished right away it should be marked and put out of the way until needed again. Many doctors insist upon the prescriptions being written on the label of the bottle by the druggist. This makes it easier for reference if he decides to go back to an old formula. It also makes it possible for the nurse to know what is being given and makes it less dangerous to have empty bottles or unused medicines around.

It is never safe to give medicine from a long unused bottle unless either the prescription is marked on it or it has been plainly marked for what purpose it was used before. Otherwise it is better to refer the prescription number to the druggist who made it up and get him to identify it. If these means of identification were always adhered to there would be fewer mistakes made.

After an illness is over and the patient convalescent, clear out all the medicines it is not necessary to keep. An accumulation of old prescriptions is rarely of use again and the bottles clutter up the medicine closet. Empty bottles are sometimes useful, but if they are kept they should be carefully washed out and the labels erased so that they will be ready for an emergency and not spoiled by the drying up of the contents.

How to Satisfactorily Clean Genuine Pewter Ware.

A shop which makes a specialty of genuine pewter ware says that in cleaning pewter whiting or any good silver powder can be used. The polish should, however, first be mixed with olive oil, machine oil or vaseline, or even kerosene, and then rubbed all over the object. Then wipe it off and polish with the dry powder applied with a soft cloth.

Protecting Shade Trees.

Governor Walsh of Massachusetts has recently signed an act defining the powers and duties of tree wardens and their deputies and providing for the better protection of public shade trees. It includes a jail sentence for not more than six months or a fine of not more than $50 for any one who willfully, maliciously or wantonly injures a tree, shrub or growth which does not belong to him and which serves a useful purpose. The same penalty applies to cutting down a tree or shrub within the limits of a state highway without authority. Another section carries a $50 fine for attaching advertisements upon or painting or marking any tree located in a public place or highway except for the purpose of protecting it or the public.

HOW TO IMPROVE YOUR EMBROIDERY BY TOUCHES OF BLACK.

In fashions the touch of black is a recognized addition to a color scheme. The same is true of embroidery. Many a centerpiece or scarf that lacks tone may be improved by outlining the color design with black. This is especially recommended on the heavy linen and scrim covers where brilliant hues appear unfinished or need bringing out.

However, black outlining is very effective on the ordinary white linen centerpiece worked in plain white. One of these seen recently had a jewel pattern with conventional scrolls done all in white. The jewels and the scrolls were outlined with a thin black thread. The centerpiece was bordered with heavy white torchon, and the whole was very effective.

INTERIOR DECORATION.

How to Furnish Your Home Without Superfluities.

Most of our schemes of interior decoration as well as our ideas on dress originate in Paris. For some unknown reason the American woman refuses to believe that her own manufacturers are capable of turning out either house furnishings or gowns which possess the same amount of artistic chic as those designed in the French capital. And it must be admitted by even the most patriotic citizen that the Parisian designers are responsible for most of the new ideas in home decoration as well as in feminine costuming.

Take, for instance, the modern craze for black and white in the home. In the drawing rooms of the aristocratic Parisiennes this startling combination was seen and Poiret, the master designer of bizarre clothes for women, was the man who put this somber but smart scheme into execution. Also to the same designer must be credited much of the futurist schemes which now decorate our homes.

The present day Paris is a war center, of course, and from that city has come recently a new craze in interior decoration which reflects very frankly the effect of the war on Parisian homes. It is the cult of simplicity, the doing away with all furniture except that which is absolutely necessary. Whether or not the idea will meet with favor in America remains to be seen.

Fewer possessions and no superfluities will be the watchword for some time to come at any rate, and the principle embodied will not be altogether deplorable from an artistic standpoint. It will prevent the overcrowding of rooms with furniture and ornaments and will help to link the purposeful to the beautiful in that correlation of which true art never loses sight. And so the modern furniture designers may, through the chain of circumstance, have their opportunity, and in the new field that is opened up to them may erect a standard in matters decorative in which originality will have freer scope and the sense of fitness be given fuller play.

We cannot all be the possessors of the furniture of our forefathers, and while revering old traditions and acknowledging the romantic spell of old associations one can yet recognize that altered conditions make room for altered methods, and can welcome the freshness of new ideas evolved often from the adapted teaching of the past.

How to Save Time In Your Housekeeping Tasks.

Nowadays in the business world all the new inventions seem to have one end in view—the saving of time.

Housekeepers in their no less important field must keep pace with the men and be on the watch for new ways and new means to save not only time, but strength and energy. A good housekeeper says:

I shall be glad to share with you one secret I have learned, and that is to make several desserts at a time. You will be surprised to find how much little extra trouble it is when sugar, flour, vanilla, butter and eggs are spread on the table before you and the dessert for the day's dinner finished to make as well several cup custards and a pie or some jelly.

The refrigerator is stocked in this way for two or three days and the trouble of producing morning after morning the nine or ten ingredients necessary for the simplest pudding is avoided.

How to Make an Economical Cake With One Egg.

The most economical cake I know: Shave two squares of chocolate and pour over it one-half of a cupful of boiling water. Cream one cupful of sugar, one tablespoonful of butter and add well beaten yolk of one egg; stir well; add melted chocolate and water, one and a half cupfuls of flour in which is one teaspoonful of baking powder. Mix well, then add one-half cupful of boiling water in which has been dissolved one level teaspoonful of soda. Flavor with one teaspoonful of vanilla. Use white of egg for frosting.

How to Use Various Household Hints.

When roasting meat in an open pan wet a clean, white muslin cloth and lay over the top of the meat. This will keep it from getting hard and will not require basting so often.

A little salt or camphor put in lamps helps to give a better light; it also saves the oil.

Beans, rice, dried fruit and the like should be kept in glass jars; then any kind can be selected at a glance and mice are never getting into them.

TODAY'S FASHION NOTE

Chic, comfortable and inexpensive is this tailored costume of brown whipcord. The skirt is plaited and with it is worn a coat with plaited lower section and high belt. Collar and cuffs are of the same material, 4½ yards, 54 inches wide, being required for the suit.

Pictorial Review Jacket No. 6351. Sizes, 32 to 44 in. bust, and 16 to 20 years. Price, 15 cents. Skirt No. 5249. Sizes, 14 to 20 years. Price, 15 cents.

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.

21, YET HE'S A CHILD.

A. M. Ross Married Girl He Met on Three Day Furlough From Asylum.

Alexander M. Ross of New York, who, although twenty-one years old, has the mentality of a child of twelve, was adjudged incompetent by a sheriff's jury.

The purpose of the inquiry was to have a committee appointed to manage the young man's property, valued at more than $300,000, which he received from his late father, Alexander M. Ross.

It was held on the petition of the incompetent's mother, who told about her son marrying a young woman on a short acquaintance, having met her while he was on a three days' furlough from Bloomingdale asylum, where he had been an inmate for three years. The marriage was annulled. Dr. William L. Russell, superintendent of the asylum, testified that Ross' mentality would not develop.

Queer Tibetan Custom.

Tibetans cut the bodies of their dead in pieces and throw them into the lakes to feed the fish.

USES MULE TO LOCATE OIL.

Colonel Green Has Novel Method of Finding Spot For New Wells.

Colonel E. H. R. Green of New York and Dallas, son of Mrs. Hetty Green, firmly believes that there is nothing like a mule for locating a new oil field.

The other day Colonel Green and a party of Dallas men associated with him in an oil venture went out to locate a site for the first well. He selected a mule as master of ceremonies. The mule was driven into the field and allowed to take his own time in coming to a stop.

Where the mule first started to graze a stake was driven and plans begun for the erection of the first derrick. If oil is struck the mule will be placed on a pension.

WIFE BEATER IS WHIPPED.

White Man Gets Fifteen Lashes at Post In Maryland.

To Charles S. Dove of Middlebrooke belongs the distinction of being the first white man to be whipped in Montgomery county, Md., for wife beating. Fifteen lashes upon his bare back were administered in the Rockville jail yard by Sheriff Peyton Whalen in the presence of the jail physician and a number of witnesses.

Several of them drew blood.

Children Cry for Fletcher's

CASTORIA

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of Chas. H. Fletcher, and has been made under his personal supervision since its infancy. Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic, all Teething Troubles and Diarrhoea. It regulates the Stomach and Bowels, assimilates the Food, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

THE SURPLICE BODICE IN DELIGHTFUL STYLE.

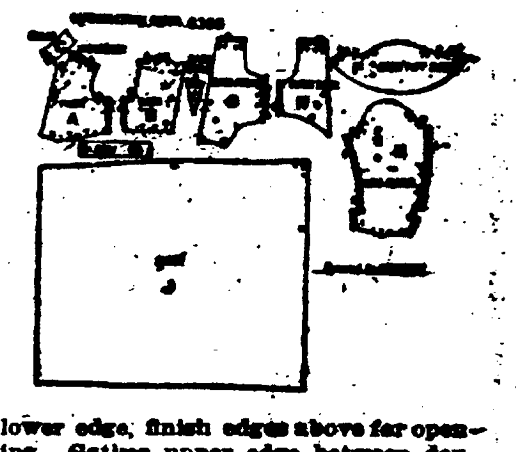
An evening gown of crisp colored silk crepe de Chine, with the surplice bodice worn over an underblouse of lace.

This evening gown of cream colored crepe de Chine has a surplice bodice draped over a lace underblouse. The gown in medium size requires 5⅝ yards 40-inch crepe, with 1 yard 27-inch lining for waist and 1½ yards lace. The accordion pleated underskirt requires 3 yards 37-inch material (pleated).

In making the underbody, however, first face from neck edges to 1 inch below lines of double "oo" perforations, and around armhole edges to small "o" perforations. Pleat lower edges of front and back, placing "T" on corresponding small "o" perforations. Close under-arm and shoulder seams as notched. Sew stay to lower edge of underbody, center-fronts even.

Next, gather the sleeve between double "TT" perforations. Close seam as notched, leaving extensions free; turn under extension on slot perforations, lap to small "o" perforations.

Now, taking the skirt, close back seam from large "O" perforation to



lower edge, finish edges above for opening. Gather upper edge between double "TT" perforations. Sew to lower edge of underbody over stay, center-fronts and backs even, large "O" perforation at under-arm seam.

For the outer blouse, pleat the fronts at under-arm seam, placing "T" on corresponding small "o" perforations and tack. Close under-arm and shoulder seams as notched. Gather along shoulder seam between double "TT" perforations. Lap right front on left, centers even (line of large "O" perforations indicate center-front) and stitch lower edges together. Arrange on underbody, center-fronts and center-backs even (large "O" perforations indicate center-back); stitch upper edge along line of double "oo" perforations.

Pictorial Review Costume No. 6390. Sizes 32, 34, 36, 38, 40, 42 and 44 inches bust. Price, 15 cents.

Skirt No. 4744. Sizes 21 to 34 inches waist. Price, 15 cents.

STRANAHAN & LOVE
15 South First Street — formerly Morton & Shattuck

SAYS GOVERNOR OF TEXAS

Dallas, Texas, Aug. 13.—Governor Ferguson today gave out the following statement to newspaper men:

My letter to President Wilson really is self-explanatory and was as follows:

"Knowing the many pressing matters confronting you, I have purposely delayed writing you, hoping that the Mexican border troubles might clear up. Conditions are now perilous and grave. Every twelve hours a loss of life or wounding of American citizen occurs.

'Texas citizens have been murdered, postoffices robbed and soldiers and rangers killed within thel ast week. The offenders are mostly Mexicans from across the border, and only a few are American citizens.

"I have increased our ranger force almost to the maximum and on account of the great area of disturbed conditions it is doubtful if I can much longer control the situation.

"I do not overdraw the picture when I say that a region of terror exists on the Mexican border and any unusual occurrence would cause a disastrous invasion of Texas from Mexico.

"Your army is doing all that it can with the forces in hand to meet the situation but the number of troops is wholly inadequate. A great service would be rendered if you could double the size of your army now on the Mexican border. For my guidance, I would appreciate an expression on the matter of a substantial increase of army on the Mexican

I beg to add that additional troops are being furnished and the situation looks somewhat improved today. Should intervention similar occur a serious racial war would happen and I was anxious for the President to know the necessity for additional troops to protect our people.

NEW YORK MAN CLAIMS HUNTERS AGREED TO SELL

Syracuse, Aug. 13.—One million dollars damages are demanded from the Hunter Arms company, Inc., or Fulton, for its refusal to sell its plant and materials for a consideration equal to $350,000. This alleged figure of damages represents the loss in profits that has been suffered by the would-be purchaser, Walter R. Hensey of New York, who planned to use the plant to fill war orders placed by J. P. Morgan & Company in behalf of the allies. Papers in a suit for this amount were filed in the office of the County-Clerk of Oswego in the city of Oswego this morning. The sale of the plant as originally agreed is also demanded.

Suit is brought for Hensey through local attorneys, Hancock, Spriggs and Hancock. They mailed the papersl ast evening to Oswego with instructions that they be placed on file the first thing this morning. The set of papers include a notice to prospective purchasers that this action is commenced and that it forms an encumberance against the property. All other deals for the plant will be automatically halted until the determination of the action.

SWEARS FRENCH LET WOUNDED MEN SUFFER

Berlin (via Sayville), Aug. 13.—The North German Gazette publishes the sworn affidavit of a reservist, William Oelbemitel, wounded September 8. The next day his right arm was amputated, and three days later the German field marshal, with the wounded, surgeons, and nurses, was captured by the French.

Twenty seriously wounded German soldiers, he declares, were most inhumanly treated. The French surgeons, refusing to dress the wounds, beat and spit at the men, whose hurts were allowed to fester.

$25,000,000 RIFLE ORDER IS REJECTED

Richmond, Va., Aug. 13.—A state official has been asked to arrange with any steel concern in this city to undertake the manufacture of 1,000,000 Mauser rifles. The order came from a Pennsylvania firm. The price offered for the weapons was $25,000,000.

Lack of necessary machinery has resulted in the rejection of the order.

WITH THE SUFFRAGISTS.

A questionaire among the mayors of New Jersey as to their attitude toward votes for women revealed a great deal of enthusiasm among them on the side of suffrage. City government being housekeeping writ large, mayors occupy a favorable position for learning what service women could render as voters.

* * *

On the mooted question of the relation between woman suffrage and war the San Francisco Star offers the following comment; "If the Brotherhood of Man had grown within the thousands of years of recorded history as the sisterhood of women has grown in the last few decades, there would be no war in Europe today."

* * *

The doctors disagree as to the cause of the high divorce rate of Colorado. The anti-suffragists say that it is a to-be-expected by-product of woman suffrage.

Ellis Meridith, for four years president of the Election Commission of Denver, lays it to the climate. "Denver," she says, "is a pleasant place of sojourn for those seeking a legal solution of their domestic woes."

* * *

A birth every four minutes; a death every seven; a marriage every eleven; over thirty millions for schools; over eight millions for fire protection; over ten millions for charity; over one million for one election; so runs the report of Father Knickerbocker for 1912. And the fairminded person perusing noted how intimately women are concerned in every detail save the last, and this exclusion took on a new absurdity from its being thus shown up in connection with other city activities from which no power of man could exclude women. And thus the city budget joins the suffragists.

* * *

The recent news that the curse upon the human race was due to Noah's eating the bark of the cassia tree and that Eve never touched the apple comes too late to save women from being held responsible for the miseries of the world.

"In all the reforms I have promoted," writes Judge Lindsey, "I have looked to the women and when I have failed it has never occurred to me to blame the men."

A custom that has been followed for thousands of years can't be changed overnight as the result of the latest news in Assyriology. There is one injustice that votes for women only makes worse. It enlarges the opportunity for men to blame women and this testimony of Judge Lindsey shows that even the best of men do not fail to embrace it.

LARGEST ONION CROP IN HISTORY THIS YEAR

The Oswego Palladium says:

Never will such an enormous crop of onions be gathered, unless all signs fail, as this year, but the biggest crop will come from the muck land farm of Wagemaker & Freer, near Furniss Station. It is estimated that there will be harvested there this year between 35,000 and 40,000 bushels.

Besides there are several other onion growers in the town of Oswego, on smaller patches of much land, all of which give promise of bountiful crops.

At the Wagemaker & Freer plant a large storage plant is going to be erected and there is also in the course of construction another onion shed, where they will be held in crates until shipping time. Thirty-five thousand bushels of onions is a pile, the size of which few can appreciate. When it is considered that all of these have to be pulled from the ground by hand and then topped, that is the cutting off of the stems, one can begin to imagine the magnitude of the job that is ahead of Wagemaker & Freer.

RILEY AGENT WAS ONCE A GAMBLERS' ALLY

Ossining, N. Y., Aug. 13.—Patrick H. MacDonald, Superintendent Riley's confidential agent, whom Warden Thomas Mott Osborne of Sing Sing charges with assault, admitted last night, under cross-examination in the trial of the case, that he had at one time been employed by a firm of gamblers and bucket shop men, Langdon & Pickens, of Albany.

The trial of the case began early in the day. At midnight it was still going on, with no promise of an early conclusion. Following the testimony for the prosecution, MacDonald was called to the stand. The warden's attorney grilled him for more than an hour. The witness tried desperately to avoid admitting that he was employed by a gambling firm. When he did, he insisted he had nothing to do with htat end of the business. He also said that he had been an Albany Alderman, and was one of "Packy" McCabe's lieutenants.

FEDERAL STAMPS MASK PACKERS' BAD MEAT

New York, Aug. 13.—Roused by the Eastland disaster, the Federal Grand Jury for July, 1913, through a committee, sent an open letter to President Wilson yesterday urging that the recommendation it made originally in August, 1913, for an investigation of the steamboat inspection service receive immediate attention. The jury also reminds the President that no change has been made in the method of meat inspection in New York, which permits meets reeking with vermin to be sent out with the government's official stamp.

Charles F. Brown, chairman of the Grand Jury Committee, says concerning meat inspection:

"Secretary Houston admitted to us that the evils exist, but claimed that his department did not have enough money to correct them. He has failed, however, to secure the necessary added appropriation, and as far as we have been able to find out the conditions are as bad as ever. The packers are still allowed to print the government stamps, which we claimed should not be printed by the government and used as guardedly as revenue stamps."

THE QUIRK.

Offers today a Mutual Masterpicture, "The Failure," in four parts, featuring John Emerson; Charles Chaplin in "The Property Man," a two-reel Keystone comedy, and an extra added attraction in Rowles & Gilman, talking and singing act, with no extra charge Tomorrow, a Mutual Masterpicture, "Her Shattered Idol," in four parts, featuring Mae Marsh; two other reels and Powles and Gilman talking and singing act. Balcony, 5c; main floor, 10c.

HENSEY ACTION DOESN'T BLOCK HUNTER ARMS CO.

Plant to Resume Operations Soon as First Payment on War Order Arrives Here—Hensey Deal Regarded Unfair to Local Interests

In a conversation with a Times reporter this morning Thomas Hunter, of the Hunter Arms Company, admitted that he had received notive of the suit for $1,000,000 brought against the company yesterday by Walter R. Hensey of New York and Syracuse. Notice was filed in the office of the County Clerk in Oswego yesterday. Mr. Hunter said he did not care to go into details at present and added that the matter was now in the hands of his attorneys, Spencer, Gannon and Mitchell of Syracuse.

The facts of the Hensey-Hunter deal is given by a Fultonian who is in close touch with the operations of the Hunter plant and was particularly influential in securing the large war contract recently given the local company, indicate that the Hensey claims cannot be substantiated in court. It appears that the Hunter company gave the City National Bank of Syracuse first mortgage bonds to the extent of $150,000 as collateral for a loan of $100,000 advanced as operating expenses for the local company. About that time the bank introduced representatives into the Hunter directorate, and after the plant failed to show adequate returns the bank wished to withdraw its loan. At this point the Hunters are said to have made an agreement which embodied the giving of an option to Hensey, who was unofficially representing the bank, to buy the plant for $310,000, if the Hunters did not pay the note held by the bank before July 7. This option was given in order that Hensey might buy the plant and with the money received the Hunters could pay the bank, it is said.

The option was given June 24, and shortly after that time the Hunter company was offered a contract for the manufacture of arms amounting to several million dollars. The Hunters immediately made attempts to get financial backing in order that they might pay the bank and take the order, and at this point, the Times informant states, the Syracuse interests got to work. The Hunters received assurances of support from several financiers and everything was ready for the acceptance of the contract when, like a bolt from the blue, all these men withdrew their support. It is said that Hensey went to each man who was to give the Hunters backing and told them he had an option to buy the plant and that they would become embroiled in litigation if they entered into any negotiations with the Hunters. He did not mention the condition of his option, but succeeded in blocking the moves of the Hunter company so that the day of payment of the Syracuse loan arrived and the firm had not yet raised the funds. Some few days later, largely through the influence of Edward Quirk of this city, the Hunter company raised the necessary amount and the bank loan was paid. The contract with Serbia was signed and the deal only awaits the arrival of the first payment of the war order, after which the Hunters will begin operations.

Hensey immediately brought suit against the Hunter company for its failure to carry out the terms of the agreement with him. He claims he has lost $1,000,000 in profits by not securing the factory at the time agreed upon, as he was in a position to receive large war orders from the Westinghouse company and machinery was already ordered. He also asks that the Hunters be compelled to turn over the plant to him.

It is the general opinion among the legal fraternity here that Hensey's case will not hold water, inasmuch as he has not come into court with clean hands if the facts of the case as set forth by the Times informant are true.

Serbia Gives Flat Rejection of the Bulgarian Demands

London, Aug. 14.—The diplomatists who are fighting the battles of the Quadruple Entente Powers in the Balkans are faced with a situation which threatens to defeat their long efforts. While the negotiations with Serbia and Bulgaria have not been abandoned, the best informed persons in diplomatic circles say the success or failure of the conversations intended to enlist the aid of the Balkan states for the allies lies with the Serbian Parliament, which meets on Monday, and that this body offers little prospect of agreement to Bulgarian demands.

A flat refusal of Bulgaria's conditions, as announced three weeks ago by the Premier, Mr. Vassil Radoslavoff, probably will be sent from Nish to Sofia. The formal reply has not been dispatched, but those best informed in diplomatic quarters say the demands far exceed anything Serbia possibly would yield.

The outcome is being watched with the keenest interest by the Chancellors throughout Europe, as Bulgaria is the chief obstacle to

(Continued on Eighth Page)

BOARD OF WORKS PASSES CONTRACTOR STYRING'S BILL OF BRIDGE EXPENSE

The Board of Public Works, with Commissioners Stevenson and Wiltsie present, held a special meeting last night at City Hall. The estimate of expenses for Contractor Edward Styring, who is constructing bridges over the Hunter tail race on North First st. and over Waterhouse creek on Sixth st., as prepared by City Engineer Hill was accepted. The report follows:

HUNTER BRIDGE.

87 C. yds. Class C cement @ $7.50 yd.	$ 652.50
15 C. yds. Class B cement @ $9.00 yd.	135.00
50.4 yds. Class B cement @ $10.50 yd.	529.00
5,279 lbs. steel reinforcement at 5c lb.	203.95
	$1580.65

SIXTH STREET BRIDGE.

Clearing, grubbing, lump sum	$ 25.00
10 yds. Class A cement at $9.50	95.00
84.6 yds. at $6.75	571.05
80 yds. embankment at 95c	76.00
Total estimate	$2347.70
15 per cent. retained	352.15
Amount now due	$1995.55

(Signed) G. C. HILL, City Engineer.

Several bills were ordered paid from the Sprinkling and Water funds. The board will get five iron poles from the Empire United Railways which will be placed along First st. between Oneida and Cayuga sts., when the wooden poles which now carry the trolley wires are removed. The new standards will also carry the wires of the Fulton Light, Heat & Power Company.

AMERICAN NAVAL FORCES TAKE CHARGE OF HAITEN

CAPE [illegible] RULE

Cape Haitien, Hayti, Aug. 14.—Following the news that a tornado had swept the interior of Hayti today, reports were received here that the Bobo and Zamor factions in Northern Hayti are again in arms.

The American naval forces have taken charge of Cape Haitien and have established military rule. The populace is in a high state of excitement.

All cable and telegraph lines to Port au Prince are down and Cape Haitien is completely isolated except by sea from the rest of Hayti and the world. Mounted couriers have been sent from here to the capital to take the news of what has happened here and to learn what has been done there.

News of the election of Senator Dartinguenave as President of Hayti was received here yesterday. Northern Hayti generally disapproves of him and the sentiment here is strongly in favor of Dr. Rosalvo Bobo. As soon as the Bobo and Zamor factions learned of the action of the Haytian congress in electing Dartingueave as President there was a demonstration here. The troops in the mountains surrounding this town declared against Dartinguenave. Uprisings, reports indicated, occurred at many places in the interior of Northern Hayti, when the news of Rartinguenave's election was received.

Disturbed condition here and in the vicinity of Cay Haitien caused Rear Admiral William B. Caperon, in command of the American naval forces in Haytian waters, to order Commander Olmstead, of the gunboat Nashville, to take charge of the administration of the civil affairs of this place. A battalion of bluejackets from the batteship Connecticut are ashore and under his command.

Rebel chiefs who fought under Bobo are doing everything in their power to retard Commander Olmstead's work of disarming the revolutionists. In this the rebels appear to have the support and the sympathy of the natives and the troops under them.

With Americans in charge of the affairs of the town and the efforts of the Zamor and Bobo forces to evade the order to surrender their rifles and cartridges, the situation here is taking on an aspect that indicates that further trouble may be expected.

The people of the country around Cap aHitien strongly favor Bobo for President and there is talk that Northern Hayti may declare the election of Dartinguenave unconstitutional and rebel. If this happens it is feared that American troops may be sent into the interior to put down the revolt.

YACHT CLUB GETS CLARK HOUSE ON EAST RIVER ROAD

Renewed Interest in Club Manifested As Result of Securing Home for Motorboat Owners—The Site Convenient to Favorite Cruising Waters.

At last, after many months of a strong desire on the part of the members of the Fulton Yacht club to own or occupy a place of recreation on the Oswego river banks, a headquarters for the many motor boats owned here and plying on the river and canal, the wishes have been realized, according to information furnished The Evening Times by A. J. Oliver, commodore of the club.

That stately old house known as the Clark homestead on East River road, has been leased for a period of one year, the lease to be signed next Tuesday. The house is easily accessible from every part of the city and its commodious rooms will provide for the demands of the club for some time to come. Of course house furnishings will be needed, but these can be secured by means of holding entertainments, etc.

During Barge canal operations the Clark house was used by H. P. Burgard as an office. It adjoins the old Burgard storehouse and is almost opposite the starting point of the races that were held last fall for the possession of The Evening Times loving cup. With the acquisition of a clubhouse interest in matters acquatic should increase here, so much so that it is believed a series of good motorboat races may be run during the early fall weeks. The Evening Times cup still remains the property of the club and is on exhibition in the Morgan Quality jewelry shop. That the cup may find a resting place in the new clubhouse with a winner's name appropriately engraved thereon is quite likely.

As another indication of revived interest in boating on the river it is proposed to have a cruise to Three River Point at an early date, and to reach a decision and make preliminary arrangements for the meet, Commodore Oliver has called a meeting of all motorboat owners for tomorrow afternoon at Camp Munger, which is north of Pathfinder Island. A cruise to Three Rivers has been for a long time in the minds of several members of the club, but obstacles arose to prevent taking the trip.

United States Will Not Arbitrate Ship Seizures

Washington, Aug. 14.—The answer of the United States to the notes of Great Britain in which she argued a justification of neutrals will be sent to Sir Edward Grey on Wednesday.

Sir Cecil Spring-Rice, the British Ambassador, who now is at Beverly, Mass., is expected at the State Department on Tuesday morning. It is understood he has been sent for by the State Department. It has been arranged by the department an agent of the Secret Service shall accompany him from Beverly to Washington.

The American reply has been considerably changed and greatly condensed since the receipt by the State Department of the supplementary notes of Great Britain, in which she maintained the legality of the blockade and set forth substantially the United States was actually the beneficiary of that blockade.

The principal note dealt among other things with a suggestion of arbitration. This, however, was to be available only after the United States had submitted to Great Britain's positive claim that all seizures and detentions should be regarded first and essentially as questions for the British prize courts.

Great Britain's suggestion was that after submission to adjudication by the prize courts, American citizens appeal to the Privy Council of Great Britain or to some international tribunal, if the owners of the cargoes and vessels alleged there had been "a denial of justice."

The United States will reject the proposition of arbitration.

Opinions

Neglectful Garbage Collectors.

A Philadelphia paper recently announced the "Junior Sanitary League opening campaign against disease," accompanying it with a large picture of four children carrying a banner inscribed: "Keep the garbage covered." We are reminded of it by the practice of Rechester garbage collectors who go about the city leaving garbage cans uncovered after emptying their contents, thereby enabling the flies to carry on their work of propagation. The government recently issued a bulletin showing that in about eight hours after the eggs were deposited we had a new crop of flies to contend with, a fact which ought to suggest the importance of preventing the deposit of their eggs in so fructifying a situation.

Just why the garbage company and the city administration tolerates the carelessness of garbage collectors is something no, fellow can find out. There used to be a force of so-called "garbage inspectors" on the city pay roll. What their duties are, we do not know, unless it is to draw their pay. They might be of some use if they would follow the garbage collectors about the city a few days and see that they replaced the covers of garbage cans after emptying them. That would be some trouble, of course, but it would be of great value to the sanitary condition of the city, at a time when there is so much pretense in evidence concerning the public health.—Rochester Herald.

Loss of Submarines.

German submarines seem to be confining their operations at present to the North Sea, although some of them have ventured as far as the northern coast of Norway, as shown by the sinking of the British auxiliary cruiser, India. The vessels that continue to be sunk in the North Sea are merchantmen or fishing boats. For example, the British admiralty announced yesterday the sinking of a British steamer, a Norwegian bark and seven English trawlers.

In determining the effectiveness of undersea warfare, the loss of submarines must be taken into consideration as an offset to the destruction of merchantmen. England officially never acknowledged her success in the submarine warfare, except where the capture of survivors makes it necessary. And yet she has estimated that at least 32 German undersea boats have been destroyed since the beginning of the war. In the current issue, the Army and Navy Journal of New York editorially says: "We have it on authority, which would carry conviction were we at liberty to mention it that nearly 50 German submarines have been sunk, captured or destroyed by the allies up to the twentieth of July." Colonel William C. Church, editor of the Journal, told a Times reporter that he had written the paragraph quoted and that he had trustworthy information upon which he based his statement. It came from an official high in the British admiralty. Colonel Church felt constrained to keep his name secret, and believed that it would be unwise if more detailed information were made public.

It is said that Germany is turning out new submarines at the rate of one every week. But, if the announcement of the Army and Navy Journal is correct, this new construction has only a little more than made good Germany's losses of submarines since the beginning of the war; that is, she has about the same number of undersea boats now as she had when the war started, although it is conceded that the new boats arem uch more powerful than those of earlier construction.—Utica Dispatch.

NEUTRALITY HAS A PRICE

To the Evening Times, nothing else seems so small, so nearly nil as a neutral person, or the person whose greed extends the full length of his long arms—for be it known that greed and long arms are companionable. And about the smallest of all small persons is the neutral newspaper correspondent—the man who advocates peace only when he has discovered that there is little doing in the way of pickings.

Fear of offending some one robs a man of his rightful privilege. In his effort not to displease, he pleases no one. He is selling his birthright for a mighty small mess of pottage. He loses no friends, for he has none to lose. In other words, the man who never offends, never pleases.

If the neutral man has an idea he is ashamed of it or is afraid to express it in public print and assume responsibility for his own declaration. The neutral correspondent will be found hiding in the dark or skulking in the tent of obscurity. Such a man has no fixed principles and never expresses an opinion unless he or the paper he represents gets pay for doing so.

Here is a sample of the neutral man as seen in his writings for the public press. It is reprinted in this paper so that its circulation may be extended beyond just a few quires of paper. This article appeared in last night's Syracuse Herald:

> Putting aside the merits or faults of the commission-city managership plan, it must be admitted that it would have been a good thing for Fulton had the present campaign never been started. Fulton is at a critical stage of its development. What happens now may make or mar the city's progress for years to come. To have the city torn up over a political question such as the one which is now agitating citizens here is unfortunate. Feeling is being created in an instant which the passage of years may not dissolve. Leading men of the city, arrayed on opposite sides of the question, are engaged in this dispute.
>
> The words of a local paper in commenting on the situation will not serve to heal the breach. This paper said: "All the stories the people are hearing from both sides in the present campaign are believed by the people who want to believe them, and by nobody else—because they wish to accept them as the truth."
>
> It is inconceivable that the men of integrity who are on both sides are spreading false stories about the city. It is an easy matter to find proof to support both sides of the question. The sincerity of men on both sides cannot be questioned.
>
> For the good of the city all sides should get together. But this is not a suggestion that all men should think or act alike on the question which is so soon to be submitted to the voters.

In making a deduction from the foregoing reprint one is able to read a complaint. It is not always that a complaint arises from a real cause, but in this case The Evening Times believes there exists a cause, and here it is:

Very early in the "present campaign" (as The Herald chooses to call a movement for the advancement of a city from its swaddling clothes to a first place in the front ranks) that newspaper carried in its columns a notice labeled "political advertisement" entitled, "Just an Opening Gun." It has since developed that, notwithstanding invitations to again use the same columns to espouse the cause of the antis, there has been nothing doing. That opening gun must have been built to shoot around corners. At any rate, even if it failed to do its work, it proved to be a regular "Jack Johnson" for the one into whose hands it was placed for insertion in the Syracuse Herald.

It was Russell who said that "newspapers are curious exponents of diseased ideas." But "Just an Opening Gun" did the very thing that the Syracuse Herald now laments—it started something which that newspaper has described in this way: "It must be admitted that it would have been a good thing for Fulton had the present campaign never been started."

The neutral man always throws inuendoes.

JUDGE FINES MAN CANDY AND FLOWERS

Cincinnati, Ohio, Aug. 14.—What is probably the most unusual fine ever assessed against ap risoner was given Clarence E. McMullen by Municipal Court Judge Boll here. Charged with abusing his wife McMullen was fined a box of candy and a bouquet of flowers. oN fine ever was received with deeper thanks. At the beginning of the trial the court sought to have Mrs. McMullen forgive her husband.

The Bible says to forgive seven times seven, suggested the court.

Judge Bell handed McMillan $50 and costs after which be changed his dollars and costs to flowers and candy and thereby paved the way for a reconciliation.

DENVER WANTS TO GET SECOND WEST POINT

Denver, Aug. 14.—Following ex-President Taft's demand for a new "West Point" to be located somewhere in the West, Denver has started a movement to demand that the second United States military academy, if such be established, be located at Fort Logan.

Trunk lines of several railroads pass near Fort Logan, so that at a moment's notice officers from the school could be rushed east to the military post of Fort Leavenworth and to the Atlantic coast, or south to the Mexican border, or west to the Pacific coast. It is urged here that no new buildings would be necessary at Fort Logan, as the present structures would be fully sufficient.

Expert Advice for the Automobile Owner

Queries and Replies Covering Matters of Importance to the Man Who Runs a Car

Where would you consider the proper place for a gasoline tank?

This depends on conditions. There are advantages in every location. If placed under the cowl the gasoline can flow by gravity to the carburetor, yet the carburetor does not need to be placed as low as when the tank is under the seat. By locating the carburetor higher, it is more accessible and the intake pipe is shortened, giving better carburetion. The gasoline is warmed by the heat of the motor so that in cold weather, at least, carburetion is facilitated.

The under seat location of the tank also allows fuel feed by the simple gravity method, but there is danger of the flow stopping when climbing a steep hill. When the tank is being filled the passengers in the front must be disturbed.

Putting the tank at the rear utilizes otherwise waste space and allows the space under the front seat and under the cowl to be used for other purposes. There is a slight objection to this location, however, because the gasoline must be fed to the carburetor either by pressure or the vacuum system. This means a slight amount of complication, but it is not serious, as is indicated by the fact that the majority of cars now in use one or the other of these systems.

A very large percentage of the cars put on the market in the past year or two use the vacuum system of fuel feed in which the main gasoline tank is located at the rear of the car, while a small auxiliary tank is placed on the dash, usually inside the hood, to give gravity feed to the carburetor.

On a level road or slight ascent my car runs well, but on steeper grades it misses, chokes and back fires. I had new rings put in and the compression seems good. What is the cause?

From the information given it would appear that the gasoline line between the carburetor and the tank is slightly clogged. The gasoline flows through rapidly enough to feed the car under conditions obtained on the level road or on a slight ascent, but on steeper grades the feed is not fast enough to do the work. If you remove the pipe connecting the tank and carburetor and clean thoroughly it will probably end the trouble.

My car will not hold compression very well. I put in two new rings, and I think they do not fit well enough as yet, as the car has only been run about thirty miles since. The compression was fairly good with the old rings, but I thought I could improve it with new ones. Is there any way to make them fit more tightly by using grinding compound?

In order to get the new rings to fit well at once they should be lapped in by means of a grinding compound. The cylinder is put on a bench and the piston worked out and in with a sort of irregular turning movement similar to that given in grinding a valve. This work can be done by an amateur, but should not be attempted without first having observed carefully how it is done, because it is easy to spoil the piston and cylinder by unequal abrasion. The probabilities are that the new ring will wear in and the compression will be tighter after you have run another two or three hundred miles, and altogether it would probably be better for you to wait and see that this does not happen unless you can get the services of an expert in lapping in the ring.

When the spark on my car is retarded it misses considerably. Is this a sign that the magneto is weak?

No. Retard and advance simply refer to time of spark occurrence. The spark is just as strong on retard as it is on advance. When the spark is retarded it means that it occurs when the piston is going downward, and when it is advanced it occurs when the piston has not yet reached dead center.

Should the valve spring be a stiff one under small compression or a nimble spring under heavy compression to give best results?

The stiffness of the spring will be found only by experiment. As the piston descends it creates a vacuum in the cylinder, thus allowing the pressure of the atmosphere to open the valve. If the piston suction is poor, then the difference in pressure between the bottom and the top of the valve will not be so great, and hence the valve will have a tendency to remain shut. However, if a piston has good suction the valve will open without difficulty. You will have to try your particular motor and valves in order to get the best results.

Please explain the proper way of overhauling a car.

In good repair shops and service stations the entire car is disassembled, the parts inspected, worn ones replaced and the car then reassembled. However, it is often found that certain parts do not require attention. For example, the repair man may find that the differential and gearset are in good shape and will not go to the trouble of taking them apart.

The consistent advertiser wins in the end. It may cost a dollar to get a dollar, but the deal wins prestige.

LIFE AND LONGEVITY.

Simply Prolonging One's Days on Earth Is Not Real Living.

What really constitutes life? Is it action, or is it merely existence? Who is the more useful, the man who gives his all in energy to service or he who conserves his forces and thereby prolongs his days? He lives most who accomplishes most. Activity in useful, productive or constructive effort is the real test of life. Length of years may content some, but restless, energetic souls will press forward, regardless of time, striving for a goal they may never attain, but always striving, and these only really live.

Life insurance presidents, being interested in the prolongation of existence of risks, bend their efforts to the teaching of elements of living, the avoidance of excesses, exposures or unnecessary risks of any kind and in this way really serve the world because they increase the productive years of man.

As a result of modern methods man really lives longer and better, but this is not the all in all of life. To live is to be active, to have a part in the creative effort of mankind, regardless of whether the span be long or short, so long as it is busy, for "an end is an end, whether it cometh on the winged heels of a week or the dull stretch of a century."—Omaha Bee.

STRUGGLES OF AN ARTIST.

Story of the Peasant Painter Millet and "The Angelus."

It was only after long years of struggle and dire poverty, through which Millet was consoled and supported by his wife, that the peasant painter was able to take the three roomed cottage at Barbizon and "try to do something really good."

It was then that he began to paint that most beautiful poem of poverty, "The Angelus," which is today one of the most valuable pictures in the world. Again and again he threw aside the picture in despair of ever finishing it to his satisfaction, and as often his wife replaced it on the easel and induced him to continue.

On one occasion he was so incensed at not being able to produce a certain effect that he seized a knife and would have destroyed the canvas and ended the matter once for all had not his wife fortunately seized his hand and induced him to give the picture another trial.

Thus it was that at last "The Angelus" found a place on the walls of the Louvre. The success it won encouraged Millet to paint many more pictures and thus place himself among the immortals in art.

A Sign of Rain.

An east side girl says she has come upon an infallible weather indicator. She can tell if it is going to rain without even glancing at the sky or casting her eyes over the weather forecasts in the daily papers. And it's the simplest thing in the world—just the disappearance of all umbrellas in sight.

"Umbrellas are perfectly safe in our office up to twenty-four hours before a storm," said she, explaining. "You can leave them anywhere. Even the pearl and gold handled ones are immune from abstraction. Indeed, one can hardly chase them away. So if I want to know the weather for a day ahead I must glance at the umbrella racks. If I find them becoming empty I make a bee line for the best rain shade of those that are left and make all other necessary plans for rain."—Columbus Dispatch.

Scene Painting.

In the past half century and more, especially since the improvement of the electric light, scene painting has become very elaborate and very expensive. Instead of being kept in its proper place as the decoration of the drama, as a beautiful acessory of the action, it has often been pushed to the front, so as to attract attention to itself and thereby to distract attention from the play which it was supposed to illuminate. Shakespeare has been smothered in scenery, and the art of the actor has been subordinated to the art of the scene painter.—Brander Matthews in Scribner's Magazine.

Phonetic Spelling.

Phonetic spelling was evidently in fashion in the sixteenth century, when even Shakespeare could not spell his own name consistently. There is a letter dug from the correspondence of a lady of the sixteenth century in the book of the "Cotswold Family"—the Hicks-Beaches. Juliana writes—it is a matter of debt between the cautious widow and "My lord a Kalder"—"My lord Ammaril and your wife I honour and love, but your false swearing and promise I hoterle a pore." What she really meant was "utterly abber."—London Telegraph.

Fifty-fifty.

"Jinks gives his wife half his salary every week."

"And what becomes of the other half?"

"She still has to get that in the old way—out of the pockets of his trousers."—Richmond Times Dispatch.

Quite a Difference.

"Did I understand you to say the woman Dubbins married is well off?"

"No she was."—Birmingham Age-Herald.

The Uncomfortable Part.

"Has Brown a comfortable income?"

"Large, but not comfortable! His wife knows just how much it is."—Puck.

It is an abominable thing for a man to commend himself.—Sterne.

HIS FREE OFFERS MET WITH NO RESPONSE

Connellsville, Pa., Aug. 14.—Free marriage license, free ceremony and free divorce. All these were included in the bargain-day offer of Josiah B. Kurtz, former burgess of Connellsville, now a notaryp ublic. The two-day offer closed at midnight.

Mr. Kurtz arranged with the Rev. D. D. Minerd to be on hand to wed any couples who applied at his office. Then in case the knot turns out unhappily, he arranged with Attorney J. Kirk Renner to get a divorce free of cost. There were no takers.

WE WANT A LIVE TOWN

LET'S all get together and help to make our community a live one.

We all realize the consequences of poor business, stagnation in commercial affairs, depression of real estate values, low wages, etc.

What we want is plenty of business, money in circulation, a live interest in the building of houses, the sale of lots and acre property and a genuine, healthy condition of business in our community.

HOW SHALL WE ACCOMPLISH IT?

The easiest thing in the world. Just keep our money in circulation, right here among ourselves, and we will create our own prosperous conditions.

In other words, LET'S PATRONIZE OUR OWN BUSINESS MEN, INSTEAD OF SENDING OUR DOLLARS TO THE MAIL ORDER HOUSES. Let's be loyal to our own best interests instead of helping to bolster up the big monopolistic establishments that are draining our resources of all the ready money in sight.

It is the aim of the big city mail order houses to drive the small town merchants out of business, so that we will all be compelled to send to the cities for our merchandise. The big mail order houses are spending thousands of dollars every month to accomplish this object.

THEY WILL DO IT, TOO, UNLESS WE ARE SENSIBLE ENOUGH TO STOP IT.

It is up to us to prevent the big mail order houses from driving our storekeepers out of business, for several reasons, the greater of which are that our community will be rubbed off the map if we have no business concerns and that our ownership of property here will not amount to anything, in this event.

The local stores, to a very large extent, make this town. The taxes paid by our business men are the principal support of our schools and churches. It is the taxes paid by our storekeepers that pay for the local improvements, for the street lighting, for fire protection and for all other communistic privileges and protection.

If we permit the big mail order houses to drive our business men out of competition, what will we have left? A place of empty store buildings, an undesirable place in which to live.

If the mail order houses accomplish their purpose it is possible that railroad interests will decide there is not sufficient business to warrant the stopping of trains here—because there will be no reason, then, for traveling men to stay over in our town, no freight to be delivered to our stores.

In such cases we will be trying to sell our property, but will find no buyers, for who will think it a good investment to buy property in a dead town?

But this is just what we must expect if we keep sending our dollars to the mail order houses, for it is only the business of the town that makes the town possible.

When we send practically all of our business to the mail order houses in the cities there will no longer be a necessity for, or a reason for, a town here.

It all resolves itself into the question: SHALL WE HAVE A PROSPEROUS TOWN, WITH GOOD LOCAL BUSINESS, GOOD REAL ESTATE VALUES, GOOD WAGES AND GOOD MUNICIPAL DEVELOPMENT, OR SHALL WE HAVE A DEAD TOWN, WITH PIGS ROOTING IN THE PRINCIPAL STREETS, STORE BUILDINGS EMPTY AND WITH "FOR SALE" SIGNS HUNG UP, NO LIGHTS AND NO FIRE PROTECTION.

IT ALL RESTS WITH US. WE ARE THE ONES TO DECIDE.

Common sense and good judgment tell us to protect our own interests. If we don't, who will?

What can we expect from the mail order houses after they shall have received our money and the local storekeepers have been put out of the running? Shall we expect help and assistance from the mail order monopoly?

We all know that the mail order houses do not pay any of our local taxes. They do not support our schools, or churches or help to pay for our lighting the streets or for our fire department.

Every dollar spent at home means added wealth, added prosperity, added real estate values and added facilities of all kinds.

Every dollar sent to the mail order houses means more unfair competition for our storekeepers and less taxes toward the support of our community.

Which do we prefer? We must make the decision. Are we for or against our community?

LET'S MAKE IT A LIVE TOWN BY KEEPING OUR MONEY IN CIRCULATION AMONG OUR OWN BUSINESS MEN.

A Definition.

Robert—Pop, what is an endurance contest? Father—The average argument.—Judge.

Not an Ornament.

"Can you give me any ideas about making my yard more beautiful?"

"Yes. Remain in the house."—Houston Post.

ELECTRICITY LOCATES BULLETS IN WOUNDS.

American Hospitals Adopt Extraction Device Used in War.

American hospital surgeons are applying a new and practical use of electricity learned from the field hospitals in France. In the war zone many thousands of cases of bullet and shell wounds are treated daily. The old and tortuous manner of searching for the bullet has been discarded in favor of the electrical locator, which quickly and definitely discovers the metal without adding pain to the wounded. Already numerous American hospitals have installed the device, a development of the Hughes induction balance.

The instrument consists of two sets of wire coils, one of which rests on the operating table and the other in the surgeon's hand. A telephone receiver is placed over the surgeon's head like a telephone girl's helmet and connected to the movable coil. The coils are so wound that they balance and are inactive when not in service.

When the wounded soldier is brought in the surgeon moves the hand set of coils over the body. The instant the coil passes over the metal the electric balance is disturbed and the telephone receiver emits a long series of clickings. The intensity of the noise in the surgeon's ear indicates the size and nearness of the bullet. The sound grows louder or more feeble as the coil is moved nearer or farther away. It will be loudest when directly over the metal.

Her Objection.

She—I don't mind late callers. He—Oh, thank you! She—It's late stayers I object to.—Philadelphia Ledger.

HISTORIC OLD FLAGS.

The Work of Restoring Uncle Sam's Fine Collection at Annapolis.

Mrs. Amelia Fowler, formerly of Waltham, Mass., holds the unique position of official flag mender to the United States. When it was discovered that the collection of historic flags stored at the Naval academy in Annapolis were in danger of falling to pieces because of age and the inroads of destructive insects the authorities in charge began to look around for some method of restoring and preserving them.

One of the authorities consulted was the curator of flags at the Massachusetts statehouse. Following the suggestion of the late Curtis Guild, he recommended Mrs. Fowler. When Mrs. Fowler examined the flags she declared that the best if not the only way for restoring them was by using the Bayeux tapestry method, which was used if not originated by the Duchess of Burgundy more than a thousand years ago. It was by this method that Mrs. Fowler restored and made practically indestructible the large collection of flags at the statehouse, Boston.

When congress appropriated $30,000 for the preservation of the historic flags kept at Annapolis, Mrs. Fowler was selected to direct the work.

In the collection of flags which she is now restoring is one that was used for a signal in opening fire at the battle of Lake Erie; another is a British royal standard captured at York, Canada, in 1813; another the ensign taken by Captain David Porter during the war of 1812, and yet another is the ensign that was hoisted in Japan by Commodore Perry at the time of his interview with the Japanese commissioners at Uraga.—New York Sun.

The Wedding Route.

It is reported that the "latest thing" in wedding invitations is an engraved map showing the way to the church and to the house. Grinding perplexity is the mother of innovations. It is not so stated, but unquestionably this helpful scheme originated in Boston, where wedding guests have been known to lose themselves and wander around for hours through the tangled highways, not reaching the scene of the festival until the rice and old shoes had been thrown and every one else was on the way home.—Providence Journal.

Last of a Celebrated Case.

David Jennings, aged eighty, died in an English workhouse. He was the last surviving claimant in the great lawsuit which Charles Dickens immortalized as "Jarndyce and Jarndyce" in "Bleak House." The case is still in the courts, but has not been called up in forty years, the lawyers having got all the money. It was a fight over a great fortune left by William Jennings, who died in 1798.

Not Hurt by Loss of Brain.

The case of a soldier wounded in the head by the explosion of a shell and who finally lost the rear third of the left hemisphere of his brain without it resulting in any paralysis or loss of sensation or of intellectual power was reported recently to the Academie des Sciences in Paris by Dr. Guepin.

An Australian Ranch.

We hear often of "captains of industry," "Napoleons of finance" and "land barons," but what title is imposing enough to fit the Australian cattleman who owns or controls 28,800,000 acres of ranch land—a domain as large as the state of Pennsylvania?

Nice Man, Nice Reward.

The chief detective of a New York hotel worked hard and earnestly on a stolen watch "case" and finally recovered the valuable missing article. As a reward the owner of the watch, a woman, named her dog after the nice man.

Kaffir Banking.

The Kaffirs have a simple method of banking. Before setting out to trade they select one of their number as their banker and put all their money in his bag. When an article is purchased by any of those who are in this combine the price is taken by the banker from the bag, counted several times and then paid to the seller, after which all the bank depositors cry out to the banker in the presence of two witnesses selected, "You owe me so much!" This is then repeated by the witness.

The general accounting comes between the banker and his several depositors when all the purchases have been made, after which all the natives go home.

Home Town Helps

GARDENS IN LARGE CITIES

No Reason Why Certain Difficulties Shrould Not Easily Be Overcome, With Proper Thought.

There are a few things that must be provided if Omaha is to become famous for its gardens, and it is to be hoped that the agricultural expert who is coming here will attend to them, says the Omaha World-Herald. There would be many more gardens if there were some central agency established where men too busy to attend to all the work could call by telephone and get a reliable man when one is needed. The charity organizations have been relied upon, but the men who seek work through them are often inefficient and unreliable. One business man said: "I have quite a large bit of ground in my back yard that I would like to put in a garden, but I cannot take a day off to spade it up and prepare the ground for the seed. I would be glad to plant the seed and care for the ground afterward. Last year I tried getting a man and after much worry got one. He was unreliable and the work that he did was hardly worth the time looking after him, so this year I have concluded to seed it down and avoid that sort of worry."

The plan for children is good and should be boosted by every one, but a large number of gardens would be planted where there are no children if there were a place where the right kind of help could be secured. Lawns would be kept in better condition if a man could be called by telephone when a mower was out of order or needed sharpening and when bulbs and shrubbery were to be planted.

Omaha gardens and beautiful lawns would add very much to the city in the satisfaction of citizens and visitors and to the value of property. It might be a good policy for some of the civic organizations to undertake to supply this want by establishing such a central agency. There is no doubt that it would be a paying enterprise.

FLOWERS IN CONCRETE WALLS

Monotony of Driveway Relieved by Device of Designer Who Gave Thought to Subject.

In designing a residence driveway which was to be cut through a terrace, a builder avoided the monotony of having two long concrete retaining walls flanking either side by breaking them at intervals with semicircular niches in which plants could be placed. These spaces were made so that they broke what otherwise would have been the straight line of the two copings. Each was made about 3 feet in depth and 2 feet wide and given the same finish as the exterior walls. Concrete jardinieres were made for the plants which were set in the spaces.—Popular Mechanics.

Making the Town Worth Living In.

The following, from the pen of Judge Nelson Case of Oswego, applies to any Kansas town: "Taxes paid for good roads, for libraries and schools, for any improvement which adds to the comfort, the enlightenment, the happiness of a people, are among the most valuable investments a person can make, even though he cannot see that he has any direct interest in them. The most prosperous cities are those whose inhabitants have the most advantages for education, religious culture, recreation and such amusements and diversions as are elevating in their tendencies, and are free from demoralizing influences. Kansas City is a fine example of this spirit and policy. It is what her citizens have done to make the city beautiful and a desirable place in which to live, fully as much as her direct efforts to secure trade, that has given her the prestige she enjoys."—Kansas City Star.

Manuring the Soil.

In garden making the first essential is a heavy layer of barnyard manure placed on the surface and then turned under as deeply as it is possible to get it. If a lot has to be filled three or four feet in depth, it should first be covered with two feet of barnyard manure, on top of which should be placed two feet of good soil. When all has been settled by the rains of one winter we will have a garden "as is a garden." This illustration is used merely to show where manure should be placed if it be possible to get it there. A garden so filled in would grow roses and other flowering shrubs that would prove little short of marvelous.

Cut the Weeds and Grass.

Whether you are a renter or an owner, you should not permit grass and weeds to "take" the sidewalk. Flies and mosquitoes bred in the tangled grass of a home owner are just as annoying and poisonous as those that are brought to life on the rented premises. And the blow to civic beauty is as severe in the one instance as in the other. Don't be a drawback to comfort, health and civic beauty, which is to say, don't let weeds and grass encumber the sidewalk of the place that you call home.—Corsicana Sun.

Modifying It.

"She threatened to throw hot water in my face," said a school attendance officer, referring to a woman who had been summoned in respect of the truancy of her child.

"You must not throw hot water," the judge told the defendant. "You can heap coals of fire on his head, if you like."—Pittsburgh Press.

Welcome Speech.

When money talks it seems always
To make a hit;
At least nobody ever says
"Shut up!" to it.
—Boston Transcript.

Immortalized.

Brown—That's the cuckoo from a clock I used to have. I have the highest respect and admiration for it, because it is the only thing that ever dared to butt in while my wife was talking.—Boston Journal.

Too True.

You may break, you may shatter
A ten dollar bill,
And you'll find that the remnants
Won't cling to you still.
—Richmond Times-Dispatch.

We would even be satisfied with "watchful waiting" for universal peace if local peace would come over Europe just now.

An army shoe lasts six weeks. Any schoolboy can beat that "wear and tear" record and have heaps of fun doing it.

DONALD MACKENZIE

Donald Mackenzie has set a high name for himself in the realms of filmdom. He likes to tell the story of how he was thrust into the directing game, "forced" he says; but is modest on the subject of being to the manner born. He was working in a Pathe picture some three years ago in the studios in Jersey City, playing the lead, when the director was taken suddenly ill. Of course, this caused much commotion, there being no one to continue the work and get the picture out, and plans were all upset. Chief Director Louis Gasnier, now General Manager, sent for "Mac" and asked him if he could direct the picture as well as act. Mr. Mackenzie hesitated about taking on the responsibilities of the job, but Mr. Gasnier said that he had watched him at work and knew he was equal to the task. Mr. Mackenzie, with the intuition of the canny Scot at last agreed to complete the picture, and made such a success of it that he has been making pictures for Pathe ever since. "So you see I was 'forced' into being a director, with Mr. Gasnier as the propelling force!" he says.

Gentle Methods.

Lucille—Anything can be accomplished by gentle methods. Cruelty is unnecessary.

Edna—I suppose instead of whipping cream you would just scold it.—Segment Block.

FARMER CHASED SNAKE; TEAM RAN AWAY—SMASH

Leave the snakes alone. If you don't believe it listen to what happened to Harry George out at Barnes Settlement. Harry was peacefully cutting hay in the field and his thoughts were far from snakes. But as the machine leveled the field a big snake was exposed to view. Now Harry wanted to kill the snake for the old saying is that a snake left unkilled means that you have an enemy alive somewhere.

He made such a fuss over the fight to kill the reptile that his team became frightened, dashed madly away and smashed the mowing machine all to bits.—Watertown Standard.

STOPPED HIS PENSION; DESERTION IS CHARGED

New York, Aug. 14.—After having received a pension for more than 30 years, Ralph Vreeland, aged 77, of Bloomingdale, N. J., and a Civil War veteran, received notice yesterday that his pension had been stopped. The notice set forth that he was a deserter and had never been entitled to a pension. He says: "For a month and ten days I was away from camp, but I went back of my own accord and was tried by court martial. I was put back on duty. My discharge papers set forth these facts, and were considered when I was admitted to the pension list."

"BALE" OF ALFALFA IS SENT BY PARCEL POST

Baker, Ore., Aug. 14.—The first bale of hay to pass through the Baker postoffice before or since the parcel post was installed, has arrived. But it is not up to the orthodox size of the commercial bundle of fodder. It weighs a little less than one pound. The hay is alfalfa, and was sent to a prominent Baker man from Fallon, Nev., where the scheme of boosting one of the products of the country has been adopted. It is a perfect replica of the ordinary bale.

SKELETON WASHED UP; 500,000 YEARS AGO

Los Angeles, Aug. 14.—The nearly complete skeleton of what scientists here declare is the bones of a prehistoric man who inhabited this land 500,000 years ago, were washed up by a heavy tide just above Santa Monica on the Malibu coast.

The head of the skeleton is missing, but bones give the appearance of never having been exposed to air, and scientists believe they have been buried in the ocean sands for centuries. Judging by the size of the bones, the man was of immense strength.

New Potatoes, per peck (15lbs.), 19c at Keller & Wilson's. adtf

NEW JERSEY HAS GEORGE'S HITCHING POST

Madison, N. J., Aug. 14.—A tree one hundred and fifty years old, to which George Washington tied his horse while camping at Morristown, has been ordered removed from Prospect street. The oak has been interfering with traffic. Requests have already been received for pieces of the tree.

V. V. Vant, Pres. W. H. Merriam, Treas. C. I. Kingsbury, Sec.

DAY BY DAY

Chronicle of Events and a Forecast of What is Doing in Officialdom—Special Correspondence.

By Frederic T. Cardoze.

Albany, Aug. 14.—Notwithstanding the fact that the delegates to the Constitutional Convention have advanced to the order of third reading the proposition to permit the present occupants of state lands in the Catskill and Adirondack preserves, wherever they are to remain upon the lands they now occupy to the extent of ten acres, to the exclusion of all other citizens of the state, there is a plan on foot to defeat the scheme when it reaches the order of final passage.

James W. Whipple of Salamanca, a delegate to the convention and for a number of years State Commissioner of Forest, Fish and Game, has promised to fight the proposed amendment to the end. He holds that to give to men who have illegally occupied state land is a gross injustice to the other people of the state and a travesty on right.

Delegate Whipple has in his possession the names of all the squatters in the Adirondaks and Catskills and during his administration made a successful attempt to secure from them affidavits to the effect that they had no titles to the land upon which they are now attempting by constitutional enactment to possess. The land in the aggregate is most valuable.

"The proposed amendment prohibits any other citizen except those persons termed 'squatters' of having any right to occupy or live upon any part of the forest preserves of the state," explained Delegate Whipple. "It is undoubtedly true that the greater number of these occupants who utilize between 200 and 300 separate tracts of land, are rich, well-to-do, or comfortable in the possession of this world's goods and that a very small proportion of these occupants are poor people. It also seems to be true, since the records of the conservation commission indicate, that a very large proportion of these occupants own camps in choice spots located in the best parts of the preserves."

According to Delegate Whipple 152 "squatters" have acknowledged in written instruments the title of the state to the land they occupy and that actions are now pending against 47 others. In addition, 19 actions have been ordered by the concervation commission for the purpose of gaining possession for the state to tracts of forest land claimed by illegal occupants.

"There are 51 pieces of state land in Townshop O around Raquette Lake, one of the most beautiful and valuable parts of the state's holding," Delegate Whipple declares. He also points out that at Silver Lake there are 9; on very valuable islands in Lake George 17; around the shores of Lower Saranac Lake, 28; around the headwaters of the Saranac and St. Regis rivers, 13; in the Beaver river section, 35, and 8 or 10 small hotels at Big Otter Lake, Jessup's river, at Mason Lake, Tirral Pond, Round Pond and Raquette Lake."

Col. Mann of "Town Topics," Richard Bennet, Rev. J. H. Brandow, J. O. A. Bryer, George H. Carlin, Frank D. Carlin, Robert Collier, B. G. Dewey, Robert Glasbrouck, Frank P. Gillaume, Mrs. Huntington, Horace Inman, J. H. La Due, P. C. Lounsberry, Dr. J. K. Huntington, H. E. Nicolls, J. A. Holden, E. J. West, C. E. Bullard, W. J. Balyman, Dr. J. H. Halleck, Dr. M. Mills, Charles W. Stickney, Monroe Bullock, Chester Elliott, D. W. H. Bishop and many others, are named by Delegate Whipple are among the illegal occupants of state land.

The property which has been illegally occupied and which in fact still is and which the delegates to the convention have proposed giving away, is valued at considerably over $1,000,000.

WATERTOWN WILL SEND 100 TO GRAND LODGE MEET

Watertown, Aug. 14.—No estimate can as yet be made as to the number of local Odd Fellows that will attend the grand lodge of the Independent Order of Odd Fellows which will meet at Syracuse next week, but one prominent Odd Fellow stated this morning that over 100 persons will attend the grand lodge. The majority of these will leave by automobile, although a number of the members will make the trip by train.

Napoleon Bonaparte SAID,

Four Hostile Newspapers Are More to be Feared than One Thousand Bayonets

Bonaparte's Meaning Is Obvious

WEATHER FORECAST.

Partly cloudy tonight and Sunday; fresh to moderate shifting winds.

A CHILD'S PARADISE.

All Ages Cared For by Trained Attendants.

No summer resort in America plans more carefully for the children whether babies, half grown, or youngsters of twelve to eighteen, than does the big institution at Chautauqua, New York.

A great kindergarten nursery is provided for the little ones, with plenty of sunshine and fresh air. Here young women who are training themselves in the Summer School to become kindergarten teachers give them the best attention. Babies can be checked here like luggage, and the tired mother who wants to be free for the whole day can leave her baby in the morning and call for it at night, with the surety that it will be well fed and cared for.

A playground and elementary school take care of older children who must be kept busy at something, half study and half play. Then the great Playstead, with its steep, rocky walls for fencing, and its big piles of pure white sand, and its running brook makes the best sort of a place for children to romp and paddle about in.

The older children have an out of doors gymnasium in which are the usual collection of see-saws, ladders, natural slides, climbing poles, chinning bars and merry-go-rounds. Over 900 children are registered in the Summer School classes which are graded for all ages, and where individual instruction can be given if needed.

Studies of birds and animal life are emphasized, when squads of youngsters are taken for long walks over the hills or picnicking about the grounds. The Boy Scouts are most active in their program under a fine head master. And the Boys' Club House and Girls' Club House offer a fine place for gatherings, whether in the daytime or in the evening.

Few summer resorts cater to "family trade" as does this famous Chautauqua. Its object is to give happiness and health to every member of the family.

No, Indeed.

Bill—The smallest apartment houses are those occupied by bees. In a cubic foot of honeycomb there are about 9,000 cells. Jill—I suppose it is not alone the janitor who does the stinging?—Yonkers Statesman.

Children Cry FOR FLETCHER'S CASTORIA

SYSTEM CHANGED

Highway Commissioner Forbids Contractors to Use Names on Certified Checks Other Than Their Own.

Albany, Aug. 14.—Criticism having been made by the State Department of Highways of the manner in which certified checks have been presented in the past by contractors who in many instances have not been financially able to undertake large highway contracts, has finally resulted in the inauguration of a new system of presenting certified checks.

State Highway Commissioner Edwin Duffy will in the future insist bidders upon highway contracts shall bear the same signature as that attached to the proposals in connection with which such checks are deposited.

Upon the execution of the contracts and bonds, such checks will be returned to the respective bidders depositing them. No other person will receive these checks except the bidders. It has also been decided by Commissioner Duffy that verbal or written requests for the delivery of certified checks to other persons than the bidders will be disregarded by the highway department.

Another rule which has just been inaugurated by Commissioner Duffy is that he reserves the right to deposit certified checks in the bank pending the award of highway contracts and the execution of the same. If this is done, the moneys realized thereon will be returned to bidders.

It is understood that in the past certified checks have been obtained by bidders who were permited to present them through the arrangement made with certain banks, when the applicants were not able to secure them upon their own standing. This practice the highway department has found most unsatisfactory. It opened the doors for contractors with small plants or none at all to bid upon highway work requiring a large outlay of money. It did not always work to advantage of more responsible bidders, moreover it is declared.

Contractors unable to get the backing they needed from the banks with which they did business were able under the old order of things to secure certified checks through another medium and though in every instance the checks were valid, they did not reflect financial stability on the part of the contractors who secured them in this manner. At least this is the position the State Highway Department has taken and when the next batch of road repair or construction work is advertised, no contractor will be permitted to bid unless he has a certified check of the nature now required.

THE QUIRK

Today is showing a Mutual Masterpicture in four parts entitled "Her Shattered Idol," featuring Mae Marsh and two other reels of real merit and that clever vandeville act of Rowles and Gilman. Tomorrow another big bill of just the kind you like, Charles Chaplin in a comedy of Chaplin quality, Fatty Arbucyle in "Fatty's Tin Type Laugh," which takes care of the comedy also "When Love Leads," a two-reel Domino drama, and "Rumpelstilskin," a four part Mutual Masterpicture.

Your appetite for fresh-every-day rolls increases every time you eat the Black company's article. adv

SUMMER PLAYERS AT CHAUTAUQUA, N. Y.

Wonderful Amateur Company Produces Best Plays With Settings of Burlap and Pasteboard.

Few stock companies have ever attracted as much attention as the amateur company of Chautauqua Players, which produce the best obtainable plays, both modern and classic, in the big auditorium at Chautauqua, N. Y.

M. Benedict Papot, who is an instructor of languages at Chicago university, directs the company of twenty and, with the common combinations of burlap and pasteboard backgrounds, obtains effects that are pronounced marvelous by the best critics.

M. Papot has long been known as the "best amateur stage director in America" and has a wonderful capacity for contriving scenic effects. He is a hard worker and during the Christmas vacation took his company to New York city, where they produced their repertoire under the auspices of the House of Play Foundation, at St. Mark's church on the Bowery.

The New York Times gave them high praise, and their stay had to be prolonged to repeat several productions.

Everywhere there is now a great vogue for amateur theatricals and for simplicity in stage effects. Chautauqua has taken the lead in this respect, and her players have won applause wherever they have gone.

Pinero's "Sweet Lavender," Clyde Fitch's "Nathan Hale" and Grundy's "A Pair of Spectacles" will be given this season.

WOMEN INDORSE CHAUTAUQUA

Strengthened and Encouraged by It, Declares Noted Club President.

"From Chautauqua, N. Y., I go back to the million women of the General Federated Women's Clubs strengthened and encouraged and tell them of that place where a woman can be reinvigorated and sent back home proud of that noblest profession—being a woman," said Mrs. Percy V. Pennybacker, president of this largest organization of women, in a recent interview.

"Women everywhere are taking a live interest in public affairs, civic and social administration. Their minds are open to gather facts. At Chautauqua they find the greatest preachers, the best teachers, famous writers and statesmen.

"The democratic air of comfort and informality brings speaker and audience closer together. The rolling hills, the pleasant walks, the bracing highland lake air strengthen the careworn. This combination makes every one glad they are alive, whether woman or man or child."

CHAUTAUQUA.

What the Word Means and Where It Came From.

An Indian chief pulled a big muskellunge from the cool waters of a twenty mile lake and properly called it Chautauqua lake. Bishop Vincent and his coworker, Lewis Miller of Akron, O., sought a beautiful point on its shores for their convention of Sunday school teachers in 1874. And with Bishop Vincent's popular ideas for educating folks of middle age and teaching them how to enjoy life the place grew into an institution at Chautauqua, N. Y., that is now world famous.

The name is borne by five towns in Illinois, Kansas, New York, Texas and Washington, by many industries in western New York state, by apartment houses in New York city and by a sleeping car and a ferry on the Hudson. The name has been adopted by 8,000 popular imitations of the "original Chautauqua." The majority of these travel from place to place on a "circuit" and are managed by independent bureaus in the same way a circus is handled.

Chautauqua Institution has been incorporated on the spot made famous by Bishop John H. Vincent and is continued as an educational and philanthropic enterprise by a board of trustees under the presidency of his son, George E. Vincent, president of the University of Minnesota.

The world's greatest public forum and one of the world's largest summer schools are held here during the summer months of July and August.

Turtles of the Amazon.

The fresh water turtle of the Amazon grows to a great size, especially on the upper river, where full grown ones three feet in length, two in width and weighing 200 pounds are often seen. Every house has its little pond or corral to hold a stock of these animals through the season of dearth, the wet months. Those who have Indians in their employ send them out for a month when the waters are low to select a stock; others purchase their supply.

TO SPEAK HERE

Thursday the Day Set for Noted Suffrage Debater to Speak at County Fair.

Mrs. Elsie Vandegrift Benedict of Denver, Colorado, is the next suffrage speaker to be heard in Oswego county. She will be heard at the Fulton Fair Thursday, August 19th, and may speak in Oswego the following day. The suffragists will have a tent at the fair, located in a central spot, and will distribute literature and try to obtain recruits. The work will be in charge of Mrs. J. S. Stevenson of Hannibal, assisted by Mrs. Jennie B. Stone of Scriba, Mrs. Fred Lockwood of Hannibal, Dr. H. M. Doane of Fulton and others.

People who think that giving women the vote in one state is going to quiet them on the subject of Votes for Women as far as the unenfranchised states are concerned, should gain enlightenment from the whirlwind career of Mrs. Elsie Vandegrift Benedict in New York this summer. Mrs. Benedict can vote herself, never has had to ask for the privilege, having been born and reared in Colorado. But this does not keep her from bending her best energies to help the New York women. And Mrs. Benedict is some help. She holds 12 gold medals for oratory. She earned her college career by winning prizes largely. She was the first woman to win a place in an intercollegiate debating team. In 1909 Gov. Shafroth appointed her official reporter of the Colorado Senate. After serving in this capacity three years she was appointed chief of the advertising department of the State Land Office. In 1913 she resigned to become political editor of the Denver Express, and later of the Denver Post, the largest daily in Colorado. In March, 1914, she was recommended by Mrs. Mary C. Benedict, State Superintendent of Public Instruction, as the best campaigner Colorado could send to the East to help New York women. Since coming to New York Mrs. Benedict has campaigned in all the largest cities of the state, and now is making a tour of the fairs.

Judge Ben Lindsey, who spoke in Fulton not long ago, wrote of Mrs. Benedict when he heard she was coming East: "Mrs. Benedict is one of the best known of our progressive Denver women. She has held public positions of trust and responsibility, and for several years has been on the editorial staffs of leading Denver newspapers in the most important capacities. She is one of the real genuine women of Denver, who has always stood for right and justice—one of the women who has done most for us in the work for children. She goes East to take part in the fight for woman suffrage and for justice. Her standing in Denver, her ability, character and integrity is of the very best, and I cordially commend her to all with whom she comes in contact in her new field of endeavor."

Don't Wait for the Fatal Stages of Kidney Illness. Profit By Fulton People's Experiences

Occasional attacks of backache, irregular urination, headaches and dizzy spells are frequent symptoms of kidney disorders. It's an error to neglect these ills. The attacks may pass off for a time but generally return with greaater intensity. Don't delay a minute. Begin taking Doan's Kidney Pills, and keep up their use until the desired results are obtained. Good work in Fulton proves the effectiveness of this great kidney remedy.

Mrs. Peter Pullen, 311 Erie st., Fulton, says: "I had lumbago and could hardly get around to attend to my housework. I used ttwo boxes of Doan's Kidney Pills and they acted just as represented. I have had no trouble from my back or kidneys since."

Price 50c, at all dealers. Don't simply ask for a kidney remedy—get Doan's Kidney Pills—the same that Mrs. Pullen had. Foster-Milburn Co., Props, Buffalo, N. Y. adv

UNION SERVICES.

The union services tomorrow will be held on the lawn of the Congregational church at 5 p. m., when the Rev. C. P. Holcombe, pastor of the Bethany M. E. church, Watertown, will preach.

Presbyterian Church.

Chas. S. Robertson, Pastor.

Morning prayer led by William Hunter. Worship by families at 10:30, when the pastor will preach by request on the theme: "Conformation or Transformation."

Bible school at noon.

Zion Episcopal Church.

Rev. Minor J. Peters, Pastor.

Sunday, Aug. 15th, eleventh Sunday after Trinity.

Services as follows:
Holy Communion .... 7:30 a. m.
Summer church school ....9:45 a. m.
Matins and sermon ......10:45 a. m.

State Street M. E. Church.

Rev. H. D. Holmes, Pastor.

The pastor has selected for his morning theme, to be preached at 10:30 o'clock, "The Old Orchard."

Bible school will be held at noon as usual.

No evening service will be held as the congregation will join in the union meeting on the lawn of the Congregational church at 5 o'clock.

Christian Science.

Christian Science services held on Sunday at 10:45 a. m. and at 8 p. m. Wednesday, in the Van Wagenen Block. Mrs. H. A. Allen, first reader; Mrs. Noah Merriam, second reader. You will be welcome and interested to attend one or both services.

The subject for next Sunday is: Soul. Golden Text: Isaiah 25:9. Responsive reading: Psalms 104;24-30, 33-35.

First M. E. Church.

Rev. J. W. Barrett, Pastor.

In the absence of the pastor, the Rev. C. P. Holcombe, of the Bethany M. E. church of Watertown, will preach at 10:30 a. m.

Brotherhood and Sunday school at the noon hour.

No afternoon services at the church, as the congregation will follow the visiting pastor to the union services where he is to preach a sermon.

Congregational Church.

Rev. Charles Olmstead, Pastor.

The pastor's theme at the morning service will be: "The Call for Human Sympathy."

The regular Sunday union services will be held on the church lawn at 5 o'clock.

Sunday school at the noon hour.

The Christian Endeavor society of the church will sell ice cream at a booth north of the main building on the Fair grounds.

Free Methodist Church.

Rev. C. C. Watson, Pastor.

The pastor will preach at 10:30 and his subject will be "A Personal Revelation,"

The Sunday school will meet at 11:45 and the Y. P. Union at 6:30 p. m.

At the evening service the pastor will have for his theme, "Confession and Forgiveness."

Class-meeting will be held Tuesday evening and on Thursday evening the annual election of officers will take place.

WOOD EXHIBIT

College of Forestry Coming Here With Exhibit That Will be Seen at All Larger Fairs.

Syracuse, Aug. 14.—The State College of Forestry at Syracuse will have attractive exhibits at a number of county fairs in August and September.

That the people of New York are thoroughly interested in forestry and other phases of conservation is evidenced by the wide-spread interest in the state-owned forest lands of the Adirondacks and Catskills and the idle forest lands in the other parts of this state. This interest has been especially in evidence as a result of the excellent work which the conservation committee of the Constitutional Convention at Albany has been doing during the past few months. Several important county fairs have shown interest in an exhibit along forestry lines and the college will put attractive and instructive exhibits in the Rochester Industrial and Agricultural exhibit, August 30th to September 11th; Oswego County Fair at Fulton, August 17th to 20th; the Otsego County Fair at Cooperstown, September 13th to 16th; New York State Fair at Syracuse, September 13th to 18th; the Oneida County Fair at Rome, September 21st to 24th; and the Genessee County Fair at Batavia, September 21st to 25th.

The exhibits which the New York State College of Forestry at Syracuse will put into various county fairs during the coming fall will be a part of the general educational work which the college is obligated to carry on under its charter from the legislature. Each exhibit will be developed along three lines, (1) To show with clear transparencies, attractive pictures and charts, past and present forest conditions in the state and the results of work along forestry lines which the state has been doing in the past. The second phase of the exhibit will be shown by panels upon which will be mounted various steps in the manufacture of small articles from wood, and especially where this manufacture has meant the saving of wood which has formerly been wasted.

Fine Illustrations.

The college is making a special effort to interest both producers and consumers of wood in the state in close utilization because it will mean the saving of our present forest cover and the use of better grades of lumber for more important purposes. The college has some unusually effective illustrations of close utilization in the manufacture of small wooden articles of all kinds.

The third phase of the exhibit will be seed and transplant beds and miniature plantations. This will be shown usually just outside the building in which the first two phases of the exhibit of the college will be located. Actual seed and transplant beds will be put out so that the people who visit the fair may see every step in the production of a valuable forest. Into these beds will be put the right kind of evergreens and hardwoods for New York and the miniature plantations will show how these various species should be planted, how spaced and how mixed in the plantation.

Various members of the Extension Service of the State College of Forestry at Syracuse will be in attendance at each of the county fairs where exhibits of the college will be shown for the purpose of answering questions, demonstrating, and at several of the fairs colored slides and moving films will be shown by the foresters. Mr. William A. McDonald will have charge of the exhibits at the Rochester Industrial and Agricultural Fair, at the Oswego County Fair, and at the State Fair at Syracuse. Shirley W. Allen will represent the college at the Otsego County Fair and at the Fair in Genesse county. Mr. Russell T. Gheen will be in charge of the exhibit at the Oneida County Fair and will assist at the State Fair at Syracuse.

The tendency of fairs throughout the country is to develop the educational features and minimize somewhat the amusements of the fair. The college authorities at Syracuse feel that effectively arranged exhibits will mean much in general educational work along forestry lines in the state.

Bowser, He Shaves

And Mrs. Bowser Has Something to Say About It.

By M. QUAD.

Copyright, 1915, by the McClure Newspaper Syndicate.

"What have you got there?" queried Mrs. Bowser, as her liege lord made a display of a small package when he came home the other evening.

"Mrs. Bowser," he replied as he sat down and carefully handled the package, "did you read of that case in Troy where a barber cut a customer slightly on the cheek, and he died of blood poisoning?"

"No. Say, you've gone and got another shaving outfit, haven't you?"

"Another? When did I ever have one?"

"You got one two or three years ago in Detroit, and how did you come out with it? Mr. Bowser, you do the most foolish things of any man I ever heard of in my life!"

"I do, eh? Is it foolish for me to want to avoid blood poisoning by shaving myself, to say nothing of the enormous saving of money? Yes, I did get an outfit in Detroit. But I had a boil on my arm and couldn't handle the razor. That was a cheap outfit, just an experiment."

"And you cut yourself and pranced around here and whooped until the neighbors thought we had a fire. How much did this outfit cost?"

"Only $10."

"Ten dollars thrown right away!"

"Is it? Let's see about that. Having my outfit I can shave daily. That's

HE LATHERED UNTIL BOTH ARMS ACHED.

$1.05 a week, or $4.20 per month. Seems to me that $50.40 per year is worth saving. In the twenty years I have been shaving I could have saved the trifle of $1,008. Where are you now, Mrs. Bowser?"

"Just where I was before. You'll shave once and that'll end it."

"Will it? If that's your opinion I have a great surprise in store for you. I've been taking lessons from a barber on how to handle a razor, and I can shave clean in exactly four minutes. Easiest thing in the world, when you know how. Just think of the $1,008 I have thrown away!"

"Well, I suppose you'll try it in spite of anything I say, but I shall decline to be held responsible for trouble."

"Responsible! Trouble! How could I hold you responsible! And what trouble can there be?"

"Why, that time in Detroit you almost tore the house down because you cut your ear."

"Pooh! I was probably joking. Don't remember a thing about it. I'd look pretty blaming you for what I did, wouldn't I? After dinner I will take a little shave, and if you don't say it's a better one than any barber has ever given me I'll put the razor up for good."

After dinner Mr. Bowser took a bowl of hot water and started upstairs, saying to Mrs. Bowser as he went:

"Better time me by the clock. I may be six or seven minutes this time, but I'll be right on tick tomorrow night."

He went into the bedroom and locked the door. Then he took off his coat, vest, necktie and collar. He looked down at his shoes for a moment and then decided to take them off also.

"Let's see," he mused as he opened the box and stood before the glass. "The first thing is to lather, of course. That's as easy as rolling off a log. This is something like comfort, this is. Hanged if I don't believe I shall want to shave twice a day after this!"

Mr. Bowser decided to put on plenty of lather. He put it on his chin, cheeks, nose, forehead, ears and throat, and more or less fell on the carpet. When he had lathered until both arms ached and no more would stick to him, he picked up the razor and chuckled.

"I just hold it with three fingers, this way, and lay it on my cheek, this way, and move it gently down. A child three years old could do that. I'll show Mrs. Bowser a trick or two before I'm through. Good woman, but she thinks she knows it all. Razor just slides"—

Mr. Bowser gave a jump, and at the same instant he saw the lather stained with blood.

"Don't amount to anything—just the head of a pimple," he whispered to know. A little more of the lather."

He lathered away until it began to drop off, and then picked up the razor again.

"The idea of my throwing away $1,008 to the barber!" he muttered as he laid the flat of the razor on his cheek. "Well, better late than never. No particular hurry about this, however. Feller wants to give himself time to get the hang of it. Perhaps I'd better begin on my chin first. Don't suppose it makes any difference whether I shave up or down, so long as I"—

"Mr. Bowser, what's the matter?" called Mrs. Bowser as she kicked upon the door.

"Nothing," he answered her.

"Then what are you jumping around so for? I thought you'd shake the chandeliers down."

"The blamed thing must have slipped on me!" he growled as he fumed to the glass to survey the cut. "Probably didn't hold it exactly right. Ah, that's more like the way the barber told me to hold it. Now, then, take it easy till you get the hang of it. May be ten minutes this time, but on the next occasion I'll"—

"Mr. Bowser, open this door!" called Mrs. Bowser from the hall.

"W-what do you w-want?" he gasped.

"I want to know what all this swearing and kicking over the chair means! Didn't I tell you how you would come out?"

"You go away! I'm all right. It was the man next door you heard."

He heard her go away after a bit, and he went back to the glass to whisper:

"I'll be hanged if I haven't nearly cut my old chin off! What in Texas ails the old thing, anyway! I'll get the hang of it if it cuts my head off! I suppose I did not have lather enough."

He lathered away some more. Then he picked up the razor and carefully examined both sides and the edge and the back. Then he laid the flat of the blade on his chin and smiled sweetly and whispered:

"Probably a little nervous, being the first time. I'll just get it by degrees. That's the way to do it! No barber ever slid a razor over my chin any nicer than that. The idea of Mrs. Bowser calling it $10 thrown right away! That's the way with a woman. If they save a cent here they waste a dollar there. I'll"—

Mrs. Bowser heard a yell and started for the stairs. She met Mr. Bowser halfway up. The lather was flying about and the blood streaming down on his shirt bosom, and his eyes were as big as onions.

"Well, didn't I say so?" she demanded.

Her words brought Mr. Bowser to himself. He turned back, beckoned for her to follow, and as they entered the bedroom he silently pointed. The razor lay on the floor, the bowl was broken in three pieces, and there was lather everywhere.

"Well?" she queried as she picked up three towels and placed two chairs on their legs again.

"Woman," he hoarsely whispered, "this is too much."

"Why, what have I done?"

"Sure! Done! Look at me!"

"Yes, but you tried to shave yourself."

"But who dragged me into it?"

"Mr. Bowser, you certainly can't blame me. I told you before"—

"That's enough. This is the limit. I understand it all and can see just how you planned it. It's not your fault that I did not cut my throat and that you are not now a widow. Mrs. Bowser, leave me to myself. I have some papers to look over before I consult a lawyer tomorrow."

"Just a minute," called Mrs. Bowser. "Why do you shave?"

"That strikes me as being a fool question."

"It may be one, but please answer it."

"I shave because I don't want to grow either a mustache or whiskers. That ought to be obvious to a child. What are you grinning at?"

"At the time you have wasted."

"Wasted? Wasted?"

"I have known you for twenty-five years, and I have never seen the slightest sign of a beard on your face. You are naturally a smooth faced man. If you didn't shave for three months there would be no beard."

"Do you mean to tell me that I'm the biggest idiot in America?" he thundered.

"But you have no beard," she protested.

"And you have never said anything about it until now."

"Why, if you hadn't been shaving you'd have been trying to cut your hair with a can opener."

Mr. Bowser came downstairs and brushed past her and went over to the barber's. After he had been greeted he asked:

"Would I have any beard if I didn't shave?"

"Not a sign of one," was the prompt reply.

"But you have shaved me a hundred times."

"Yes, sir."

"Why in thunder did I come here if I've no beard to be shaved?"

"I thought you liked to be tickled with the lather brush."

When last seen Mr. Bowser was kicking the stone dog on his front lawn.

Might Be Worse.

When the indigo predominates
  The view I take of life,
And man's well known existence rates
  As useless stress and strife,
When I am hitting .20
  And fielding .23,
And fate has hung the Indian sign
  With extra frills on me;
When I am tempted to object
  To fortune's cruel ways—
It's comforting to recollect
  They're worse in picture plays.

—Peoria Journal.

It would appear that about the last thing with which one could charge an American citizen would be a lack of ingenuity and originality. Forward looking, quick of mind, essentially inventive, the American is keen to resent any such apparently unwarranted imputation. In one respect, however, he has shown himself singularly hidebound and imitative.

Whether it be an inherent though unadmitted conservatism or a strong devotion to deep rooted habit and prejudice, the American has, at all times and in every clime of this broad country, displayed a tendency to borrow a name by which shall be known the town in which he takes up his habitation. Thirty-one Washingtons, twenty-two Madisons, twenty-three Oaklands, sixteen Lincolns, twenty-one Columbias, even ten Bostons, prove his lack of originality in this particular field.

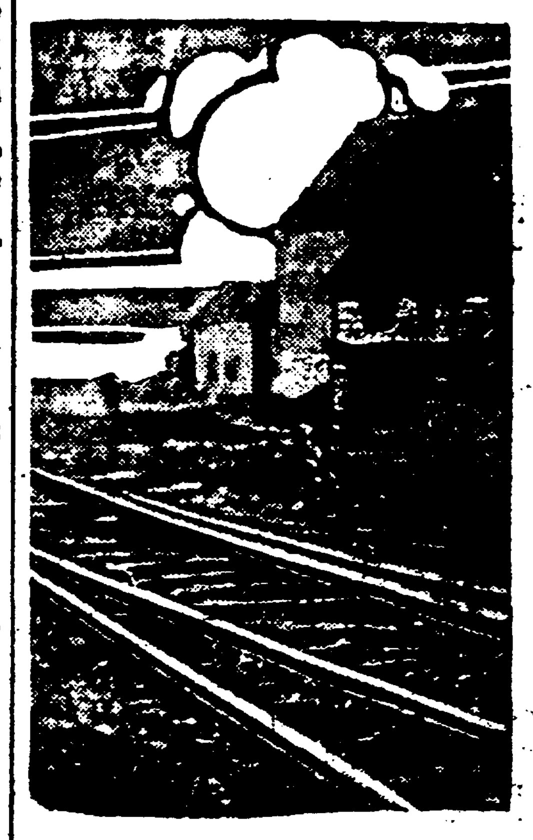
When, therefore, one of these cities—in spite of the fact that there are fully a score of other cities of the same name—puts out a trade organ or a prospectus without qualifying the city name with any state address, it sometimes proves rather difficult to determine just which of the multitudinous Columbias, Lincolns, or Oaklands is referred to by the publication.—Town Development Magazine.

JUVENILE DELINQUENCY.

Judge of Buffalo's Children's Court Scores the Railways.

Sixteen lines of steam railway enter the city of Buffalo, completely encircling it, writes Judge George E. Judge of the children's court, Buffalo, N. Y., in the American City. There are 725 miles of railway trackage within the city limits. In some of the railroad yards we find eighteen to twenty tracks and standing upon these tracks miles and miles of cars loaded with every conceivable article of merchandise. To protect this property a few railway police are employed. These men work long hours and receive small pay. Our newspapers frequently inform us that some of these railroad police are themselves arrested and convicted of burglarizing cars.

Thirty per cent of the boys appearing in our children's court in 1913 were charged with offenses against railroad



A DANGEROUS BACK YARD.

property. The cost to the state of New York and county of Erie of caring for boys convicted for crimes against railroad property and sentenced to institutions from Buffalo was $11,000. Offenses of this character will increase year by year until the railroad property is properly protected, and this neglect on the part of the railroads will continue to be responsible for making criminals. Leaving out the cost in money to our state, the saving of these valuable lives by removing the temptations which cause boys as well as adults to become criminals is worth more than can be computed in dollars and cents. It is a common sight in our railroad yards to see dozens of women and children, sometimes on moving trains, throwing off coal or walking alongside of the tracks, gathering up coal which has fallen or has been thrown from the cars. These women are often arrested and brought into court in groups of ten or twelve, and upon inquiry the judge finds that they have families of children dependent upon them for care.

If the railroads would wall in their yards and station watchmen at the necessary openings the greatest contributing factor to juvenile delinquency would be removed and the number of criminals in all of the railroad centers of this country greatly lessened.

Utility In City Plan.

Many cities have been built on more or less idealized plans, and, while in some cases the result has been pleasing, from an aesthetic point of view the tendency has been to pay too little consideration to individuality and little, if any, to practical considerations and industrial developments.

The utility of the city, as distinguished from its beautification, demands a greater degree of attention than has been accorded it, and the response to this demand by German cities has been largely responsible for their progress.

Prepared Especially For This Newspaper by Pictorial Review

A DAINTY FROCK FOR TRIM FIGURES.

6389

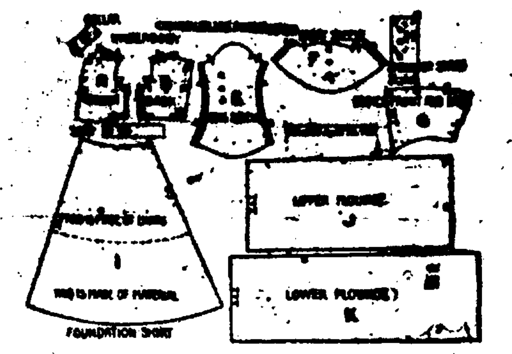
One of the new shades of pink in chiffon taffeta may be used to develop this costume, which has a draped bodice, lace under-blouse and a scalloped skirt.

Charmingly pretty is this frock of pale pink chiffon taffeta, with a draped bodice and underbody of all-over lace. The bodice is supported by straps of pleated taffeta, while the two one-piece gathered flounces on the skirt are finished along the lower edge with corded scallops. To reproduce the model in medium size requires 1⅛ yard lining 36 inches wide for upper part of skirt foundation, ⅝ yard 2-inch belting for stay, 2 yards 27-inch all-over lace and 4 yards 40-inch taffeta.

The under-arm and shoulder seams of the underbody are first closed, after which the back is hemmed so that the underbody can be fitted. The lower edge is then gathered between double "TT" perforations and the stay sewed into position. Finish the neck with a narrow edging of net or lace.

Next close sleeve seam as notched and gather on crosslines of small "o" perforations and ½ inch above. Draw gathers to the required size and stitch tape under gathers; after which the sleeve is ready to be sewed into the armhole. Ease in the fullness as gradually as possible.

Face the skirt foundation from lower edge to double "oo" perforations. Close back seams of foundation and flounces, leaving seams of foundation and upper flounce free above large "O" perforations for plackets. Gather upper edges between double "TT" perforations. Adjust lower flounce to position on foundation, stitching gathers along crossline of single small "o" perforations, center-fronts, large "O" perforations and seams even. Adjust upper flounce to position in same way and sew skirt to lower edge of underbody over stay, center-fronts and backs even. Scallop and bind with silk covered cord the lower edges of flounces.



For bodice and shoulder strap, first pleat shoulder strap as creased and press. Sew to upper edge of bodice, corresponding notches and perforations even. Arrange on underbody, center-fronts even; bring the large "O" perforations at upper front edge and the small "o" perforations along the back edge to corresponding perforations in underbody and tack; also tack at shoulder, bringing the large "O" perforation in shoulder strap and in underbody front together.

The hem edge of the skirt is an important consideration this season. One of the latest methods of finishing it is to bind it with a self-material cord.

Pictorial Review Costume No. 6389. Sizes 14, 16, 18 and 20 years. Price, 15 cents.

Economy Hints

A penny saved is a penny earned.—Benjamin Franklin.

TEXTILES of one kind or another make an important part of the changeable equipment of a house. Carpets, rugs, curtains, furniture covering, household linen, blankets, etc., all come under this heading. A general knowledge of the different fibers—cotton, wool, silk, linen, etc.—of which these materials are made, the effect and durability of different dyes, the values of the different methods of cleaning, etc., would evidently be a help to the practical housekeeper. Much has been written regarding color, design and other matters pertaining to household textiles from the standpoint of the fine arts, but many of the other questions, especially regarding durability, strength, etc., have not as yet been systematically studied. Some of those which bear most directly on every day household processes are being investigated by the government by laboratory methods, and it is hoped that as useful results may be obtained as have been gained from the scientific investigations of food materials. In the meanwhile, general practical experience is a great help in selecting such furnishings.

Tacked down carpets and mattings mean too much work in cleaning to be recommended, and movable rugs of some kind are much to be preferred. Rugs large enough to cover the whole floor are not as easy to handle, but stay in place better than small ones. In choosing rugs, those which are firmly woven and which lie flat should be selected. If they are too thin or loosely woven they will work up into wrinkles or ridges, especially if they are large. Good oriental rugs are very beautiful and wear a long time, but they are too expensive to be generally used in the majority of homes. Carpet rugs are now manufactured in a great variety of shapes, sizes, materials and designs, and are very satisfactory. Some of the best are those adapted from oriental ones. Good Brussels and some of the firmer of the pile carpetings are excellent, as are also those which resemble the heavy, old fashioned three ply ingrains. Old fashioned rag rugs and their modern imitations have an attractive, pleasing style of their own. They are especially appropriate for bedrooms and bathrooms, but are often too thin for places where there is constant passing. Matting rugs, which now come in good tones of the standard colors, often prove useful, though they are not so durable as good wool. They are particularly suitable for warm climates.

Soft colors and inconspicuous figures wear better to the eye and harmonize better with the other furnishings than gaudy figures on a bright background. The rugs should tone in with the coloring of the walls and should ordinarily be darker in shade than the latter, not only because they show soil less, but also because they seem to bring the room and its furniture into their proper relations.

Wireless Whispers.

Regular wireless business is daily handled between Long Island and Germany and between Boston and Norway.

Massachusetts students of wireless have had good success with experiments in sending and receiving messages with aerials laid on the ground.

The United States navy will establish a wireless station on Cape Cod especially equipped to guide vessels along the Atlantic coast in time of fog.

Within a few months wireless messages have been sent from a station in this country to Paris. They are sent direct and not relayed from ships at sea.

Short Stories.

Biscuit comes from the Latin words "bis coctus" (twice cooked).

Perfect eyebrows are found in no animals other than mankind.

Of the 3,000 or more islands comprising the Philippines only about 400 are inhabited.

Costa Rica is nominally on a gold basis, but nearly all its gold has either been collected by a few financiers or shipped out of the country.

The Italian government has made strict regulations concerning the width of wheels on wagons and carriages. The breadth of its wheel depends on the gross weight of the vehicle.

Shot and Shell.

German soldiers carry small tin whistles to blow for medical aid should they be wounded.

It is claimed that half an hour of the goose step does as much for the muscles of the legs as half a day's route marching.

When shells are filled with shrapnel bullets there is poured in about a pint of boiling resin, which keeps all fixed until the discharge.

Guns with a bore of twelve inches or more can only fire ninety full charges. They are then considered to be worn out and have to be sent to the foundry to have a new core inserted.

Hints for Housewives

Look For Dishonest Measures.

The north plaza of the city hall, New York, which was stacked high with all kinds of weights, must surely have caved in were it not for one thing. The weights were false. They were not as heavy as they looked. They were not honest weights.

That is the reason they were there, for it was weights and measures week, and Commissioner Joseph Hartigan of the mayor's bureau of weights and measures had placed all the dishonest baskets and pails and scoops and balances and other weighing paraphernalia which his inspectors had confiscated in public view that passersby might see and become wise.

One of the prize fakes was a five gallon oil can, so constructed that it contained but one quart of oil. It was said that the engineer who designed this can did not mean to be dishonest. He had a grudge against John D. Rockefeller and figured that he would not let any one use his oil, like the Irishman who bought a ticket and then walked, to get square with the railroad.

Another infernal machine was a large ice scale which gave only thirty-five pounds when it registered 100. When the iceman was arrested he said the ice had melted on the way up the dumbwaiter.

On one side of the exhibit was a pile of baskets, such as are used to mismeasure fruit and vegetables, while on the other a large stack of short weight paper containers gave mute evidence of the fortunes to be made in the ice cream business. A prominent confectioner accused of possessing these containers asserted that he only used them when selling ice cream and water ices to young ladies, as he could not bear to see them injure their complexions.

An interesting balance was one with a wire attached, connected through a hole in the counter with two weights weighing eighteen ounces below. By this device an ostensible five pounds of coffee became in reality only three pounds fourteen ounces.

While this exhibition was exposed to the elements, safely housed on the third floor of the Municipal building, in Commissioner Hartigan's office, was a display of correct and proper scales and measures of all sorts. At this office the commissioner is busy organizing what is known as the Consumers' league. Already [illegible] women have joined this organization, and by the end of three months the bureau expects the enrollment will be more than 200,000. This league, composed of housewives, will spread the propaganda of honest weights and measures by insisting on them when making their purchases.

When Ice Cream Sticks.

Ice cream is sometimes frozen so hard that it does not come out of the mold easily. When this happens let the cold water run over the outside of the can. The water is so much warmer than the ice cream that it melts it sufficiently to start it out and does not melt it enough to spoil the shape of the mold.

How to Clean Matting.

When matting is soiled rub it with a soft flannel cloth dipped in lukewarm salt water. Rub the spots with moistened cornmeal; then go over the whole surface again with salt water, this time cold. Wipe with a dry cloth. This method of cleaning does not turn the matting yellow, as water usually does.

If You Need More Fat.

If your physician advises you to eat more fat see that your diet includes plenty of cream, butter, olive oil, bacon, walnuts, pecan nuts, egg yolks, suet, salt pork, salmon and beef and mutton fat. All these foods contain a very large percentage of fat.

Cleaning Mackintoshes at Home.

Spread the mackintosh out flat on the table and scrub with warm water and yellow soap, in which a little carbonate of ammonia has been dissolved. Rinse in cold water and hang in the air to dry. On no account put it near the fire.

This Drives Mosquitoes Away.

Wind a piece of paper around a pencil and fill the tube so formed with Persian powder. Stand it in a dish of sand and burn it an hour before bedtime. This drives the mosquitoes away and so insures an untroubled night's sleep.

Bran For White Paint.

A plain cloth dipped in hot water and then in a saucer of bran will clean white paint and not injure it. The bran acts like a soap on the paint.

Brightening Rugs.

Throw coarse salt over rugs and carpets before sweeping them to prevent the dust from rising. This will brighten the color also.

To Sharpen a Knife Quickly.

A strip of emory cloth tacked to a small square board will be found useful for quickly sharpening the carving knife.

Ironing a Bias.

Be sure to iron garments with the straight of the goods and thus prevent stretching of the bias seams.

TODAY'S FASHION NOTE

Corset cover made in one piece and trimmed with hand embroidery. The open drawers are cut on a circular model and developed in the same material. Four yards 36-inch material will make both garments.

Pictorial Review Corset Cover No. 5525. Sizes, 32 to 48 in. bust. Price, 10 cents.

Drawers No. 4753. Sizes, 21 to 36 in. waist. Price, 10 cents. Embroidery design No. 12028. Transfer pattern, 10 cents.

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.

Laconic.

"Hair's a little inclined to"—

"Cut it," interrupted the man who wanted to catch a train.—Puck.

The Kitchen Cupboard

APRICOT MARMALADE.

NOT only alphabetically first, but first in favor among the "confitures" of the French, stand all the forms of apricot preserve, of which apricot marmalade is the chief. This sticky, velvety, smooth sweet of not very positive flavor, but most delicate when made of fine fruit, is used in dozens of the different little cakes of the fine French pastry shop, sometimes to give the shiny top to the little filled tartlets, sometimes between the cooked creams, and a foundation of puff or other paste, and is an altogether serviceable and attractive addition, although not dietetically good with pastry. The French pastry maker often recooks it with a very heavy sirup to make it more shiny.

The Italians also use a great deal of such things as apricot marmalade with their "pasta frolla" (puff paste), sometimes covering a layer of paste with it, which thus becomes a background for figures cut from pastry like a rose branch with leaves, buds and roses.

The marmalade is made by reducing the raw apricot to a pulp by putting it through a sieve—a stout tin one with re-enforced bottom is one of the invaluable kitchen utensils—and then it may be cooked with the sugar or cooked separately to dry out the water and united with a thick sirup. The first method is probably the best for the inexperienced, and the following recipe adapted from the French describes it:

Apricot Marmalade Recipe.

Pour boiling water on the apricots, fine ripe ones, and let stand three or four minutes. Pour off, peel and take out stones, then press all through sieve. Add three-fourths as much sugar as fruit and cook from half to three-fourths of an hour. If over the fire directly, stir all the time. It is safer to cook it on an asbestos plate and stir frequently. A test for its being done is that it should stick the fingers together. Put in sterilized glasses; when cold cover as you would a jelly.

Anna Thompson

COMMUNITY CENTER USE IN WISCONSIN.

Great Increase During Past Year In Use of Schoolhouses.

Five hundred and nine schoolhouses in Wisconsin were used as community centers in 1914-15 as against eighty-six so used in 1910-11, according to a report compiled by Edward J. Ward of the social center bureau, University of Wisconsin extension division. Twelve hundred and sixty-five community meetings were reported in the former period, 9,031 in the latter.

Five years ago only one principal had undertaken the duties of the community secretaryship; last year 152 performed such services. In 1910 a dozen schoolhouses were used as polling places; in 1914-15 over 100 school buildings were so used. Not until 1913-14 is any school principal reported as serving in the capacity of voting clerk; last year seventeen school principals did this work.

Not a schoolhouse in the state reported gymnasium equipment in 1910-11; 130 are now thus equipped. Fifty-five public school libraries were in use in their respective communities in 1910; now 479 such libraries are in use. Two dozen young people's organizations were reported in the public schools in 1910; over 200 such organizations are now in existence.

No community secretaries were regularly employed five years ago; last year seven communities employed such officers.

These figures are taken from responses received in answer to a questionnaire sent out to 990 school principals throughout the state.

An Indiscreet Memory.

The Hostess—Don't you think Colonel Broadside is quite a wonderful old man? Look at him. He is as straight and slender as an arrow, and he has the most wonderful memory. The Lady of Dubious Age—I think he's an atrocious old bore. He remembers when everybody was born.—Cleveland Plaindealer.

Crushed the Diamond.

Among historic diamonds one, the Piggot, has gone out of existence. The story of its destruction is a tragical one. It was said to be worth $200,000. The diamond came into the possession of Ali Pasha, who always wore it in a green silk purse attached to his girdle. He was wearing it when he was wounded by Reshid Pasha. Knowing that his wound was mortal, he immediately retired to his divan, gave orders that his favorite wife should be poisoned and then delivered the diamond to Captain D'Anglas with the order that it should be crushed to powder in his presence. His command was obeyed, and the beautiful gem was utterly destroyed.

SPORTS BLOUSE.

Shirt Waists Smartly Tailored Liked For Ordinary Wear.

A PINK AND WHITE FANCY.

The development of the blouse has given us many kinds of them for sports, as well as for more elaborate wear. The one shown in the illustration is made of pink and white striped linen combined with plain white linen for collar and cuffs. Large white pearl buttons are the only ornamental touches.

Settled the Difficulty.

An insurance agent had vainly tried to persuade a man to insure his valuables against burglary. "A safe's all very well," he admitted, "but look at the constant trouble of locking up and unlocking to see if your things are all right."

"I've got over that difficulty," declared the weary listener.

"Indeed!" said the agent incredulously. "How?"

"I've had a window put in the safe," growled the other.

NEVER DESPAIR.

The most perilous hour of a person's life is when he is tempted to despond. The man that loses his courage loses all. But it matters not how poor he may be, how much pushed by circumstances, how much deserted by friends, if he only keeps his courage and with unconquerable will determines to be and to do what becomes a man all will be well. It is nothing outside of him that kills. It is what is within that makes or does not make.

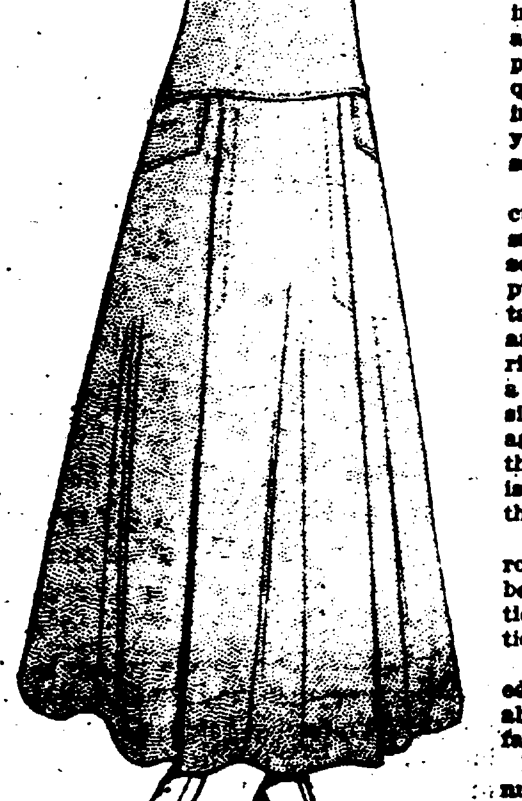
Prepared Especially For This Newspaper by Pictorial Review

SKIRTS DIFFER WIDELY IN STYLE.



6359

Smart five-gored skirt of black serge trimmed with a circular hip-yoke and pocket. The model lends itself to many variations, however.

The separate skirt is becoming ubiquitous as the autumn modes put in an appearance, and the models range from the simplest to the most elaborate. An extraordinarily good looking skirt of the plainer sort is very smart in its simplicity. It is made up of black serge on a five-gored model, having an inverted pleat at the center-back and a hip-yoke, below which are good sized pockets. As shown here the skirt requires, for average size, 3⅛ yards 54-inch material, but if desired the hip-yoke can be omitted, thus effecting a saving of ⅛ yard of serge.

If laid carefully on the material when cutting, mistakes will be avoided and smart lines preserved. Taking the serge as it is originally folded when purchased, spread it on the cutting table, and along the lengthwise fold arrange the front gore. To the right of this lay the pocket on a lengthwise thread. The back and side gores are placed nearer the selvage, so that they rest on a lengthwise thread. The yoke comes last, and this is, of course, on a fold of the serge, so that there will be no seam.

If the deep yoke is desired with rounded lower edge the lower edge may be cut off on single small "o" perforations. There are double "oo" perforations to indicate a short yoke.

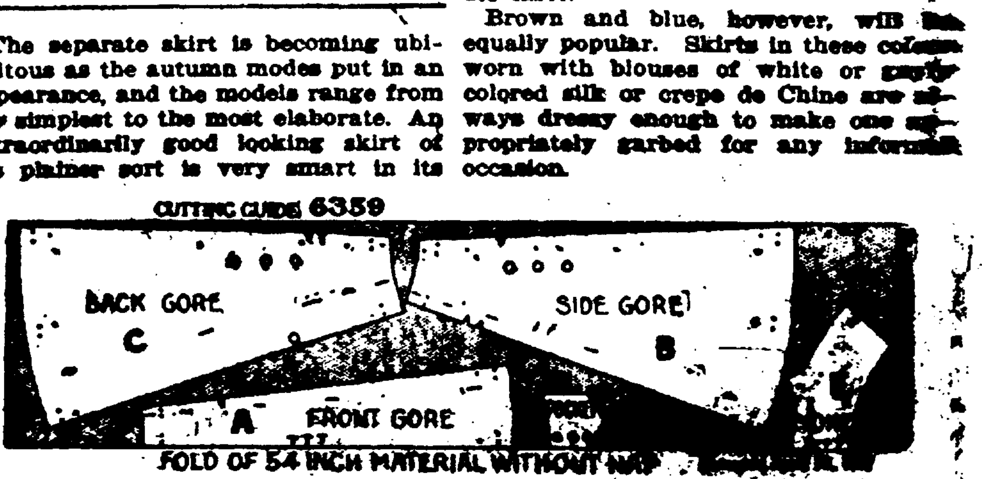
The lower edge of the skirt is finished with a deep hem and the width is about 3⅝ yards, this being both a fashionable and comfortable width.

Pleated skirts appear in bountiful number, and there are some compromise models, combining pleats, tucks and hip-yokes, which can be recommended to women who want something that follows the prevailing fashion, yet must be "different."

Black serge promises to be exceedingly popular this fall. Trimmed with black silk braid it takes on a very rich effect and is always in the best possible taste.

Brown and blue, however, will be equally popular. Skirts in these colors worn with blouses of white or gaily colored silk or crepe de Chine are always dressy enough to make one appropriately garbed for any informal occasion.

CUTTING GUIDE 6359



Pictorial Review Skirt No. 6359. Sizes 22, 24, 26, 28, 30, 32, 34, 36, 38 and 40 inches waist. Price, 15 cents.

Industrial France Must Give Way to Fighting France, Says Army Commissioner

Paris, Aug. 14.—Henry Berenger, member of the Senate Army Commission, in a statement giving the results of a visit to four of the great fortresses on the eastern frontier, gives the following as the unanimous testimony of the French generals:

"Our front will not give way because we have enough good soldiers, enough cannon and, henceforth, we will have enough munitions.

"Our most serious check would not amount to a retrgression of more than a few miles. But our front will not coincide again with our frontier unless industrial France gives to fighting France the surplus of projectiles, big cannon and enormous bombs necessary to the continuous operation of artillery, and without which the most magnificent courage can end only in spectacular heroism.

"Our army, with its actual armament, will not give ground, but i norder that it shall break through the obstacle before it, the artillery must be given supplies commensurate with the gigantic character of the war."

Serbia Gives Flat Rejection of the Bulgarian Demands

(Continued from Page One)

united action by the Balkan states in joining the Entente allies and thus throwing the Balkan barrier between the central powers and Turkey.

Bulgaria contends that by a treaty with Serbia the latter ceded to Bulgaria about seven thousand square kilometers of Macedonia, which Bulgaria was compelled by the great Powers to relinquish during her enfeebeld condition after the second Balkan war. Bulgaria now insists that the original treaty be carried out, and that unless she secures the return of Macedonia she will refuse to join the other Balkan states in assisting the Allies.

The present issue has renewed the smouldering fueds among the Balkans and much bitterness is said to have developed in the course of the negotiations, all pointing to Serbia's refusal to yield Macedonia and to Bulgaria withholding her support from the Entente Powers.

EXPRESS COMPANIES TO INCREASE RATES

Express companies doing business in this state have filed a scale of tariffs which increase their rates on state business to the same extent permitted them recently by the Interstate commerce commission. The change affects first class shipments within the state weighing less than 100 pounds.

The increases are as follows; 1 to 5 pounds, 5 cents each; 6 to 29 pounds, 4 cents each; 40 to 49 pounds, 3 cents each; 50 to 70 pounds, 2 cents each; 1 to 99 pounds, 1 cent each. It is also likely that increases will be made on second class shipments under 100 pounds. The second class increases, if made, will be 75 per cent. of the first class rates.

HUGO SAYS FARMER IS NEAREST A PRODUCER

Whitney Point, Aug. 14.—Secretary of State Francis M. Hugo of Watertown was the principal speaker at the Broome County Fair Wednesday. Discussing present agricultural conditions, the secretary told how farmers in New York state are at a great disadvantage in borrowing money, although they have the best security on earth.

"The farmer comes nearer being a producer than any other member of the community," explained Mr. Hugo, "yet he has the hardest time to obtain credit, and even then must pay the highest interest."

DILLON WANTS SOME PROMISES

Producers Should Inform the Official They Have Goods for Auction---No Limit to Sale.

New York, Aug. 14.—John J. Dillon, Commissioner of the State Department of Foods and Markets, issues an appeal to producers of fruit that should create interest. He wants full information of what is obtainable and assures producers of fruit there is no occasion to allow products to rot on tree or ground.

Mr. Dillon says further:

"We have completed all the arrangements and details for the selling of apples, peaches, pears and other fruits and vegetables at public auction. In New York City, under the supervision of this department, the sales to takep lace on the New York Central Railroad docks at Barclay st. and Desbrosses st. We will also have the use of the largest and finest auction salesroom and display room, for samples, in the world, at 204-206 Franklin st., New York City. We have closed the contract with the Fruit Auction Company, and the auctioneers employed for the selling of the fruit by this department will be the same auctioneers who have sold fruit for the Fruit Auction Company of this city for many years. The charge to you for doing your business will be 5 per cent. commission, and the handling and cataloging expenses not exceeding 2c per barrel.

"The amount of fruit that can be disposed of at auction is practically unlimited. After a careful and thorough investigation we find that the auction sales realize the highest market price obtained forf ruit in this market. Now that we have completed all arrangements and details and have the machinery for doing the business, we want to know definitely from you if you are ready to give us a part or all of your fruit to sell. If it isy our intention to give us a part of your fruit to sell we would like to know at once what fruit you expect to ship us to be sold at auction, and when you can make shipments. We must know definitely what we can depend on. You will readily understand that no buyer will pay more for the fruit than thep rice established at auction, and no buyer would know the price at auction until the sale was closed. We have arrangements made so that in case of goods being withdrawn for the owner's account, because of not having brought a price satisfactory to the shipper, the goods will be placed in cold storage. The charge for storing apples will be 40c per barrel for the season.

"Kindly remember we are conducting this business, not for profit, but for benefit to New York State producers and consumers, and after a thorough investigation we know positively that this is theb est method for selling your fruit. We want you now to do your part. Give us the definite information of what you will have to ship, and about when it will move."

Mammoth Auditorium at Chautauqua, N. Y.

Six presidents of the United States have spoken on this platform. The leaders in American life and thought have here found their most responsive audiences. This auditorium seats 5,300 people comfortably and will accommodate 7,500. Its open air sides afford perfect ventilation and comfort during the hottest days.

ENGLAND BELIEVES GULF OF RIGA SAFE FROM THE GERMAN ATTACK COMING

London, August 14.—That the German fleet will have a most difficult task in attempting to force a passage into the Gulf of Riga is the opinion expressed in military circles. Riga is recognized as essential to any German scheme involving an advance on Petrograd. By reason of its geographical location Riga is directly atwart the main trunk line leading from Warsaw through Vilna to Petrograd, and Riga has an independent connection of its own with the Russian capital.

Before the German fleet can hope to enter the Gulf of Riga it must force a passage through the waters bteween Dal Grund, the shoal waters off the southern end of Oscelo Island, and theh Courland coast at Poipt Lyser Ort. In the center of the passageway is the Michael Bank. The usual route is to pass between Michael Bank and Lyser Ort. The distance from the Dal Grund to the nearest point on the Courland coast, which is in the vicinity of Launtseem, is ten miles, but this distance is shortened for navigation purposes by the four fathom curve which off Launtseem extends at one point two miles off the beach.

It is this eight miles' stretch between the Dal Grund and the Courland coast which the Russians have blocked with mines. Only one other route is open to enter the Gulf of Riga, and that one is by way of Mohn Sound. This is a very dangerous passage and one which is also capable of being easily defended. The Russians through a number of years have conducted manoeuvers having for their object the working out of war problems based on the loss of the Gulf of Riga. It would seem as if the Russians have always reckoned the possibility of Riga failling before a strong naval force and have therefore based their defense of Petrograd on holding the Gulf of Finland. Assuming that Riga is taken, the Russian naval manoeuvers were worked out on the assumption that the port of Reval would be the next point of attack. Reval is directly connected with Petrograd by rail and is the natural base for operations of a . nd force having Petrograd as its immediate objective.

Riga as a rule is frozen in after the first of November and continues so until the last of February or early in March. When the ice comes on the city front it is still possible for vessels to discharge and load for a few weeks longer at Millegraf. The latter place is about five miles below Riga on the Dvina river. Hapsal, Port Baltic and Reval close about November or December and open in February or early March. During the winter months the Gulf of Riga is covered with ice a considerable distance from shore. "It is the practice of the Russian government to employ ice breakers to prolong the open season at the Riga Gulf and Finland ports.

The success of the Russians in holding back the German fleet from the Gulf of Riga is ascribed in naval circles largely to the Russian naval manoeuver experience of recent years, which has to do almost wholly with thep roblem of holding the Riga Gulf entrance as a preliminary to the defense of the Gulf of Finland. The Russians have the advantage that they can reinforce by way of the Mohn Sound the passage between Orel and the Hapsal shore, any certaining force defending the entrance to Riga. The Gulf of Finland is reported as safe so long as the Gulf of Riga remains in Russian possession.

The Gulf of Finland on its northern side is fringed with reefs. A well defined passage exists behind these reefs and Russian naval defense of the Finland Gulf largely counts on using this inside passageway. The depth of water is sufficient for large vessels.

Aside from the Finnish reef passage the waters of the Gulf of Finland are open, and there is no block before Petrograd short of Cronstadt. The latter place has long been regarded as possessing one of the most elaborate torpedo defense schemes of any port in the world. Cronstadt was wrested from the Swedes by Peter the Great in 1703.

Gonigal of Rome motored to Long Branch Friday.

LEGAL NOTICES

NOTICE TO CONTRACTORS

State of New York, Office of the State Commission of Highways, Albany, N. Y.—Pursuant to the provisions of Chapter 30, Laws of 1909, as amended by Chapter 646, Laws of 1911, and Chapter 80, Laws o f1913, sealed proposals will be received by the undersigned at their office, No. 55 Lancaster street, Albany, N. Y., at 1 o'clock p. m. on Thursday, the 26th day of August, 1915, for the improvement of the following highways: Oswego County—Road No. 5408; Fulton City; East First st. Mileage, 0.36.

Maps, pans, specifications and estimates may be seen and proposal forms obtained at the office of the Commission in Albany, N. Y., and also at the office of Division Engineer, Chas. J. McDonough, 433 South Salina St., Syracuse, N. Y.

The especial attention of bidders is called to "Information for Bidders" in the itemized proposal, specifications and contract agreement.

Proposals for each road or contract must be represented in a saparate sealed envelope, endorsed on the outside with the name and number of the road or contract for which the proposal is made. Each proposal must be accompanied by a certified check payable to the order of the State Commission of Highways for an amount equal to at least five per cent. of the amount of the proposal which such check accompanies.

This check will be held by the Commission until the contract and bond are duly executed.

The successful bidder will be required to give a bond for fifty per cent. of the amount of the contract; such bond to be executed by a surety company to be approved by the Commission, or a bond secured by the deposit of collateral securities to be approved by the Commission.

The right is reserved to reject any or all bids.

EDWIN DUFFEY,
Commissioner.

I. J. MORRIS,
Secretary.

DES MOINES OFFICIAL REPUDIATES CLAIMS MADE RELATIVE TO CITY'S TAX RATE

ST. MARY'S TO GET SET OF CHIMES, GIFT OF JOHN GIBBONS

Yesterday the Feast of the Assumption of the Blessed Virgin was observed with appropriate ceremonies in the Church of the Immaculate Conception, of which St. Mary is the patron saint. In his sermon, Rev. Father John Lindsman dwelt upon the mystery of the Assumption and spoke of the death of the Virgin Mother and of her calmness, resignation and piety as the hour approached in which she was to meet her divine Son again. He urged the congregation not to allow a day to pass without a special prayer to St. Mary for help and guidance.

Father Lindsman spoke of the departmene of Father D. J. Dooling, his assistant for nine years, who left Saturday for St. Lucy's church, Syracuse, where he will assume the curateship. Father Lindsman voiced his regret at Father Dooling's departure and spoke of the many friends the young priest had made during his stay and labors here. In closing Father Lindsman introduced Father J. S. Karszmarczyk, formerly assistant at the Whitesborough parish, who arrived Saturday to take up his duties here. Father Karczmarczyk said mass in St. Stephen's at Phoenix yesterday. He is a young priest, having been ordained in 1914, and speaks several languages, including Polish, fluently. He is expected to be of great assistance to Father Lindsman among the Polish parishioners of the church here.

Father Lindsman announced a gift of $2,000 by John Gibbons of this city, the money to be utilized in erecting a bell tower on the church. Work on the tower will be started in the near future and Father Lindsman hopes to secure a special set of chimes when the improvement is complete. He expressed the thanks of the congregation for Mr. Gibbons' generosity.

Count Von Bernsdorff and Von Bethmann-Hollweg Involved in Three Plots

New York, Aug. 16.—As the result of work by secret agents of the Department of Justice the United State Government has come into possession of indisputable evidence of dabbling in the internal affairs of the country by accredited officials of the German diplomatic service. Coming on the heels of the passport scandals, which nearly brought about a diplomatic rupture, and the attacks on the President by the inspired publication Fatherland, edited by George Sylvester Viereck, these latest discoveries have produced a crisis in Washington, where last night it was freely predicted that within a month Germany either will voluntarily call home Count Johann von Bernstorff, its Ambassador, and Captain Franz von Papen, the military attache of the Embassy, or will do so by request of President Wilson.

That the situation is acute was made clear by revelations in this city yesterday and the publication of correspondence which proves that Dr. von Bethmann-Hollweg, Chancellor of the German Empire, personally directed the employment of an American journalist to write articles favorable to German's cause for American consumption. At the same time it was shown that the publication Fatherland has been and is being financed by Dr. Heinrich F. Albert, the chief financial agent of the German government in the United States.

Ever since Dr. Albert arrived in this country he and Herr Hugo Schmidt, western representative of the Deutsches Bank of Berlin, have been under the closest scrutiny by the government agents. It is now discovered that they have been directing the activities of scores of German secret agents from their headquarters on the steamship Vaterland, of the Hamburg-American line, tied up at Hoboken, and from offices which they have maintained at No. 45 Broadway. What makes this more serious is that the government is in possession of documentary proof that in their work Dr. Albert and Herr Schmidt have been in constant communication with Count von Bernstorff and Captain von Papen.

That German agents have arranged widespread publicity for their cause through subsidized bureaus posing as legitimate news associations, through lecture tours and moving picture enterprises, has been well known for some time. The government, however, is said to be in possession of proof that German government officials attached to the Embassy in Washington and to German Consulates throughout the country have not only concerned themselves in these things but in the fomenting of labor troubles in arms, ammunition and moto vehicle factories.

That German government money is building a great ammunition factory in this country, and that the projectors of this enterprise, to disguise their real identities, have hidden themselves behind American citizens and actually made bids for orders for explosives from Britain and Russia, is information that the government has had for some time. No inkling of where this factory is located has come from government sources.

Public Rest Room During Fair Week

Persons attending the Oswego County Fair this week may be interested to learn that the Chamber of Commerce will have a Rest Room where the farmers and their wives may make their headquarters and leave their wraps and bundles, etc., during their visit to the Fair.

The Rest Room will be open from 9 a. m. until 5 p. m. It is located in the office of the Chamber, Telephone building, No. 34 So. 1st st.

CHIEF TO HAVE EYES ON SHARKS

An Abundance of Gentry Arrive to Ply Big Business, But Sleuths Aplenty Are Here, Too.

Almost all the concessionaires and attraction owners arrived in this city today with their oufits and the Fair grounds is a busy place today. Tents [illegible] lot and the "grifters" are setting up their "layouts."

From the conversation of several men who arrived yesterday, the members of the sporting fraternity seem to have gathered the impression that the fair this year will be wide-open and any number of "strong-joint" operators are headed Fultonward. In spite of Chief Dyer's announcement that wheels will be barred this year and only legitimate concessions will be allowed to operate, those who care to risk their money on the games that "look easy" will no doubt be afforded every convenience by the wise "grifters" who find theg oing harder each year.

Detectives from all over the state will gather here tomorrow and "harness-bulls" will also be in evidence. Chief Dyer announces that a general clean-up will be made as soon as the fair gets under way and any suspect will be ordered to take the first train out.

Two racing cars, one a Ford and the other a National, arrived in the city yesterday, the advance guard of a crew that will reach here later in the week. Races will be staged on the track Saturday and the two cars already here may be allowed to give speed trial exhibitions during the week. The National is the car used by Joe Dawson of the National factory in some of the greatest races on the Indianapolis speedway.

WOODMEN TEAM OUTCLASSED THEIR RIVALS

The Fulton Woodmen made chopping blocks of their Syracuse brethren in that city yesterday when the local baseball nine walloped the Syracuse team by a score of 18-2. The big town team never had a lookin and the locals piled up the runs at will. Mike Bray, who caught for the locals, poled out a homer with three men on the cushions, Green and Pullen slammed out doubles, and Martin at shortstop for the locals, did some wonderful work in the field. The Fulton contingent made the trip by trolley.

THREE CONCERTS HERE THIS WEEK

City's Excellent Band to Make Up for Lost Time Which Is Due to Moist Weather.

Music lovers of the city will be pleased to learn that three concerts will be given in the city this week by the Elks' band. The first will take place tonight in the East Side park, [illegible] that was to have been given last Thursday even- but was postponed until Friday because of the rain. Friday night proved to be a stormy night also, and the committee hopes that Jupe Pluvius will take a vacation for this week at least.

Wednesday evening the Elks' band will give a concert at their clubhouse and following the concert an orchestra will play for dancing from 10 until 1 o'clock. On Thursday evening another concert, with a complete change of program, will be given and daneing will follow. The Elks' will hold an ice cream festival in connection with each concert.

The band will have a busy week having contracted to play every afternoon at the Fair grounds.

The program for tonight's concert follows:

March—American Cadet ......Hall
Selection—Chin Chin ...... Caryll
Popular Hits:
(a) One step, "Somebody Knows," .... Von Tilzer
(b) One Step, "Cows May Come—Cows May Go" .... Von Tilzer
Selection—Bohemian Girl ....Balfe
Waltz—Barcarole from Tales of Hoffman .... Roberts
Selected:
(a) Intermezzo "Tunisia" .. .. Laurendeau
(b) Song: "The Vale of Dreams".. .... Roberts
Trombone Solo—....F. Jess Newton
Medley Overture—The Grand Slam. .... Witmark
Overture—Wanderers Zeal .... Suppe
Selection—High Jinks .... Friml
March—The Big Elk ....Newton

JOHN McGUAIN'S ARM BROKEN ADJUSTING BELT

John McGuain, pumpman for the Walter Bradley Contracting company, in charge of the construction of the new paper mill at Broadway, suffered a compound fracture of the left arm this morning at 11 o'clock, when he attempted to put a belt upon the fly wheel of a pump. McGuain tried to throw the belt while the wheel was in motion, but his arm slipped under the belt and he was whirled off his feet.

Fellow workmen picked him up and he was taken to the office of the comcompany and Dr. Gladman was called. Some one called the ambulance and McGuain was taken to the Lee Memorial hospital after Dr. Gladman had applied first aid.

IN SPITE OF INCREASED POPULATION AND EXPENSES MILLAGE HAS DROPPED

In view of the conflicting statements regarding the tax rate in Des Moines Iowa,, the Chamber of Commerce wrote to the Commissioner of Accounts and Finance in Des Moines for a statement of the rate since 1900. The following letter has just been received:

"In reply to your of August 6th, will say that I am indeed very much surprised at the accusations made in your town regarding our tax levy, and in order to fully inform you as to the same, since the commission form of government went into effect, which was in the year 1908, will give you the tax levy for each year:

For city purposes:—1901, 40.3; 1902, 40.6; 1903, 39.3; 1904, 38.8; 1905, 38.7; 1906, 39.7; 1907, 37.9; 1908, 36.4; 1909, 37.1; 1910, 37.1; 1911, 37.1; 1912, 37.1; 1913, 32.1; 1914, 32.1.

"It is the total millage levy for all city purposes. You will note that from 1901 the levy has dropped more than 8 mills, and, of course, we have in that time increased our valuation some, but we have also increased our population about 25,000, and naturally the population necessarily has brought more taxable property values, and also created a little more expense for the city, so that we consider that one offsets the other."

ALL STORES MAY REMAIN OPEN EVENINGS DURING THE PRESENT WEEK

It is quite probable that several of the larger stores in the city will remain open two evenings this week during the fair, if plans made by several merchants are carried out. These men point to to the fact that the stores are closed Wednesday for the half-holiday and to the comparatively small number of people who spend the afternoon in the down-town section during the fair. With warm weather this week, evening shopping is likely to be more agreeable and if the stores are lighted the town will assume a livelier appearance. In consideration of the half-holiday granted for the past month, the clerks are not expected to remonstrate against two or three extra hours of labor, as the case may be. One man, interviewed this morning, expects to keep his store open Wednesday and Thursday evenings until 8 or 9 o'clock. This will allow customers to visit the stores and at the same time permit the employes to go to the evening band concerts. The store will be closed Wednesday afternoon, as usual, but will re-open at 5 o'clock. This merchant has planned an extensive advertising campaign this week and means to get the benefit of it. His representatives at the Fair grounds will announce that the store will be open in the evening and the band concert will be advertised as an attraction to keep the country trade in the city.

Secretary Heydecker of the Chamber of Commerce said this morning that no action had been taken in this regard by the Retail Trade Division of the chamber, but added that he considered the idea a good one and worthy of trial.

"TAXPAYERS COMMITTEE" UNKNOWN TO CHAMBER OF COMMERCE SECRETARY

"I don't know anything about the Taxpayers' committee," said Secretary Heydecker of the Chamber of Commerce this morning, "But if I knew who the leaders of it were, I should certainly ask them why they do not use their names instead of the 'Committee' signature. They have no reason to hide themselves."

The Secretary of the Chamber disclaimed all knowledge of the personnel of the Taxpayers' committee, but he did say that the organization was not a Chamber of Commerce project.

Several of the anti-commission government group are of the opinion that the committee is an ex-officio Chamber of Commerce organization and is receiving the financial backing of the chamber. Rumor credits a prominent attorney with the authorship of the advertisements which have been signed by the committee and say this is a plan of the chamber to put its ideas before the public, while the chamber itself remains out of the political fight. In spite of the "efforts of several young business men," as cited in a daily paper circulated here, the fight goes merrily on and seems to bid fair to reach the boiling point within the next two weeks. It is stated unofficially that opposition workers will import their first speaker of a series next week. This man is to come from Dayton, and he will relate the true story, according to the antis, of the commission form in that city.

Opinions

The Inevitable Cost.

It is frankly impossible for any man to prove that an adequate navy and a thoroughly maintained army would keep this country out of war. It is just as impossible for the pacifist to deny that without these safeguards the country is at the merry of the world, or of any part which finds itself both belligerent and prepared.

That being so, a comparison of values is necessary. The British naval appropriation for 1914 amounted to $250,000,000. The estimated military expenditure of the German Empire for the corresponding time was $300,000,000. These are the maximum appropriations of Europe. The singular and instructive thing about them is that together they represent the cost to England alone of running the war for one month.

No. There is no guarantee that by spending as much or ten times as much, this country would be kept at peace. But it is made clear that in the gaunt and sinster fires of Europe's pergation that unless we spend freely now we shall be called upon to spend much and bitterly later on. If we refuse toprepare, we are none the less preparing —for disasters! Philadelphia Ledger.

War and Rain.

There has been some excess of rain over the northern half of the country during the summer, and with a view to finding a reason for this there are numbers of people who lay it to the discharge of so many hundreds of tons of explosives in Europe. The theory has no foundation whatever.

There was a very great deficiency in rainfall throughout the winter and spring. The depth of snow throughout the winter was scarcely enough to protect the ground, and in many of the states did not do so. Government reports told us during the spring that there had been unusually large discharges of icebergs from the Greenland coast and beyond, and it was anticipated that there would be no shortage of moisture during the summer, particularly in the northern states. The ice drifts slowly south, and as it melts it throws off great quantities of mist. This gives the atmosphere a heavy content of moisture, and the tendency of this cold and moist air is to set in toward the warmer areas upon the continent nearest at hand. Unusually long periods of east wind have in this manner carried millions of tons of water far inland, and the storms follow.

Witness the fact that the states further south—that is, those below the Mason and Dixon line, have not been unduly wet. Indeed, they have not had rain enough. There was no rain in New Mexico from April until the latter part of July. Texas is getting rains now that have been deferred all summer, and the cotton crop is reported as improving. Oklahoma, and all the southern states lying eastwardly have suffered to some extent from drouth, and have only recently been favored with the needed showers.

If the war in Europe was of sufficient vigor to seriously affect the atmosphere would it not bring rain all over the world, instead of to a few states along the northern border of the United States?

There is a whole lot of nonsense about producing rain by explosions. We had our silly season in this country a few years ago when "rainmakers" sprung up all over the country. A good many people seem to have forgotten this fact. Not a single reliable instance can be cited when one of the experimenters ever produced the goods.—Utica Observer.

CASTORIA
For Infants and Children
In Use For Over 30 Years
Always bears the Signature of

HONESTY THE RULE

The Evening Times has been criticised recently for permitting persons to express themselves through its columns thought relative to local affairs, and whose opinions differ from the policy advocated by this paper, The criticism is unfair for various reasons.

In the first place, with a community as with individuals, an honest opinion on any question of moment cannot be obtained until both sides are viewed intelligently, and, while the stand of The Evening Times on a question may be found in its editorial column the news columns of this paper are open for discussions on questions of public interest.

In the second place, the opportunity offered the readers of this newspaper is not new or especially commendable—it is simply fair, open and above board, and the outcome of a desire to truly help this community to grow.

It is the contention of The Evening Times that any person who would advocate the denial of the privilege to any individual to set forth his honest views on a subject under discussion in almost every nook and corner of the city is guilty of two things—he is either afraid of the strength of the policy he advocates, or he is guilty of a primitive instinct which smacks of the village; or, he is downright dishonest himself. Abraham Lincoln once said: "He who will not listen to both sides of a question is dishonest," to which might be added, that he who does not want others to hear both sides of a question is dishonest. If an issue be right it will stand for itself; it needs no propping up. Criticism brings out its coloring and its high lights.

Those of The Evening Times readers who remember the first issue of this newspaper remember the prospectus on the first page. Its heading read: "For the service of Fulton," and the contents read like this:

"The sympathies of the Fulton Times will be instant in favor of programs which promise to make the city a better city in which to live.

"It will accomplish its purpose unless it senses the social and civic longings of the hundreds of homeowners and homemakers who are making Fulton the splendid city it is.

"It will battle with them for better facilities of every sort to which they are reasonably entitled and of which they are unreasonably deprived.

"It is the duty of real newspapers to mirror the aspirations of the community it serves, to visualize conditions of life as they are and picture them as they can and will be.

"It must be the spokesman of the man in the street, the woman in the house, the girl who meets her necessities through daily toil.

"With whole-hearted enthusiasm and with no interest to serve save the interests of the community, the Evening Times dedicates itself to this policy of service and takes its place among the institutions of Fulton."

To deny any individual the privilege of expressing himself through the columns of this newspaper would mean that we were not fulfilling our pledge.

The Evening Times may not at all times be right, but it shall at all times remain honest.

HOMEMADE

Cany ou tell me why it is that men will go out of their way to patronize out-of-town industries? These men are nationally patriotic, locally homeloving, and will contribute any reasonable sum to any national couse in the interests of civic pride or progress.

But they will insist on buying things made out of town.

They want to see business better at home. They will spend much money and a lot of time toward any honest effort to bring business to town, but after it gets located in town, and really deserves success, they start sending for things made in the big cities. They start to make the cities larger, and the towns smaller. This is exactly what they do.

The real amount of their purchases may not make or may not break the local institution, but it is questionably a mighty poor plan to buy a fine horse, put him in the stable and fail to feed him.

By and by the horse develops the prohistoric disposition in him —proves to be a mule, and just when you want him to work he balks, strikes and kicks. And he runs away, over into the next town, where thel ocal folks feed better.—Silent Partner.

OUR WASHINGTON CORRESPONDENCE

News Mostly of a Political Nature From the Nation's Seat of Government for Times' Readers.

Washington, Aug. 15.—(Special Correspondence)—The increase in exports of corn, oats, wheat and flour to the European belligerents presents some astonishing figures showing the war has helped the farmer.

A report of the Department of Commerce shows that for the 1915 period breadstuffs were exported to the value of $558,660,000, compared with $156,780,000 in 1914.

The exports of breadstuffs in 1913, under Republican law, and when normal conditions prevailed, was over $211,000,000. In that year we exported 49,000,000 bushels of corn at an average export price of 60c; 33,760,000 bushels of oats, average price 40c; 91,600,000 bushels of wheat, average price, 98c; and 11,400,000 barrels of flour, average price $4.90. The price of corn this year was largely influenced by the huge 1912 crop, the record year, when 3,125,000,000 bushels were raised in the United States.

If the Democrats can get any political consolation from this statement they are welcome to it, but when Secretary Redfield of the Department of Commerce declares that our huge increase in export trade is not due to war orders, show him these figures.

* * *

It is announced that the new Armour frigorifico at La Plata, Argentina, will be the largest in South America and will have a capacity of of the daily slaughter of 2,000 cattle, 4.500 sheep and 2,000 pigs. Most of the meat prepared in this establishment will be shipped to the United States. So much for the effect of the free meat provision in the Underwood tariff law. The Armour company employs Argentine labor, feeds its stock with Argentine feed, and sends the meat to this country thus cutting down the market for the cattle raised by the farmer and stockman. But thep rice of meat to the consumer does not appreciably diminish, and the government loses the revenues.

* * *

The Bureau of Railway Economics reports that 622,284 persons, firms, or institutions own railroad stocks having a par value of more than five securities in one of the fundamental enterprises in American activity of the country. Their share in it consists of diminished or vanished dividends and of reduced values for their stocks. Shares in "war order" concerns are booming to be sure. But the real test of good times in this country is to be found in railroad earnings and in railroad values.

* * *

Our Consul at Yokohama answering inquiries from home respecting the prospest of additional Japanese steamship service, in view of the abandonment of the Pacific by American liners, reports that, while the shipbuilding industry is booming, the Japanese government will not grant subsidies to the new ships. There is, indeed, no apparent reason why subsidies should be granted any longer, considering the unexampled success of Democratic legislation in freeing the Japanese shipowenr from American competition.

* * *

Pin "the red badge of courage" on ex-Governor Cox (Dem.) of Ohio! The governor was defeated last fall, but he now declares that he will run again next year "for a vindication." Vindications, however, are not scheduled among Democratic fashions for 1916.

WOULD BREAK THE NEWS GENTLY TO THE EGG

A political candidate for an agricultural district, after making a fine speech, announced that he would be glad to answer any questions that might be put to him. A voice came from the audience:

"You seem to know a lot about a farmer's difficulties. May I ask a ques tion about a momentous one?"

"Certainly," replied the candidate nervously.

"How can you tell a bad egg?" went on the merciless voice.

The candidate wiated until the laughter died away.

Then he replied: "If I had anything to tell a bad egg, I think I should break it gently."—Exchange.

The consistent advertiser wins in the end. It may cost a dollar to get a dollar, but the deal wins prestige.

Expert Advice for the Automobile Owner

Queries and Replies Covering Matters of Importance to the Man Who Runs a Car

I have trouble with pounding in the second cylinder of my car. Several times I have tightened the connecting rod bearings so tightly that it is easily felt while cranking the machine. When I have run 400 or 500 miles the knock reappears. The machine has run 8,700 miles in all. Can you tell the trouble?

The most probable cause of the knock you mention is a loose bearing. This may be a main, connecting rod, wristpin or camshaft bearing. It might also be caused by a broken piston ring, the camshaft being out of alignment, or if the knock is not very severe it may be the result of carbon on a valve seat. As it is most probable that is it in the crankshaft bearings, these should be inspected and if necessary carefully taken up, or if they are badly scored they may need to be scraped, or in an extreme case they will require replacing. In taking up the bearings great care should be exercised not to get them too tight, and it should be noted that it is quite possible that the reason your machine begins to knock again after going 400 or 500 miles after the bearings have been adjusted too tightly. When a bearing is too tight excessive friction is the result, and overheating occurs. This wears the bearing away in a very short time and in some cases may even melt the metal. The bearing should be only taken up enough to remove all play.

It would hardly seem possible that the bearings should need scraping after the car has gone such a short distance, but if they have been adjusted too tightly it may be that they are badly scored, and if this is the case scraping will be necessary. This operation should be left to the care of an experienced and skillful mechanic and is not a job for the novice.

Kindly tell me the best way to true up the wheels on a car. I feel that my wheels are not running true.

Before anything is done be certain that the wheels need truing up. Sometimes all that is necessary is to readjust the tie rod, which connects both wheel knuckles. Wabbling front wheels may be caused by a bent axle, bent spindle, partially broken bearing, interior of hub worn, etc. The common cause is bent spindles, and a good repair man can bend these back in shape.

Why is it hard for me to start my car when I run out of gasoline and refill the tank again?

Possibly the carburetor float sticks against the side of the chamber, so that it is difficult for the gasoline to flow in. Another explanation is that there is dirt in the fuel pipe and that therefore the passage of fuel is very slow, with the result that it takes some time for the chamber to become filled, and if an attempt is made to start before this time difficulty may be experienced.

Can you tell me how to mend a crack in the crank case? It is so bad that the oil leaks out in a short time.

You cannot mend this yourself unless it is very small, in which case you might be able to patch it with a piece of sheet steel metal and some rivets. If the crack is of any size it is best to have it welded, although if the place is so situated that it is not strained by the operation of the motor it may be sufficient to solder it.

What effect does the practice of using the motor as a brake coming down a hill have on the mechanism of an automobile?

The use of a motor as a brake is generally conceded to have a more or less deleterious effect on the gears. The power through the gears is reversed, since the car is now tending to drive the motor. Thus instead of having the stepdown reduction we have a step-up with consequently more surface pressure on the teeth and hence more abrasion.

Where is the best place to look for a knock?

All moving joints are susceptible to knocks. Tracing through the transmission of power from the cylinder to the rear axle, we find that at each point of engagement of one or more moving parts with other parts there is a chance for a knock. Starting with the piston, if this is too loose, there will be a distinct slapping sound. It can only be cured by the use of an oversized piston. The next point is at the wrist pin, which might have a knock due to looseness in the upper connecting rod. The fourth point is in the main bearings in the crankshaft, fifth at the connection between the crankshaft and clutch, then in the universal joints and the gear box bearings and between the teeth of the different gears. Loose valve tappets, timing gears, etc., are also fruitful sources of knocks.

Will it shorten the life of a piston by drilling to lighten it, or is there any disadvantage in so doing?

You can drill the pistons and get good results. Many racing cars use such pistons. It will be better and cheaper in the end to get pistons of some light material, such as magnalium.

"Black's white bread" and Black's cookies have won a place here. They suit the taste. adv

BOTTOMLESS LAKE SURVEYED BY STUDENTS

A map of Green Lake at Jamesville, N. Y., which is of great interest zoologically and geologically has been made by R. D. Rudolph of Highland Falls and W. J. Endersbee of Russell, students of the College of Forestry, as a part of their study of the fish of the lake. This map has aroused much interest because it is the first and only detailed map showing soundings over the entire lake area. This lake has the reputation of being "bottomless," although the maximum depth at winter high water is only 62 feet. During the winter the lake has an area of 8 feet, but in the summer season it drains away so that on June 1st it had an area of 3 acres only.

GETTING OUR MONEY'S WORTH

IN EVERY transaction we expect to get our money's worth.

When we buy merchandise from our local storekeepers we examine everything with the utmost care, we test for strength and look for quality. We discuss with the merchant the desirability and value of everything and after we shall have decided that we will effect a purchase we are convinced that we have obtained full value and that we can depend on our purchase as being what we want.

Then, again, if for any reason we have reason to be dissatisfied with that which we have bought we can talk it over with our merchant and any discrepancy will be readily adjusted.

This is the principle of all good business. The buyer meets the seller face to face and examines the goods before closing the deal. The seller is responsible for his representations and the buyer can always find him and adjust any differences which may occur.

On the other hand there is the mail order method.

We receive a book from the mail order house, illustrated with expensive pictures of various articles. The descriptions of these articles are always optimistic and gloriously pleasing. Our minds are impressed by the charming wording of the descriptions and the selection of adjectives creates in our minds a desire to possess these wonderful things.

All sorts of promises are made in the book, or catalog. We will be accorded the greatest possible consideration. we will be allowed all kinds of privileges; we can return the goods at the expense of the house if not satisfactory; shipments will be made with promptness and despatch; any damages in shipping will be adjusted at once; "Our Mr. So-and-So will give your orders his personal attention," etc.

We are flattered and cajoled by the clever wording of the catalogue and the statements made in the "fake" personal letters sent to follow up the catalogue. We are touched in that tiny spot of vanity which, though small, seems to be everywhere and to respond to the slightest touch.

We are allured by the prospect of obtaining such magnificent and desirable articles at such remarkably low (?) prices and we are flattered by the statement that Mr. So-and-So will give our order personal attention.

We begin to believe ourselves to be "some punkins" and we are inclined to swell up and look askance at our less fortunate townsmen who have not been singled out for such distinction as a letter, signed in person by Mr. So-and-So.

Therefore, we decide that we will send an order for something. We forget that we can go into the store of our own local So-and-So, whom we know and to whom we are perhaps responsible for past favors. But it is easy to forget all this in the happiness and exultation of having been singled out by the great mail order "boss" as a desirable person with whom to do business.

SO WE SEND AN ORDER, CASH WITH IT, OF COURSE.

Then we wait for the article to come. More waiting. Then we write to the mail order "boss."

We get a succession of form letters in reply, but no merchandise. We waste a lot of time and patience and postage stamps and stationery. Finally the shipment arrives.

We are astounded. This hardly looks like the article we expected. So we write again. Then follows more correspondence. We are told to examine the article again thoroughly and compare the description with it. We do so.

Yes, the technical description is the same. BUT THE CLEVER STYLE IN WHICH IT IS WRITTEN HAS DELIBERATELY MISLED US. The illustration has lied to us deliberately, because the picture was toned up and exaggerated for the sole purpose of misleading us.

We are stung. We could have gotten a far better value from our local storekeeper for the money. The lying letters we received from Mr. So-and-So were merely printed form letters and were probably never seen by the alleged signer, who is in Europe spending the dollars which we, and other similar dupes, have sent him.

Bah! Why will be persist in such foolishness? Our common sense should tell us better. But no, probably we will do the same thing over again when we get the same sort of flattering and lying dope from another mail order house that has bought a list of names, containing ours, from the house which stung us.

YES, THEY WILL PASS OUR NAMES ALONG, ONE TO THE OTHER. WE HAVE PLACED OURSELVES ON RECORD AS BEING "EASY MARKS."

In the meantime we may go to our local dealer and buy the article we really need. He will guarantee it and, perhaps, give us credit for it if we need it.

LET US SUPPORT OUR LOCAL BUSINESS MEN. THEY ARE ENTITLED TO OUR TRADE AND WE KNOW WHAT TO EXPECT FROM THEM.

Advice.

"Nobody listens to advice."

"You're wrong. One fellow always does."

"Who's that?"

"The fellow who's giving it."—Cleveland Leader.

GOES BAREFOOT AT 73.

Says Close Union With Earth Keeps Him Well.

Kansas City, Kan. — When grass roots and mother earth come in contact with bare feet there is a sort of soothing electrical current transmitted through the body that rebuilds and invigorates the entire system is the theory and practice of J. M. Halger of Carlton, Okla.

Eight months in each year he spurns the pressure of leather on his feet, and with trousers rolled up nearly knee high attends to his farm. He has been in Kansas City with no shoe or boot accompaniment and did not feel half as strange as people who looked at him.

Recent Inventions.

A plow that digs peanuts and shakes them from the vines has been patented by a Missouri inventor.

An Australian inventor has patented apparatus for the manufacture of gas from 98 per cent air and 2 per cent gasoline vapor.

To save electricity in hotels there has been invented a door lock that shuts off the lights in a room when it is locked from the outside.

A patent has been granted for an umbrella that can be made in the forms of leaves or flowers, the inventor believing they have advantages over the round shape.

Laconic.

"Hair's a little inclined to"—

"Cut it," interrupted the man who wanted to catch a train.—Puck.

WHEN WOMAN DECIDES.

Great Organizations Strongly Pro-suffrage.

Unless there is a votes for women pennant waving from each window the antis are nearly sure that the people of the house don't want votes for women. Sometimes, according to anti arithmetic, it's 97½ per cent of all the women in the United States who wouldn't vote if they could, sometimes it's 90 per cent, and just recently it's 88 per cent.

The only time suffrage was ever submitted to a referendum of women in the east was in the case of the straw vote in Massachusetts twenty-five years ago. Twenty-five times as many women voted for it as against it, yet the legislators said that so many women didn't vote at all that it was proof that the women didn't want the suffrage and deliberately refused to abide by the women's decision. Having been tricked in this way, it is small wonder that women say, "No, thank you," when the subject of a women's referendum is broached. When a majority of the men who vote on a question are for it that settles the question. But when women vote 25 to 1 in favor of woman suffrage the question is not settled at all. It is merely shoved back to those who vote neither way. This is not, however, the only reason why women won't waste time over a woman's referendum. There is no legal provision for making such a decision binding no matter which way it goes. If every woman in New York voted in favor of woman suffrage that effect would have the legal weight of two chicken feathers. If woman's vote on such a matter were legal there would be no woman struggling for the suffrage; she would already have it.

In this connection it is rather interesting to note that every time you can get the general opinion of women concretely expressed, as through some great woman's organization, you find that organization going on record as overwhelmingly for suffrage.

In the United States alone the membership lists of the women's national organizations that demand suffrage total over 10,000,000. They include the United States contingent of the 7,000,000 women in the International Council of Women, the 237,000 women in the two orders of the Maccabees, the 1,600,000 women in the general Federation of Women's Clubs, the half million in the W. C. T. U., the woman contingent of the 300,000 members of the national grange, the 100,000 women in the Women's Trade Union League and hundreds of thousands of other women in other national organizations ranging in membership from 5,000 to 100,000. Even if these membership lists overlap to some extent, the net total of separate names runs into the millions. In so far as organized women can prove the case by numbers, they have done so by massing an overwhelming array of women in the line of march to the polls.

Original Pledge Card.

A novel suffrage pledge has been received by the president of the Virginia Equal Suffrage League among those returned at a recent meeting. On the card a man had written:

"I hereby pledge myself to contribute all the time I can spare from my everyday duties and employment to the Equal Suffrage League of Virginia. Payable as the opportunities are presented."

On the reverse side of the card the following lines were written:

"A man may hae an honest heart,
Though poortith hourly stare him;
A man may tak a neighbor's part,
Yet hae nae cash to spare him."

Women Admitted to Men's Union.

An important decision for women was the resolution passed by the National Union of Railway Men of England at their annual general meeting admitting women to the union. This means that women who are employed as ticket collectors, booking clerks and in other railway capacities where they are replacing men will have their wages standardized by the union.

Polish For Steel.

Sweet oil, one tablespoonful; turpentine, two tablespoonfuls; emery powder, one tablespoonful.

Not a Grumbler.

In one of the southwestern states the courtroom of the courthouse was overlooking the cemetery. A negro had just been sentenced for two years. The judge, piqued at his apparent indifference, remarked, "You don't seem to mind your sentence."

"Bless yo', judge, de's plenty ob 'em ovah yondah would like to hab it!"—Life.

HOME TOWN HELPS

TREES PLANTED TOO THICKLY

Mistake Made by Many People Who Set Out the Desirable Shade for the Summer Days.

A week ago the writer saw a street where trees had just been planted but twenty-five feet apart. There is no tree large enough for street use that should be planted so thickly. Could every other one be taken out at the end of ten years from planting, no fault could be found with the scheme.

At a score of years after planting, pepper trees are close enough at 60 feet apart. For the first ten years they could well be maintained at 30 feet apart; but who will cut away the offending alternates when the time is ripe? Unfortunately, all are left, to form a solid wall of green on each side of the street so that no glimpse of anything may be seen outside this narrow and uninteresting channel dubbed, usually, "a beautiful avenue of living green," a serious misnomer. Each tree should be silhouetted against the sky so that its individuality may be seen, its beauty of outline, grace of carriage, form and color of foliage and flower, and also that a clear view may be had of both the near and the distant landscape. Let in the glorious sunshine and air; also let them out, and have landscape views as free. Neither fence in anything or fence out anything. The trees may with propriety be made to appropriate their just share of the territory and the view, but no more. There should be other rights and other places for other objects.—Los Angeles Times.

FOR THE GOOD OF THE TOWN

Ten Commandments That Are Worth Heeding by the Citizens of Any Community.

These Ten Commandments for the spring clean-up are just as good in this town as they were in Winfield, Kan., where the Courier printed them:

Thou shalt honor thy neighborhood and keep it clean.

Remember thy cleaning day and keep it wholly.

Thou shalt take care of thy rubbish heap else thy neighbor will bear witness against thee.

Thou shalt keep in order thy alley, thy back yard, thy hall and thy stairway.

Thou shalt not let the wicked fly breed on thy premises.

Thou shalt not kill thy neighbor by ignoring fire menaces or by poisoning the air with foul odors.

Thou shalt not keep thy windows closed day and night.

Thou shalt support the city, county and state health officers in their work and obey their instructions.

Thou shalt eat less, breathe deeper, rise earlier and bathe oftener.

These things do that thy days may be long and healthy upon the earth.

Setting Out Trees and Shrubs.

Now is the time to set out trees and shrubs. In setting any plant of this kind in a new location it is necessary for the hole to be large enough to allow the roots to be spread out. The soil should be worked around the roots, as every space under them will mean just that amount of idle root. Too many empty spaces under the roots mean a dead tree or shrub. When the earth is filled in it should be tramped in as firmly as possible. It is sometimes desirable to wet down the soil to make it pack more firmly. The soil particles must be forced against the roots to enable the soil water to be carried to them through the action of capillary attraction. Many of the failures in transplanting come from permitting the soil to lie too lightly over the roots.

School Children Make Bird Houses.

The boys and girls of the Columbus public school, under the direction of one of the teachers, are making bird houses. They have already made twenty, of sizes ranging from one to nine rooms. These are intended for the martins, especially, since they consume such numbers of destructive insects. The old idea that the only use a boy has for a bird is as a target for stones and airgun is surely dying out in progressive communities. Intelligent people, old and young, recognise birds as invaluable friends to the farmer, the fruit grower and the gardener and protect them as such. We are glad to note that several Brookville boys are providing houses for wrens and bluebirds and are thus doing their part in this good work.—Brookville American.

Against Billboards.

Several hundred women in Firwood, Pa., have started a crusade to place under the ban every store, theater and other business that uses billboards as an advertising medium.

Pride in the Home.

Many men are determined to beautify their home grounds this summer even if they have to make their wives do the work.—South Bend News-Times.

The Jitney Bus.

At least the bus of that name has lived long enough to make the jitney famous.—Chicago News.

So far as is known, with all her troubles, Europe doesn't have to grapple with a jitney bus problem.—Detroit Journal.

One thing the jitney certainly has done—it has enabled the street car motorman to see a prospective passenger sooner than formerly.—Dallas News.

With the coining of the word "jitneur" to denominate the driver of the jitney bus there should no longer be any curbing the demand that this vehicle must go.—New York Post.

Current Comment.

America is now the richest of nations. Can we keep our peace and our ducats?—Louisville Courier-Journal.

A rise in the price of beef used to be accompanied by an interesting explanation. Now it simply takes place. —Washington Star.

Almost any man with personal magnetism, some guns and a few boxes of soda crackers can get up a revolution in Mexico.—Los Angeles Express.

The crank is capable of much worse mischief than the criminal, and the pity of it is that he should be so much harder to detect.—Philadelphia Ledger.

He Had Felt Slippers.

Old Lady (in shoe shop)—Have you felt slippers? Boy Assistant (solemnly) —Yes, ma'am; many a time.

FUN RAYS

By Ray I. Hoppman

SLANG.

SOME highbrows draw the line on slang—they just can't stand the "vulgah" twang of mutilated character. They do not like the terms we use—the classic phrases we abuse; but then, that doesn't matter. Why should we be so straight laced that we can't say "paste this in your hat" because it isn't proper? Why should we can such happy words as "feed that chatter to the birds," or draw the chalk on "copper"? I like to hear a fellow sling a little "phoney" talk and bring a smile to your smiler. Oh, partner, throw a little slang (there's snap and action to its twang) and be a gay worth-whiler. There's music to the slangy speech—(it's not the kind the schoolmarms teach)—but, hoop la! we should worry! I can't see how it's such a sin to substitute "joy flash" for grin, or "shake a leg" for hurry. It grieves me when a fellow talks so carefully and proudly balks at phrases out of order. It gets me, friend, so doggone mad I'd like to run the straight laced lad across the Southern border. It makes a fellow feel at home to gayly chirp "nobody home!" to some dense friend, uncertain. It's good to say a thing or two to bring your real self into view, and draw aside the curtain. A little slang talk now and then is relished by the wisest men, and that does down, for ages. That little proverb ought to be absorbed by all humanity, from helpless babes to sages. The man who slings a little slang will get in solid with the gang (a tip, right off the handle). 'Twill make your tongue as versatile—as easy rolling as a wheel—as lighting as a candle.

A Beau-Knot?

There once was a nice little shoe
That mused, "Yes, 'tis strange, but 'tis true—
When my mistress, so trim,
Goes walking with him,
I always untie—yes, I do!"
—New York Times.

The Exact Spot.

Lawyer—So you went out and waited for some time on the pavement. Now, did you strike the witness in the interim?

Defendant—No, I didn't. I pasted him in the jaw.—Baltimore American.

Children Cry for Fletcher's

CASTORIA

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of Chas. H. Fletcher and has been made under his personal supervision since its infancy. Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic, all Teething Troubles and Diarrhoea. It regulates the Stomach and Bowels, assimilates the Food, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

GENUINE CASTORIA ALWAYS

Bears the Signature of

Chas. H. Fletcher

In Use For Over 30 Years

The Kind You Have Always Bought

THE CENTAUR COMPANY, NEW YORK CITY.

A STRAIGHTFORWARD BUSINESS PROPOSITION

The Taxpayers' Committee Has No Political Axes to Grind—No Political Friends to Hand Jobs To

The Taxpayers Committee wants only one thing, TO SEE FULTON'S GOVERNMENT raised from its present low plane of inefficiency, to see power removed from political hands IN THE DARK to efficient business management IN THE LIGHT.

TAKE OFF THE BLINDERS!

SEE FULTON'S GOVERNMENT AS IT IS!

FULTON is staggering under a $530,000 debt.

$67,000 sewer bonds are due next year. NOT A CENT TO PAY THEM.

THIS YEAR'S TAX RATE—$3.29 per hundred, East Side; $3.54 per hundred, West Side.

What Will It Be Next Year?

WHY THIS DEBT? Because under the present cumbersome and inefficient form of government the politicians only know where your money has gone—and they won't tell.

They want you to look at the City Government with blinders on. You have seen only what they intended you to see.

Citizens of Fulton—Look into your government and see the waste, carelessness and inefficiency. These make the high tax rate and the big debt.

TAKE OFF THE BLINDERS!

The commission-manager form of government is a tested, straightforward business proposition, a government for the benefit of every honest person in the community. Now is the time to face your city's problem and decide whether you want CONTINUED POLITICAL MISMANAGEMENT or a REAL BUSINESS-LIKE ADMINISTRATION.

Vote for commission-manager plan of government on September 18 and turn the searchlight of publicity upon and into city affairs.

[Signed]

TAXPAYERS' COMMITTEE

DOCTORS MUST REPORT BIRTHS

Department of Health Once More Points Out Importance of Obeying Vital Statistics Law.

Albany, Aug. 16.—The State Department of Helath has again called the attention of the physicians of the state to the fact that violations of the vital statistics law, requiring the report of Births within five days of their occurrence, will be prosecuted by local district attorneys.

"This is not a desire of the Department of Health to enforce some unimportant provision of the law merely because it happens to be law," said Dr. Hermann M. Biggs in a statement madep ublic here today. "The thorough observance of this law is of great importance to each individual child. Nearly every day the newspapers print accounts of American citizens arrested in Europe or involved in one way or another in the world war being able to prove their citizenship only through certified copies of birth certificates filed in this country. Tardy registration results in many births not being recorded at all. This results in serious handicaps to children in many cases in subsequent years when they will require certified copies of the legal records for school, employment and other purposes.

"Prompt reports of births are necessary also for the prevention of infant mortality. For these reasons physicians and midwives will be held to strict compliance with the law under penalty for failure or neglect.

"The enforcement of this law is not only a matter of great value to the state, but is also of national importance. New York has taken an advanced position with respect to the requirement that births be registered within five days after their occurrence, an example which has been followed by Michigan and North Carolina during the present year. The administration of the law is being watched with great interest throughout the country, as indicated by telegrams received by the Department of Health from the Federal Children's Bureau and the U. S. Public Health Service."

Dr. Biggs made public the following telegram from Lewis Meriam, Acting Chief, U. S. Children's Bureau, Washington, D. C.:

"Immediate registration of all births is essential to prevent unnecessary deaths of babies. Unless all births are registered at once, infant welfare agencies may not learn of a birth of a baby under adverse conditions until too late to be of assistance to that baby. Thorough and uniform enforcement of law is necessary if a city is to derive full profit from birth registration as an aid in saving the lives of babies."

Dr. Rupert Blue, Surgeon General, U. S. Public Health Service, wired as follows:

"I wish to express my sincere commendation of the active measures being taken by your department in the enforcement of your vital statistics law, particularly the efforts you are making to secure prompt and complete registration of all births. The registration of all births is necessary to protect the civil and social rights of the child and the future adult. Immediate registration is necessary for complete registration. Delayed registration means incomplete registration. The greater the delay the greater is the proportion of births forgotten or for some other reasons not registered."

The law provides a penalty of from five to fifty dollars fine for the first offense in the case of a physician or midwife who fails or neglects to file a birth certificate within five days, and from ten to one hundred dollars fine in the case of a second offense.

COLUMBIA MILLS, INC. TO PROTEST TOMORROW

Tomorrow will be grievance day in Oswego town and the Columbia Mills Inc., intends to be represented before the Board of Assessors and protest against the assessment of $800,000 on its property at iMnetto. The company alleges that the valuation is excessive, erroneous, unjust and discriminative. It is asserted that property in other parts of the town is not assessed in any such proportion as the big shade cloth plant.

FOR FLETCHER'S
CASTORIA

ALBANY GOSSIP DAY BY DAY

Chronicle of Events and a Forecast of What is Doing in Officialdom—Special Correspondence.

By Frederic T. Cardoze.

Albany, Aug. 16.—The proposed amendments to what is known as the "Charities Article" of the State Constitution, are likely to hold the center of the Constitutional Convention stage in the near future. These amendments and the recommenda- many and varied. First, there are the amendments proposed by President Stewart of the State Board of Charities. Under these all of the state institutions, including the prisons, would have separate boards of managers that would really manage and direct the institutions, with a reasonable amount of fiscal control vested in the state comptroller.

President Stewart argues that as the state charitable and reformatory institutions and the state hospitals for the insane have been well managed by boards the members of which serve without salary the state prisons which usually have been in politics and poorly managed, would profit through the adoption of a similar system. He also recommends that the state commission in lunacy be continued like the state board of charities and the state commission of prisons, simply as a visiting and inspecting body which the provisions of the present constitution merely contemplate, but from which principle there has been an extended departure through legislation.

It is further recommended by President Stewart that the duties of inspection by the state board of charities be extended to cover charities and other like organizations, most of which receive their main support from the contributions of the general public.

Opposition to this proposed extention of the funtions of the board has come mainly from the societies for the prevention of cruelty to children which apparently have the feeling that any state supervision of their work would be irksome. This proposition is likely to be debated in open convention to considerable length by Delegate-at-Large Louis Marshall, who will take the affirmative side.

Then there is the proposed Steinbrink amendment, which has been reported out by the committee on charities of the convention. This seeks to repose in the state commission in lunacy by constitutional enactment, the inconsistent duties of visitation and inspection as well as those of management and control of the state hospitals for the insane, as at present provided by statute, in opposition to the provisions of the constitution.

Those who have had a look at the inside workings of the convention machinery are of the opinion that the real amendments to the "Charities Article" will emerge from the Tanner committee on governor and other state officers. This committee is said to favor an amendment consolidating fiscal and a certain amount of administrative control of the state prisons and the state charitable and reformatory institutions in the hands of a single executive officer to be appointed by the governor. Such official, it is planned, will assume the duties and take the places of the state superintendent of prisons and the state fiscal supervisor of state charities. He also will have under his control a motely array of institutions ranging from the state prisons to the school for the blind and the hospital for crippled children. The state board of charities, the state commission in lunacy and the state commission of prisons are said to retain their statu quo under this amendment.

SYRACUSE BANKS HAVE INCREASED DEPOSITS

Syracuse Aug. 16.—"Our deposits have increased very materially within the last six weeks," stated A. N. Ellis, vice-president of the City Bank of Syracuse, this morning, while discussing the local business situation. Inquiry at other banking institutions revealed the fact that the increase in deposits was by no means confined to the City Bank.

While perhaps no banker would express the situation in so many words, yet it seems to be true that Syracuse banks have more money on hand than they know what to do with. It is possible that Syracuse people also have more money than they know what to do with; hense, the decidedly important increase in amount of deposits.

PATHFINDER COMPANY RUSHING ROAD WORK

The State Highway Department is giving out assurances that the Pathfinder Construction company of this city will complete the Colosse highway between now and October 1, the time limit set by the department.

The original plans called for a concrete road, but objection was made by many residents of the town of Mexico and the highway department was asked to change the road to macadam. The Board of Supervisors adopted a resolution to this effect. But the department decided that it would not be proper to change the type of construction while the road was being built.

There was considerable delay owing to the difficulty in securing a suitable supply of sand and gravel, but this has been obviated and the work was started a week ago. The completion of this road will complete the route from Syracuse to the St. Lawrence river.

KANSAS FARMERS TO TURN GRAIN INTO MUTTON

Kansas City, Kan., Aug. 16.—Floods can't keep Kansas down. Most states would have raised the white flag over the heavy grain loss from rain and floods, but Kansas has the old ensign flying over the fort.

Grain that lies on the ground, that the hail and the winds and rain have knocked flat, is to be converted into mutton. From every county farmers are sending orders for sheep and within 30 days there will be more than a million sheep feeding throughout the state.

Along every valley in the state unprecedented rains sent the water out across the fields when the grain should have been ripening. More than a million and a half acres of wheat and oats were ruined. With sheep getting fat on this grain, the elimination of harvesting, threshing and marketing, the farmers are looking upon life a little more cheerfully these days.

MISCELLANEOUS WANTS

Girl Wanted—For general housework. Must be experienced. American preferred. Family of four adults. Apply by letter, stating references, if any, and wages desired to W. C. B., care of The Evening Times office. 208

For Rent—A flat at 504 Pine street. $10 per month. H. L. Crandall.

MAYOR FOX WOULD STOP DOGS FROM RUNING LOOSE

A largeb ull dog, the property of a neighbor, leaped upon 9-year-old Max Gately of Erie and 3rd sts. Saturday night and bit the lad on both legs, inflicting deep wounds. Dr. Fox dressed the wounds and ordered a hunt for the owner of the dog. The city dog catcher was given orders to take the animal to the city pound and the dog will be observed closely for signs of rabies. The little boy's wounds were cauterized and no complications are feared.

Two other children have been bitten by stray animals during thep ast week and Mayor Fox is in favor of a general order preventing owners allowing their dogs to run at large even though they have tags.

AUTOMOBILE DAY TO BE ADDED TO FAIR

The Oswego County Agricultural Society has added one more day to this week's show, to be known as Automobile Day. Saturday is designated and at 2:15 p. m. the auto and motorcycle races under the direction of Fred Plant of Boston will be run. Mr. Plant says that at the races some of the fastest professional drivers will compete for the prizes. This will give persons who have never witnessed auto races a chance to see some speed kings. The motorcycle events are open to everybody and entries may be made in person or by telephone to Fred Plant, Lewis House.

G. M. GILBERT IS DEAD IN WEST

Was Well Known in This Vicinity---Western Paper Describes Mr. Gilbert's Life

George Macumber Gilbert, who died at Warrensburg, Mo., was a former resident of Gilbert Mills and one of the most prominent men of this section. The Warrensburg Standard-Herald comments as follows:

George Macumber Gilbert departed this life Sunday afternoon, Aug. 8, 1915, at the family home in East Gay street. For some time he had been in failing health, but it was only shortly before his death that he became bedfast. During his entire mature life he had been actively engaged in business..

Mr. Gilbert was a native of New York, having been born at Gilbert's Mills, Oswego county, New York, eighty-six years ago. There he grew to manhood. In 1861 he was married to Mary E. Allen. In 1866 they came to Warrensburg, residing here until death claimed them. Mrs. Gilbert preceded her husband to the grave a few years, and since then Mr. Gilbert has been cared for by his son, Allen, and wife. After coming to Warrensburg Mr. Gilbert was engaged in the grocery business a number of years. Later he engaged in the hide and wool business with which he was connected for a number of years, being senior member of the Gilbert & Son establishment on East Pine st. He was active in the business until advancing age kept him away from the place, and until very recently he was there nearly every day, more or less.

Mr. Gilbert was the last of his generation, being the last of a family of ten children to pass to the great beyond.

During his active business life he was one of the most progressive citizents of Warrensburg, and one of the men to whom we owe our thanks for the splendid foundation on which the city is built. He had been a member of the Presbyterian church many years and he lived as he professed. He was a fine, Christian gentleman, a kind father and neighbor, and his death is mourned by a large circle of friends, who extend sympathy to the son, Allen Gilbert and other relatives.

The funeral was held from the family home at ten o'clock Tuesday morning, and in the absence of his pastor, Rev. Elbert Hefner, the services were conducted by Rev. James pastor of the Market Street Methodist Episcopal church. Interment in the city cemetery.

MRS. GEORGE JENKINS.

Mrs. George Jenkins of Keokuk, Iowa, died last night at the home of her sister, Mrs. G. J. Emery, of So. 4th st.

Mrs. Jenkins had been a guest in her sister's home for the past six weeks, but ten days ago she become ill and failed rapidly until the end came last night. She was a native of this section but for the pst forty years had made her home in the west.

Surviving besides the sister are two daughters, one whose home is in Keokuk, Iowa, and another in Chicago.

The body will tonight be sent to Keokuk. Prayer will be offered at the Emery home tonight by Rev. H. D. Holmes. A son-in-law, Harry Blood, of Keokuk, Iowa, is expected to arrive in the city tonight and will accompany the body.

Efficiency Methods

RESULT IN HAPPY HOMES

THE "SCIENTIFIC STERLING"

Is the Last Word In Kitchen Efficiency

Surely there is no question that the wife is entitled to the same modern equipment in her kitchen that the husband demands in his store or office.

The husband is constantly trying to find new and better methods of doing his work, because they make his work easier and increase his earning power; modern appliances make him a more efficient man.

The wife is justified in asking the same consideration.

THE "SCIENTIFIC STERLING" The Gas Range that Burns Coal

Fills a place in the kitchen as important as the typewriter or cash register in store or office. It takes the place of all other gas, coal, or "combination" ranges—doing the work of all of them, and doing it better.

The "*Scientific Sterling*" cooks or bakes with either gas or coal. Compact cleanly, convenient, economical, absolutely safe, and wonderfully efficient.

It requires only a demonstration to convince any housewife that the "*Scientific Sterling*" is the range for which she has been waiting. May we give you that demonstration today?

SAVE MONEY BY OUR CO-OPERATIVE CLUB PLAN

Fulton housewives may take take advantage of our Club Plan in purchasing the "Scientific Sterling" on the offer that will not be duplicated.

We will place the "*Scientific Sterling*" in your kitchen and give you full 30 days to try it out—you keep it only if satisfied.

Future purchasers will pay the full cash price of the "*Scientific Sterling*" which is $77.00 without special terms or discounts.

Club Purchasers who buy now may take a full eight months to pay for their range—only $5.00 first payment, and $2.00 a week on the cash price.

The "*Scientific Sterling*" is installed for Club Purchasers without charge. Future purchasers will have to pay for installation. As soon as the first $5.00 payment is made, we will set up the "*Scientific Sterling*" in your kitchen, furnishing all gas, water, and stove pipe connections above the floor, and we will not charge a cent for connections or labor.

Should any Club Purchaser die or become disabled before all payments are made, we simply issue a bill of sale for the range, and cancel remaining payments.

Every "*Scientific Sterling*" is sold with the strongest guarantee that we can write, signed by ourselves and by the manufacturer. We protect you against any possible defect in workmanship, material, installation, and against damage.

Our Inspection Service is designed to help you get the very best and most economical results with the "*Scientific Sterling*"—we show you how to save money on fuel when using coal or gas.

THESE BENEFITS ARE FOR CLUB PURCHASERS ONLY—for those who buy **NOW**. A $5.00 payment makes you a member of the Co-operative Club, and installs the "*Scientific Sterling*" in your kitchen.

ONLY EIGHT MORE DAYS BEFORE THE CLUB IS CLOSED.

MISS ESTELLA BUTTS.

Phoenix. Aug. 16.—Miss Estella Butts, daughter of Mr. and Mrs. Frank Butts, who live about one mile north of Phoenix, died early yesterday at the Hospital of the Good Shep herd of typhoid fever. Miss Butts was 34 years of age.

Miss Butts was born in the village of Schroeppel. After graduating from the Phoenix High school she went to Oberlin college, in Ohio.

She was an active member of the Congregational church, was a teacher in the Sunday school and a member of the Missionary society.

Besieds her parents, she is survived by a sister, the wife of Rev. Frank O. Leonard of Salt Lake City and an adopted sister, Miss Sarah A. Butts of Phoenix.

The body was sent to Phoenix yesterday afternoon by W. P. Hart, undertaker, and the funeral will be held at the home of her parents at 3 o'clock tomorrow afternoon. Rev. N. S. Aller, pastor of the Congregational church, will officiate. Burial will be in Phoenix Rural cemetery.

GIRLS OFF IN MERRY PARTY TO MEXICO POINT

This morning a merry party of girls left the city for a two weeks' outing at Mexico Point. The group was made up of the Misses Irene Halsey, Edna Jennings, Elizabeth Jewett, Reine Gilbert, Gladys Haines, Mary Church, Lucy McCaffrey, Lenora Eames and Mrs. Jessie McCaffrey acting as chaperone.

Two automobiles carried the happy girls on their way, and Old Sol come out of hiding to beam his approval.

"The best seller," is the expression of merchants handling Black Baking Co.'s products. adv.

Children Cry FOR FLETCHER'S CASTORIA

Fulton Keynotes

Mrs. James Manning and her daughter, Louise, both of Gasport, N. Y., are guests of Mr. and Mrs. Edward McCaffrey of West 5th st.

* * *

John Dyer and his daughter, Ida, have returned from a week's visit in Watertown.

* * *

Mrs. Ernest Smith and daughter, Eunice, of East Broadway, have returned after spending a month in Camden, N. Y., and Sylvan Beach.

* * *

Mr. and Mrs. Lou B. Garrett of 3rd and Rochester sts., motored to Syracuse Friday, remaining there until Saturday.

Mrs. B. D. Northrop is spending a week in Watertown.

* * *

Mrs. Harriet Porter has been entertaining Mr. and Mrs. Richard Bell of Mt. Pleasant.

* * *

At the hour of going to press the weather conditions are favorable to the lawn party to be held tonight at the home of Mr. and Mrs. William Singleton, in East Broadway. In fact, the decorations have been placed and everything is in readiness to entertain the members and friends of the State Street M. E. Church Epworth League. A large crowd is anticipated.

* * *

F. Jess Newton's march, "The Big Elk," will receive a rousing reception at tonight's public band concert. The first number on the program will be played at 8 o'clock.

* * *

Today's clear atmosphere encourages those persons who want to have community singing become a feature in our local life, to believe that a large crowd will be gathered in East Side park tonight. An opportunity will be given everybody to demonstrate that Fulton should by all means have a community chorus.

* * *

Mrs. S. C. Hadden and her daughter, Lillian, have left their home in West 1st st. to visit relatives in Michigan.

* * *

Mr. and Mrs. Oney Boyle recently spent a few days in this city as the guests of Mr. and Mrs. Hector St. Peter of West 4th st. Mr. and Mrs. Boyle stopped here while enjoying a wedding trip and have returned to Utica, where they will take up a permanent residence.

* * *

Something of a community picnic is planned by the Societie Mutuo Socorosso Vittorio Emmanuele III, which is to have an outing on the Fair grounds Labor Day, Sept. 6. Frank Zaia and his associates are active in lining up Italian societies in Syracuse and Oswego for the picnic, and it is likely that the new Italian band of this city will on Labor Day make its first public appearance.

* * *

Mr. and Mrs. C. L. Beckwith were Sunday guests of Mr. and Mrs. E. A. Raymond, at the Dunbar cottage, Hinmanville.

* * *

Miss Blanche Stevens has returned to her home in West 1st st. after spending a pleasant vacation with Mrs. Ives in Syracuse.

* * *

Mr. and Mrs. Harold Wienkie of Utica are guests at the home of Mr. and Mrs. James Stevens in West 1st st.

* * *

Mr. and Mrs. E. J. Peafield and son spent the week-end at Mexico Point.

* * *

Mr. and Mrs. Russell Rogers were over-Sunday guests of friends at Mexico Point.

* * *

Mrs. Decker, trimmer in the millinery department of the Katz store, has returned after a fortnight's vacation.

* * *

Mrs. Jarvis Newman and children are guests of Mr. and Mrs. Johnston Grier. Mrs. Newman is the wife of Major Jarvis Newman of the 1st Canadian division now stationed in Belgium.

* * *

Mr. and Mrs. H. M. Van Auken of Hannibal areg uests of Mrs. Van Auken's sister, Mrs. Edwin Cox, of W. 1st st.

* * *

Mr. and Mrs. Frank Lamson of W. 2nd st. spent Sunday with their daughter, Mrs. Harry Payne, of the Emery road.

NO BOY NOSES MISSING HERE

Police Department Unable to Account for Garments Found on Bank of Spring Creek, Yesterday.

The clothes of a small boy, discovered on the banks of Spring Creek by Mrs. Anne Lord of this city late Saturday afternoon have furnished the local police with the nucleus of a real mystery. Mrs. Lord discovered the little heap of boyish apparel on the banks of the creek and a cap was floating on the placid waters. She immediately looked around for the owner but he was not in sight. After she returned home she notified John Vogelsang, who lives in that vicinity, and with some neighbors Mr. Vogelsang dragged the creek yesterday in the hope of finding the body of the lad, thinking he had been drowned. Nothing was brought to the surface.

Meanwhile the police had been notified and Chief Dyer personally conducted an investigation in an effort to learn if any Fulton lad was missing from his home. All the young Fultonians seemed to be accounted for and no boy who lives in the vicinity of the creek had disappeared.

So thec lothes are still lying on the bank. Mrs. Vogelsang seems to incline toward the belief that the lad was frightened and ran away without taking his clothes and several mothers have questioned their sons and have inspected wardrobes in an effort to learn if the lads are minus anything. So far no trace of the owner of the clothes has been found and they still lie peacefully upon the banks of the stream.

Black Baking Company time in Fulton is at all times. Your grocer sells the goods. adv

Prepared Especially For This Newspaper by Pictorial Review

PRETTY NIGHT GOWN IN KIMONO STYLE.

A novel design for a nightgown. It is made in kimono effect and gathered into a band at Empire waist-line, with a straight ruffle.

It has become quite the perfunctory thing for lingerie to be fashioned after outer garments, hence the introduction of the peplum effect upon this kimono nightgown of fine nainsook. The neck is finished in round outline, eyelets being embroidered below the band for the accommodation of narrow ribbon. This treatment is repeated on the short sleeves. The embroidery on the front of the gown is done in eyelet and satin stitch.

To make the gown for a person of average size requires 4¼ yards 36-inch material, with 1¼ yard beading for the waist, 2 yards of 1½-inch wide ribbon and 4 yards of ½-inch wide ribbon.

The kimono effect is exceedingly simple to cary out, and the home dressmaker will be delighted at the quickness with which it can be put together. First close, the under-arm, sleeve and shoulder seams as notched. Turn hem at lower edge on small "o" perforations. Gather on crosslines of single small "o" perforations. The large "O" perforations in ruffle indicate front edge. Close back seams of ruffle and band; gather upper edge of ruffle between double "TT" perforations. Sew ruffle to band, center-back seams even, and bring front edges of ruffle together at center-front. Adjust band to position, stitching the upper edge of band over gathers in front and back, center-fronts and center-backs even, small "o" perforations in band at under-arm seams; leave the lower edge of band free.

This model may be adapted in two or three different ways, being equally pretty in straight effect, with a square neck, or finished with fichu lines front and back.

Nighties show many innovations. Ruffled shoulder capes are among the most unusual.

Pictorial Review Nightgown No. 6371. Sizes 32, 34, 36, 38, 40, 42, 44 and 46 inches bust. Price, 15 cents.

Appear Daily in This Paper

HOMETRADE BOOSTERS ARE DAILY FEATURES ADAPTED ESPECIALLY TO LOCAL CONDITIONS

Advertiser's recognize the value of *live features*, that's why more local advertising appears in *The Fulton Evening Times* than in any other Paper circulated in Fulton.

Fulton's "Herald of Progress"

It is a time of sharp competition and villages and towns as well as cities are compactly organized. Active, well equipped and well financed commercial bodies are alert in every community. They are striving for self advancement and are overlooking no opportunity. Superior advantages do not count for full value unless presented forcibly. * * * To improve our opportunities, to enjoy fully our natural advantages and our work of preparation, we must fight as other citizens are fighting, only harder, to prove to the stranger what we know is true.—Augusta (Ga.) Chronicle.

FOR QUICKER ACTION.

Keokuk Industrial Organization Reduces Red Tape and Saves Time.

Under a new form of organization the Keokuk Industrial association has aimed to reduce the amount of red tape usual in commercial organization work and to minimize the time required for the various committee meetings, thus hampering the private business affairs of each committee member as little as possible.

The executive committee as reorganized is made up of five members these being the officers of the association. This is the quick acting body of the organization. Five departments were created for the consideration of the five main divisions of activity—viz, industrial affairs, city affairs, financial affairs, public relations and association affairs. Each member of the executive committee was assigned to one of these departments. The usual committees of the organization were continued, but were distributed among the above departments, the basis of distribution being the nature of the committee work.

The department heads have authority in conference with the manager of the association to take such action as may be deemed advisable in handling the different items of business which come up for consideration. A meeting of the executive commitee resolves itself into a cabinet meeting for the consideration of policy, reports and results. The general policy of the association, all appointments, all legislative matters and the final indorsement of all efforts are handled by the board of directors.

Specific items of business are discussed and handled by the head of a department without leaving his office. The manager of the association takes to him the correspondence and other necessary information. They go over the matter in detail, and the manager makes his recommendations. After conclusions are reached the manager is authorized to handle the matter as agreed upon or to instruct a committee in that department to do so. This plan saves fully one-half the time formerly occupied by members of the executive committee at the committee meetings, has greatly increased the volume of work accomplished and assures immediate dispatch. Under this plan it is also said to be increasingly possible to keep all the members of the organization active, the different committees being kept more busy than ever handling the work assigned.—American City.

PREVENTING SLUM AREAS.

A City Should Control the Layout of Streets Beyond Its Borders.

One of the most important powers a city can have if it is to prevent the development of slum areas in the future, urges the Bulletin of the National Housing Association, is that giving it the right to control the layout of streets beyond its borders. The size of blocks and the width and arrangement of their boundary streets often exercise a determining influence on the character of the housing.

If the street is too wide and expensive land overcrowding and the erection of tall dwellings to carry the burden are almost inevitable. On the other hand, if the streets are too narrow, or if no main arteries are provided, or if the lot units are too small, the speculators may make quick sales to small buyers, but the city will have a long future full of trouble when it absorbs the new, misfit development.

Toronto has provided against all these difficulties by securing a city and suburbs planning act, which gives it the power to control all subdivisions within five miles of the city limits with respect to the width and number of streets and the direction in which they run and the width and depth of lots. Pennsylvania has a similar law for cities of the third class, giving them jurisdiction for three miles beyond their borders.

The [illegible]st Shortstops.

President Tener says the National league is better equipped with shortstops than the American. He names Bancroft of the Phillies, Maranville of the Braves, Fletcher of the Giants, O'Mara of the Dodgers, Herzog of the Reds and Gerber of the Pirates. President Johnson has filed a demurrer, declaring that his league boasts of real stars in Barry of the Athletics, Peckinpaugh of the Yankees, Scott of the Red Sox, Bush of the Tigers, Weaver of the White Sox and McBride of the Senators. Take your pick.

Players Pick Killifer.

National league players say that William Killifer of the Phillies is far and away the best catcher in that circuit, and they do not except Archer of the Cubs.

Tyrone Power Writes of Motion Pictures and Recalls the Days of Sir Henry Irving and Others

TYRONE POWER AS "MAVERICK BRANDER."

William Winter, dramatic critic, in his book on the life of Tyrone Power, says that Power will go down in stage history as great an artist as Booth, Barrett or John McCullough. Every one knows of the distinguished stage career of Power who played Brutus to Faversham's Marc Antony; supported Sir Henry Irving and Helen Terry; scored as "the Marquis of Steyne," in Mrs. Fiske's production of "Becky Sharp," and was a leading member of Augustin Daly's great company of artists of the spoken drama.—Editorial Note.

By TYRONE POWER.

I am proud to appear in the silent drama and I am delighted to be a member of the great Selig Polyscope company, for Mr. William N. Selig's artistic conceptions appeal to me, and I feel perfectly at home in the Selig environment. I feel there are opportunities in motion picture work that are somewhat lacking in stage art. Yes, even such an old stager as myself is obliged to admit this fact.

I concluded upon taking up this work to permit the director to direct and the actor to act. Maybe the failures registered by some actors and actresses, who turn to the motion pictures, are caused by the fact that they assume a know-it-all attitude. They refuse instruction, claiming that years of experience on the stage cause them to be well qualified to act for the screen. For my part, I have found many new details to comprehend—much new "business" that is peculiarly identified with the animated screen.

The art of make-up, for example, must be altered to a certain extent. Make-up appropriate for the footlights will never do in the motion picture studio. Then again, there is new technique to comprehend, a more limited space for the action, and there is no audience to spur one along.

I confess that for a time I held the attitude of many other well-known actors toward the silent drama. I thought the industry but a flash in the pan. But with the advancement, the wonderful strides onward and upward, I experienced a change of heart. I was informed that people who never before could afford to see my acting would now be given an opportunity because the prices for the silent drama are not so high. I was informed that pictureplay audiences were exacting, and as appreciative and as pliant as those who frequent the legitimate theaters. I believe this to be true. I have been visiting many pictureplay theaters, and I have been studying the audiences. I believe that my art will not suffer and that I am in a humble way contributing to the enjoyment of the masses, when I try to do my best in pictureplay land.

I believe that if Sir Henry Irving, that great actor, were alive, that he would perpetuate his art for future generations through the medium of motion pictures. I was playing Bocassio in Sir Henry's London production, I well remember, and one night his dresser came to me and said Sir Henry wanted to see me. Attired in a resplendent robe, I mounted the stairs to Sir Henry's dressing room. He was seated before his dressing table making up for his wonderful character role. I can see him vividly in my mind's eye. "Power," said he, "who was the greatest of all English-speaking actors?" One of the greatest of actors sat there, but without reflection, I said: "Edmund Kean, perhaps."

"Ah-h-h, right you are," exclaimed Sir Henry. "Edmund Kean was the greatest of English speaking actors—the little man in the cape."

Mrs. Powers and I have a little son, and naturally all our hopes are centered in him. And when he grows in years the art of the motion pictures will do much for his education. He will have educational advantages that I never had. His mind will be broadened without the vexations of extended travel; he will have learned at an early age the wonderful story of the bee and other secrets of nature, his imagination will have been cultivated by visits to motion picture dramas of higher class; without imagination a human being is nothing. When a boy I read fairy tales illustrated with colored plates. My son can see the living, moving fairy stories on the motion picture screen, and fairy stories are educating for they cultivate the imagination; bring higher thoughts and fancies; tend to refinement and gentleness.

The art of the motion picture is wonderful. The McCauley of future historical events will not be obliged to depend upon the opinions, and the ideas, and the prejudices of others. Instead he will enter a large record room, ask for motion picture films of this or that period, and he will see at first hand the modes of dress, the architecture, the armaments, the customs of living of the people of that particular historical period.

Before the advent of the motion picture, some Europeans believed that Buffalo, N. Y., was so named because buffaloes roamed there; they thought Chicago was on the border of the western wilderness. After the motion picture had flashed true to life scenes in and about these great cities, the Europeans received a more enlightened conception of the life and wonders of this great country.

I believe that between the pillars of the great churches, the motion picture screen will sooner or later be permanently fastened. Why not? Seeing is believing! Pointing to the motion picture screen as the pictures appear, the clergyman will exclaim: "This is Jerusalem; here we see the Mount of Olives; here is where the Bible tells us Christ was crucified; this is the Sea of Galilee. In this manner the Bible will be made yet more dear to many, and its lessons made the more vivid and impressive.

And I often hear adverse comments upon the melodrama of the motion pictures. This melodrama is not so bad; I speak from experience; there is always a moral lesson in movie melodrama and many are beautifully pictured like great paintings of tragic action. We must all have our tragedies, our melodramas in real life, and what, by the way, is more melodramatic than the Bible and Shakespeare?

I have put my best work into the character of "Maverick Brander," the Texas Cattle King in Charles Hoyt's play "A Texas Steer," released as a Selig Red Seal play. There are many opportunities in that character role for humorous work.

Prepared Especially For This Newspaper by Pictorial Review

A PLAIN WAIST OF VERY GOOD LINE.

Guiltless of superfluous fullness, this waist of silk poplin is very dainty for autumn. It is trimmed with flat silk braid and buttons.

Without the hampering effect of superfluous fullness to be disposed of in tucks or gathers, the home dressmaker will find it easy to develop this waist of fine silk poplin. Light tan, cream, white or blue trimmed with flat silk braid looks well. The inset vest may be of contrasting material, since it is trimmed with a row of tiny buttons. Reappearing upon the long sleeves, the buttons help the military air which the braid trimming imparts to the waist. The lower edge is pleated below the belt at the front, but at the back the fullness is allowed to fall in natural folds. To reproduce the waist in average size requires 1⅞ yards of material, with 3 yards of braid and at least three dozen satin covered buttons. As many more buttons as desired may be added, however, for they are among the most fashionable of the season's trimmings.

The wearer must decide in the beginning whether she prefers the high or V-shaped neck, for if the latter is to be used it will be necessary to cut out the neck edge of the vest on small "o" perforations.

The back and the collar are placed into position first, resting even with the lengthwise fold of the poplin. Next to these, in the same position, comes the peplum. To the right of the peplum, but slightly elevated so that the end of the outer edge will rest on the fold of the goods, comes the sleeve. This, however, rests on a lengthwise thread of material. Opposite the back is the front, and sandwiched between the front and sleeve are the small sections for the under-arm, the vest and the belt.

Old-fashioned surah silk is revived for fashionable fall wear and will be used extensively in the development of separate waists.

SOME DELICIOUS RECIPES.

Anchovy Sauce.

A QUICK and easy way of making anchovy sauce is to stir two or three spoonfuls of prepared essence of anchovy, which may be bought at the grocer's, into a pint of melted butter. Let the sauce boil and flavor with lemon juice; time, ten minutes to boil; sufficient, two teaspoonfuls to a pint.

Maple Custard.

Beat five eggs until a spoonful can be lifted without stringing; add one-half cupful of maple sirup, a saltspoonful of salt; stir well, then add three cupfuls of milk and strain into a mold or individual cups; wet the inside of the cups with cold water. The hot water in the pan in which the custards are set to bake should not boil after baking is begun.

Fried Cucumbers.

Pare and cut into lengthwise slices more than one-quarter of an inch thick and lay for half an hour in ice water; wipe each piece dry; sprinkle with pepper and salt and dredge with flour; fry to a light brown in good dripping or butter; drain well and serve hot.

Raised Brown Bread.

Two cupfuls of cornmeal, one-quarter yeast cake, two cupfuls of boiling water; pour boiling water on cornmeal; when lukewarm add dissolved yeast cake and remaining ingredients; beat well; let it rise overnight; beat and pour into a buttered brown bread tin; bake in a moderate oven from one to one and one-half hours.

Old Fashioned Batter Pudding.

One pint of milk, four eggs, whites and yolks beaten separately; two even cupfuls of prepared flour, one teaspoonful of salt; beat up the eggs, add the yolks to the milk, salt the flour and stir in alternately with the whites; beat hard and bake in a buttered pudding dish forty-five minutes; eat with sweet sauce at once, as it soon falls.

Sweet Sauce.

To one pint of boiling water add a heaping teacupful of sugar, one tablespoonful of butter, a pinch of salt and one tablespoonful of cornstarch dissolved in cold water; season with nutmeg or vanilla; boil half an hour. If good and well cooked it will be very clear.

Fried Bananas, Chafing Dish.

Cut four bananas in halves lengthwise; melt one tablespoonful of butter in blazer of chafing dish without using the hot water pan; brown the bananas on both sides and serve with nut currant jelly sauce made as follows: Boil three-quarters of a cupful of sugar and one-quarter cupful of water together four minutes; then pour on to one-third cupful of currant jelly which has been beaten until soft with a silver fork; then add one-third cupful of nut meats blanched and broken in small pieces. Then it is ready to serve.

DAMES AND DAUGHTERS.

Mrs. Celia Stellman of Brooklyn recently found her son, Henry, who disappeared fifteen years ago, a sailor in the United States navy.

Miss Eva Ramstedt, a former pupil of Mme. Curie, the radium expert, has been appointed professor of radiology at the University of Stockholm.

First to win the iron cross from Emperor William in the present war was Fraulein Lenny Hertz von Vessen of Berlin, a cousin of the late Mark Twain.

In the fifty years she has been connected with the bureau of engraving and printing in Washington it is estimated that over $100,000,000,000 has passed through the hands of Miss Annie Roe, chief of the numbering division.

Miss Harriet A. Graham has been retired on a pension by the Pittsburgh board of education after having taught for more than fifty-three years in Pittsburgh schools. Miss Graham is said to be the oldest woman public school teacher in point of service in Pennsylvania and one of the oldest in this country.

Echoes of the War.

It seems to be millions for munitions, but not one cent for peace pacts.—Cleveland Plain Dealer.

Even the Swiss are running deeper into dept to pay the cost of their neutrality.—Boston Herald.

Reflections as to the causes of war have lost interest in the contemplation of the effects.—Washington Star.

"No change" in the military situation is beginning to evoke a heartfelt echo from hollow war chests.—Washington Post.

The war will do one thing for the men who die in the trenches. It will relieve them of the burden of helping to pay the war debt. This will be a heritage to their children to the third and fourth generations.—Houston Post.

PITH AND POINT.

The more excuses a man makes the less he gets out of it.

The dictates of conscience are never recorded by a typewriter.

Since getting into the war little San Marino seems to have been lost.

Originality is a thing we constantly clamor for and instantly quarrel with.

Actions may speak louder than words, but most people prefer oratory to pantomime.

Work is terrible to some men and loafing is terrible to others, showing what habit will do.

War dispatches announce another gain of 200 yards, but fail to state who carried the ball.

Don't wait too long for your ship to come in. Better take a canoe and paddle out and meet it.

Care of the Baby In Summer

Summer Complaint.

[Prepared by the children's bureau, United States department of labor.]

Most mothers have leared to regard diarrhea as one of the most dangerous ills of babyhood. Thousands of babies die of this disease every year, largely in the hot weather months—a fact which has gained for this illness the common name of "summer complaint." The deaths from this disease begin to increase in May, and the number grows rapidly in June and July and reaches its highest point in August, then decreases rapidly as cool weather approaches. It is prudent, therefore, for mothers to be on guard at the beginning of summer and to do all in their power to prevent the onset of this illness by exercising great care in feeding the baby and by keeping him as cool and quiet as possible. In all illnesses prevention is far better than cure, but this is particularly true with infant diarrhea, because the second attack comes on much more readily than the first. Also the baby's growth is seriously interfered with at a time when it is proceeding most rapidly.

To prevent summer diarrhea in babies first feed the baby on the right food in suitable amounts at proper intervals and in no other way; give him plenty of pure, cool water to drink between meals; keep him out of doors as much as possible in cool, fresh air, dress him lightly and bathe him frequently.

Another important part of keeping the baby well is to protect him from flies and mosquitoes, which frequently carry disease about. It is believed that one form of infant diarrhea is distributed by these household pests.

The healthy baby usually has one or two bowel movements a day. If this number is increased to four or more it is time to take measures against sickness.

It is well to remember, however, that the bowel movements of a baby fed entirely at the breast are normally more frequent than those of a bottle fed baby and that a slight increase in the number of movements is not so serious a matter to a baby at the breast as to one artificially fed. A baby fed at the breast does not usually have diarrhea, and when such a baby shows signs of digestive disturbance it is usually because he is overfed, either he is nursed too often or at irregular intervals, or is allowed to nurse too long at one time. When he does have diarrhea the time between nursings should be increased to four hours, and the times at the breast reduced to five or ten minutes. If the bowels continue loose the breast should be withdrawn entirely for several feedings if necessary, giving the baby instead cool drinking water at frequent intervals. In this case the mother should pump her breasts at the regular nursing times, both to keep them from drying up and to prevent their caking.

Bottle fed babies are the most frequent sufferers from summer diarrhea, and this fact furnishes another strong argument in favor of breast feeding. Diarrhea in a bottle fed baby is also best treated by reducing the amount of food. The bottle should be omitted for eight, twelve or twenty-four hours, according to the severity of the attack, and in place of the milk there should be given as much boiled and cooled water as the baby will take. Food should not be withheld for more than twenty-four hours, without the advice of a doctor. When the bottle is resumed the food should be much weaker than before, water should be substituted for at least half the milk previously given. The milk should be skimmed and the sugar omitted. The return to the former feeding should be made gradually by adding a little more milk each day and beginning to add sugar. The more severe the attack has been the more slowly should changes be made.

If the baby is on "mixed" feeding—that is, partly breast and partly bottle fed—the bottle feedings should be omitted if diarrhea appears and the breast given once in four or five hours, with nothing but drinking water between meals.

The children's bureau publishes a pamphlet called "Infant Care," which is sent free to any one sending a request to the chief of the children's bureau, United States department of labor, Washington. This pamphlet contains some simple directions for the care of the babies in summer, which may help the mother to prevent summer diarrheas and other ailments of infancy.

It should be understood that whenever possible the baby should be put at once under the care of a doctor. If the mother in the city has no physician she should take her baby to the nearest infant welfare station, where she will be well advised as to his care.

Since the country mother does not usually have access to an infant welfare station and is frequently far away from a doctor, she should use every effort to keep the baby well, but if serious diarrhea occurs a doctor must be procured without delay.

To Clean Sinks.

Coal oil will clean badly discolored enameled sinks or bathtubs and also will remove fresh paint stains.

TODAY'S FASHION NOTE

There are many novelty suitings among the materials for Fall, for, we are told, solid colors that "hold fast" will be scarce. The suit shown here offers splendid suggestions for a tailored gown. The coat is buttoned high at the neck and finished with a turn-down collar of self-material. The side sections and back are cut in one, while the front is in panel effect. The two-piece plaited skirt is full and short. Five yards 54-inch suiting are required for the suit.

Pictorial Review Coat No. 6351. Sizes, 32 to 44 in. bust and 16 to 20 years. Price, 15 cents. Skirt No. 6372. Sizes, 14 to 20 years. Price, 15 cents.

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.

PLAY GARMENTS.

How the Romper and the Jumper Have Become Invaluable.

Play garments in the sense in which they are known in this country find no place in the French collection. Such practical affairs as the romper and the jumper are American in origin and to a very great degree in use also. Like many styles that in the course of time are adopted by the Parisiennes, the romper made its French debut on the American child. It can hardly be said to have universal vogue, but nothing has been advanced of recent years that has approached it for utilitarian service.

Pinafores have been discarded by most American mothers, but in certain of the foreign countries they retain their old time vogue and are offered in many interesting fabrics and styles. The smock of the working classes has been taken as the model for latter day aprons designed for children, and while originally it was meant to wear over the frock, it gradually was lengthened, the opening down the front became a seam and the erstwhile pinafore was graduated into the dress ranks for little folk.

Many mothers in planning the wardrobes for their children buy an extra quantity of material so that bloomers may be made to go with the washable dresses. This is an excellent idea, since it helps to reduce the laundry bills.

In many instances the bloomers are cut on circular lines, because this gives more breadth and consequent ease to the active small girl or boy. Moreover, the extra fullness does away with the necessity of petticoats, since the folds of the bloomer serve to hold out the dress skirt.

This year there are interesting checks, plaids and stripes in washable materials especially designed with reference to the dress wants of the younger generation. The better quality will wash without fear of running or of shrinking in any marked degree. With the shepherd checks in ginghams, linens and cotton voiles are sometimes combined plain linens in old blue, rose pink or light blue.

How He Arranged It.

"Bobby," inquired the mother, "did you wash your face before the music teacher came?"

"Yes'm."

"And your hands?"

"Yes'm."

"And your ears?"

"Well, ma," said Bobby judicially, "I washed the one that would be next to her."—Ladies' Home Journal.

ORNAMENTAL WINDOW BOXES

Often Can Be Made to Atone For Architectural Incongruity.

A properly designed window box, suitably planted with trailing vines and a harmonious selection of colors, can often be made to atone for a vast amount of architectural incongruity in the house itself. Even in the most skillfully designed work the need for some softening effects about the windows can be felt. Aside from the charming exterior effect of such an arrangement, the bright colors and the scent of the flowers add greatly to the interior atmosphere of the house, while the view from a window is greatly enhanced by being framed in by the foliage of growing plants. Great care should be taken to secure the boxes from falling on passersby.

The window box may be made of white pine, painted to withstand the weather, or oak or chestnut stained, strongly put together and braced, and should be lined with copper or zinc with suitable apertures for drainage. The soil is put directly into the metal lined box so formed.

Of the planting it is enough to say that there should be a vine of some sort to hang over the edge, thus softening the rigid lines of the box, and that the flowers selected should be such as harmonize in color. Plants which form constant masses of bloom are best. It is well to provide several flowers which blossom in rotation, thus insuring a continuous effect. Pansies, heliotrope, giant mignonette, myrtle and similar plants are suitable for small boxes, while foxglove, salvia and digitalis may be grown in the larger ones. Geraniums are hardy and because of their bright coloring and fragrance make an excellent combination for the smaller window gardens.

Happy Toast.

The happiest bridal toast was when a speaker wished a deaf and dumb couple "unspeakable and unheard of bliss."

Speaking of infant industries, that of the home tourist finds better protection in war than in the tariff.

Short steps attained at terrific cost in blood and treasure is the monotonous story of the European hostilities.

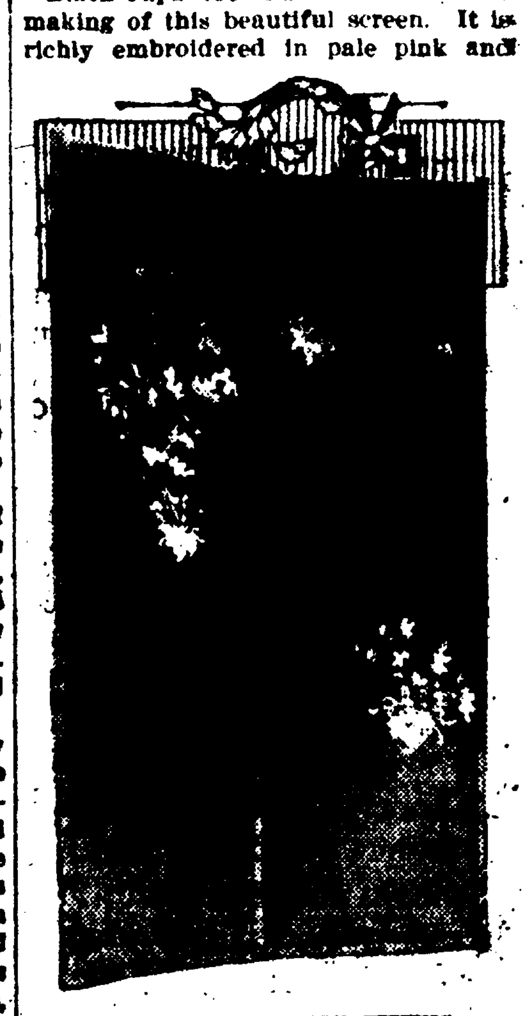
One of these days there is going to be a great battle at Szczebrzeszyn, and then half a dozen compositors will commit suicide.

A New York woman aged ninety-nine attributes her longevity to having always had a good appetite. The eatless campaigners will please note.

JAPANESE SCREEN.

Black and Rose Is the Color Scheme In This Article.

Black Japanese silk was used in the making of this beautiful screen. It is richly embroidered in pale pink and



HANDSOME HOUSEHOLD FITTING.

rose chrysanthemums and the casings are of ebony. There are four leaves in the screen proper, only two of which show in the illustration.

Cooling Process.

To keep milk fresh in warm weather or to cool any liquid in a bottle dip a cloth in cold water, wrap the cloth around the jug or bottle and leave in a cool place, preferably in a draft. This method of cooling is much more effectual on account of the evaporation produced than if the jug or bottle had been placed in cold water.

Grazing Lands.

Present methods of transforming the grasses of the public grazing lands into beef and mutton are generally conceded to be wasteful, and it is estimated that under a proper system the quantity of beef and mutton produced on these lands could be increased at least 50 per cent.

A Definition.

Robert—Pop, what is an endurance contest? Father—The average argument.—Judge.

Easy & Practical Home Dress Making Lessons

* * *

Prepared Especially For This Newspaper by Pictorial Review

A DRESS FOR THE AFTERNOON TEA.

Frock of ecru chiffon cloth trimmed with dark brown satin and narrow bands of brown fur. The brown velvet hat is ornamented with fluted silk ribbon.

Fur trimmings have grown so enormously in popularity that they are used all year round. The touch of brown on this costume of ecru chiffon cloth produces an unusually handsome effect. The skirt is hemmed with satin and the collar and cuffs are of the same material. The full skirt is gathered about the waist-line, and the waist has an under-front cut with a high neck. A corded shirring is added at the waist-line, forming a peplum below.

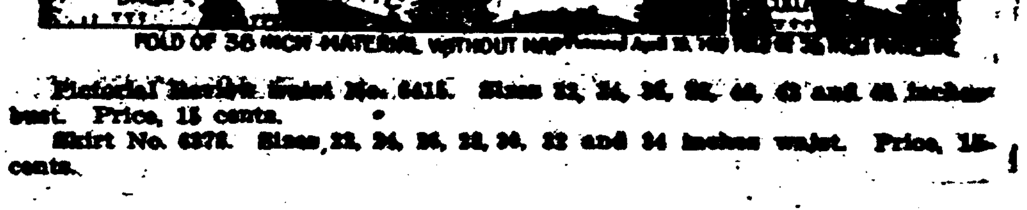
The materials required for the entire costume are 6 yards 36-inch chiffon cloth, 1¼ yards 40-inch satin, ⅜ yard 32-inch organdy for vest and collar and 4½ yards fur banding.

The waist will easily attract attention for the possibilities it offers for independent wear, so today's dressmaking lesson will be devoted to the cutting of the waist. First fold the materials carefully, so that there will be no wrinkles. The scissors with which sheer materials are cut should be very sharp. Place the back into position first, letting it rest on the lengthwise fold. Follow with the collar. Now, opposite these two sections there is arranged the stay, though along the selvage edge of the cloth. The outer front, plain sleeve and cuff are laid on a lengthwise thread of the goods. In case the sewer prefers a V-shaped neck to the high effect shown in the accompanying illustration the neck edge of the under-front can be cut out ⅜ inch above small "o" perforations. If the lower edge of the waist is desired with rounded scallops cut out on single "o" perforations. By cutting ⅜ inch below small "oo" perforations a pointed scallop effect will be gained.

Another very pretty way to make the sleeve is with oversleeves of silk that reach to the elbow and are finished in flare effect over undercuffs of chiffon.

"Vieux rouge" or "old red" is tremendously popular for relieving notes and for costumes, waists, etc. At its best it is a soft and lovely color, giving the impression of a warm, fruity red mellowed and faded by age.

CUTTING GUIDE 6415



FOLD OF 36 INCH MATERIAL WITHOUT NAP

Pictorial Review Waist No. 6415. Sizes 32, 34, 36, 38, 40, 42 and 44 inches bust. Price, 15 cents.

Skirt No. 6378. Sizes 22, 24, 26, 28, 30, 32 and 34 inches waist. Price, 15 cents.

4% PAID IN OUR INTEREST DEPARTMENT

1 DEAD, 10 HURT; TANK EXPLODED

Buildings Shaken; Ammonia Fumes Fill Cellars and Employes Are Overcome; Firemen's Work Saved Many

New York, Aug. 16.—A large tank of ammonia in the second sub-cellar of the Biltmore hotel exploded with a tremendous report at twenty-five minutes after twelve o'clock this morning, killing one man and overcoming ten others.

The greatest confusion prevailed throughout the hotel for half an hour or more, most of the persons living there being aroused. The shock of the explosion was felt throughout the giant sructure, it was said, even where the noise of the explosion was not heard.

Fumes from the ammonia, used in the hotel's refrigeration plant, were starting through the corridors and the halls when all doors were closed and fans were put to work, sweeping the gas out into the open air.

Use Oxygen Helmets.

Half a dozen ambulances were called and the Rescue Squad No. 1, of the Fire Department was summoned. These men, wearing oxygen helmets, entered the sub-basements of the hotel and dragged out the ten men who were overcome and hurried them to the hospitals.

One of the last men they reached was Louis Rednert, an electrician. He had been near the tank when it exploded. He was dead when the rescuers reached the street.

After the rescue squad had made a careful examination of the various sub-basements, which extend deep under the street level, they said they found that no others were killed and they had taken out all those who were unconscious.

Fumes Spread Rapidly.

The acid fumes permeated the substructure of the hotel quickly and those overcome mostly were employes of the engine, fire and other mechanical departments. The fumes caught them and they were unable to escape.

It was said that several of the unscious men probably would not recover.

The telephone operators called to many of the rooms where persons had been alarmed and assured them there was no danger, as the explosion had occurred far below the street level.

The explosion broke several water pipes and streams from these began to flood the basements, of which there are six. Pumps were put to work to draw off the water.

A hook and ladder company was sent to the hotel with heavy mechanical equipment to aid in the work of rescue and to prevent the spread of the ammonia fumes.

DEALERS WANT TO KNOW WHY GASOLINE IS HIGH

Utica, Aug. 16.—The Utica Auto Trades' Association, an organization made up of Utica dealers, has taken action to standardize the price of gasoline in New York State. They are not trying to reduce the price to a minimum, but they demand that a universal price be fixed for the fluid. A petition has been made to the up-state public service commission to that effect.

Members of the Utica organization say that both wholesaler and retailer are compelled to raise their price every spring from three to five cents a gallon, depending upon the company which supplies them.

ODD FELLOWS TO GO TO SYRACUSE

Many Will Attend Grand Lodge Sessions — Big Parade Wednesday Greatest Object of Interest.

Today and tonight Odd Fellowship takes possession of the Keys to Syracuse hospitality, and many of Fultons "three-link" men will go to the various sessions which begin tonight. Quite a number of them will go to the city Wednesday to participate in the big parade which occurs in the evening. No effort will be made to leave this city en masse, but every Odd Fellow who desires to participate in the parade is expected to meet at the Syracuse trolley terminal at 6:45 p. m., provided with white gloves and a badge.

This week will be the first time in thirty years since Syracuse has handed over the keys to the Grand Lodge of the State of New York, Independent Order of Odd Fellows, and it is anticipated that fully 4,000 visiting Odd Fellows and members of the Rebekah lodges will be in the city during the next four days.

This morning fifty members of the reception committee, with a troop of Boy Scouts, met all incoming trains and conducted the delegates where the official headquarters of the Grand Lodge may be found.

Tonight, at 7 o'clock, there will be held a special session of the Grand Lodge at Odd Fellows Temple for the purpose of conferring the Grand Lodge degree, and members of the order who desire the degree are required to have with them their Grand Lodge degree certificate in order that they may not be disappointed.

To Hold Sessions in Church.

The first business session of the Grand lodge will be opened by Grand Master Thomas W. McKnight of New York at 9 o'clock tomorrow morning. All sessions thereafter will be held in the auditorium of the First Baptist church, which ceats 1050 on the main floor and 750 in the gallery. The magnificent organ also will be placed at the disposal of the Grand lodge, as also will the committee rooms, hotel parlors and other rooms necessary for the use of the various committees of the body.

Robert W. Ellis, chairman of the executive committee, will present Mayor Lewis Will, who will deliver the address of welcome, to which response will be made by Grand Master McKnight. The Grand lodge will then go into executive session to receive the annual address of the Grand Master. It is anticipated that he will make a number of recommendations of importance, as a result of his statewide visitations. Among these will be the suggestion that the four different Homes of the order, which are now under the jurisdiction of separate lodge organizations, shall be placed under the direct control of the Grand lodge.

To Make Other Recommendations.

The other Grand officers will also make their reports at this session, all recommendations, as well as the proposed new amendments to the constitution, being referred to standing com mittees for consideration and report. Among the proposed amendments are the following: Making it possible to declare vacated by vote of the lodge any appointive officer's chair as well as those of elective officers, if he absent himself from three successive meetings; changing the time of electing representatives to the Grand lodge from the first meeting in June to the last regular subordinate lodge meeting in June; regarding the donating and dividing of funds of subordinate lodges, subordinate encampments and Rebekah lodges; changing the time of nominating Grand lodge officers and filing the same with the Grand secretary, and changing the date of the annual meeting of the district grand committee from the second Wednesday in March to the second Wednesday in April.

Tomorrow afternoon at 2 o'clock, the Grand lodge will suspend its business sessions for the annual field day at Long Branch. The program of sports will include a contest between two classes of Rebekahs baseball games, etc., for all of which substantia plrizes will be awarded. In the evening the visitors will be guests at the Strand theater.

The business sessions will be resumed Wednesday morning and afternoon, but Wednesday evening the general public will be given an opportunity to gain a much more intimate acquaintance with the three links of Odd Fellowship. Syracuse Odd Fellows and those from nearly every city and town of importance in the state will take part in the grand parade, scheduled to movef rom the Court House at 8o'clock, under the leadership of Grand Marshall George Boysen and his staff of aides, one for each lodge.

In some respects this parade is expected to be the greatest spectacle of the convention. The members of each lodge will be dressed in uniform, the exact nature of which is to be kept a surprise until the night of parade. It has leaked out, however, that the Mohican lodge of Baldwinsville will resemble a whooping band of red men. Rebekah lodges from various sections of the state will enter floats. There will be at least ten bands in line, and fully forty lodges are expected to participate. There will be prizes for the lodge with the largest number of men in line, the lodge making the best appearance, the prettiest float, etc.

After the parade the bands will contest for prizes at Billings park. At 9:30 o'clock that evening a reception will be tendered the Rebekah State assembly and the Grand lodge at the Odd Fellows' Temple, at which dancing will be enjoyed. The program states: "Representatives, their ladies and all visitors are cordially invited."

Thursday will be devoted to cleaning up the business of the Grand lodge while in the evening the final event of the convention will be the conferring of the Floral degree by Twilight Rebekah lodge at the Odd Fellows' Temple.

WON'T STOP SHIPPING ARMS, AUSTRIA LEARNS

Washington, Aug. 16.—"The national safety of the United States and other nations without great military establishments" demands that the right of a belligerent to purchase munitions from neutrals be recognized. This plain statement of the "practical reason" which is offered in support of international practice to refute the Austrian contention that arms shipmentss to the Allies should be stopped is the salient feature of the American note to Austria, made public here last night.

In drafting the note it was Secretary Lansing's object to sum up once and for all in definite form the attitude of this government on the question, which hasc aused serious international and domestic complications.

THE QUIRK

Today is showing "Man's Prerogative," a Mutual Masterpiece, in four parts. "Whiffles at the Front," a two-part Pathe, and "Probosco," the wonderful comedy juggler, who is pre sented as an added attraction, and all at the low price of balcony, 5c; main floor, 10c. These programs seem to have caught the popular favor as big houses testify.

Tomorrow, "Probosco" for the last time and the Mutual Masterpicture, "On the Night Stage." in five parts, featuring Robert Edison, Wm. S. Hart and Rhea Mitchell, with another first-class reel will be theh offering.

Those You Know

Mr. and Mrs. S. Wiseman of Syracuse are in the city attending the fair and are guests for the week with Mr. and Mrs. A. Aroneck of W. 1st st. Mr. and Mrs. Wiseman will spend the rest of the summer at Pompey Hill.

* * *

The Misses Beatrice and Edith Blumberg of Syracuse are visiting Mr. and Mrs. I. Fox of So. 4th st.

* * *

Percy Brace, Highland street, returned Sunday night from an automobile trip. He also spent some time camping at Lake Keuka.

* * *

Miss Green Newton has returned from Oriskany Falls, where she has been visiting her aunt, Mrs. Griffith.

* * *

Mrs. I. Fox spent last week with her parents in Syracuse.

* * *

Miss Iva Dolbear will spend the next few weeks with her parents at Palermo.

* * *

Miss Lillian Howe is ill at her home in West 4th st.

* * *

Miss Eva Keys is spending a two weeks' vacation in Syracuse and vicinity.

* * *

Marion Lewis has returned from a visit with friends in Syracuse.

* * *

Miss Pearl Lazarus of Syracuse is the guest of her sister, Mrs. J. Prowdla, of Utica st.

* * *

Mrs. Sweet, Mr. and Mrs. Grenville Patterson and Mr. and Mrs. R. C Anderson, of Utica st. automobiled to Fair Haven yesterday.

Frenchmen Prove Themselves Masters of German Aviators

Paris, Aug. 16.—Battles between French and German aviators have been quite frequent recently and in these encounters far above the earth the Frenchmen have distinguished themselvs.

A Frnch aeroplane was reconnoitring above Colmar on Thursday when a German aeroplane appeared out of the sky. In the ensuing combat the Frenchman poured a stream of shots from a maichne gun on the German, forcing him to descend within the German lines in Alsace. The indications were that the German machine had been badly damaged and that the aviator had been wounded.

Two German aeroplanes on the same day tried to reconnoitre above the French lines in Artois. French aviators rose and the battle far above the trenches was so lively that the Germans were forced to retreat and descend. They were pursued at top speed a long distance.

In this neighborhood a little later the same day two French patrols attacked another German aeroplane and apparently damaged it, as it was sent to volplane back of the German lines. Only the day before an Albatross machine was forced to the ground in the same manner.

So sharp is the watch kept for German aircraft that they are attacked and driven back before they get far inside the French lines. This has given to Paris an added sense of safety from aerial attacks.

Perhaps the most important and exciting aerial battle recently was when a squadron of ten German aeroplanes, all carrying heavy bombs, attempted to attack Toul and Nancy on August 1.

French aeroplanes, warned of their approach, rose quickly and met the Germans. The machine guns of the flying craft popped like firecrackers. The pursuit was so desperate that to avoid being overhauled and dashed with their machines to the ground the Germans released all their bombs and they dropped upon open fields, doing no damage.

Irishman Won't Register; He Was in His Home; Fired at Police

Dublin, Aug. 16.—Since early afternoon Saturday David Johnston, of Lurgan, County Armagh, armed with a revolver, has been holding his home against the police, who seek to arrest him for having taken a potshot at the registry enumerators when they called to deliver the official forms of the registry of Johnston's household.

Johnston, apparently believing the forms meant conscription, threw the papers into the street and then, standing in his doorway, drew a revolver and fired at the retreating enumerators, who are members of the constabulary, but without effect.

He then retired into his house, barricaded doors and windows and prepared for a siege, which the police promptly instituted.

Occasional shots from behind Johnston's barricades have kept the police and the crowds at a considerable distance from the house. Bullets have narrowly escaped an army officer, two policemen and the town health officer, who some time ago certified for a lunatic asylum. The man's home is located on the main street of the town, and his shooting has held up all traffic on the thoroughfares.

The police remained on siege duty all Saturday night and Sunday and vainly attempted to effect an entrance by stealth. Johnston appears to be well supplied with ammunition and fires frequently. His mother and sister, who were the only other occupants of the house with him, fled to the home of a neighbor when ohnston began to barricade himself inside, believing him mentally unbalanced.

The scene of the siege yesterday was the attraction for several thousand persons from the country roundabout. Johnston was still holding his fort at a late hour last night. He has been an occupant of an insane asylum three times. His hallucination is that the police are his enemies.

JANE ADDAMS SAYS SOLDIERS ARE DRUGGED

Chautauqua, Aug. 16.—Miss Jane Addams of Chicago, speaking yesterday on "Peace" before the Chautauqua assembly, reaffirmed her statement that Europe's soldiers, in some cases, have been stimulated by alcoholics and drugs for the bayonet charge.

"My informants in England and France and Germany were soldiers, officers and well informed civilians," said Miss Addams.

"I don't question the soldier's courage," she continued, "but when a prominent official in the Paris war office tells me his men are given absinthe before a bayonet charge, I believe him.

"When a German lieutenant tells me his men were given a drug formula, containing sulphuric ether among other things, to stimulate their bloody bayonet work, I believe him. And when a big Oxford university professor in England tells me his son and nephew were given rum to stimulate them in battle, I believe him.

"When common talk in all countries among the women who have husbands and sons and sweethearts at the front tells me the same thing. I began to believe that the average soldier is not sufficiently brutish and beastly to fight with cold steel against his brother, unless primed with drugs or strong drink."

Miss Addams declared that America must lead the fight for peace and disarmament.

ITALIANS HOLD SEXTEN VALLEY

Invaders Overcome Austrian Artillery in Tyrolese Mountains, Making Long Advance Toward Important Fortresses. Trenches Filled With Water Due to Severe Storms.

Milan, Aug. 17.—Notable progress continues in Sexton Valley, Tyrol, where the Italian positions have been pushed forward to the slopes of Seikofel and Croda Rossa, which means that one-half of Sexton Valley is now in Italian possession.

As far as the village of Moos, Italian artillery and infantry have begun to deal serious blows at the Austrian troops. They are advancing down the Sexton Valley and past the silenced forts, while their batteries are coming dangerously near the important Austrian lines of communication in Pusteria.

Italians also advanced in the valley of Boden, and are evidently forcing a passage between the valley of Sexton and the forts of Landro. The silencing of the Sexton batteries and forts is no small operation. Most of them are well protected and at heights of 4,200 feet or more.

The position of the Croda Rossa, now captured by the Italians, is fully 6,000 feet up, and therefore it commands the Austrian forts.

Coincident with these advances in the Tyrol the Italians are likewise pressing their advance in the Trentino toward Riva, at the head of Lake Garda. They have already reached Condino, thirty miles southwest of Trent.

SPY SYSTEM HERE SAYS NEWSPAPER

Federal Agents Find Leaks Aiding Germans—Information Flowing to Embassy, Says R. I. Paper.

Providence, R. I., Aug. 17.—"The Providence Journal, publishes today the statement that government officials have been investigating for weeks leaks in the State and Treasury department through which information has been given constantly to the German Embassy. "The Journal" asserts that at least two persons in State Department and four in the Treasury Department are under suspision and says:

"The government has in its possession positive proof that these leaks have been constant and that important and valuable information, particularly in connection with investigations, has constantly found its way into the possession of Count von Bernstorff and Captain Boy-Ed.

"There have been numerous conferences among Cabinet officers with regard to these leaks for several weeks. Secretary McAdoo and Secretary Lansing have conferred constantly with Secret Service officials, and every possible effort has been made to put a stop to this shameless traffic in state secrets.

"The Journal is able to say authoritatively that these investigations are in progress and that conclusive proof of the conditions in the departments named has already been secured.

Bridge Explosion Ordered.

"The government has in its possession an affidavit signed by Captain Horn, who attempted to blow up the international bridge at Vanveboro. This affidavit not only tells the entire story of Horn's attempt, but declares that he was ordered to do what he did by his superior officer in this country in the employ of the German government. The Secret Service authorities who have this document in their possession have proof that the individual referred to is Captain Franz von Papen, Military Attache of the German Embassy.

"Captain Horn's statement declares that he was brought here from South America to do either this work or work similar to it; that he came under orders from and in the pay of his superior officers in this country. His confession goes into detail with regard to the method he employed in attempting to blow up the bridge. It declares that before starting from the village of Vanceboro on his perilous expedition with a satchel containing eighty pounds of dynamite, he pinned a German flag to each of his arms, so that if captured he could declare he was in German uniform.

"He says that the scheme was to blow up the bridge so that the lives of no people would be in danger, but that his superior had given him an incorrect timetable of trains, with the result that just before he was about to light his fuse, he discovered a pas-

THOUSANDS FLEE FROM GALVESTON; DANGER PASSED

Houston, Texas. Aug. 17.—With the barometer at 29 flat, the wind blowing 75 miles an hour, water filling the streets and the light power plant paralyzed, the people of Galveston are fleeing from the city on every train. Practically every town along the Texas gul coast reports similar conditions.

Although the actual damage indicated at 7 o'clock tonight is confined to a few houses blown over, with no known loss of life, the situation is growing worse with such rapidity that fear of another disaster is expressed everywhere and all precautions possible are being taken to meet any emergency. The telegraph companies have closed their offices, quitting work when their floors were flooded with six inches of water.

Seven thousand persons have fled from Galveston and there are other thousands camped in the center of the city, the outskirts being deserted.

At 7 o'clock last night the Santa Fe office reported that water stood in its Galveston station four feet deep. Crowds of reguees are in the second story of the building.

Caplen and Bolivar, including the Bolivar peninsula, are cut off and a large number of persons are trapped by the water. The towns of Sabine and Sabine Pass have been deserted as well as Port Lavaca.

ELECTRIC COMPANY OFFERS PRIZES TO PUPILS WHO SYSTEMATICALLY SAVE

The boys and girls of this community who are learning to save have an impetus offered them in the shape of prizes. The first prize is $10 and there are five second prizes of $1; the test is to be the highest record in systematic saving rather than the greatest amount. The pupils of the public and parochial schools of the city are invited to join the contest by the Fulton Light, Heat & Power Company, which will be the domor of the prizes. The following letter has been received for publication:

To the Pupils in Public and Parochial Schools of Fulton:

> The Fulton Light, Heat & Power Company offers to pay a first prize of $10, and five second prizes of $1 each to the pupils in each of the public and parochial schools in the City of Fulton who make the best record during the next school year in systematic saving. The test to be not the actual amount saved but the results accomplished considering the opportunities and age of the child, and the awards to be made, in case of a tie, by the vote of the school children themselves.

The judge of the matter to be the Principals themselves or such committees as they may appoint.

I have offered prizes on a similar plan for thel ast two years in my native town of Salisbury, Conn., where the plan has met with considerable success and aroused much interest in the teachers and children, some of the latter of whom have accomplished quite remarkable results.

I think the crying need in this country is thrift and I believe the way to start is with the children. Few people realize how rapidly small savings will accumulate, unless as children they have started the habit of making savings.

Sincerely yours,

G. C. WARNER,

For Fulton Light, Heat & Power Co.

BAND MEN BELIEVE WEATHER DEVILS CLING TO THEIR COATTAILS

L. W. Richardson, director of the Elks' band concert committee, announced this morning that the concert which was to have been held last night, after three postponements, will now go over until fall, as the members of the band are convinced that some unknown agency is working with the weather man against them. Until an hour before the concert last night everything looked promising, but a sudden downpour about 7 o'clock necessitated another postponement.

The program which was to have been given last night will be probably carried out tomorrow night at the Elks' club, according to Mr. Richardson. Another concert will be given at the Elks on Thursday evening and dancing in the ball room of the clubhouse will follow each concert. An orchestra will furnish the music.

One of the series of city concerts, financed by the Chamber of Commerce and John W. Stevenson, may be given in the Second ward on Friday night. The bandstand will be erected on Sullivan's corner. The program will be announced later in the week.

CHAMBER NOT FOOTING ONE COMMITTEE'S BILLS

When questioned about the Taxpayers' Committee this morning, Secretary Heydecker stated that although he did not know the membership of the Committee, he did know that no funds of the Chamber of Commerce were being expended by anyone, except the Finance Committee of the Chamber, and that positively no vouchers had been drawn for, or money given to the Taxpayers Committee for any purpose whatever.

WEATHER FORECAST.

Fresh northeast winds; partly cloudy and continued cooler tonight and Wednesday; probably showers.

THE SALVATION ARMY AT THE FAIR GROUNDS

Ensign Fitzgerald will this week continue the practice of former years, that of holding open air services on the fair grounds. Each day religious exercises will be held at different points and where the crowds are thickest. Besides holding the religious services it is the intention of the Corps members to mingle freely with the people.

At the conclusion of each open air service a collection will be taken, the proceeds of which will be used to defray the cost ofb uying a winter's supply of coal for the fine new barracks in East lsts t. Truly no worthier object exists in this city than Ensign Fitzgerald's Corps of Workers.

S. M. DADA JOINS BORROWED TIMERS

Syracuse Attorney a Former Resident of Fulton---Served as Secretary of Local Whig Club in 1852---Yesterday's Meeting a Double Birthday Celebration.

Birthday parties have become a feature in the Borrowed Time club. Yesterday the birthdays of two of the members were celebrated in right royal fashion, it being the 78th anniversary of S. P. Mason's natal day and the 85th anniversary of J. B. Hodges. A birthday cake with lighted candles and all the fixings served in evidence of the festivity of the occasion.

The Hon. S. N. Dada of Syracuse, a former Fulton resident and attorney, became a member of the club at yesterday's meeting. The registration showed Mr. Dada's years as 88.

The discussions held by the club usually are on current affairs. This group of young old men peer into the future that they may remain young in the present. However, yesterday was an exception and the hand of Time was turned back and remincences were enjoyed. The Hon. S. N. Dada pointed out that sixty-three years ago he had been the secretary of the Fulton Whig club and that year cast his vote for Henry Clay, the candidate of the Whig party. H. N. Gilbert recalled the fact that on that same date he had cast his vote for the first candidate of the Abolutionists, James G. Birney of Michigan. The tragedy of the split in the Republican (Whig) party when the Abolitionist party was formed from within it was a repetition in the Progressives growing out of the Republican party, with the same net result, the Democrats walked off with the pie.

According to the reminiscences things were "doing" in those days. H. N. Gilbert, in a chat with some of the younger guests at the party, outlined the happenings as he vividly recalled them in the Underground Railroad for slaves which was kept by his father, Hiram Gilbert, of Gilbert's Mills. This station Mr. Gilbert said was the first station, the second was kept by John B. Edwards of Oswego, a very wealthy Abolitionist.

In recalling the facts Mr. Gilbert said, "We children would see those poor, black slaves, many of them still bearing the open wounds on their backs made by the lash of their master's whip. One old slave we shall never forget; he had been whipped nearly [illegible] slaves wanted to sleep in the barn always, for in their [illegible] thought they could escape more easily if detected. However, mother insisted and gave them a good bed and norishing food. Hundreds of slaves made their escape to Canada."

Although the Whigs never forgave the Abolutionists for being the cause of the Democratic victory, the Hon. Mr. Dada and Sec. H. N. Gilbert clasped hands as two good comrades in the membership of a club whose vision is ahead, far into the future, rather than in living the past.

Another interesting feature of the meeting was a talk given by the Rev. H. D. Holmes, who took "Our Social Life" as his topic. In part he said: "Whether we realize it or not we are living in the midst of a movement that is toward a social reconstruction, not in one community, state or nation, but which reaches out to the ends of the civilized world. The social problem is in the very atmosphere which we breathe everywhere. It finds expression in the books and magazines and daily papers are constantly keeping it before the eyes of the people."

Mr. Holmes dwelt upon the necessity of doing something to help the boys of today in their social life in the community, and showed that throughout the land women, the mothers of men, have been the chief agitators in this movement. Mr. Holmes was heard with deep interest.

The musical part of the program was in charge of Clark and Sidney Morrill, who acquitted themselves in a most creditable manner as young musicians.

A social hour was enjoyed following the refreshments. Mrs. A. D. Clark and Mrs. Justin Morrill served.

NEW CHEMICAL WAGON WAS MADE IN FULTON BY FULTON ARTISANS

Tomorrow morning the new chemical wagon purchased for the Fire Department will be put into service with John Youngs as regular driver. The new apparatus is painted a bright red, with gilt trimmings, F. F. D. appearing on each side. The painting was done in Fulton by Clarence Richardson. The wagon will have an especially attractive appearance at night, being supplied plentifully with lamps at the sides and rear. The running gear of the vehicle which is considerably heavier than any wagon now in the service, was purchased out of town, while the box was made by John Hickey of Fulton.

Besides the regular chemical tank of 35 gallons capacity, two auxialiary tanks, commonly known as hand fire extinguishers, of three gallons capacity, are carried on each side. The rest of the equipment consists of two ladders, one extension and one scaling; 200 feet of chemical hose; about 1,200 feet of 2 1-2 inch hose, and a large basket for holding the rubber clothes of the firemen. All of the equipment is new and modern.

Opinions

How Prosperity is Undermined.

A tariff law that teaches Americans to buy European goods weakens the foundations of permanent prosperity in the United States. If Americans made all goods bought by Americans there would be no need to turn to the export business for relief from war depression. If the union were complete, financially and commercially, the United States and Latin America could laugh at the threats of the warriors of Europe.

There is less need of Tariff Protection against South and Central America than against any European country, because the products of Latin America seldom compete with those of the United States and the wage scale is more on a parity with the scale that prevails in the United States. But it is clear, in any event, that the markets of the United States and South America are the richest in the world and that these countries are, and ought to be, independent of Europe. — Washington, (D. C.) Post.

Is It a Benefit?

Whether the decision of the Illinois state board of arbitration that the women employed in state institutions shall receive thes ame wage scale as men is to benefit the fairer sex ultimately is a question. Mrs. Grace Wilbur Trout, president of the Illinois Equal Suffrage Association, says: "It (the action of the state board) protects the men, for where women receive the same compensation as men the tempation to replace the men with equally capable women at a lower rate of pay is removed."

The New York Press comments as follows:

"The ability of many women workers beingc heerfully granted, their frequent superiority to men being admitted, it is equally certain that many other women are employed not because they work as well as men or better than men, but because they will work for less. If the doctrine of the equal wage scale is carried out, what becomes of these women?

"Even more competent women are at a disadvantage, for under present social conditions, which can hardly undergo radical change without readjustment of all human relations, earning a living and supporting a family are in general the primary duty of men, while with women (still speaking generally and with due regard to their business and professional attainments in many instances) a 'job' is only a temporary avocation until marriage supervenes.

"Consequently, as has been frequently remarked, women are the ephemeral, men the permanent workers; and wages as well as other things being equal, employers are likely to prefer the permanencies to the 'transients.' " —Watertown Standard.

Injecting Human Interest

When it comes to putting human interest into a mercantile announcement there is probably no one who excels John Wanawaker. Each day his store news contains a few short paragraphs which apparently have no relation whatever to his store. But they do have such a relation and a very important one. They flag the attention of the newspaper reader, hold his interest and gently, but firmly, lead him to the discussion of prices and merchandise which form the main portion of the advertisement.

These bits of very skillful writing appear over Mr. Wanamaker's signature. Many people say that he does not write them. Perhaps he does not, anyway that is a minor detail. What he does do is toc ome forth and vouch for them withh is own name, which is the really important thing because it puts the human note into the writing.

One example will serve to show the sort of material and style Mr. Wanamaker uses. The following was taken from a recent advertisement of his. Imagine anyone who is a follower of current events passing up such a wealth of pertinent data without giving it a few moments thought: "The United States covers considerably less than 6 per cent of the earth's area and contains only about 5 per cent of the earth's population, but official records show that the United States produces: 76 per cent of all the corn grown in the entire world. 70 per cent of all the cotton. 72 per cent of all the oil. 59 per cent of all the copper. 43 per cent of all the pig iron. 37 per cent of all the tobacco. 26 per cent of all the silver. 24 per cent of all the wheat. 21 per cent of all the gold, and contains more than 33 perc ent of all the wealth of thec ivilized world.

"These figures were compiled July, 1915, by Dr. Joseph Caccavajo, C. E., from theg overnment reports and statistics for the year ending June 30, 1914, and are, therefore, uninfluenced by the present war."— Batavia News.

THE SLOGAN MADE WIDER

One of Fulton's manufacturers in commenting upon an article which appeared in The Evening Times last Saturday, said that the object of his criticism aroused in his mind a few recollections which he felt like airing. The article bore the caption, "We want a live town." It brimmed over with the "Trade-at-home" spirit, and of course, protested the idea of dealing with mail order houses. Here is an excerpt from the article that excited comment:

"Let's all get together and help make our community a live one.

"We all realize the consequences of poor business, stagnation in commercial affairs, depression of real estate values, low wages, etc.

"What we want is plenty of business, money in circulation, a live interest in the building of houses, the sale of lots and acre property and a genuine, healthy condition of business in our community.

"How shall we accomplish it?

"The easiest thing in the world. Just keep our money in circulation, right here among ourselves, and we will create our own prosperous conditions.

"In other words, Let's patronize o ur own business men, instead of sending our dollars to the mail order houses. Let's be loyal to our own best interests instead of helping to bolster up the big monopolistic establishments that are draining our resources of all the ready money in sight.

Our friend the manufacturer employs many skilled workers whose wages are spent in the Fulton merchants' stores. Those employes are doing exactly as the merchants and everybody concerned in the development of this city advise us to do. They are contributing their portion toward keeping "money in circulation right here among ourselves, and this, too, in spite of the fact that they earn their bread by helping to make goods that are sold to and by several of the large mail order houses of the country. And to their credit it should be known that these makers of a Fulton product pass by the voluminous volumes of mail order house descriptions and prices. These catalogs are at all times accessible, but loyalty to home institutions remains a creed in the heart of the average worker, and the home merchant is the chief gainer thereby.

The manufacturer whose case is cited actually rejoices in the loyalty exhibited by his employes, but he nevertheless suffers a large measure of disappointment—and not without cause, for the knowledge has come to him that merchants who could and should buy and sell his product make a practice of purchasing from wholesalers and jobbers elsewhere the articles produced by his machinery and the persons in his employ. In fact, this same manufacturer avers there are instances on record where the product of his factory is offered for sale here that has been brought from a distant city, whereas the product might have been sold to the merchant at a substantial saving in price. Is it right that this should be the case? No, it is not, you say. No doubt the merchant makes the same answer and yet the fact remains.

In the months intervening since The Evening Times became a factor in the development of Fulton—"A herald of progress," as it were, many columns of reading matter have been printed bearing upon the subject about which too much cannot be said, "Buy at home," but always the shoe has been made to fit a different foot than on this occasion. This manufacturer's complaint needs adjustment; it is to your interest to aid the adjustment, for unless we keep before us at all times the fact that every dollar spent at home means added wealth, added prosperity, added real estate values and added facilities—schools, churches and clean, healthy amusements—we shall fail in that measure of consistency by which we must hope to make really and truly a live town. Why not look about ourselves to see if we can find a place to spread a little more of the big brotherhood spirit in business. Why not keep our money in circulation among our manufacturers as well as among our merchants?

POLITICAL OPINIONS

Attorney-General Woodbury has issued a vigorous statement in reply to charges of extravagance preferred by the press bureau of the Democratic State Committee, and answers categorically every question asked regarding the administration of his department. It is not probable that the people would look uponc harges of extravagance, issuing from such a source, as extremely serious, but the Attorney-General does not intend to allow aspersions to be cast upon his department when the purpose is to mislead the public,no matter where such aspersions originate.—Rochester Democrat and Chronicle.

* * *

Having produced a treasury deficit of $36,000,000 for the fiscal year now closed Congressmen will feel that they got af airly good haul for their constituents.—Ithaca Journal.

* * *

The people of this State have not yet ceased paying the penalty of their folly in entrusting responsibility to the Tammany element. It was a costly experiment and nothing is more certain than that the burdens of today would have been tremendously increased if the Tammany forces had been given further lease of power. As the case stands, the taxpayers of the state are making up for years of Democratic misrule; but through the courageous efforts of the present administration, people have the satisfaction of knowing that the credit and fair repute of the commonwealth are in process of complete restoration. — Gloversville Leader-Republican.

If there were real need for a Progressive party in New York state it would not find itself in sixth place in the running after maintaining an expensive propoganda for three years past. Real Progressives in New York State have seen the futility of continued fealty to the party. —Buffalo News.

FLOWERS FOUND QUICK BUYERS AT PUBLIC MARKET

Auburn newspapers contain interesting accounts of the success attending the public market in that city. The experience Saturday was that. Saturday's Advertiser-Journal says:

"Sweet peas, gladioli, golden glow and other flowers were sold in large quantities on the trial public market this morning. Flowers have had a good sale since the market was started, but all records were broken today in numbers sold. Large bunches were selling at 5, 10 and 15 cents, the price varying according to the kind and the size of the bouquet.

"Peaches were sold on the market for the first time today. Several prominent fruit raisers in the county announced that they would have peaches at the market next week, and others promised to bing in cantaloupes. Plums and prunes will be brought in within a few days.

"Quantities of fruit of different kinds, will be sold at the market this fall, and Market Master Miskell predicts that many unusual bargains will be offered to the householders who desire to purchase fruit for canning.

"The demand for butter and eggs is great and so far there has been a scarcity of these products. Eggs are selling today at 23, 24 and 25 cents a dozen. One farmer sold a number of fancy eggs at 25 cents a dozen. Several of the market men have started the practice of taking orders for butter and eggs and in this way are building up a trade. Butter retailed at 28 cents a pound."

M. J. Crandall will perform most of the decorative work during old home week in Shaneateles.

FEDERAL AGENT PRAISES AUBURN'S FISCAL RECORDS

Auburn, Aug. 16.—"The fiscal records of this city are being kept in a manner which greatly simplifies the work of the federal agents who are entrusted with the duty of compiling reports on American cities. It showed that the system of accounting employed by the municipality is not only good, but most excellent and thorough."

This was the statement made today of Sherman E. Danfroth of the United States Department of Commerce and the Bureau of Census, who is completing an investigation at the City Hall. Mr. Danfroth's study of the city's fiscal records has extended over a period of one week; and while he made it plain that the federal inspection of municipal books is in no sense an audit, at the same time the report to the federal government furnishes a valuable index of what is going on in the offices of the comptroller, the city treasurer and the city clerk.

The consistent advertiser wins in the end. It may cost a dollar to get a dollar, but the deal wins prestige.

Expert Advice for the Automobile Owner

Queries and Replies Covering Matters of Importance to the Man Who Runs a Car

Is it common practice to regrind the sylinders when a motor is worn or is it better to get new pistons and rings?

All depends upon the condition of these parts. Sometimes it is advisable to regrind the cylinders, which is the case when they are worn oval. In this case the fitting of new pistons is a difficult job, and the previous troubles would return again. If the cylinders retain their circularity, then new pistons and rings may be fitted.

Is it a good plan to place graphite in the crank case with the regular oil?

Graphite shows excellent results when used as a lubricant for the motor. Its action is one of a filler, the minute holes in the cylinder being filled in with the graphite, thus reducing friction and wear. Some owners use ordinary flake graphite, while others prefer the deflocculated form.

There is a swishing sound issuing from the neighborhood of the right front wheel of my car when it is in motion. It seems to occur once every revolution. What can be causing it?

There are two very likely causes of such a noise. It may be due to the speedometer gears meshing too tightly or the demountable rim has a wedge loose. Jack up the wheel and rotate it slowly, and you can soon determine whether the gears are too close. If this is the case loosen up the arm that carries the driven gear and move the gear only far enough away so that the noise is eliminated. If the trouble is not found in the speedometer gears tighten up the wedges on the rim. One loose wedge will make a noise similar to that you have described, due to the lack of support at this point.

What, in your opinion, is the best way to crank a motor with the throttle open or nearly closed?

It is preferable to crank the motor with the throttle only opened a small amount, say an inch or an inch and a quarter movement on the quadrant. With some carburetors it is impossible to start the motor with the throttle wide open, while with others it is generally done with difficulty.

I have always been bothered with motor knocking when throttle was opened on a hard pull, necessitating my retarding the spark to the extreme limit, and that, of course, reduced power. I have been told that it was caused by too high compression. Will it help matters to reduce compression by raising the cylinder and placing a plate beneath to make a larger compression space?

The high compression reason which has been assigned to your case is very possibly correct, although it might be that carbon trouble is at the bottom of the difficulty. If you have noticed that the knocking continues even after the motor has been cleaned of carbon it is probably due to the high compression or to a loose connecting rod, wrist pin or crank shaft bearing or part. It is never a good idea to reduce compression until you are sure that it is too high, and it will be better to have this measured by gauge and see what it really is before attempting to cut it down by means of a plate. A compression pressure of seventy pounds is sufficient, and for ordinary purposes you should not have higher than this. If it is below this a reduction of compression will reduce the power correspondingly, as it infinences the mean effective pressure in the cylinder.

If a motor is equipped with a high tension magneto, does each cylinder receive alternately one effective spark and one surplus spark?

The ordinary four cylinder high tension magneto only produces sparks when required—that is, at the beginning of the working stroke. Such a magneto produces a spark every half revolution of the armature, and therefore by connecting it to the motor so that it revolves at the same speed just the right number of sparks are generated, since a four cylinder, four cycle motor requires a spark every half revolution. These sparks are distributed to the proper cylinders in turn by means of a rotating brush which makes consecutive contact with the four segments which are connected to the high tension wires running to each of the four cylinders. The distributer runs at half the speed of the armature, and the two are positively connected by gears. The two are so set that the brush is in contact with one of the segments when the breaker points separate and the spark occurs.

Will you kindly give me any information you can on soldering aluminium?

Aluminium is soldered by the use of a blowtorch. A solder which may be used without a flux is composed of seventy-five and five-tenths parts of tin, eighteen parts of zinc and two and five-tenths parts of aluminium. The parts should be slightly heated before applying. The solder should be forced in place by means of a stiff metal brush. Another solder which requires a flux, however, is made up of 80 per cent tin and 20 per cent zinc, stearic acid being used as a flux. The objection to soldering aluminum is that the joint is not very strong.

Laconic.

FLEET MAKES 90 HITS OUT OF 826 SHOTS

Washington, Aug. 16. — Concrete corroboration of his assertion that marksmanship in the navy has deteriorated tremendously was disclosed today by Congressman A. P. Gardner, of Massachusetts, inm aking public correspondence between Secretary Daniels and himself on the subject. In reply to Mr. Daniels's contention that Mr. Gardner had not been entirely accurate, Mr. Gardner answers that "this is a fact," and the actual record "is more alarming" than he had supposed.

Out of 56 shots fired by the Michigan last Spring, says Mr. Gardner, only 5 actual hits were allowed by the umpire. In 1911 the same ship made 19 hits out of 27 shots.

Only 90 hits were made out of 826 shots at the individual Spring practice of the battleships fleet this year, he adds, "which doesn't sound much like "the 95 per cent of accuracy" we have heard so much about." Mr. Gardner gives the full record of each of the seventeen ships which participated.

PAYING THE FIDDLER

WE ALL realize that when there is dancing going on, whether it be the new-fangled tango or the old-fashioned polka or waltz—some one must pay the fiddler.

We cannot have music without paying for it, nor can we have much of anything in this world without paying for it.

If we expect any person to do something for us, we expect, naturally, to do something in exchange for such favors as we receive. If we accept favors, but evade the responsibility of making any returns for them it will not be long before we discover that the unpaid for favors become curtailed.

Probably we become provoked, after the favors have stopped, and acknowledge our own stupidity. It is generally too late when we wake up and then it is merely the old story over again—of locking the door after the horse has been stolen.

Many of us in this community devote more or less of our time to the raising of produce of various kinds. We have vegetables, butter, eggs, milk, etc., to sell.

We find it a convenience to sell such products in the local stores. Some of our business men buy up the small quantities, as well as the larger lots, and ship all together to the more central markets.

This facility for disposing of such articles is a great convenience to us. If the local storekeepers did not buy our produce it would be difficult for us to find a market. In fact, there would be no market for small quantities except at ruinous prices.

Therefore we are favored, to a very considerable extent, by the fact that our local storekeeper stands ready to buy from us. This places us under certain obligations. The local storekeepers are entitled to some consideration from us in return.

HOW MANY OF US APPRECIATE AND ACKNOWLEDGE THIS FACT?

How many of us think of this when we have some cash to spend? How many of us consider that the local storekeeper is entitled to our trade and that we are morally bound to consider him as the proper repository for our orders and the recipient of our trade?

It is regrettable that many of us must plead guilty to an entire forgetfulness of any feeling of obligation. Therefore, we send our orders, with the cash, to the mail order houses, to whom we owe nothing.

We are enticed by cleverly written advertisements and neatly worded descriptions of goods and merchandise so that we deceive ourselves into believing them to be true. We forget the local storekeeper and his favors; we forget that he is a benefit to the community and to every individual in the community; we forget that he is affording us an opportunity to dispose of our produce—that he has his money invested in a stock of merchandise that he has selected because he believed we would need such articles and would wish to buy them at home.

Every dollar we send away from home to the mail order houses brings us closer to the limitations of our local opportunities. Every dollar diverted from local trade adds to the restrictions of our trade facilities at home so that we are not only permitting, but we are inviting, our local merchants to close up shop and go out of business; or to move to some community where their efforts will be more appreciated.

By our lack of appreciation we are urging our local storekeepers to restrict their efforts to carrying only the lines of merchandise that are the most profitable for them and to cut out all goods that we can buy in the city. We are actually inviting disaster.

LET US AWAKEN TO A REALIZATION OF THE CONDITIONS WHICH CONFRONT US. LET US PLACE SOME LIMITATIONS ON OUR DISREGARD FOR EXISTING CONDITIONS AND LOOK INTO THE FUTURE.

We can see what the consequences must be if we fail to do our share toward supporting the establishments of our business men in town, for the handwriting is written plainly on the wall.

Shall we read the writing and profit by the message or shall we continue to dance merrily and foolishly on until the time shall come when we must pay? And how shall we pay?

There will be only one way to pay and that will be with much more than the profit we shall have derived from our dealings with the mail order houses. WE WILL PAY DEARLY UNLESS WE AWAKEN TO A FULL SENSE OF OUR RESPONSIBILITIES, AND AT ONCE.

We wish to dance, but let us change the tune—or the fiddler.

Did Him Little Good.

James W. Marshall, a native of New Jersey, was the first man to discover gold in California. It was in 1848 that he noticed a glistening object in the bed of a stream, which happened to be a nugget of gold. Notwithstanding this important find Marshall died in 1855 penniless and alone in his little cabin.

Is It Worth While?

Is it worth while that we jostle a brother
Bearing his load on the rough road of life?
Is it worth while that we jest at each other
In blackness of heart—that we war to the knife?
God pity us in our pitiful strife.

God pity us all as we jostle each other;
God pardon us all for the triumphs we feel
When a fellow goes down; poor heart-broken brother,
Pierced to the heart; words are keener than steel,
And mightier far for woe or for weal.

Were it not well in this brief little journey,
On over the isthmus, down into the tide,
That we give him a fish instead of a serpent
Ere folding the hands to be and abide
For ever and aye in dust at his side.

Look at the roses saluting each other;
Look at the herds all at peace on the plain,
Man, and man only, makes war on his brother,
And dotes in his heart on his peril and pain—
Shamed by the brutes that go down on the plain.

—Joaquin Miller.

Transmuted Philosophy.

Croesus had just touched a stone and turned it into gold.

"That's more than he could do to me," ruminated Hadji, the beggar. "I'm too poor to touch."

Which goes far to prove that poverty is no bar to wit.—Louisville Courier-Journal.

His Favorite Play.

Edith—That Mr. Phan is conversationally impossible. Ethel—Why so? Edith—We were talking about the theatre, and when I inquired what was his favorite play he said if he had any favorite it was seeing a man steal second.—Boston Transcript.

FOLLOWING THE CLEANUP.

New Orleans Sends Printed Reminders to Its Citizens.

Keeping the city in order from day to day, after the annual cleanup, is a problem which requires some ingenuity. To ward off a relapse into carelessness on the part of its spring cleaned citizens the department of public property of New Orleans has recently issued a set of small folders called the "City Beautiful Series," which it is expected will be effective in producing results. These are printed in a style to make them attractive and interesting and are unique as to contents. In each case, as a practical part of the argument, it is stated that the department is determined to put an end to the throwing of papers and rubbish upon the streets and that stringent measures will be adopted to punish all violators of the city ordinances upon this subject.

These warnings are distributed by the citizens' committee, which consists of representatives of the board of trade, New Orleans Association of Commerce and other commercial organizations. Each ward in the city also has a representative on the committee, and the Women's club has rendered valuable assistance in circulating the folders. It is interesting to note that each of the seventeen wards of New Orleans has a club devoted to the beautifying of its surroundings and that a representative from each precinct reports progress at the ward meetings.

To Protect City Trees.

Small boys who tear "switches" from trees planted along the parkways of streets and delivery wagon drivers who allow their horses to make a meal of the long hanging leaves of those same trees are henceforth to be the object of vigilance of the streets and tree planting committee of the Municipal Art league of Chicago.

Mrs. H. S. Newton, chairman of the committee, spent a day inspecting the newly planted Carolina poplars which have recently been placed by the league along Warren avenue.

"We want the streets of our city to look like some of those beautiful avenues in large cities of Europe, where the trees have become famous," she said. "This we can accomplish if the trees are not molested. The greatest menace to the life of the trees is the mischievous boy and the driver of the nibbling horse. When we secure the co-operation of these two classes of individuals our object is assured."

To plant trees along the structure of the Metropolitan elevated railroad is the plan of the committee.

"One of the hideous things of the city, the great iron structure, will then become an asset," said Mrs. Newton.

About 300 trees have been planted thus far by the committee in the vicinity of Warren avenue and West Monroe and West Congress streets.

Fighting the Billboard Nuisance.

In a decision delivered not long ago the supreme court of Illinois upholds the principle underlying Chicago's present billboard ordinance. Not only is the measure declared valid, but the reasoning of the court indicates that even a stronger ordinance dealing with the billboard would be sustained.

As the contest over this nuisance is going to the supreme court of the United States, where the frontage consent feature of the existing ordinance may be the special object of attack, opponents of billboards are seeking to improve the measure. Instead of providing, as does the ordinance as it stands, that billboards may be permitted in certain conditions only with the approval of the majority of the property holders in the neighborhood, the city council is now asked to prohibit absolutely billboards within 250 feet of any hospital, church or school, in blocks in which one-half or more of the buildings are used exclusively for residence purposes and in vacant blocks adjoining residence blocks.

Prize Plan For Street Intersection.

John Floyd Yewell of Peekskill, N. Y., won out over 200 competitors and was awarded first prize by the jury of awards of the Municipal Art society of New York city in its competition for the best architectural solution of the intersection of an avenue and a street. His plan provided for a tower in the center of the intersection with the angles of the buildings on the four corners cut off so as to allow rotary circulation. The car tracks on the cross streets were depressed so as to pass under the avenue, and vehicular traffic, leaving the street at another point, also passed under the avenue on the lower level. This plan involved a very slight amount of condemnation of property.

HOME TOWN HELPS

PLAN FOR A GARDEN CITY

Cleveland Citizens Are Beginning to Recognize the Value of Trees and Flowered Spots.

Reminiscence and a measure of hope are combined in the suggestion of one of the women entered in the Plain Dealer vacant lot and home gardening movement. "It is a grand idea," she writes, "to get Cleveland back to what it was when I remember it first—the forest and garden city of the state."

Many memories span the same stretch of Cleveland history, and many residents are welcoming the opportunity to do their share in restoring, as far as practicable, the conditions that existed half a century ago. Much of the change wrought in this period cannot now be remedied; yet a good deal can be done in the direction indicated.

An industrial city, growing by leaps and bounds, cannot expect to retain all the sylvan beauty of its younger days. Shade trees are poisoned by elements in the atmosphere that should not have escaped the chimneys, and by poisons in the soil that should have been confined to pipes. Tillable vacant lots become fewer in number and the old-fashioned garden of roses is likely to give way to other, less picturesque devices.

Yet the city really needs this companionship of cultivated trees and gardens more than the village did, for the country moves farther afield and the more highly organized urban life becomes the greater is the need of such relaxation as home gardens afford.

The Cleveland of earlier days was a town of trees and flowers, of home plots blossoming in copious measure to match the earnestness of their owners. "To get Cleveland back to what it was—the forest and garden city of the state." Plenty of loyal residents, young and old, will second the suggestion.—Cleveland Plain Dealer.

USE OF MANURE IN GARDEN

Matter of Much Moment to Those Who Desire a Luxuriant Growth of Flowers.

Nearly every owner of a garden knows that he must annually supply the garden with stable manure to keep up the physical texture and general plant food in the soil. For this nothing is better than well-rotted horse manure. But there are special crops of flowers that need special feeding to get high-class flowers. An inquiry is just at hand asking for "rush food" for carnations. The grower wishes to feed heavily at proper times in order to produce showy blossoms for early winter. Carnations have very fine hair-like roots that need equable conditions of soil, moisture, temperature, food, etc. Aside from a rich, friable soil, potash and lime are needed to keep plants in good general health. Both of these are supplied in wood ashes, or one may use air-slaked lime and either sulphate or nitrate of potash. The latter also contains nitrogen. Well-rotted animal manures, especially pulverized sheep manure, make fine stems, leaves and general plant growth. If stems are weak, bone meal and lime will stiffen them and also induce the formation of flowers. Feed frequently, but in small or light doses.

Desirable Magnolias.

Chinese and Japanese magnolias are especially desirable for lawn planting. They prefer a warm, rich, dry soil and should be planted carefully in the spring. The Yulan magnolia, M. conspicua, is known for its large white flowers, produced before the leaves. It is shrublike while young, but becomes a symmetrical tree as it attains age. Similar in habit, but blooming a little later, is Soulange's magnolia, flowers white and purple, cup shaped, three to five inches in diameter. The foliage is large and massive, and this magnolia is so hardy, vigorous and handsome that it is extremely satisfactory to plant. Earlier in bloom than either of the preceding is Hall's Japan magnolia, which is dwarf in habit, forming a bushy shrub. The flowers are pure white, semi-double and fragrant. It is not uncommon for it to open so early in April that there may be a light snowfall while it is in bloom. These magnolias vary in price from $1 to $2, as a rule.

A Clean Town.

As the citizens so the town. If this holds true, a city is only the reflection of the people who reside therein. A clean town, then, means citizens who take pride in their own personal appearance, in the cleanliness of their homes, in the condition of their houses, in the appearance of their yards, streets, alleys, parking strips and public parks. If the external appearance of a city is neat and clean, visitors are sure to conclude that its residents are a progressive, clean-cut, active unit.—Richmond Palladium.

New Advertising Device.

To attract attention a new electric drink mixer for soda fountains is equipped with a tiny light which illuminates the liquid in which it is working.

Rubbish in City Parks.

A vigorous campaign has been instituted in New York city against the throwing of rubbish in city parks. Mayor Mitchel, Police Commissioner Woods and the park commissioners instituted the crusade, and the city magistrates have co-operated, with good results. Numbers of malefactors in this respect have been admonished, while others have been arrested and fined. A great improvement has resulted, and the arrests now are few and far between.

Dr. William T. Hornaday, director of Bronx Zoological park, gives the following testimony:

"For fifteen years we have been trying to educate the persons who come to the zoological park on Sundays into the knowledge that the park was not built for a big rubbish can. Now on Monday the park employees can put all the peanut shells into a silk hat and the waste paper into a receptacle just as small. The result is very satisfactory."

The Silkworm.

The silkworm is three inches long and is well provided with legs, having no less than sixteen of them.

OTHERS' FAULTS.

If by silence we hide the faults of others God also will hide ours, but if we divulge them God will also make known our own.—S. Paemen.

FUN RAYS

By Ray I. Hoppman

THE PESSIMIST.

IT gets my nanny when I meet a pessimist upon the street, who swings his tongue in plaintive bleat—that's why I write this poem. He sulks along in deep distress, and ever flashes "S O S"; he's dead sore on the world, I guess—there's cobwebs in his dome. He's foreign to the sunny smile and thinks that life is not worth while; he's like a cross grained, grating file—with soul devoid of song. He chills the very atmosphere; he puts the jody sign on cheer and wears an everlasting leer upon his visage long. He sees no beauty in the flower; he knocks and grumbles by the hour, his countenance is ever sour—a mirthless soul is he. Say, on the level, do you know? I'd like to slam the cuss a blow and jar him hard from knob to toe—I sure would, bully gee! Why should a man of knowing years go 'round and peddle gloom and tears and add a chapter to our fears, when ev'rything's O. K.? Why should we tolerate the guy who never has an optic dry and does his best to paint the sky a dark and gloomy gray? We ought to send him to some isle and teach him how to laugh and smile and make his joyless life worth while, or chase him off the earth. Our lifetime is so gol darn short we haven't time to howl and snort—we've got to delve in healthy sport and happiness and mirth. I'd like to get my freckled fists tattooing on the pessimists and knock 'em on the smiling lists—and knock 'em there to stay. The man who doesn't smile, by heck! is like a boil upon the neck, as worthless as a phony check—away with him, away!

By Comparison.

"Dubkins is a great comfort to me."

"I don't see how you can say that. He's the most tiresome chump I have ever met."

"That's just it. Although I don't amount to much, it's true, every time I look at Dubkins I feel that I could amount to less."—Birmingham Age-Herald.

Tree Planting.

A good tree well planted will usually grow whether the work is done in the spring or fall.

3 DAYS SALE AUGUST 18, 19, 20

The STERLING RANGE

A BEAUTIFUL RUG FREE WITH EVERY PURCHASE

Beginning August 18th, we are going to conduct the biggest sale on a high class range ever opened in this city. The sale will last for three days only—during that time we offer inducements that you cannot afford to ignore.

The Sterling Range is the range for your kitchen. For twenty years the name "Sterling" has stood for all that is best in cooking apparatus. It is the one range that embodies the unit system of construction, every part being interchangeable for each model. You can select any kind of range you want from the Sterling line—leg base or cabinet; with reservoir or water front, or without; shelves, warming closet, and all fixtures built up to suit yourself in any way you desire.

The "Sterling" is the famous range that bakes a barrel of flour with one hod of coal; the range with the perfect oven, the scientific flue system; removable grates; oval firebox; extra large ash pan; removable nickel; non-warping griddles; patent lift plate for broiling; polished top that does away with blacking; and more than twenty other convenient features not found in other ranges.

During this sale only you can buy a Sterling Range at the regular cash price. on terms to suit yourself. Use the range all summer—pay for it in the fall. A special arrangement with the manufacturer enables us to offer terms that you cannot secure again. Long credit, or easy terms—you use the range while you are paying.

As an added inducement, during these three days only, we will give every purchaser of a Sterling Range, a beautiful Saxony Axminster Rug absolutely free—take it home with you when you take the range. The rug is 36 x 72 inches, a yard wide and two yards long; your own choice of coloring and design. Ordinarily this rug retails for $5 to $6—you get it free for prompt action now. And not one cent has been added to the price of the range.

There is the whole offer. Buy your range now instead of waiting until fall—we give you this beautiful rug free while the sale lasts.

Make your selection early while there is still a large number of Rugs from which you can make your choice.

L. P. SMITH CO., FULTON, N. Y.
Hardware Bldg., Oswego County Fair

DON'T FORGET

The Sale is for three days only

AUGUST 18, 19, 20

Buy now—use your Sterling all summer—pay a little at a time, or make your own terms.

A beautiful Saxony Axminster Rug for your parlor given away free with every Sterling Range during this sale.

It will pay you to buy now.

ASSAULT CHARGE FOLLOWS FIGHT

Drinking Bout of One Man Led to Argument and Now Both Antagoniststs Must Face Court.

Orin Prashaw, a weaver in the American Woolen Mills, who lives at 416 West 3rd st., was arrested last night on a warrant sworn out by Frank Bodin of Montreal, who charges Prashaw with assault. Prashaw was arrested by Patrolman Lewis and immediately gave bail.

Shortly after he swore out a warrant, Bodin was arrested on 1st st. for public intoxication and is at present confined in the City Jail.

Several conflitcting stories are in circulation regarding the affair, but from information gleaned at police headquarters this morning it appears that Prashaw had sufficient provocation. It is alleged that Bodin, who is tramping around the country, applied at the Prashaw home for a room, early Sunday night. He is an old man, and Prashaw's mother-in-law admitted him and rented him a room, for which he paid. In the morning, the story goes, he had breakfast, for which he did not pay, and before he left the house, Prashaw alleges, he became insulting to the woman.

Last night Prashaw met Bodin in a saloon on the West Side and the man was buying drinks and appeared to have plenty of money. It is reported that Prashaw asked him how it happened he had money to buy drinks, but had no money to pay for food, and Bodin made some insulting reply, according to witnesses. A mixup followed and Bodin emerged badly beaten up. He engaged a lawyer and swore out a warrant for the arrest of his assailant. Later he imbibed too freely in the saloons on this side of the river and landed in jail himself.

HUGO ADDRESSES THE FIREMEN

Tells Them the Best Way to Fight Fires—Advocates Nothing But the Very Best Equipment.

Oneida, Aug. 17.—Pointing out that a very high percentage of the abnormal and tremendous money loss resulting from fires in the United States is due to conditions that should nol onger be allowed to exist, advocating stricter building and premises, Secretary of State Francis M. Hugo spoke here this afternoon at the annual convention of the State Firemen's Association. Charles W. Taft, Second Deputy Secretaary of State, who has always been actively identified with fire companies, was also present this afternoon.

In his opening remarks, Secretary Hugo called attention to the fact that while the fire loss in the United States and Canada had reached the enormous sum of $225,000,000 in 1912, in 1913 it was only about half a million less than that amount, while in 1914 the loss footed at $235,000,000; the largest of any year since 1908.

"The best way to fight a fire is not to let it start," said Secretary Hugo. "If it gets a start, then the fire fighting apparatus should be of the type that will enable the department to reach the scene in the quickest possible time. I am in favor of motor driven apparatus. As Mayor of Watertown I watched the first piece of auto apparatus added to the department of a city that has winters of a most rigid sort. Despite deep snows, blizzards and zero weather, the apparatus has proved so efficient and has brought about a saving of such proportions that other pieces are being added year by year."

"There is no question that a good part of the national fire loss is due to carelessness and negligence," said Secretary Hugo, "and there is likewise no question but what the annual ash heap of this country and Canada could be reduced to much smaller dimensions if the means of fire defense in all communities was brought tr the most efficient standard possible. Every fire prevention association organized, no matter how small its membership or how limited its territory, is a step that is deserving of encouragement and support, meaning as it does, fewer conflagrations, less loss of life and property and ultimately am oney saver to the community at large through lower premium rates."

Secretary Hugo referred to a regular and systematic inspection of buildings and premises which he advocated and secured for Watertown while at the head of that city. Mr. Hugo urged for co-operation between citizens and fire fighting companies, saying that no city or village could expend funds to better advantage than in protecting its industries, its homes and itsc itizens from the ravages of conflagrations, by means of uniform building laws, an adequate water supply and efficient fire departments.

Secretary Hugo spoke of the debt which every community owes men who risk their lives in saving life and property. Today was the second occasion on which Secretary Hugo has addressed the State Firemen's Association. When Mayor of Watertown in 1910, Mr. Hugo welcomed the Association at its Thirty-eighth Annual Convention held in that city.

PRESIDENT TO REVIEW THOUSANDS OF VETERANS

Washington, Aug. 16.—In the celebration of the fiftieth anniversary of the grand review, which is one of the principal features of the forthcoming annual encampment of the Grand Army of the Republic, to be held in Washington, September 27 to October 3, forty thousand marchers will pass in line before the President and his Cabinet.

Theg rand review of the victorious veterans of the Civil War which was held in Washington immediately after the close of the great struggle was one of the most spectacular military incidents in the history of the world.

Elaborate preparations have been made by the old soldiers to commemorate it at their coming encampment. The line of march will be from the Capitol to the White House, along Pennsylvania Avenue. It will rival any inaugural parade which the city has ever witnessed.

Them ajority of the marchers will be veterans in blue, most of whom participated in the march fifty years ago, but it will also include those who belonged to various army corps which did not take part in the concluding event of the War. Augmenting the veterans will be the Sons of Veterans and kindred organizations, as well as troops from the regular army, members of the marine corps, sailors from battleships, cadets and independent military bodies, as well as civilian escorts.

Fulton Keynotes

Miss Carrie Seymour has returned from a pleasant vacation spent in the Adirondacks.

* * *

Babies will not be checked at the Chamber of Commerce rest room during this week—fair week.

* * *

Albert Pare desires to secure a situation on the police force, but no vacancies exist at present, is the announcement.

* * *

The Rev. J. L. Lindsman will remain in retreat at St. Bernard's Seminary, Rochester, one week.

* * *

G. W. Roy has returned to his home, 208 Highland st. after spending a few days in Buffalo and Batavia.

* * *

The Rev. and Mrs. J. W. Barrett arrived yesterday after spending a two weeks' vacation touring the north country in an automobile.

* * *

Mrs. Charles Graham of 4th st. who has been ill at her home for the last three months, is slowing recovering.

* * *

Mrs. James Ridd and family of Mexico have been visiting friends in Fulton the last week.

* * *

Miss Jennie Caswell of Utica st., who went to Massena Springs some time ago for her health, is reported improving.

* * *

Wednesday morning at 9 o'clock Ladies' and Misses' Summer Dresses (about 75 in all). Ladies' and Misses' Dresses were from $3.00 to $12.50 each. Voiles, Muslins, Organdies, Batistes, Linen, Dotted Mull, Flaxons, etc.; Your choice $1.48 each.

* * *

Mrs. Floyd Fullerton of Hannibal was a guest the past week at the C. L. Foster home.

* * *

Mrs. James Wheaton of Gilbert's Mills has been the guest of Miss Mary Hegaman of West Fulton.

* * *

Mrs. Frank Parsons is visiting friends in Cardiff.

* * *

Miss Reta E. Dwyer, daughter of Mr. and Mrs. Andrew Dwyer was married yesterday to Charles Gaspar of Detroit, Mich. The wedding ceremony was performed in the Church of the Immaculate Conception.

* * *

Mrs. William Egbertson of Grand Rapids, Mich., is the guest of Mr. and Mrs. J. B. Rector of Ontario st.

* * *

Mrs. Bert Guernsey visited her brother in Syracuse yesterday.

* * *

Mrs. J. Rude and sons, Leon and Walter, are spending a week at Sylvan Beach. Miss Eva Rude spent Sunday there.

* * *

Mrs. S. Lipsky of Brooklyn, N. Y., is spending a few days with her son, D. L. Lipsky, of 159 South 4th st.

* * *

Miss Mayme Frawley spent Sunday at Ontario Beach, Rochester.

* * *

John Youngs, caretaker of the City Hall, began his two weeks vacation yesterday.

NO SPEED LIMIT AS YET PLACED ON TROLLEY

Unles the Aldermen of the city choose to take up voluntarily the question of regulating the speed of the inter-city trolley car operated by the Empire United Railways, there may arise a howl of protest loud enough to be heard in the darkest corner of the City Hall; at least, this is indicated by the comments made by a number of persons who claim to have escaped collisions with the fine new car.

George L. Pratt quite recently escaped a collision with the car and there are others on record, and nearly every one of the fortunate persons makes about the same complaint, which is, that it is hard to understand, why the city insists upon autoists keeping the speed of their cars under the limit and allowing the trolley car to travel at a rante dangerous to pedestrians and traffic in general.

While it is true that no real collision has so far resulted, the complainants fell that "an ounce of prevention is worth a pound of cure."

Your appetite for fresh-every-day rolls increases every time you eat the Black company's article. adv

MARY ELLEN FRIGHTENED THE SENSITIVE HORSES

The big show elephant, Mary Ellen, caused some commotion on the streets yesterday when she made her first public appearance. Of course the small boy became excited and in two instances The Evening Times' newsies forgot their routes until a late hour. But the most serious trouble arose among horses, many of them scenting from afar the Mary Ellen outfit. Two runaways occurred, one of them, the L. P. Smith West Side delivery horse, whose sense of smell was too keen and the horse bolted in West Broadway. The driver attempted to hold the horse in check, but the line broke and the horse succeeded in getting a headway that was not stopped until the animal reached the fair grounds. The driver, horse and wagon escaped injury.

"FLYING FRENCHMAN" ENTERED FOR RACES

Fred Plant, manager of the auto and motor cycle races to be held on the fair grand race track Saturday, announces the entry of Charles Plant, who is called in racing circles, "The Flying Frenchman." Plant will drive his No. 8 National racer.

Motorcycle entries are opened to anyone wishing to enter and no entry fee is charged. Send all communications to Fred Plant, Lewis House, City, who is representing the Fair Association in promoting this special event.

SOLD CANDY EACH YEAR FOR NEARLY 40 YEARS

For the first time in nearly forty years there will not be ab ooth on the fair grounds this year presided over by a representative of the Green family who are known as candy-makers. James Green, who now conducts the business, succeeding his father, decided to this year confine his labors to making candy and not in retailing it on the fair grounds.

DEALERS WARNED TO STOP SELLING TO DRINKERS

District Attorney F. D. Culkin, according to The Palladium, has announced that he intends to see that the law relative to selling liquor to persons who have been convicted of public intoxication five or more times is strictly enforced. Mr. Culkin will call the attention of the Police Department to the fact that no prohibited list has been circulated in Oswego in several years and in adition to seeking their co-operation will personally do all in his power to see that this law isl ived up to. In this connection he will receive and entertain complaints from all of those who have friends or relatives who need protection and who should be on the list.

Mr. Culkin's determination to take a hand in the situation results from several cases which have beenc alled to his attention recently. In one case a woman complained that her husband was drunk in his home and refused to let her enter. Taking the matter up with the Police Department she says they told her she must walk several miles to headquarters to get a warrant, as the police could not arrest a man in his own home for public intoxication. Mr. Culkin's investigation of this case showed that the husband had been arrested scores of times and so he came to the conclusion that the best way to remedy the trouble is to see that the man doesn't get anything more to drink.

SOCIETY DANCED IN HONOR OF MR. AND MRS. FOSTER

Mr. and Mrs. Langdon C. Foster of this city entertained with a dance last evening at Pathfinder Island in honor of Mr. and Mrs. Alan Foster, formerly of this city, but now of New York. Guests to the number of eighty thronged the clubhouse and enjoyed the dancing. Reynolds furnished the music, which included the popular fox-trots, one-steps and canters for the younger people, as well as the familiar dances of past years for the older members of the party.

MISCREANTS TAKE MILK FROM PEOPLE'S PORCHES

Residents of upper Broadway, east side, in the neighborhood of Fifth st. have made complaint that during the early morning hours yesterday and today miscreants have taken the milk from the porches and in some cases have secured the money left in the bottle. The opinion of the residents is that the undesirable element which usually follows fairs, circuses, etc., are the guilty ones.

OSWEGO HAS NEW ITALIAN SOCIETY

The "Figli D' Italia," an organization of the Italians, will be formed in Oswego on August 29 and Rocko Hendricko, grand deputy and organizer, will hold the initiation. Ralph Amoroso, the east side tailor, will be the eminent commander of the new organization, which has a membership of over 200,000 in the United States, alone.

CAPE VINCENT GIVES UP LIGHTING PLANT

Cape Vincent has tried municipal ownership of an electric lighting plant and has had enough of it. Last week the taxpayers voted to sell their village plant to the Northern New York Utilities Company of Watertown for $5,500 and the company will operate the plant hereafter.

SUPERVISORS TO MEET IN SPECIAL SESSION

A call was made yesterday for a meeting of the Board of Supervisors to be held September 1 at 2 o'clock. This meeting is to conduct special business, the discussion of the sale of bonds by the towns of Volney and Oswego to provide funds for the building of the new Minetto bridge.

"KING OF THE CLOUDS"

Ernest J. Hanmon, formerly of Oswego, but now of Rochester, and known as the "King of the Coulds," and who will make balloon ascensions and parachute drops at the fair grounds this week, is said to be one of the most daring men in the business.

CORRECTION

Secretary Heydecker of the Chamber of Commerce has asked The Evening Times to correct an error which appeared in last night's Times. A reporter misunderstood him. Mr. Heydecker did not say, as quoted, that he considered the idea of opening the stores in the evening, a good one, and worth trying. He merely said that no action had been taken by the Division of Retail Trade. He added this morning that as far as he knew no such action was contemplated.

COMMISSIONER WILTSIE REFUSES TO VOTE BOARD'S SECOND APPROPRIATION

Although Commissioner A. S. Wiltsie refused to vote, the resolution drawn by the Board of Public Works last night that an order in the sum of $1,625.79 be drawn from the sewer fund for the purpose of paying Frank Massaro, the contractor who constructed the tow-path sewer from First and Onedia sts. to the Hunter tail race. Mr. Wiltsie was asked by President Stevenson if he wished to second Commissioner Garrett's motion that the order be drawn, and he replied, "No, I think I'll keep quiet on this matter. Go right along without me." He afterwards added, "I don't suppose there is any real reason why I shouldn't vote for this thing, however." President Stevenson seconded the motion and said, "Well, the bill must be paid, that's all there is to that."

Frank Massaro was awarded the contract for the sewer two months ago and his bid totaled $2,445. According to Massaro he encountered unforeseen obstacles in the course of the work and among other things, rock was discovered in large quantities and he was obliged to blast. Mr. Massaro says the terms of the contract protected him in such cases and he was able to turn in a bill for extras. At any rate, he turned in a bill for $3,280.37. About half of this amount, or $1,654.58, has already been paid Mr. Massaro, it is said, and at the last meeting of the Common Council, the aldermen were asked to appropriate the sum of $2,150 for the Board of Public Works, this money to be used for the express purpose of completing the sewer. Last night an order was drawn for $1,625.79 of that amount, and whether or not the board anticipates other obstacles which will consume the remainder of the Common Council appropriation has not been settled. If the full amount of $2,150, added to the amount already paid Massaro, $1,654.58, is used in constructing the sewer, the work will have cost the city $3,804.58, instead of $2,445, the contract price.

GEORGIA'S DISGRACE

Mob Kidnapped Jewish Prisoner, Leo Frank, and Shot Him During Early Morning Hour Today. Race Prejudice Runs Riot.

Atlanta, Ga., Aug 17.—(Special) Leo Frank's bullet-ridden body was found just before dawn this morning in Little River, near Lynchburgi where it had been cast after receiving at least 100 bullet wounds.

It is now definitely known that twenty kidnapers were occupants of the five autos that formed the cavalcade whose descent on the prison farm resulted in Frank's capture. The apathy of the authorities is quite apparent and if people dared express opinions many would say that men "higher up" are implicated in the ghastly crime which has brought upon Georgia the greatest disgrace.

Atlanta, Ga., Aug. 17.—Leo M. Frank was kidnaped from the Milledgeville prison farm last night and is believed to have been shot to death on a lonely bridge near Meda hamlet shortly after 4 o'cock this morning.

Although persons in several towns near Milledgeville were informed early yesterday that Leo M. Frank had been taken from the state prison farm by a mob and requested to watch for the automobiles in which the mob traveled, the route taken was not known here at 4:30 this morning.

Herbert Haas, one of Frank's attorneys, received a telephone call from Mason at about 4 o'clock this morning from a man who gave his name as "Jones," saying that Frank had been hanged about five miles from Milledgeville. "Jones" informed Haas that he was trying to call a friend in Atlanta and tell him of the hanging, but he had got Haas' residence by mistake.

Between 4 and 5 o'clock this morning, or about five hours after Frank was mysteriously spirited away from the prison farm, a fusilade of shots was heard near Meda.

A searching party from Milledgeville, which was hunting for traces of the kidnapers, came upon a pile of empty cartridge shells upon a bridge spanning Little river and it was at once concluded they had been left by the mob which carried Frank away.

Although search was made in the vicinity of the bridge, no trace of Frank's body was found. Leaders of the searching party concluded that, if Frank really had been killed there, his corpse had either been tossed into the sluggish stream or had been hidden.

The search for Frank was handicapped by the fact that the telephone wires leading from Milledgeville had been cut as the gang was carrying Frank off in an automobile.

The motor car dashed off in the direction of Eatonton, but later, when the authorities did manage to get in communication with Eaton it was said that no trace of the mob nor of Frank had been seen there.

FAIR SAID TO BE THE BEST EVER

Interest Seems to Center In the Steppers---Local Horses Not Enjoying Great Favor

Many Fultonians spent yesterday afternoon at the Fair grounds with the idea of comparing the event this year with those held in previous years and the general opinion yesterday seemed to be that the 1915 fair will be bigger and better than ever, if the attractions can be set up in time for the opening day. Most of the booths and concessions were in the course of erection yesterday and even in the main building the booths of local business houses were far from being ready. Several of the concessions were ready for business, however, and the soft dring dispensaries did a fair business.

Great interest is centered in the racing this year, and horsemen from all over the state are at the track all day long, clocking the many steppers as they make the circuit. Thursday is expected to be the gala day for the sport of kings. "The local horses will have to travel this year to get a look-in at the money," said a prominent local horseman yesterday. "Some of these out-of-town men have some pretty fast birds over here."

The automobile and motorcycle races on Saturday will also draw well, the promoters believe. The management intends to have a free-for-all for amateur drivers in both classes and several Fultonians who have been laboring under the impression that they are Barney Oldfields and "Red" Parkhursts in embryo will have an opportunity to show their mettle.

SWIMMING INSTRUCTION URGED IN SCHOOLS

Chicago, Aug. 16.—Members of the committee on buildings and grounds of the board of education adopted a resolution recommending the teaching of swimming in every public school. A special committee, of which Mrs. Ella Flagg Young, superintendent of schools, is chairman, was appointed to work out the practical details of the plan. It is estimated it will cost the city about $1,000,000 a year to add swimming to the curriculum in every school. The steamer Eastland disaster led to a consideration of the subject by the committee.

OFFERS PRIZE FOR THE OLDEST AUTOMOBILE

Watertown, Aug. 17.—A meeting of the Jefferson County Agricultural Society was held Saturday afternoon at which time the matter of the municipal carnival which will be held on Publics quare during fair week was discussed. The general committee in charge of the carnival has decided to offer a prize to the oldest automobile driven by its own power in the automobile parade, and also a prize to the oldest car in the parade whether driven by its own owner or not.

BIRDMAN FALLS; HAS BROKEN JAWBONE

Rochester, Aug. 16.—"Daredevil" Charles F. Niles, the Rochester aviator who became internationally famous by his sensational looping the loop around the Statute of Liberty and by his work for General Carranza in the Mexican war, is in St. Francis Hospital in San Francisco with injuries suffered when his plane plunged into San Francisca bay as thousands of spectators were watching.

AUBURNIANS MAY SING UNDER COVER

Auburn's interest in community singing is growing at a rapid pace and interest in keeping alive this valconraged there. The Advertiser-Journal of that city says:

"From now on, those who desire to impart the community spirit to their friends and acquaintances, may have the opportunity to do so, even though the weather man may present thunder showers, hail storms, or the much desired decent weather. Up to this time, there has been an opportunity for only one community sing at Pomeroy Park on Sunday afternoons, as the rain descended just at the crucial moment to drive home any approaching guest.

"However, yesterday afternoon was to the contrary and so set the example for the Sundays to come. About 35 people, men, women and children gathered at the park, not to be outwitted by the sprinkles, and were invited by Mrs. A. M. Dulles to come up on the piazza of the Tarajorhies Clubhouse. This proved to be an excellent place for the singing, and is to be the place in the future whenever it rains on Sunday afternoon. Otherwise, the concert will be given in the park.

"The soloist who were listed for the afternoon evidently decided that the rain was too evident, and did not come. With Miss Winifred Hoyt at the miniature organ, the group sang all of the more favorite and familiar songs, for an hour or more. Next Sunday at 4:15 there will be the usual singing no matter what the weather conditions are."

Easy & Practical Home Dress Making Lessons

Prepared Especially For This Newspaper by Pictorial Review

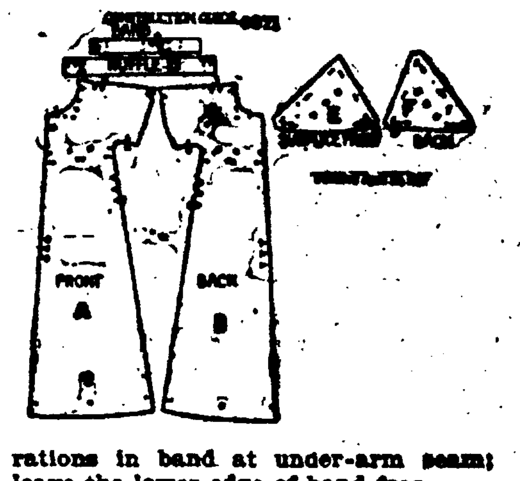
PRETTY NIGHT GOWN IN KIMONO STYLE.

A novel design for a nightgown. It is made in kimono effect and gathered into a band at Empire waist-line, with a straight ruffle.

It has become quite the perfunctory thing for lingerie to be fashioned after outer garments, hence the introduction of the peplum effect upon this kimono nightgown of fine nainsook. The neck is finished in round outline, eyelets being embroidered below the band for the accommodation of narrow ribbon. This treatment is repeated on the short sleeves. The embroidery on the front of the gown is done in eyelet and satin stitch.

To make the gown for a person of average size requires 4¼ yards 36-inch material, with 1¼ yard beading for the waist, 3 yards of 1½-inch wide ribbon and 4 yards of ½-inch wide ribbon.

The kimono effect is exceedingly simple to cary out, and the home dressmaker will be delighted at the quickness with which it can be put together. First close, the under-arm, sleeve and shoulder seams as notched. Turn hem at lower edge on small "o" perforations. Gather on crosslines of single small "o" perforations. The large "O" perforations in ruffle indicate front edge. Close back seams of ruffle and band; gather upper edge of ruffle between double "TT" perforations. Sew ruffle to band, center-back seams even, and bring front edges of ruffle together at center-front. Adjust band to position, stitching the upper edge of band over gathers in front and back, center-fronts and center-backs even, small "o" perforations in band at under-arm seam; leave the lower edge of band free.



This model may be adapted in two or three different ways, being equally pretty in straight effect, with a square neck, or finished with fichu lines front and back.

Nighties show many innovations. Ruffled shoulder capes are among the most unusual.

Pictorial Review Nightgown No. 6371. Sizes 32, 34, 36, 38, 40, 42, 44 and 46 inches bust. Price, 15 cents.

ON WESTERN FRONT

LETTER FROM FRENCH SOLDIER TELLS OF THREE DAYS' STRUGGLE.

WOUNDED BY GERMAN SHELL

Father of Rene Bardet Gets Graphic Story of Charge—Pathe Employe Proud of Son.

The personal, intimate side of the great world war now being waged is lacking in the colorless, censored reports officially disseminated by the various governments of the countries involved. Rarely letters come to this country from men at the front, and it is from such letters that one gains a conception of the sensation of the brave fellows, thousands of whom are dying daily for the highest earthly ideal a man can have—"pro patria."

One such letter has been received by Mr. Gabriel Bardet, the notary of the Pathe American Company, and an old and trusted employee of that great concern. When the war broke out last summer, Mr. Bardet's two sons, Rene and George, were among the very first French-Americans to leave for France to fulfill their duty to their mother country. George, the elder, was made a prisoner in the very first weeks of the fighting, and has since been incarcerated in Germany. A few brief letters have come from him to his father, saying that he is well and as happy as could be expected under the circumstances, his greatest hardship being the lack of tasty food. Mr. Bardet has in consequence made arrangements for various delicacies to be sent to him.

It is from Rene, the younger, however, that the Pathe notary has received the most interesting letter. Rene has been in the thick of the fighting from the start and his experiences are worth narrating. He says in part as follows:

"After a terrible bloody struggle which lasted for three days I am safe and sound and taking a much needed rest. For the first time since I have

Rene Bardet.

been at the front I have taken part in a bayonet charge and I never had thought that our men were so brave. On the morning of the 25th of May we had received orders to go ahead. At 12:30 the struggle began. Shells were bursting all around as friends and comrades were falling thick and fast, but still we forged ahead through the hell of fire and succeeded in taking the first German lines. What happened afterwards is indescribable. We fought like tigers with bayonets, knives, stones, bombs and rifle stocks foot for foot, and yard by yard. Terrible shrieks were ringing through the air from all sides from the wounded and the dying. We could not stop to help our stricken comrades for duty compelled us to go forward at all costs. We advanced to within fifteen feet of the German third line, but our losses were so heavy that only a few of us reached there. In fact at one time there was only my captain, a sergeant and myself left. A few groups of our own soldiers ran up to reinforce us for the cry came that the Germans were making a counter-charge on our left. Just then a shell broke right over us. All in our party were bowled over like a house of cards. The next thing I knew I was in the hospital with my face and right arm heavily bandaged. Perhaps my wound saved my life and I surely look up to God and thank him for having spared my life. Chills of horror come over me when I think that of that brave little group of survivors in front of the Germans perhaps I am the only one living. The battle continued to rage for a whole day and our soldiers succeeded in retaining the two trenches we had captured. Let us hope that the sacrifices these brave men made in giving their lives will not be in vain. My poor friends! How I pity them, and hope that they are happy in heaven, for they surely deserve it."

A MAN OF ALL AROUND TALENT.

Rarely does one find a man who is an actor, a painter, a musician, a writer, and a producing manager, and does all his accomplishments with great skill. Yet there is one man, William Elliott, a Pathe-Balboa star, who is to appear in "Comrade John," with Ruth Roland, who is thus versatile.

400,000,000 Cigarettes Must Be Delivered by Sept. 1.

The allies have signed a contract with a large American manufacturing firm for 400,000,000 "coffin nails." They are not metal nails to tack up coffins with, however, but are the good old "coffin nails" of the text books on physiology, the same old "coffin nails" dear Aunt Maria warns small Billy about.

The 400,000,000 cigarettes are to be delivered to the allies on or before Sept. 1. The order will keep the factory handling it busy night and day, it is stated. In order to get the "smokes" completed on time the factory will have to turn out cigarettes at the rate of 10,000,000 a day, or about 7,000 for every minute of the day, which is "goin' some," every man who "rolls his own" will admit.

If the allies smoke the cigarettes at the rate of manufacture, a cloud of smoke forty feet high should engulf the German empire, statisticians figure out.

Four hundred million cigarettes would form a tobacco bridge covering the Bug river from bank to bank from source to mouth. The "papers" used would carpet Europe as with a white pall. If laid end to end those 400,000,000 cigarettes would stretch from Paris to Berlin and from Berlin to Paris nineteen times.

TO END COUNTERFEITING.

Prisoner Offers to Make Money Safe In Return For Liberty.

If the claims of Peter Feldkamp, now a prisoner in the Wayne county (Mich.) jail under a seventeen year sentence to Fort Leavenworth for counterfeiting, are correct, he may be the means of revolutionizing the entire issue of United States paper money.

Feldkamp wrote to Secretary of the Treasury McAdoo offering in exchange for his liberty and a job with the treasury department a chemical secret he had discovered which, according to him, will make counterfeiting impossible.

Feldkamp is a photographer and an amateur chemist of no slight attainments. While experimenting in raising one dollar bills to ten dollar ones he stumbled on his process, which since his arrest, he asserts, he has perfected.

Feldkamp's process so colors the bill that it cannot be bleached and thus halts evildoers from making even the paper. Even with the paper they would still be up against a stone wall, unable to duplicate his tint.

That the Washington authorities are taking Feldkamp's assertions seriously is shown by the fact that James Sloan, head of the treasury department at Detroit, has been instructed to interview Feldkamp.

Percentage of Boats Sunk.

Out of almost 20,000 vessels which had entered or left the port of Liverpool since the German submarine blockade began only twenty-nine were sunk by German submarines. These figures were given in a speech at Liverpool by Sir A. Norman Hill, secretary of the Liverpool Steamship Owners' association.

ARCTIC KNOWS OF WAR.

Remote District In Alaska Just Learning of Great Conflict.

Captain A. D. Williams came into Ruby, Alaska, the other day after a ten months' absence on the extreme upper reaches of the Novi river and learned for the first time of the European war.

Bob Smith, Jack Larson and Ed Slater came out from the same region awhile ago, ignorant of the war. Several men who spent the winter across the divide on the Kuskokwim had not heard of the conflict.

Last fall a few men came down the Porcupine from the Arctic divide, and people on the Yukon thought it a great joke when it was learned that the men from the rim of the pole had remained in total ignorance of the belligerent state of Europe until reaching the big river.

With the usual winter expedition of the northwest mounted police to Herschel island and trips of mail carriers from Nome to Port Barrow, it is probable that now most all the white men and natives on the Arctic slope know about this world event.

$10,000,000 A MONTH IS SENT TO BELGIUM.

Whereas Edward J. Williams, the treasurer who disbursed the funds to meet the cost of the construction of the Panama canal, paid out $2,000,000 per month on the average during the years 1905-13, he, as assistant treasurer of the commission for relief in Belgium, has been distributing $10,000,000 per month since the German occupation became effective, says the Chicago Christian Advocate. The economy with which this fund has been administered by the commission and its splendid system of distributing food, regularly, promptly and economically, suggests to William B. Parker, the official historian of the commission, that we have here a practical illustration of how successful collective marketing for an entire nation may be.

FIELD FOR TALENTS

FAMOUS AUTHORS NOW WRITE DRAMAS FOR FILM COMPANIES.

W. H. OSBORNE THE LATEST.

Scion of Prominent Family and Noted Author Writes Great Serial for Pathe.

William Hamilton Osborne, author of the new serial "Neal of the Navy", is the latest of the modern popular authors to enlist in the moving picture line. He has already written five hundred short stories in the past thirteen years, and is also the author of several best selling novels, "The Red Mouse", "The Catspaw", "The Blue Buckle" and "The Running Fight." He never really attempted to write moving pictures straight

William Hamilton Osborne.

off—or on—the reel, until he tackled "Neal of the Navy," for Pathe. Mr. Osborne was attracted to the Navy as a fine background for a story of adventure, and for a year past he has been delving not only into the characteristics of the navy itself as an institution, but also into the records of the Secret Service, so far as the same were obtainable. He has coupled this authentic knowledge to his own imagination and is turning out a series, which, while it pictures the United States Navy from all its advantageous standpoints, also involves an exciting novel story of adventure in the toils of which the hero is constantly finding himself baffled. The heroine is a modern young girl whose ancestry is shrouded in mystery, but whose fortunes are bound up with an unusual trio of adventurers who are constantly under the surveillance of the government. Lillian Lorraine is featured as the heroine and Wm. Courtleigh, Jr., as the hero. The series is being produced by Balboa for Pathe, and will begin to appear on the screens in September. Permits for the taking of the naval pictures have already been obtained from the authorities at Washington.

Navy in His Family.

Both Navy and Army figure largely in the family of Mr. Osborne. The late Secretary of the Navy, George M. Robeson, now deceased, was one of his ancestors, and an uncle of Osborne's has, until his recent retirement, been an official in the Navy for many years. His great grandfather was quartermaster-general of the State of New Jersey. Another uncle was the youngest commissioned officer in the Federal army in the Civil War, Capt. Ellis Hamilton, killed at Bull Run, at the age of 18.

William Hamilton Osborne comes of an illustrious ancestry—his great grandfather and granduncle — two William Penningtons, were both Governors of the State of New Jersey and one of them at one time Speaker of the House of Representatives at Washington. Another ancestor was Chancellor Halstead of New Jersey.

His grandfather was a well known editor, and his father an old time lawyer of New York and New Jersey. He was born in Newark, N. J. and has always lived there. Mrs. William Hamilton Osborne is a well known clubwoman of Newark, being corresponding secretary of the Contemporary of N. J., the largest woman's club in the world.

FILM VERSIONS OF NOVELS.

It is probable that within the near future one will be able to see his favorite novel, whatever it is, in pictures. It has been well known for some time that Pathe has been in the market buying right and left the picture rights of famous novels and plays that seem to be best adapted for motion pictures. Among them are numbered: "The Beloved Vagabond" and "Simon, the Jester," by William J. Locke; "The Galloper," by Richard Harding Davis; "Via Wireless," by Paul Armstrong and Winchell Smith; "Comrade John," by Henry Kitchell Webster and Samuel Merwin; "The Closing Net," by H. C. Rowland; "Nedra," by George Barr McCutcheon; "The New Adventures of Wallingford," by George Randolph Chester; "The Weavers," by Gilbert Parker; "Mary's Lamb," by Richard Carle.

TODAY'S FASHION NOTE

An unusually smart looking coat of black velours in light weight for early Autumn wear. The front extends over the shoulders forming a yoke in the back and there is a convertible collar. Satin cords may be used to outline the large armholes, into which are set one-piece sleeves with turnaback cuffs. The fulness about the waist is held in with a heavy satin cord, in lieu of a belt. Four yards 44-inch material makes the coat. Thes kirt of whipcord, requires 5½ yards 36-inch material.

Pictorial Review Coat No. 6316. Sizes, 32 to 44 in. bust. Price 15c.

Skirt No. 6369, Sizes, 22 to 36 in. waist. Price, 15c.

Pictorial Review Patterns may be procured at the M. Katz & Co. Department Store, Fulton.

The KITCHEN CUPBOARD

SUMMER DISHES.

Cream of Asparagus Soup.

CUT off the tips of a bunch of asparagus. Cut the rest of the stalks in half inch pieces and cover with water. Add a small onion and a sprig of celery and simmer for an hour and a half. Half an hour before taking from fire add the tips in a little cheesecloth bag or small wire strainer. When the hour and a half is up remove the tips and put the rest of the asparagus through a vegetable press. Heat and thicken with flour and butter rubbed together—a tablespoonful of each to each cupful of asparagus stock. Then add to the same amount of hot milk and serve with the asparagus tips in it. Season with paprika and salt.

Clam Pates.

Drain a quart of clams and heat a cupful of the liquor. Melt a tablespoonful of butter, add the same amount of flour, and when cooked add a cupful of hot milk, a pinch of soda and a cupful of hot clam liquor. Chop the clams while the sauce is simmering, add them, and then add very slowly a beaten egg. Season with salt and pepper and put while very hot into puff paste pate shells.

Green Peas and Mint.

Shell green peas just before they are to be cooked. Line the top of a double boiler with green lettuce leaves, put the peas in, add a tablespoonful of chopped parsley, cover and cook until done, which will be about half an hour or perhaps forty minutes. Then drain, add a tablespoonful of finely minced mint, salt and pepper, and two tablespoonfuls of butter.

Sweet Pepper and Cheese Salad.

Wash a sweet red and a sweet green pepper and cut off the stem end of each. Remove all seeds and pith. Mix cream cheese with a little cream, pepper and salt and chopped parsley and nut meats. Stuff the pepper shells full and chill thoroughly. Then slice, about three slices to the inch, and serve a slice of each on each plate on a bed of white lettuce leaves. Dress with mayonnaise.

Watermelon Balls.

Chill a ripe, red watermelon, cut it in half and scoop out with a ball scoop rounds of the pulp. Sprinkle them with sugar and chill thoroughly. Then pile them in long stemmed dessert glasses, sprinkle with lemon juice and serve.

Anna Thompson

THE NARROW BOSPORUS.

At Its Greatest Width It Measures Only 9,838 Feet.

The Bosporus contains few dangerous submarine rocks or shoals. The locality of these few is indicated by lighthouses or buoys. The water is only slightly tinged with salt and is marvelously clear. The sands, glittering apparently near the surface, may be twenty feet below.

On a map, of whatever scale, each of those familiar straits, which cleave lands and continents asunder, seems hardly more than a silvery thread. Yet as one sails over their famous waters the opposing shores on either hand sometimes appear far away. The strait of Gibraltar, which wrests Africa from Europe, is sixteen miles wide; that of Messina, forcing its way between Italy and Sicily, is from two to twelve; that of Bonifacio, which, like a blade of steel, cuts Corsica and Sardinia apart, is seven miles in width at its most contracted point; even the Dardanelles expands from over one to four.

But the illusion as to distance created by the map is reality as to the Bosporus. Off Buyoukdereh, where it attains its largest breadth, its hemmed in waters broaden to only 9,838 feet, or about one and four-fifths miles. Between Roumeli Hissar and Anadoli Hissar they shrink to one-sixth of these dimensions, or to 1,641 feet.—From "Constantinople," by Edwin A. Grosvenor.

THE MUDDY MISSOURI.

How the River Lowers the Surface of the Land It Drains.

The Missouri is the muddiest river in the Mississippi valley. It carries more silt than any other large river in the United States except possibly the Rio Grande and the Colorado. For every square mile of country drained it carries downstream 381 tons of dissolved and suspended matter each year. In other words, the river gathers annually from the country that it drains more than 123,000,000 tons of silt and soluble matter, some of which it distributes over the flood plains below to form productive agricultural lands, but most of which finds its way at last to the gulf of Mexico.

It is by means of data of this kind that geologists compute the rate at which the lands are being eroded away. It has been shown that the Missouri river is lowering the surface of the land drained by it at the rate of 1 foot in 6,036 years. The surface of the United States as a whole is now being worn down at the rate of 1 foot in 9,120 years.

It has been estimated that if this erosive action of the streams of the United States could have been concentrated on the isthmus of Panama it would have dug in seventy-three days the canal which was completed after ten years' work with the most powerful appliances yet devised by man.—Geological Survey Bulletin.

A Lovely Ride.

"You visited Venice while you were in Europe, I hear, Mrs. Trotter?"

"Yes, indeed; and we were rowed about by one of the chandeliers for which that city is noted."—Wisconsin State Journal.

Facts From France.

Building the best of roads in the world has cost France about $612,000,000.

A hollow wooden ball six feet in diameter, which is moved by the flow of the sewage, is used to remove obstructions from sewers in Paris.

In a billiard room in Paris is a table made of glass. It is much more difficult to make a shot on it than on the ordinary baize covered table.

BRIGHT BRIEFS.

Walk fast until you get there—then stand fast.

There is always room at the top of an argument—for more talk.

Courage is the yeast that causes a man to rise to the occasion.

All men are equal the day they are born and the day they are buried.

Theory looks good, but it doesn't always go when you try to crank it.

Every young man should be taught that there is something better than luck to trust to.

Many a man has sense enough to get a good wife, but hasn't sense enough to know it.

An optimist is a man who smiles at kicks, and a pessimist is a man who kicks at smiles.

A Chicago physician says that humans may grow fat by eating hay, thus making it a pleasure to remain skinny.

The respirators make a soldier of the trenches look like a death's head. But that's what war is trying to make of all of them.

Automobiles may have decreased the demand for horses, but military statistics show that the mule is as highly prized as ever.

It is to be hoped that some statistician has been keeping count of the number of times the "world's greatest battle" has been fought since last August.

Easy & Practical Home Dress Making Lessons

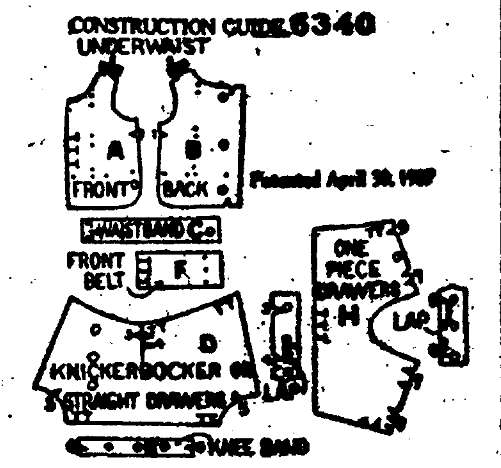
Prepared Especially For This Newspaper by Pictorial Review

CHILDISH FASHION IN LINGERIE.

Underwear for the little maid or the growing girl. The set comprises an underbody and drawers in three different styles.

The charm of this little set of underwear lies in its comfort and conformity to the rules of common sense. The underwaist is a very plain little affair, to be finished with ruffles of embroidery or lace about the neck and armholes; with it there comes three styles of drawers—knickerbocker, straight and one-piece effects.

For the straight drawers first sew lap to slashed edges of front and back section D, single and double notches even, making seam ⅜ inch wide at upper edges of slash and graduating seam [illegible] through center, fell remaining edge over seam. Turn the lap underneath the upper back edge, and stitch upper edges together. Close leg seam as notched. Close center seam from upper edge in front to upper edge in back. Gather upper edge of back between double "TT" perforations. For knickerbocker style gather lower edge of leg between double "TT" perforations; close seam of knee band as notched,



face and sew to lower edge of drawers, seams even; finish lower edge of band with a straight gathered ruffle.

The seam is closed as notched to large "O" perforation as the first step in putting the one-piece drawers together. Then sew lap to edges above seam, corresponding notches even; fold through center, fell remaining edge over seam. Turn the lap underneath back and stitch upper edges to position. Gather upper edges of front and back between double "TT" perforations. Sew belts to gathered edges, center-fronts and center-backs even, fold through center, fell remaining edge over seam. Trim underwaist and drawers in any desired way.

Now, close under-arm and shoulder seams of underwaist as notched, leaving under-arm seam free below large "O" perforation in front. Stitch straps of material (⅜ inch wide when finished) to position on front and back, center of straps over center-front and over lines of double "oo" perforations. Adjust waistband to position on front and back, center-fronts and backs even (large "O" perforations indicate center-back), upper edge of waistband along crosslines of single small "o" perforations. Turn hem in back at notches and stitch.

So little time is consumed in making the set that the home dressmaker will [illegible] try one of each style drawers.

Pictorial Review Girl's Underwear Set No. 6340. Sizes 2, 4, 6, 8, 10, 12 and 14 years. Price, 10 cents.

CHILD'S DAINTY FROCK.

Printed Blue and White Linen Trimmed With Plain Blue.

CHIC SUMMER DRESS.

For summer wear is this charming frock of printed blue and white linen, with trimming of plain blue linen. The guimpe and sleeves are of striped batiste. An attractive sunbonnet of plain and printed linen is becomingly worn.

NEW HANDKERCHIEFS.

Voile Is Now Being Used For These Very Necessary Articles.

The newest thing in handkerchiefs—and there are new things in these accessories as well as in any other—are those of voile. Of course the finest of voile is used for the purpose, so that it will not be disagreeable to use.

One style of handkerchief is of solid pale pink voile and is bound with a narrow white hem. Blue, lavender and green voiles are used in the same way. A number of the handkerchiefs have a very wide border of white around a solid portion of color.

A very unusual decoration of one voile handkerchief is a figure of a woman dressed in street costume and leading a dog. The latter is embroidered in black, while the figure of the woman is embroidered in a combination of gay colors.

Some of the voile handkerchiefs are ornamented solely with a fancy hemstitched border. Such treatment of handkerchiefs adds great value to them, so that the price of one handkerchief is $1 or more.

Blocked designs are very prominent in the new voile handkerchiefs. These are separate sections of the material hemstitched into the corner of a handkerchief.

Not only are women's handkerchiefs made of voile. It is used also for men's handkerchiefs, and the colored borders on them are just as gay and attractive as those of the smaller kerchiefs.

Of course handkerchiefs of crepe de chine and china silk are still enjoying great popularity.

PIE PLATE AND SHADOW HATS

Odd, Chic and Exceedingly Becoming Are These Midsummer Creations.

As the days grow warmer new fashions are launched, but those which do appear are no less attractive and sometimes show greater thought and originality than the features displayed in the fashion festivals at the beginning of the seasons.

Odd, chic and exceedingly becoming are the new pie plate and shadow hats. The pie plate hat has a reasonably large brim, about the edge of which is an upturned frill of plaited malines, giving the appearance of a crinkly pie. The shadow hat is even more fascinating, for it veils at times the eyes. At least it does so when the head is bent. This shadow hat is nothing more than a straight brimmed sailor, the brims of various widths, according to choice, about which is placed a flat fold of malines, black or white. The fold is about two inches in width, and, being placed with its center along the edge of the hat brim, an inch extension of the fold is then upon either side of the brim edge. This makes a sort of little transparent wall about the hat above the edge of the brim and a smooth curtain like band below the edge. The very smartest people are wearing these hats.

No, Indeed.

Bill—The smallest apartment houses are those occupied by bees. In a cubic foot of honeycomb there are about 9,000 cells. Jill—I suppose it is not alone the janitor who does the stinging?—Yonkers Statesman.

Gentle Methods.

Lucille—Anything can be accomplished by gentle methods. Cruelty is unnecessary.

Edna—I suppose instead of whipping cream you would just scold it.—Segment Block.

NOT A MATRIMONIAL BUREAU

Housewives' League of New York City Obliged to Announce Neutrality.

Well trained wives who can cook and keep house and who know more about sanitary conditions than "mother" ever dreamed of knowing are among the supplies that are being demanded of the National Housewives' league at its headquarters in West Forty-fifth street, New York city.

Two men called at the headquarters of the league within the last two weeks, and each of them wanted a wife. One of them was a widower with several children and no one to look out for them, and the other was one of the lonely young men of New York. He had no friends in the city, few acquaintances, and he felt that if he could only get a nice wife with domestic tastes, one who could manage the income of a rising young man, he would be happy.

Where can any one go to find a good, sensible wife if not to a place like the league? That was what the young man thought. New York has all the modern conveniences and more than enough modern amusements, but where can one go to find a heart and helpmeet? he asked.

That is what a good many young men—and young women, too—who make their homes in New York are asking, and the league would like to help them out, but that is where it has to draw the line. No matrimonial aspirants need apply, though the league appreciates their need.

"That men thinking of marrying should come to a place like the Housewives' league," said Mrs. Julian Heath, president of the league, "emphasizes the fact that one of the greatest needs of the present time is efficiency in the housewife. Women should be trained to spend the income of the family as the men are trained to produce it. Men are looking for real partners in the business of home making. Hitherto it has been a question of the husband supporting the wife and of the wife being supported. The majority of women are willing to do their share in maintaining, but they are not properly trained. This makes young men with moderate incomes hesitate before they even think of marriage.

"When the league started three years ago we were asked if we would do anything about the servant problem, and we said no. We intended to first train the mistress. Now we have come to the place where the mistress is on the way to obtain proper training, and we are extending our work, but not on the basis of 'mistress and maid,' but of 'employer and employee.' Statistics speak of the 'employment problem' and the 'domestic problem' as two separate and different subjects.

"When they are considered as one and the same thing then people will begin to think of hours and wages. I have very little use for the woman who goes to Albany to advocate the eight hour law for men and then comes home and works her own maid twenty-four hours a day."

The Garbage Bucket.

If the housewife, after buying a new garbage bucket, will paint the inside black and then shellac it she will find that it will last twice as long. It will hold none of the odors and will rinse out very easily, not requiring the scrubbing which is taken to keep the ordinary bucket clean and sanitary. Then, if she will fold a newspaper, opening it first to the fullest extent, in wide pleats from margin to margin, and, opening it again, pull it into a circle, she will have a perfect lining for the bucket, which will insure its emptying clean each time it is emptied.

Washing Summer Dresses.

In washing summer dresses of colored linen it is an excellent plan to get a package of dye and put it into boiling water, making just the shade of the dress (test it first). And as quickly as the dress is washed clean and rinse in salted water to set the color; dip it in the dye and let it stand two minutes. Then put it into the starch and hang it on the line in the shade without wringing and iron while it is still damp.

Egg Substitutes.

When eggs are high one hesitates to make white cake, especially if she does not care to use up the yolks for something else. It is not necessary to use egg whites at all. Simply use gelatine instead. One tablespoonful of the dry gelatine equals three eggs. Dissolve it in cold water and add enough boiling water to make a cupful. Beat with an egg beater and add to cake.

How to Treat the Sting.

To alleviate the stings given by summer insects first remove the sting with a needle if it is left in the wound; then press a key over the stung part tightly, thus forcing out the poison. Wash the wound and apply a liniment made of finely scraped chalk and olive oil mixed together to the thickness of cream.

Brass Cleaning.

For brasses that have become tarnished an excellent method of cleaning is to use equal parts of vinegar and salt. Smear thoroughly with the mixture, then let it dry on, and when thoroughly dry wash it off with hot, soapy water and polish dry with a soft flannel cloth.

He Had Felt Slippers.

Old Lady (in shoe shop)—Have you felt slippers? Boy Assistant (solemnly)—Yes, ma'am; many a time.

OF GEORGETTE CREPE.

Pale Yellow Color Employed In This Pretty Summer Blouse.

ELABORATE SHIRT WAIST.

The eton jacket effect is simulated in this handsome blouse by means of inserts of white silk embroidery. The color of the blouse is a pale yellow, a color much liked this year. The collar follows the lines well liked by all femininity and is moderately high in the back. The sleeves are long and trimmed with the embroidery.

ABOUT HYPOCRISY.

Be Sincere About What You Say, Do and Think.

Be sincere of what you say of others. If you cannot think nice things about them do not say anything at all. You should never run down others in your speech, so if you cannot praise be silent. If you are forced to utter an opinion about a person you dislike pick out the one point you find to admire in that person and mention that.

Unfortunately it is all too seldom that the real hypocrite recognizes herself in her true nature. She usually garbs herself in a cloak of self righteousness, covering her inward self with a mask of dissimulation. Her "I am better than thou" attitude succeeds in deceiving most of the world, including herself. This pharisaism is one of the commonest characteristics of the hypocrite.

It is better to be blunt and outspoken than to be hypocritical. The hypocrite may make more friends, but the frank person knows her friends are true. You want your friends to like you for what you are—not for what you are not, but pretend to be.

The hypocrite parades her pretended virtues before the world. Self advertisement is a model of kindness and nobility is her pet labor. Her plausibility is her best stock in trade. You have only to talk to her five minutes to know that she has two Bible classes and is the most charitable member of her church. According to her, she is constantly doing good. She will tell you in one breath that she has only love in her heart for the whole world and in the next that Mrs. Brown is no doubt a respectable woman, but that she shouldn't be so indiscreet.

The awful part about the hypocrite is that she can do more harm to a girl's character in one minute than a frank person can do in a year. The outspoken girl will talk to you against a person and you will know right away that she is talking of some one she greatly dislikes. You can tell, consequently, that her opinion of the person in question is prejudiced by her dislike and is to be valued accordingly.

But the hypocrite speaks very highly of the person she wants to slander. Then she inserts a but and a slight innuendo. Every insinuation is preceded by a flattering comment. The impression you receive at once is that this criticism must be quite unprejudiced, as the talker said so many nice things too. Every harmful innuendo is doubled in importance because you think that if a woman who is such a friend can say such things they must be true.

Keep Pantry Neat.

We all know how hard it is to keep the pantry looking neat. The spices and other articles lying around make it so untidy. From your grocer get three large, strong egg cases. Nail these firmly one on the other. This gives you six compartments. Now get a ten cent can of paint (any color you want); then make a curtain (double) and put on rod. In one compartment have spices, in another all articles that come in bags, like beans, rice, etc. This cleans the pantry out and helps fill up the kitchen.

To Keep Stockings Mated.

Take some small snap fasteners. Sew one part of the fastener on one stocking at the top and the other part on the other stocking at the top. Then when stockings are taken off to put in the wash have each person snap his or her pair together. It does not interfere with the washing, and no clothespins are necessary when they are hung on the line to dry. Best of all, the pairs are always together.

(Continued from Page One)

senger train making for the bridge and abandoned his attempt until it had passed."

Lusitania's Position Known.

"The Government is convinced that before the sinking of the Lusitania representatives of the German Embassy in Washington sent to the Admiralty in Berlin secret messages with regard to the position of that ship and her course. The government has already taken steps to see if it can hold these men on either murder or piracy charges.

"It is understood that this information came to the German Embassy through a spy, or spies, in the office of the Cunard company, in New York City. 'The Journal' cannot state to what extent the government has verified these suspicions, but it is a fact that within two weeks the government has called upon two of the best known legal authorities on international law in New York City to give their opinion as to whether such acts, if proved, would constitute either piracy or murder, and that, if either of such charges could be brought, whether they would hold against members of the German Embassy staff.

To Finance 'Longshoremen's Strike.

"With regard to the German plot to finance a strike of 'longshoremen, it is learned today that the government has in its possession all the facts concerning this propaganda. The sum to be paid by the German Embassy for the creation of this strike was $1,700,000, and arrangements were made with the leaders of the 'longshoremen's union pledging to every striker $10 a week as long as the strike lasted.

"All the material with relation to this matter, including the names of the men involved, is now in the possession of Secretary of Labor Wilson, who has been investigating the entire subject through the Secret Service for several weeks.

"The Secret Service has in its possession facts which prove beyond any question that a great part of the German propaganda argued among the mobs that gather at well known meeting places on the streets of New York is directly fomented and paid for by German interests. A number of these agitators, have been traced directly to the office of George Sylvester Viereck, editor of 'The Fatherland,' from whom, the government officers state, they have received money for their services.

"Last week the government was able to secure possession of a bag of documents which had been left in charge of a high German Secret Service official. These documents reveal a great deal of information of a startling character, and also connect the Hamburg-American line directly with the German plots that have been carried on in this country. They prove conclusively among other things, that Captain Koenig, chief disbursing agent of the Hamburg-American line, has been handing out most of the money in connection with the various plots and schemes that have been operated from New York City by the German Embassy."

SLIGHT LOSS AT EARLY MORNING PAPER MILL FIRE

The fire department was called out this morning at 5:45 on an alarm from the Oswego Falls Pulp and Paper Co. mill at Broadway and Combination Wagon No. 2 responded. A hot journal on one of the paper machines in the south end of the plant ignited some waste paper and the blaze had gained some headway before the employes brought the mill stream into play. When the fire department reached the scene the blaze was under control. Thel oss was small.

A CHILD'S PARADISE.

All Ages Cared For by Trained Attendants.

No summer resort in America plans more carefully for the children whether babies, half grown, or youngsters of twelve to eighteen, than does the big institution at Chautauqua, New York.

A great kindergarten nursery is provided for the little ones, with plenty of sunshine and fresh air. Here young women who are training themselves in the Summer School to become kindergarten teachers give them the best attention. Babies can be checked here like luggage, and the tired mother who wants to be free for the whole day can leave her baby in the morning and call for it at night, with the surety that it will be well fed and cared for.

A playground and elementary school take care of older children who must be kept busy at something, half study and half play. Then the great Playstead, with its steep, rocky walls for fencing, and its big piles of pure white sand, and its running brook makes the best sort of a place for children to romp and paddle about in.

The older children have an out of doors gymnasium in which are the usual collection of see-saws, ladders, natural slides, climbing poles, chinning bars and merry-go-rounds. Over 900 children are registered in the Summer School classes which are graded for all ages, and where individual instruction can be given if needed.

Studies of birds and animal life are emphasized, when squads of youngsters are taken for long walks over the hills or picnicking about the grounds. The Boy Scouts are most active in their program under a fine head master. And the Boys' Club House and Girls' Club House offer a fine place for gatherings, whether in the daytime or in the evening.

Few summer resorts cater to "family trade" as does this famous Chautauqua. Its object is to give happiness and health to every member of the family.

GERMAN MONEY BUILT BIG PLANT

German Capital Used in Organization of Bridgeport Projectile Co., According to Evidence.

New York, Aug. 17.—Further proof that Germany, while spending large sums of meny in this country to foster a sentiment against the exportation of warm unitions to the Allies, was secretly arranging to manufacture war munitions here for herself on a large scale and to tie up other war supplies from the Allies is proved in the third installment of letters and contracts published in the World this morning.

Proof is submitted that the German government supplied the money for the establishment of the Bridgeport Projectile Company at Bridgeport, Conn., a new concern; that the German government paid the money through the Deutsches Bank and the Guarantee Trust Company, and that the German government made a contract to purchase 1,212,000 pounds of carbolic acid made in the Thomas A. Edison plant.

One of the most interesting exposures comes in a letter written by the Guarantee Trust Company to Herr Hugo Schmidt, western representative of the Deutsches Bank, asking if the Deutsches Bank would authorize the payment of $140,000 to Henry Diston & Sons, saw manufacturers, of Philadelphia, "for 2,000,000 pieces of steel to be used in the manufacture of shrapnel shells."

Edmund R. Roberts, vice-president of the Disston concern, said in Philadelphia yesterday that his company had accepted a contract to manufacture 2,000,000 bars of steel to be shipped to the Bridgeport Projectile Co. He said that as the latter was a new concern he had demanded some assurance of pay and had been referred to the Guarantee Trust Company to Herr Schmidt, American representative of the Deutsches Bank of Berlin, asking for authority to pay the Disston Company, traces the financial backing of the Bridgeport Projectile Company directly to the German government.

Capital for Projectile Plant.

Of equal importance is the contract by which the German government supplied the capital for the organization of the Bridgeport Projectile company.

This contract shows that the Guarantee Trust Company supplied the money for the erection of the buildings at Bridgeport and other organization expenses and guaranteed the bills of the concern, and that the Guarantee Trust Company did so on the authority of the Deutsches Bank, given by Herr Schmidt and officers of the bank in Berlin.

Again, this contract links Captain von Papen with the manufacture of arms and ammunition for Germany. While urging a contraband on war munitions for Germany, the contract with the Bridgeport Projectile Company indicates that secretly he was aiding in the manufacture of such munitions for his own government in this country.

The arrangement of Germany to obtain a large supply of phenol, or carbolic acid, used in the manufacture of explosives, is shown by a contract with Hugo Schweitzer, a German chemist of No. 117 Hudson st., entered into with the American Oil and Supply Company. This contract shows that the American Oil and Supply com pany was to purchase from Thomas A. Edison 1,212,000 pounds of phenol and was to deliver it to Schweitzer, who was to arrange for its shipment to Germany, or at least to keep it out of the hands of the Allies. It is thought this might have been intended for the Bridgeport Projectile company. The contract which Schweitzer made with the American Oil and Supply Company of Newark, specifically stated that the phenol was for the German government. Schweitzer gave $100,000 to guarantee thep erformance of his part of the contract.

HAY STACK BURNS.

An alarm at 4:15 this afternoon called the firemen to Fay st., where a small stack of hay was afire.

CASTORIA

For Infants and Children

In Use For Over 30 Years

Always bears the Signature of

The Straw Ride

Kiddies find Chautauqua Institution a veritable paradise. They are provided with day nurseries, kindergartens, playrooms and a big outdoor Playstead with sand piles and running water. Boys have a clubhouse and the girls do too. Straw rides and sunset picnics are a part of each day's program. Chautauqua, New York state, takes care of the whole family.

HOW TO TAKE GOOD CARE OF THOSE DELICATE ORGANS, THE EYES.

It is undoubtedly true that we do not take sufficient care of our eyes. The eye is too delicate an organ, however, to be subjected to haphazard treatment. A sudden change from very bright light to darkness should be avoided, and if the eyes are weak the prevailing color in the room in which one spends most of the time should be some tint that is helpful to the eyesight.

Do not read while lying down, when rocking or when in a car. Do not use the eyes before breakfast, and do not read or sew in the sun, but let a good, strong light fall over your right shoulder. Hold whatever you read on a level with the eyes, and do not bend over your book or paper.

TENNIS TOGS.

How to Know and Acquire Proper Outfit For Pastime.

All signs point to tennis as the leading pastime for the summer season. Specially made dresses, hats and sweaters for the sportswoman are much more attractive than usual. She can no longer be fooled by any "just as good for the purpose" togs which may be offered to her. This is a step in the right direction and promises a smarter gowned lot of women at the net this year than ever before.

Another improvement is also to be noticed in the fact that slim and stout women now adopt clothing which in color and cut conceals rather than accentuates their own peculiarities of figure.

One charming novelty is a coat and skirt suit of balbriggan of the same weave as that used in fine underwear. This is very attractive in old rose, hunter's green and old blue, the popular tennis colors.

There is also a jumper suit of fine blue and white striped flannel, having the white trimmings which make it very pretty for outing use. A very smart hat of white linen, trimmed with blue suede, is worn with this suit.

Tweed flannel semifitted sweaters are quite new and have collars, cuffs and sashes of plain white tweed, finished with mother of pearl buttons.

Box plaited waists in dainty colored chambrays, having polo collars and cuffs of white pique, are especially new and smart and go beautifully with white linen or serge tennis skirts. The English skirt is also a feature, which is on the smock model and laced at the top, so that it may be slipped on and off over the head.

Embroidered hats are new and very becoming. They are of the coarse white or tan straw, and the flowers are embroidered in linen on the crowns and brims of the hats in embroidery stitches, and they are sewed through and through. The brims are then faced with linen the color of the embroidery on the top of the hat. The embroidery matches the tennis skirt or suit.

With the white tennis shoes white stockings are usually worn, though many are selecting those of the color of the chambray blouse or the dark stripe in the flannel suit, which gives an added note of color to these dainty out of door suits.

How to Adjust the Wabbling Legs of Your Furniture.

It is well known that the legs of tables and other furniture in a dining room, whether owing to imperfection of manufacture or to the inequality of the floor suface, are apt to wobble unsteadily at times, and this is a great trouble and annoyance.

It is commonly remedied by a wedge or wad of paper, but this is an unsightly expedient, and it is interesting to note that an adjustable caster has been invented by which the variations in lengths of support can be compensated for. The crux of this invention is a screw, so that the tread can be quickly and accurately adjusted, and it can be adapted to meet all requirements, from a billiard table to a small clock.

How to Clean Your Sink in a Sanitary Manner.

Do you know that an old newspaper is excellent to clean an iron sink? It does not soil the hands, and it is sanitary, as it is burned after using, thus doing away with the unsightly and unsanitary sink cloth.

Pour on the sink about a tablespoonful of kerosene, then wipe with the paper. A sink cleaned in this way is free from grease. It is glossy and sheds the water. Therefore it does not rust easily.

How to Keep the Kitchen Paint Bright and Clean.

Kitchen paint will soon acquire a shabby, dull look from the frequent cleaning that is necessary in this room. The use of soap only increases the difficulty, especially if the paints are varnished. A good plan is to boil one pound of bran in a gallon of water for an hour, then wash the paint with this bran water. It will not only be kept clean, but bright and glossy.

How to Keep Bread, Cheese and Cake Fresh.

Keep cheese in a cool, dry place, and after it is cut wrap it in a linen cloth and keep it in a tight tin box.

Keep bread in a tin covered box and it will keep fresh and good longer than if left exposed to the air.

Cake also should be kept in a tight tin box. Tin boxes with covers like trunks, with handles at the ends, are best for bread and cake.

Saving a Gunboat.

When the United States gunboat Princeton struck an uncharted submerged rock in the harbor at Pagopago, Samoa, a very unusual engineering feat was employed to save the craft. A pinnacle of the rock which was struck entered the hold of the ship, filling the rent torn in the hull and preventing any progress being made. It was possible to keep the water out by means of canvas and plank sheathing. Then the projection of rock which had cut into the boat was cut from its ledge and by re-enforcing and cementing made fast so that it plugged the hole it had made. This accomplished, the Princeton was able to proceed to drydock for repairs.—Exchange.

Why He Wanted Wings.

Tommy's mother was an invalid, so his Aunt Lavinia looked after him and the house. And she never missed a chance of pointing out a fault or expounding a precept.

"Oh, dear," said Tommy one day after auntie had lectured him for ten minutes, "I wish I had wings!"

"Why, my pet?" asked mother, pleased at this angelic inspiration.

"Oh, I'd fly up in the air with Aunt Lavinia, and I'd fly and fly till I couldn't get any higher."

"Yes, dear," said mother proudly as the little chap paused impressively. "What would you do then?"

"I'd drop Aunt Lavinia!" said Tommy savagely.—Stray Stories.

ALBANY GOSSIP DAY BY DAY

Chronicle of Events and a Forecast of What is Doing in Officialdom---Special Correspondence.

Albany, Aug. 17.—Frederic C. Tanner, chairman of the Republican State Committee and of the Constitutional Convention committee on Governor and other State officers, is likely to have a somewhat stormy time inh aving the program of his committee relative to contemplated changes in connection with the duties of Satte officers adopted by the delegate body.

There are a number of the older delegates whoh ave expressed themselves as being satisfied with the manner in which the State's business is being administered. These delegates are apparently unalterably opposed to the ideas which the Tanner committee has outlined. They take the position that there is no need in rearranging the duties and authority of the heads of State departments and have declared that they will vote in the negative upon the whole proposition when the proposition, in the form of a committee report, comes up for final debate.

It is known that Chairman Tanner is quite anxious to have his ideas, or perhaps those of his committee and of his own, adopted by the Convention. Fors everal months the committee on Governor and other State officers has ben diligently at work and much consideration has beeng iven the subjects and propositions sent to it by President Root.

While no one denied that Chairman Tanner has worked hard and all agree that his is conscientious in his belief that there should be certain changes made to the Constitution affecting the duties of the executive and the State officers,the opinion prevails in certain quarters that the chairmanship of the committee he heads should have been given to a delegate of wider experience in affairs of State. The delegates who cherish this opinion point out that Senator Edgar T. Brackett, an experienced legislator, Former Assemblyman Harold J. Hinman, former majority leader of the Assembly, Ray B. Smith, former clerk of the Assembly; ames W. Whipple, forJmer clerk of the Senate; Senator Wagner, Senator Foley, Jesse W. Phillips, formerc hairman of the Judiciary committee of the Assembly and others of wide legislative experience were not designated to that committee. While their comment is by no means a criticism as to the make up of the committee of Governor and other State officers, the lack of experience in matters of State, which naturally grows from legislative enactment, is obvious in the personnel of the membership of that committee. This is the belief of Delegate Francis C. Allen of the forieth district who thinks that there is no fault to be found with the present way of doing business on the part of the State.

The plan of the Taner committee to curtail the powers of the State Comptroller met with vigoroue opposition from the first and it is almost a certainty that the provision which was aimed to limit his authority will not prevail.

Many of the delegates feel that the change of administrations is to blame for the laxities in the State's business, if any laxities exist. A State officer scarce has time to learn his duties before he is required to give up his office, his term having expired. Let the present method of conducting the affairs of State alone, is the slogan of those who have faith in matters as they exist.

Chairman Tanner and his committeemen are firm in the belief that drasticc hanges should be made and will endeavor to have the program as mapped out adopted. 1/4

OSWEGO COUNTY FAIR EDITION

To Probe German Charges

Secret Service and Department of Justice Begin Investigation of Workings of Foreign Agents in This Country.

New York, Aug. 18.—The United States Secret Service Department and the Department of Justice agents are conducting two distinct inquiries into the activities of the agents of Germany in this country.

While nothing has been discovered as yet which warrants arrests, one official taking an active part in the investigation stated last night that enough information had been gathered "to warrant diplomatic action by the State Department."

He also asserted that the Federal officials of Washington have long been in possession of the information brought to light through the theft of letters from Dr. Heinrich Albert, financial secretary of the German Embassy.

"That is merely a shadow of all the evidence we have in our possession," he said.

While keeping themselves fully informed as to the purchase of munitions of war by the German agents, the Federal men have been delving principally into the activities of agitators in fomenting industrial disturbances. The series of strikes in the war munitions factories have resulted in important discoveries, the official said.

Revelations, he stated, will probably be made within a few days.

"We have for a long time been observing the activities of agents, not only of Germany, but of other foreign Powers." The American's informant said. "We have considerable information already in our possession. This matter is being turned over to the State Department for its action.

"The matter of strikes in many of the industrial plants in the East is well in hand, and the investigation is going to bear fruit."

The only reason for the failure to fasten anything of a criminal nature upon the men under investigation, it is asserted by Federal officials, is the insufficient neutrality laws of this country.

DISCLOSURES COMICAL TO GERMAN VIEW

Frankfort, via Berlin, Aug. 18.—Defending German efforts to obtain war supplies in the United States, the Zietung says:

"That we are trying to purchase abroad what we may need during the war and for the war and what otherwise would presumably fall into the hands of our enemies, is so obvious that disclosures along this line are simply comical. The United States has declared officially and expressly that it lies in the nature of its neutrality to sell arms and ammunition to us as well as to our enemies."

COMMUNITY DAY HELD IN PULASKI VILLAGE

Community Day was celebrated in Pulaski yesterday in a big way. A parade included several hundred people and was featured in various ways including a team of oxen, real Indians, blooded horses, floats of humorous design and an auto parade of elaborate preparation.

Justice Irving Hubbs' car won first prize in the auto parade. The prize was a silver loving cup and was presented by Mrs. Harry Moody of Brooklyn.

Lee Model Kitchen at People's Hardware Booth, Fair Grounds. adv

The consistent advertiser wins in the end. It may cost a dollar to get a dollar, but the deal wins prestige.

SOUTH ASSAILS THE LYNCHERS

Louis Marshall Says Crime Puts Georgia on Trial; Southern Press Shares in General Condemnation.

Albany, Aug. 18.—Louis Marshall, a leader of the Constitutional Convention, declared last night that the Federal government ought to proceed against Tom Watson, editor of The Jeffersonian, and that if Georgia failed to catch the men who lynched Leo M. Frank, Watson ought to be indicted and tried for murder in the first degree.

Mr. Marshall, who appeared as counsel for Frank in the appeal to the United States Supreme Court, said:

"The murderers of Frank took him out of the very sanctuary of the law, not in the heat of the excitement of theh moment, but in cold blood, two and one-half years after Frank had been arrested.

"It seems incredible that in any civilized community it can be possible for such a recrudescense of savagery and brutal lawlessness to manifest itself. It is a stain upon our country and an ineffaceable blot upon the name of Georgia. Here was a man of whose innocence every fair-minded, unprejudiced thinker who had occasion to study the facts was unqualifiedly convinced.

Excerps from editorials in Southern newspapers are practically unanimous in their condemnation of the action of the citizens of Georgia who hanged Leo Frank. Many insist that Georgia and not the lynchers must bear the blame.

The Savannah News.

The lynching of Leo M. Frank makes a blank chapter in the history of Georgia. It is a chapter that every Georgian who loves his state will read with a feeling of regret and sorrow. And who was responsible? Undoubtedly the state's authorities.

The Atlanta Constitution.

The sovereignty of the state of Georgia has been assaulted, desecrated, raped. No word in the language is too strong to apply to the deliberate and carefully conspired deed of the mob. Every man, woman and child in Georgia will feel the ultimate effect of the act of the law defying mob which went to Milledgeville and lynched not Leo Frank, who is only a detail in the awful story, but the state itself. It is Georgia law and justice that was hanged upon that Cobb Co. tree.

Columbus Ledger.

While there appears little to indicate that the prisoner was not guilty, he had been placed in the state penitentiary by the legally constituted authorities, and any one lending the slightest approval to the act of the mob is directly thrusting a stab at law and order.

Richmond (Va.) Times-Dispatch.

With the hideous murder of Leo M. Frank a crime against an individual has been merged in a crime against the nation. Regardless of the guilt or innocence of the man so cruelly and so foully slain by a pack of wolves of the night, his lynching constitutes the most vicious blow that has been struck at organized government in this country in a century, and the South, in particular, must suffer its effect

Augusta Herald.

With the fierce feeling that has been engendered in the many dramatic incidents of this famous case. it was criminal negligence on the part of the prison officials not to have been better prepared to protect the life of the prisoner intrusted to their care.

The whole case from beginning to end has been a horror and a nightmare that has challenged the roots of law and order and civilization itself throughout the state.

Give The Evening Times a trial. It has all the news about all the people you know, and then some more. adv

3500 COPIES THIS ISSUE CIRCULATE IN CITY'S LIMITS

This issue of the Fulton Evening Times, known as The Oswego County Fair Edition, contains the advertisements and announcements of the majority of Fulton's progressive merchants. It is a unique edition in several ways. The paper today will be circulated in approximately 3,500 homes, including 1,000 copies which will be distributed on the Fair Grounds this afternoon. More local advertising is carried in this edition than has ever appeared in any single edition of any newspaper circulated in this city. The volume of advertising matter carried is conclusive proof that the merchants of this city have confidence in the people of Fulton and in those who live in the farming districts which surround this city, and indicates that local business men are once more optimistic as regards business conditions here. Look over these pages carefully, you will see some wonderful values advertised and you may be sure of every courtesy and convenience when patronizing merchants who believe in the slogan "Buy in Fulton" and practice their belief by using the columns of thel ocal papers to place their goods before the public.

GAMBLERS NOT IN EVIDENCE

Chief Dyer Prepared to Handle Efficiently the Crowds and Fair Followers; Big Day Tomorrow.

Several special policemen, including men in plain clothes from New York city, Buffalo, Rochester, Oswego and Syracuse were on hand at the Fair grounds early this morning to preserve order and to prevent any violations of the state and city laws. Any concession which shows a tendency toward gambling will be promptly "pulled", according to an order given by Chief Edward Dyer of the Police Department this morning. The Chief said, however, that the gamblers are conspicuous by their absence this year, and so far no violations have ben brought to his notice. He is inclined to think the men will arrive in this city this afternoon to think the statements made regarding such concessions early in the week have convinced the operators that it would be useless to try to play at the local fair. This afternoon and tomorrow, the busy day, are expected to be lively ones for the officers and they are well prepared.

Before 9 o'clock this morning the influx of farm wagons, automobiles and vehicles of every description and vintage began along West Broadway. The weather is cool, but comfortable, and only the soft drink dispensaries, of which there are an unusually large number on this grounds this year, are bemoaning the fact. The majority of the concessionaires are optimistic and predict a big business.

The crowd on the opening day yesterday, while not as large as it has been in somey ears past, was a generous one and money seemed to be plentiful, especially with the farmers. The main building which houses the exhibits of the Fulton merchants, was well filled at all times, and the booth operators report several good sales. Today is expected to bring out a record crowd and the indications early this morning point to several thousand before noon.

The balloon ascension, slated for 4 o'clock today will take place promptly and the open air concerts are also ready. Horsemen were trying out their strings at 6 o'clock this morning and, although thhe sudden change in the weather is expected to make some difference with work of the horses, the track is fast. Before the races this afternoon the track will be given a final grooming and the 2:20 pace and trot and the 2:28 trot are expected to develop some keen competition.

Want to know what the folks are doing? Then subscribe for The Evening Times. It tells you everything worth knowing about. adv

ELKS' CONCERT TO BE FAVORED

Weather Man Doing His Best to Make Tonight's Event a Happy One—Dance Follows Music.

The Elks' Band will give the first of a series of two concerts financed by the city, at the clubhouse tonight in South First st. The concert will begin at 8 o'clock and the program will be completed about 10 o'clock, after which there will be dancing in the ballroom of the clubhouse to music furnished by the Elks' Imperial orchestra. Tickets will be on sale at the door.

The committee in charge of the ice cream festival tonight has been busily engaged in preparing the lawns for the event and tables to accommodate a large crowd will be placed there this afternoon. "Hot dogs," popcorn, peanuts and other eatables will also be served.

The band will give another concert tomorrow night, with a complete change of program, including several request numbers which have been received by Director Richardson during the past two weeks. The ice cream sale will be repeated and dancing will follow.

Friday night one of the city concerts will be held at the corner of West First st. and Broadway. The program will be announced later in the week.

The program for tonight's concert is identical with the one which was to have been given Monday night, when the rain necessitated a postponement.

FIRE DESTROYS EDGARTON'S VALUABLE HAY STACK

Fire late yesterday afternoon destroyed the hay stack belonging to Lee Edgarton, local real estate man, at 12th st. and East Broadway. The Fire Department made a quick run but the fire had done great damage before the firemen could reach the scene. Three tons of hay, valued at $20 per ton, were rendered unfit for consumption by the fire and water. The hay was insured.

PRAWSHAW'S CASE HELD OVER FIVE DAYS

The case of Orin Prashaw of W. 3rd st. charged with assault by Frank Bodin of Montreal, was adjourned for five days yesterday by Judge Wilson. Bodin alleges that Prashaw gave him a bad beating in West Broadway Monday night. Prashaw's story charges Bodin with the use of insulting language. Bodin was arrested for intoxication shortly after he had sworn out a warrant for Prashaw's arrest.

FULTON AUTOISTS IN BAD MIXUP

Utica Man's Car Tore Into F. A. Cordinnier's Machine Badly Wrecking It—Local People Uninjured.

The details of an automobile accident in which the lives of several Fultonians were endangered became public today, when information given a reporter for the Times was verified by the local people.

Mr. and Mrs. Frank A. Cordonnier of 209 South First st. and their daughter, Vera Cordonnier, of this city, and Mrs. Floyd Newton of New Haven were motoring near Cicero on Sunday afternoon, closely followed by a buggy, occupied by two people who lived near Cicero. Suddenly a large Case car, owned and driven by a Utica man, who gave his name as Hamman, in which were seated his wife and a friend, approached from the opposite direction at great speed, and swerved into theb uggy, tearing off the left front wheel, and then swung around into the Cordonnier machine, completely demolishing the left front wheel of the car and bending the front axle and bumper. Then the Utica car hit an obstruction in the roadway and turned completely over, throwing the Hammon party into the road with great force.

Hamman escaped with some painful bruises and Mrs. Hamman was also fortunate in escaping serious injury. The man who accompanied them, however, sustained bad cuts on the head and body and a doctor who was called from Cicero announced after an examination that both the man's arms were broken.

J. M. Caffrey and Ed. Stevens of this city happened along soon after the accident and Caffrey conveyed the Cordonnier party to Fulton in his car. None of the party was injured, but the car was badly damaged and was left at a Cicero garage. The Hamman car was damaged to the extent of several hundred dollars. The injured man was taken to his home in another car later in the evening.

GOOD TEMPLARS HERE NEXT WEEK

[illegible]

The fifty-third annual convention of the I. O. G. T. will be held in Fulton August 23, 24, 25 and 26th.

The meetings of the convention will be held in the I. O. G. T. Hall in Oneida street and in the First M. E. church. The program of the convention has not been definitely settled as yet, but it is understood that on Tuesday night there will be a public meeting in the First M. E. church. The other sessions of the convention will not be open to the public.

W. F. Stewart, who has been active in promoting the convention when interviewed yesterday stated thhat the committee on arrangements expected about 200 delegates. The Grand Secretary and the Board of Managers for this state will arrive in town Saturday afternoon.

The Chamber of Commerce subcommittee on conventions is actively co-operating with Mr. Stewart's committee.

This sub-committe of the Chamber is composed of W. P. Morin, W. C. Morgan and A. L. Rice.

FELL IN THEATER; HAS A FRACTURED LEG

James Baker, 55 years old, of Erie st., was the victim of an unusual accident last night in a local moving picture theater, when he suddenly became ill. Mr. Baker attempted to rise from his seat in order to reach the open air, when his foot slipped and he fell, fracturing his left leg. He was helped to the office of the theater and Dr. Fox was called at once. He reduced the fracture and Mr. Baker was taken to his home, where he is resting comfortably today.

Immense Sums Sent to Germany

The German-Americans Loan $20,000,000 to Fatherland to Be Used in Furthering Propaganda in America.

Germany has raised $20,000,000 in this country since March and has used this money in an attempt to involve the United States in the war.

Germany's expenses in maintaining offices in America from which its anti-British propaganda is directed are estimated at $16,000 a week.

A shakeup in the German secret service in this country is expected as a result of the publication of the correspondence of German agents and sympathizers.

The Providence Journal says Germany, operating through Otto Kahn, of Kuhn, Loeb & Co., fought to have the Ship Purchase bill passed hoping to compel the purchase by the United States of the German merchant vessels now in New York harbor.

The Providence Journal laid before Washhington officials evidence that the German government tried through the Telefunken company to obtain control of all the wireless stations in the Philippines. It also says Dr. Frank, head of the Sayville wireless station, attempted to obtain the secret of the fire control system aboard American war ships.

The New York World this morning presents documentary evidence to prove that a German trade expert, while making frantic appeals to Washington to open the way for German imports through the British blockade secretly advised his government to discourage shipments.

Washington officials declare citizens will be prosecuted under federal statute for intriguing in favor of German government.

GERMANY BORROWS MILLIONS OF DOLLARS

The German government has raised $20,000,000 in this country since March, Wall street estimated yesterday, following the important disclosures that accredited German agents had established a large munitions factory in Bridgeport, Conn., and had purchased the output of powder mills, shipyards and munitions plants to handicap the Allies.

From the facts presented it was apparent that Germany had induced residents of this country, largely German-Americans, to provide the money with which to carry on these extensive operations in this country, including a very active and expensive propaganda.

It is understood in Wall street, where the information on such matters usually is authentic and reliable, that Germany had raised about $20,000,000 in this country by issuing treasury notes.

Perhaps that money was intended for thep urchase of clothing for German non-combatants, but there is no record that such an investment was made. No vessels left this country laden with $20,000,000 worth of clothes for the German non-combatants.

The Bridgeport Projectile Company now proven to have been financed by the German government, was incorporated on March 31, a few days after the Treasury notes were offered for sale. That plant, nearing completion, already has spent much more than $1,000,000 and has contracted for other millions of war supplies.

Soon after those Treasury notes were sold the secret agents of Germany in this country began to organize press bureaus, establish magazines and organize corporations for the purchase of publicity mediums.

Opinions

Afriad to be Poor?

The headlong race for money and the disposition to estimate men, not by what thehy are but by what they have, lends melancholy point to some observations of the late Prof. James, the celebrated psychologist.

"We have grown literally afraid to be poor," said Prof. James. "We despise anyone who elects to be poor in order to simplify and save his inner life.

"We have, lost the power of even imagining what the ancient idealization of poverty could have meant — the liberation from material attachments, the unbribed soul, the manlier indifference, the paying our way by what we are or do, and not by what we have; the more athletic trim, in short, the moral fighting shape."

When Prof. James wrote that, he doubtless had in mind the contrast between the sordidness of some modern aims and standards, and the ideal of "plain living and high thinking" characterized by Emerson in classic phrase.

Men and women of rare abilities, who deliberately sacrificed the opportunity to make fortunes, not because of any unreasoning prejudice against wealth, but because the engrossment of money-making would have prevented them from attaining objectsd earer to them than money, were not infrequent in the earlier days of American life.

Washington Allston might have earned large sums had he devoted himself to a secondary plan of art.

But he preferred, even at the risk, nay, with the actual presence of poverty, to be a great historical painter.

The Concord philosophers, like Emerson and Alcott; the New England poets, Longfellow, Helmes and Whittier; the great Southern poet, who, as it turned out, was poet not only of the South but of the nation and world literature — Poe, and Hawthorne, the novelist, were all men who did not fear to be poor, though some of them enjoyed a modest financial competeace.

Yet, there are those who in our time are not afraid to be poor.

Witness the priest who, a few days ago, declined a legacy of $15,000,000, because he believed that care of such vast wealth would be inconsistent with his plain habits of life and the ideals he had set for himself.—Buffalo Times.

SAFETY FIRST, MR. VOTER

Can it be business like for a person or persons to advise Mr. Voter to stick by a government for the people (where they have the say) when such a government makes possible the spending of 200 perfectly good dollars for a banquet instead of adding sewers and sidewalks in sections of the city where they are a crying need. Did Mr. Taxpayer have ac hance to say where the $200 should go? That is one sample of the present business (?) efficiency of the present system.

The Business Men's League uses as argument the fact that certain Chamber members are opposed to Commission Government. Perhaps that is true, but let it be said that those same members may also be opposed to other good things for Fulton. Indeed, the Business Men's League is hinting at no dark secret, and shows thereby no real reason for fault of the Chamber as a unit, but the more the reason that a change should be made in government. It is to be remembered selfish interests are everywhere. Even in the Garden of Eden the snake was found.

The charge that should Commission Government be chosen here an out of town Manager would get the job is a silly, asinine argument. If that should hold water then for the same reason the American Woolen Mills has no right to bring skilled workmen from out of town. Hunter Arms must when the time comes draw on Fulton for its expert machinists. By all means, make or break, let us be loyal to the finish. Now isn't that too doggone silly for any man or men to think, much less to say in print and pay for the privilege to boot? Evidently the Business end of the Business Men's League has gone on a vacation. However, there are men in Fulton, men of capabilities, who could fill the position of Manager, thus making it unnecessary to go outside.

Perhaps some one who is opposed to the Commission form of Government for the reason can tell Mr. Voter why the contract for the North 1st street bridges went to an out of town contractor instead of to a local firm. Why loyalty in one case and not in the other.

Watch your step, Mr. Taxpayer! For Safety First inform yourself on BOTH sides.

An Unsound Policy

An Auburn merchant called the attention of The Advertiser-Journal today to the following item which appears in the list of bills for theh Department of Education for July:

"Sears, Roebuck & Co., erasers, $15.00."

Sears, Roebuck & Co. is the name of a mail-order house having its headquarters in Chicago. All its taxes are paid in Chicago, all its employes reside there, and such of them as are taxpayers pay taxes in that city. Not one of those concerned, either as a member of the firm of Sears, Roebuck & Co., or as an employe of the same, pays a sou marquis either for the construction of Auburn school buildings or for the maintenance of Auburn schools, or towards the wages of Auburn workers, or towards the improvements of Auburn's streets or the maintenance of the Fire or Police Department, or the support of Auburn's institutions.

There are in Auburn at least twenty-five firms, at a conservative estimate, which sell erasers. Some of them are wholesalers, some retailers. All pay taxes here; either directly or indirectly, and without exception contribute to thes upport of Auburn's institutions generally. In short, their interests are here.

Some short-sighted individuals argue that it is sound economic policy to patronize foreign dealers, help pay the wages of workers in other cities and counties, assist in the pavement of Chicagos streets, and in the support of Chicago's schools. One farming community in the West tested this project, according to reliable information, to its logical conclusion. The sequel was grass growing in the streets of that particular community, so the story goes. All the merchants shut up shop and moved out. Realty values declined so that business properties went under the hammer, and the town's tax rate was sky-rocketed to unheard of heights. The ultimate sufferers were those who had withdrawn support from local employers and in turn from local employes.

A Sears, Roebuck & Co. item in a bill footed by the taxpayers is an index of this unsound economic policy which makes grass grow in the streets, ultimately.—Auburn Advertiser-Journal.

No need to stop working when your horse is galled if you use Hanford's Balsam. adv

Constipation Causes Most Ills

Accumulated waste in your thirty feet of bowels causes absorption of poisons, tends to produce fever, upsets digestion. You belch gas, feel stuffy, irritable, almost cranky. It isn't you—it's your condition. Eliminate this poisonous waste by taking one or two Dr. King's New Life Pills tonight. Enjoy a full, free bowel movement in the morning—you feel so grateful. Get an original bottle, containing 36 pills, from your Druggist today for 25c.

What Do You Look For In a STOVE?

Don't say "FIRE"---this is not a joke!

But, to use other words, what is your idea of a Good Stove?

FIRST---You ask for RELIABILITY.

SECOND---You demand STRENGTH.

THIRD---The Stove must be ECONOMICAL to Operate.

FOURTH---And the Housewife demands this---It Must Be MODERN.

Just at present we are conducting a campaign for

THE FAMOUS SUMMIT

This Stove meets all of the above requirements and many more.

It Is Reliable, for it is made by a company which prides itself upon setting up a standard and sticking to it.

It Is Strong and Sturdy, you can see that in a glance.

It Is Economical; a strong, well-built firepot affords the greatest amount of heat for the least coal consumed.

It Is Strictly Modern; it is more than that, for it is far ahead of any Stove now on the market in up-to-date improvements.

THE FAMOUS SUMMIT
IS TWO STVOES IN ONE

Four Gas Griddles in addition to Four Coal Griddles an improvement you won't find in a Stove that costs twice as much.

A Large Oven, in which you can bake either by gas or coal.

A Large Warming Oven, on top of the Stove proper in which you can set food when someone is late for dinner.

Look over some of the Stoves on the market. Look at Stoves that cost up to $100, and you will not find all these improvements.

And here's the final argument:

The Famous Summit sells for $55

Terms to Suit You—Small Payment Puts Stove in Your Home.

Come In and Look It Over---NOW!

A. M. DRUSE & CO.
7 SOUTH FIRST STREET, FULTON

Mrs. C. B. Brower, who has been the guest of friends in town for a few days, returned to Syracuse Wednesday.

Miss Florence Lockwood has returned from Michigan, where she has been the guest of relatives.

Mrs. Dorothy McThurston of Earlville and Mrs. George Slater of Binghamton are guests of Mrs. Horace Hamilton.

Mr. and Mrs. W. M. Adamy were Sunday guests of Mr. and Mrs. Verner Cooper, Ira.

Mrs. W. S. Hare of Rochester is the guest of her sister, Mrs. Frank Vanpatten.

Mrs. Marie Cooper of Cato and Mrs. McEckron of Sterling are guests of Mrs Will Cooper.

Mr. and Mrs. Henry Phillips and Merle Locke, son of Mrs. Phillips, are guests of Mr. and Mrs. Frank Cooper.

Mrs. Crandall of Fair Haven spent last week with her father, William Clark.

The Misses Beatrice and Georgia Kennedy of Lyndonville, were guests of Mr. and Mrs. G. J. Shutts last week.

Dr. M. J. Marsh is the new health officer recently appointed by the board of health.

Rev. Dr. Day preached a very able and helpful sermon at the Presbyterian church on Sunday.

Thomas Echard and family will occupy rooms in the Reed house this winter.

Mr. and Mrs. O. J. Adamy were the guests of Mr. and Mrs. Roy Blanchard Sunday.

The Ladies' Aid Society will meet with Mrs. Rosamond Hopper on Thursday next.

Mrs. John Clark, Flushing, L. I., is the guest of Mrs. W. B. Acker.

Miss Ruth Brackett is spending the week in Fulton with her father.

C. D. Shaft of New York was the guest of friends at Hannibal Center last week.

The concert by the Hannibal Center band was very much enjoyed by Hannibal people on Saturday evening.

E. L. Gardner and family are visiting relatives at Gilbert's Mills.

C. L. Fetterly has returned home Haven.

Miss Fannie Rhoades and Mrs. C. S. Chamberlain have returned home after spending a week with M. Rhoades.

Mrs. Fred Cox is spending the week with friends at Fully Lake.

R. A. Bradt is improving his business block by having a cement platform and steps placed the entire length of the store front.

Mrs. O. J. Adamy entertained Mrs. Fred Hammond and daughter, Louise, Mrs. Alice Eldredge of Chicago, and Mrs. C. Eldredge last Thursday.

The body of Mr. William Dellabough of New York was brought to Hannibal for interment on Monday, August 15. He was a son of Mrs. P. Dellabough and formerly resided in this village.

There was a quiet wedding at the home of Miss Eva Brackett Thursday morning, when her sister, Miss Belle Brackett, was married to James R. Gault. Rev. F. W. Dunning performed the ceremony. Only the immediate relatives were present. The groom is a well known and highly esteemed young man, and the bride is a daughter of William Brackett and one of the most popular and esteemed young ladies of our village and a graduate nurse of the Women's and Children's hospital at Syracuse. They have the best wishes of a host of friends.

Harry C. Mizen and Miss Hazel M. Hardie were married Thursday, August 12, at the home of the bride's parents, Mr. and Mrs. E. V. Hardie of Mexico. Mr. Mizen was formerly of Hannibal and is now a well known attorney of the firm of Morehouse, Mizen & Morehouse, Oswego.

George W. Burt of New ork was the guest of friends in town last week

Hannibal Center Grange will confer the first and second degrees on a class of candidates Friday evening.

The lady officers, Chaplain, Secretary, Lady Assistant and Organist will provide the program at Golden Sheaf Grange Saturday evening. Can they excel the gentleman officers? Come and see.

Miss Gaynell Albring entertained her Sunday school class, the "True Blues," of the Baptist church, at a picnic dinner at her home last Wednesday afternoon.

The following young ladies are spending the week at Fair Haven with Miss Sadie Adamy as chaperone: Ruth German and Eethel Young.

Miss Mae Pellett is chaperone for a party of young ladies at Fair Haven, among them being Misses Ethel Robinson, Fenn Hamblet, Mabel Cooper, Marion Wiltsie, Susie Spafford and Hazel Minar.

A. W. Wiltsie is building a fruit packing house on his farm. O. J. Adamy is doing the work.

BUNDY'S CROSSING.

Mrs. Muriel Congdon was in Fulton one day the past week.

Miss Goldia Graham of Battle Island spent the week-end with Mrs. Byron Wells.

Mr. and Mrs. Edward Steward, Mr. Dean Althouse and Mrs. Della Pevey went to Mt. Pleasant on Friday on business.

Some local people attended the dance at Seneca Hill on Wednesday evening.

The Kingdom picnic was held on Saturday in C. J. Echard's grove. Many from here attended. The day was very pleasantly spent with speaking and a bountiful dinner.

Miss Flossie View called on Lois Frost on Sunday.

Mrs. Fannie Dodge, Roy Dodge and daughter spent Sunday with Mrs. Muriel Congdon.

Mr. and Mrs. Fred Loughrey and son, Earl, of Oswego Center, were the Sunday guests of her mother, Mrs. Alice Adams.

Mr. and Mrs. Edward Steward entertained friends and relatives from Richland on Sunday.

Mr. and Mrs. Arthur Stevens of Oswego Center called on Mr. and Mrs. Erwin Dumont on Sunday.

The supper held at the church on Friday evening was a success.

Miss Marion Dumont called on Anna Rickert on Sunday.

Worms Cause Many Children's Ills

Worms, by thousands, rob the child of nourishment, stunt its growth, cause Constipation, Indigestion, Nervousness, Irregular Appetite, Fever and sometimes Spasms. Kickapoo Worm Killer gives relief from all these. One-fourth to one of these pleasant candy lozenges, taken as directed, kill and remove the Worms, regulate your child's bowels and restore its health anl vitality. Get an original 25c. box frorm your Druggist. Don't endanger your child's health and future when so sure and simple a remedy can be had.

That's the STERLING

Read every word printed below—that gives you and idea of the famous Sterling Range,—the range that again and again, in thousands of public baking tests, baked an entire barrel of flour into loaves, with a single hod of coal.

For three days only, August 18, 19 and 20, we offer you an opportunity to buy the Sterling Range practically *on your own terms*—you can save money by replacing your old range now instead of waiting until fall—because the Sterling can be bought now, used all summer—and paid for just as though you had waited until fall to buy. When we say your own terms, we mean just that—easy payments, or long credits, as you desire.

As an additional inducement, during these three days only, we offer every purchaser of a "Sterling" Range of any type, a beautiful Saxony Axminster Rug, that retails for $5 to $6—size 36x72, and your choice of coloring and design. Come early while there is a large number of choice selections.

There has been no advance in the price of the Sterling Range—the ranges we offer are the same that have made the name Sterling mean the best range that money could buy. We have simply made an arrangement with the manufacturer that enables us to offer these terms for quick summer sales.

It will mean money in your pocket to take advantage of this offer.

A 3 DAYS SALE—BEAUTIFUL RUG FREE

THERE is only one range that positively gives *each* half of the oven *half* of the heat. The STERLING RANGE has a special Flue System that does that very thing. There is a division Plate that cuts the fire exactly in halves the instant it leaves the firebox. Each half of the heat is kept in a straight course across the oven, and down the back. Each half of the oven is *bound* to get half of the heat.

That will make a world of difference with your baking!

One loaf or sixteen in the oven at a time—it makes no difference. *Every* loaf gets an even heat *all* around it.

You'll be even a better baker with a Sterling Range. Be satisfied with nothing less.

YOU might want to, and you might not—but you *could* bake 16 loaves of bread in the STERLING RANGE *at one time.* That means more than perhaps you think. We mean *big* loaves—one and a quarter pounds each.

Think of 20 lbs. of cold dough—that will take a lot of heat, very evenly distributed. For the dough must not be slowly warmed up—that would only dry it out, and give you tough, half-baked stuff instead of bread.

The heat must be intense. Every loaf must be surrounded with a heat that will penetrate quickly, and bake the bread all the way through,—*in just as short time as one loaf would bake.*

You couldn't ask a harder test of a range. The Sterling will bake 16 loaves at a time, and bring out every loaf crisp, sweet, evenly browned.

And *because* it can do that, the Sterling will bake *one* loaf *better* than ordinary ranges.

Don't be satisfied with anything less.

WHEN you look at ranges pay particular attention to the *grates*. This one in the STERLING RANGE is the best we know anything about. Notice the alternating prongs or fingers. There is plenty of open space between them for the draft, yet there are no large openings to let unburned coal drop through.

You can see how this *ought* to give you a quick, hot fire; but you never can realise what a *lot* of difference the STERLING Grates make until you have used the range yourself.

You get *perfect* combustion in the Sterling,—all the burnable parts thoroughly consumed. And that means some of your good money kept in your own pocket instead of going to the coal man.

Don't be satisfied with anything less than a Sterling.

GET AWAY FROM THE POLITICIANS!

The Business Men's League Are the Politicians

Citizens, Note:—That the Business Men's League (so-called) displays little wit and less intelligence in debate.. The Taxpayers' Committee turned the searchlight upon the Business Men's League and hit the bull's eye by telling the voters that the Business Men's League (so-called) is made up of politicians and the interests which Fulton politicians have benefited. The Business Men's League (so-called) comes back with that inept, inane theory of argument and with a puff of hot air shouts: "Get away from the Politicians!"

Come, come, you "Business Men" shouldn't steal from us, we said it first!

Listen to this plaint: "These politicians want to take away from you the power to vote for the head of your city government."

Say, Mr. Voter—If the politician could forbid you from voting you wouldn't vote at all—he'd run things for you without your votes. But, this plaint of the Business Mens League (so-called) is founded on falsehood.

THE FACT is that under commission-manager form of government the people at large vote for all their city elective officers—five commissioners and the city judge. The commissioner receiving the highest number of votes is elected mayor. Now, get this—the city manager is hired by the commission just as the superintendent of public works is now hired by the Board of Public Works, and the CITY MANAGER CAN BE FIRED AT THE WILL OF THE COMMISSIONERS. Who is the head of the city in such a case? The man who can be fired or the commission who can fire him? THE COMMISSION, OF COURSE. Then, why this twaddle about taking away the people's right to vote for the man to be at the head?

Citizens—The more you look at and consider the advertising of the "Business Men's League" (so-called) the more convinced you become that if any business men had anything to do with those advertisements they forgot business sense while considering them.

Don't you believe them, Mr. Citizen. If the members of the Business Men's League are business men be assured they were politicians first.

CAN, THE LEOPARD CHANGE HIS SPOTS? As a matter of fact our form of government couldn't be worse! ! !

The voters of the city of Fulton will admit without dissent that the business of the City of Fulton could not have been administered to greater disadvantage to the taxpayers and people under any form of city government than has been the case during most of the years since Fulton became a city.

Will anyone deny this assertion and furnish proof to the contrary?

Will anyone deny that the city's money has been wasted year after year?

Will anyone assert that it has been possible for expert accountants or city officers to strike an accurate balance of city books in the past four years and be able to tell why the deficits?

Will anyone go into detail on the present loose methods of conducting city business under the present form of government and give good reasons to the taxpayers to prove that a change for the better should not be made?

Commission-Manager Plan of Government Gives:

1. SIMPLICITY—Because there is a single council of five members, including the mayor, who select the city manager. He has entire charge of the administration.

2. PUBLICITY—Because the members of the council are elected at large and not by wards and each member represents and therefore must stand the scrutiny of the whole city.

3. RESPONSIBILITY—Because the mayor has no veto power and the city manager is responsible solely to the council. They have ALL the power and cannot evade their responsibility to the people.

4. EFFICIENCY—Because the city manager gives his whole time to the city administration. He is employed for that purpose. He can employ and discharge all his subordinates subject only to the restrictions of the civil service law. He must make good or get out.

The commission-manager plan gives COLLECTIVE THINKING on matters of POLICY and INDIVIDUAL RESPONSIBILITY for the EXECUTION of that policy.

It is the application of BUSINESS METHODS to city administration.

Vote for Commission-Manager Form of Government Sept. 17th

Signed: TAXPAYERS' COMMITTEE

MAN'S KINDNESS GETS A REBUKE

Says He Gave Companion a Boost; Suspected of Intoxication by Officer Pare; Both Placed in Cell.

Officer Pare, on traffic post at Cayuga and First sts., arrested Chene Bracey of Mexico and Mrs. Ruth Preman of the same town at noon today on a charge of driving while intoxicated. The couple were riding in a trim little racing sulkey, a four-wheeler, which boasted only one narrow seat, large enough to hold one person. Mr. Bracey was holding Mrs. Preman upon his knees and she was driving the horse, a speedy looking pacer, according to witnesses. Bracey said they were bound for the Fair grounds and that he had offered Mrs. Preman a lift further down the road.

According to a man who saw the arrest the Bracey sulkey, with Mrs. Preman at the ribbons, turned into First st. from Cayuga in spite of a warning to stop from the traffic officer. Mrs. Preman said one of the lines became tangled and she was unable to stop the horse. She is an experienced driver, having a fast pacer of her own. Officer Pare immediately placed them under arrest, charged withd riving while intoxicated. Mrs. Preman was indignant and Bracey became very much excited when accused of being drunk. Both seemed to be perfectly sober and talked rationally after being taken to the police station.

One witness told a Times reporter that Officer Pare was not in the best of humor at the time of the arrest because of some kidding he had been subjected to some few moments before when a cycle car owned by Samuel Griffin disregarded his traffic signal and ran into a trolley car on the same corner. The auto was not badly damaged, for the motorman had the car well under control and was able to come to almost a dead stop before the car hit the automobile.

RECORD REGENTS STUDENT HERE

Local High school students will be interested to learn that the record for theh highest number of Regents points scored by any High school student in New York State is held by Miss Beatrice Blumberg, who is a guest of Mr. and Mrs. Myer Feinglos of Seneca street. This fact was established last year, prior to Miss Blumberg's graduation at Syracuse University, when Principal Harper of Central High school, Syracuse, received word from Albany that the students records for the past few years showed Miss Blumberg at the head of the list.

Instead of the 72 Regents counts necessary for a Regents Diploma, Miss Blumberg had 108 to her credit. She entered the Syracuse High school when only a little over 13 years old and graduated from Syracuse University last year, obtaining a degree, cum lauda.

According to Principal Harper, the record has never been equalled in the State. Instead of trying to get through High School as quicky as she could, the idea with which most students enter the institution, Miss Blumberg made a resolution to get as much as possible out of her course. In this she was encouraged by her father, who believed that there were many benefits which the average student misses in his hurry to graduate. Miss Blumberg carried as many subjects as possible, sparing herself no work. She chose what are known as the hardest subjects, and those which almost all girls instinctively taboo, namely: Advanced Greek, Latin, German, and French. She took the most advanced courses in Mathematics, going as far as possible in every course which the instution offered her. There were no vacant study periods in Miss Blumberg's course. She was regarded as a most unusual student in every way.

Miss Blumberg never had to depend on her school count to enable her to pass ab ranch of study because she always passed her Regents examinations with plenty of points to spare above the 60 counts required.

Miss Blumberg spent five years at Syracuse High school and five years at Syracuse University. She is now a teacher of Mathametics in the High School at Oriskany Falls, N. Y.

DAY BY DAY

Chronicle of Events and a Forecast of What is Doing in Officialdom---Special Correspondence.

By Frederic T. Cardoze.

Albany, Aug. 18.—While it is generally acknowledged by the delegates to the Constitutional Convention that the propositions bearing on Home Rule are among the most important before them, because of the great mass ofb usiness yet unattended to but a comparatively short space of additional time will be given the subject before the final vote is taken upon it. Already four days have been devoted to discussion, upon the general orders calendar, of the Home Rule scheme as evolved by the committee on Cities, of which Hon. Seth Low is chairman.

During the last Constitutional Convention, held in the year of 1894, sixteen days were devoted to considering Home Rule and had there been urgent reason whhy the debate should have continued, additional time would have been allowed.

It is conceded in many quarters that thep resent Constitutional Convention should have had a steering committee and because one was not provided the present glutted calendar is due. And there are other conditions which do not entirely satisfy the delegates and which they maintain would not have existed had there been a committee of this nature to expedite and map out the work of the delegates.

As a matter of fact, there is very little difference between the manner in which a legislative session and a Constitutional Convention is conducted yet there has usually been a steering committee in connection with legislative sessions. Because many of the delegates to the present Convention have had little experience as lawmakers the belief prevails that much time cauld hahve been saved had provicion been made for an additional committee to which the work of planning the work of the delegates could have been assigned.

There has been much talk about the lack of quorums, yet when it is considered that a fair percentage of the delegates are men well along in years, it cannot be regarded as unreasonable when some of them find it somewhat beyond their physical strength to sit in the Assembly Chamber from ten o'clock in the morning until nearly midnight each day, with but two short recesses.

So arduous has been the work of the Convention for the past few weeks that it hhas been an impossibility to keep all of the delegates in their seats upon days when there is no question as to a quorum. Groups of them are to be found daily in the lobbies smoking and reading, while others keep pretty close to the rooms of their committee. They are all within call, however, should their presence be required for a vote.

There is a lassitude about the entire work of the Convention which is most obvious. The weather, the long delay in getting to the final vote upon propositions, the small parliamentary questions which have been argued at lelngth and the numerous amendments whihch have been made to proposed amendments when coupled to the custom of refering certain propositions back to committee, have caused apathy and a certain amount of resentment on the part of some at the uncertainty surrounding the date of the final adjournment.

Thus far the Saturday sessions of the Convention have proved to be a failure, yet iti s quite likely that a morning session on Saturday will be hehld from now until the conclusion of theh business before theh delegates

STUDENT TAKES SIDES WITH BILLY

That the action of the clergy of San Francisco in turning down Billy Sunday and his way of telling things is dissented from by at least one Fultonian may be seen by the following communication:

The turning down of Billy Sunday by the clergy of San Francisco, evidently draws a line of demarkation be tween religion served on a wooden platter and religion on a golden server. We find if the Bible is to be believed that the priestly element was ino pposition to Christ himself; also, that John the Baptist was beheaded for speaking the truth and calling things by their proper names; therefore it is no wonder that Billy Sunday should be frowned upon for speaking the truth in plain English and not in the flowery language that we mostly hear from the pulpits of today. Our forebears heard the word, from time immemorial, in language, if perhaps uncouth in expression, yet it hewed to the line in plain terms thatc ould not fail to be understood. Are we better than they that we cannot bear to hear the truth in its entirety? Robbed of flowery phrases, what is more plain than the Bible itself? Does it treat in flowery sugarcoated words the subject in hand? I think not. At least after careful study the writer has always found it called a spade a spade and a hoe a hoe. It is very evident to one, at least, that the clergy aforementioned were hit in a very tender place, else why in the words of Paul the Apostle, should they heap to themselves teachers having itching ears.

BERNHARD'S BAY.

Prof. Walker and family returned to Syracuse Friday after a two weeks' outing in the Vandawaker cottage.

The Cleveland and Bernhard's Bay Sunday schools held their picnic at the Grange hall.

The new arrivals at the Chestnuts are Mrs. T. Frank, Mrs. E. Frank, Miss Floher, Misses Helen and Grace Halleran, all of Syracuse.

Prof. L. B. Howe and family of Syracuse were at the cottage over Sunday.

Mr. and Mrs. Harry Gilbert of Syracuse came Wednesday for a two weeks' outing and are at the Howe cottage.

Mrs. Janet Lewis and granddaughter, Ruth, visiter at L. A. Ferris' at Cleveland recently.

Ed. Myrick has returned to Wilcox, Pa., where he was working in the glass factory.

Mrs. Grace Hill and children of Syracuse are visiting at her mother's, Mrs. Kate Pickens.

Remember the Church and Society will meet with Mrs. Hira Short next Thursday at 2:30. All members requested to be present, as important business will be transacted.

The proceeds of the food sale were $8.42.

Rev. J. W. Wilson of New York is a guest of Mr. and Mrs. Clayton Winn.

The B. B. Grange held a meeting at hteir hall recently. There was a good attendance.

C. L. Benedick of Phoenix was a guest of the Grange Friday evening.

Miss Lulu Taft is visiting at Mrs. George Davis' at Maple Flats.

Mrs. Jane Hall visited Friday at Mrs. D. G. Ingersoll's.

Mrs. E. Deline, Mrs. William Wood visited Mrs. R. Woolridge at Constantia Center.

R. Beinard is seriously ill and not able to be about.

Mrs. Will Hall is seriously ill.

Miss Florence Hall was called home on account of the illness of her mother.

Mrs. William Wood and son, Walter, spent Saturday in Oneida on business.

Clarence Winn and Miss Helen Winn came Thursday to their cottage for two weeks.

Mrs. Sarah Brocket is spending some time at the home of Mrs. Volintine.

Mrs. J. E. Peachin and son spent Sunday at Mrs. James Peachin's.

SOUTH GRANBY.

The meetings are growing in interest and we are sorry to see Miss Moore depart. There has been much good done. There were two ministers there Friday night besides Elder Bull, the Rev. Johnson of South Hannibal, and Rev. Conklin of Bowen's Corners.

Mrs. Bertha Taylor is entertaining her cousin, Mrs. Swayze, and her daughters and husband, Mr. and Mrs. Beatie and little son.

Mrs. Ernest Luke and children have been visiting her parents and friends in this place.

Mr. and Mrs. Myron Terpening were guests of his sister on Sunday.

Mrs. Maud Pierce and Mrs. Wilda Assenheimer arrived from Brooklyn this week.

Mrs. Pierce stopped in Ilion and visited her friend, Miss Clara Atherton.

Miss Brown from Schenectady visited her brother, Ralph Brown, and family.

Harlow Stege is home for a two weeks' vacation.

Mr. and Mrs. E. C. Starick and her sister, Mrs. Ruth Roat, of Elmira, have rented Mrs. L. T. Austin's house for a few weeks.

Mrs. Austin went to Cazenovia Sunday with her son, Milo, and wife to visit her nephew and niece. Mr. and Mrs. A. L. Dunsmore. She will remain some time.

Miss Frances Luke visited in Baldwinsville the week-end.

Mrs. Estella Howard is visiting her brother Fred Andrews. She accompanied her niece Lottie Andrews to her home.

The farmers' picnic at High Bank last Wednesday was quite an event. There was a large crowd present and were from Ira, South Hannibal, Bowen's Corners, Lysander, Fulton, Marcellus and all through the country. Ray Darling and wife were busy popping corn, and the Wybrons were selling ice cream and soft drinks. They sold 30 gallons of ice cream and thought they could have sold ten gallons more if they would of had it. Friends met friends, and altogether it was a jolly day and could not have been nicer if the day had been made to order. The usual games and contests were had. Two baby shows, a nail driving contest by ladies and the running race by the ladies. Potato race, three-legged race and a ball game. The Ira band furnished music.

Easy & Practical Home Dress Making Lessons

Prepared Especially For This Newspaper by Pictorial Review

CONSERVATIVE TYPE OF TAILOR-MADE.

Autumn model for a tailored suit. The slightly fitted jacket and pleated skirt gives it an exceedingly chic effect.

There is a note of serious dignity, even austerity, about the latest tailored modes. Coats are slightly fitted and in many instances fall well below the hips. In the design pictured here brown covert cloth is used, and the coat has an inverted pleat at the under-arm seams and two-piece sleeves, with cuffs of the same material. The skirt is a pleated model and falls barely below the tops of the high buttoned boots. Using 54-inch material, 5 yards of cloth are sufficient for the suit in average size.

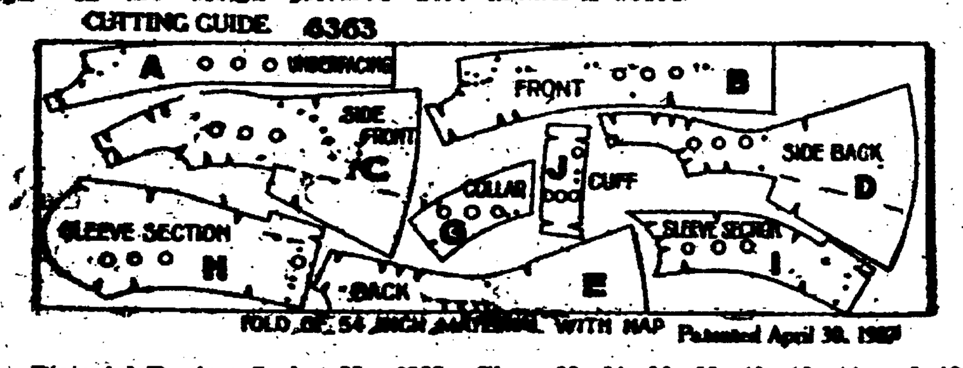
The coat may be finished with either high or open effect at the neck, and there are other changes that may be made during the cutting process. For instance, if the sleeves are desired with cuffs it will be necessary to cut off lower edges of pattern about ⅝ inch below small "o" perforations, then cut off extensions ⅝ inch outside of slot and small "o" perforations.

The cloth is first folded so that the various parts of the pattern may be placed to the best advantage. The upper sleeve section is laid on the cloth first, on a lengthwise thread. Then comes the back, which must be carefully laid along the lengthwise fold to avoid a seam. The lining should be mathematically correct, or else the back of the coat when worn will have the twisted effect that so often mars homemade garments.

To the right of the back the lower sleeve section is placed. This provides for the first row, as it may be called. Now, starting from the beginning again, place opposite the upper sleeve section the side front and underfacing. These with the following sections are all arranged on a lengthwise fold. Next comes the front, then the side back. Between the back and the front there will be sufficient space for the collar and cuff. After laying the sections carefully on the goods, pin into place, and then the cutting may proceed.

In developing the jacket too much care cannot be given to the stitching and pressing of the seams. Use heavy irons and press quite flat. If necessary pad the shoulders lightly with canvas cloth. Frequently, when the suit is to be worn all winter, an interlining of flannel is added.

CUTTING GUIDE 6363



FOLD OF 54 INCH MATERIAL WITH NAP Patented April 30, 1907

Pictorial Review Jacket No. 6363. Sizes 32, 34, 36, 38, 40, 42, 44 and 46 inches bust. Price, 15 cents.

Skirt No. 6308. Sizes 22, 24, 26, 28, 30, 32 and 34 inches waist. Price, 15 cents.

THOMAS' RACER MAY REEL OFF SOME STUNTS

James Thomas, local sportsman, who owns a 90-horse power Palmer-Singer racer, expects to try a mile against time at the Oswego County Fair automobile day Saturday, if he can secure permission of the fair authorities to use the track. Thomas' car is the same machine which hung up several records in the New York City, Brighton Beach and vicinity in 1913-14, and is capable of 90 miles an hour. On account of the sharp curve at the local track and the absence of banks, Thomas does not expect to smash any national marks for half-mile tracks.

PALERMO.

John Bough, who has been confined to the house several weeks by an injury to his foot, is now able to be about.

Mr. and Mrs. Oren Barrett of Delton, Mich., were visitors at Fred Parson's Thursday and Friday. Mr. Barrett resided here several years before going West.

Silas Wright of Scriba was at Harlon Wright's Saturday.

Mrs. Belle Wheaton visited at Mrs. Mary Hegaman's at West Fulton on Sunday.

Mrs. F. D. Johnston has gone to Scriba to spend several weeks with her daughter, Mrs. Silas Wright.

PAINT BETTER

Better isn't enough; paint best.

A man bought "cheap" plaint; saved 20c or 30c or 40c or 50c a gallon, didn't he?

Yes, and bought 40 or 50 or 60 or 80 percent more gallons; how much did he make on his paint?

And he paid for painting those gallons—a fair day's work is a gallon—how much did he make on thel abor part of his job?

He lost a quarter or third of his money.

How long will it last? not his money, the paint

Perhaps half as long as Devoe. How long will his money last, if he buys other stuff as he bought that paint?

Better buy the best paint; it makes the least bill and least-often.

L. P. Smith Co. sells it.

MT. PLEASANT.

The usual service will be held next Sunday, although Rev. Williams invites everyone to attend the Dempster camp meeting.

Leonard, Velma and Laney Howard and Gladys Peckham were the guests of their aunt, Mrs. Frances Burlier, in Euclid last week.

Bessie and Pauline Montague of Syracuse are guests of their sister, Mrs. Charles Osborn.

Miss Lottie Powell of Rose Hill is the guest of her aunt, Mrs. Albert Paddock.

Mrs. Theodore Stewart is entertaining her sister.

Mrs. Ray Dunsmore fell on the walk last week and injured her back quite severely. Mrs. Susan Dunsmore is caring for her.

Gerard Taft of Pennsylvania, spent last week with his family here.

Orlon Taft of Iowa is visiting his parents, Mr. and Mrs. Gerard Taft.

Threshers are making their rounds to the farmers in this vicinity.

Word has been received here of the death of Mrs. Ada Gadbow of Scriba. She will be buried from the home of her daughter, Mrs. Clinton Martin, at 2 o'clock on Tuesday. She was a half-sister of Mrs. Lavina Osborn of this place.

Mr. and Mrs. Erwin and Mrs. Lois Talman of Sterling were recent visitors at Fred Osborne's.

Mrs. Jane Parson of Fulton is a guest of Earl Rowlee.

Mrs. Leo Seaton and daughter, Sarah, of Fulton, have been the guests of her mother, Mrs. Sarah Kerfein.

Mrs. Grannes of Constantia visited her daughter, Mrs. Bert Dupey, and Mrs. T. Haynes.

Mrs. Rufina Depuy was pleasantly surprised on her recent birthday at the home of her son, Moses.

Your Cough Can be Stopped

Using care to avoid draughts, exposure, sudden changes, and taking a treatment of Dr. King's New Discovery, will positively relieve, and in time will surely rid you, of your Cough. The first dose soothes the irritation, checks your Cough, which stops in a short time. Dr. King's New Discovery has been used successfully for 45 years and is guaranteed to cure you. Money back if it fails. Get a bottle from your Druggist; it costs only a little and will help you so much.

COOKING A HUSBAND

By I E. Hyde.

Some women think they justly can,
As bladders are blown, blow up a man,
And other women roast them;
Some freeze them, others like them stewed,
And some they batter all askewed,
And yet another toasts them.
One woman keeps her's in a pickle,
Another thinks it wise to tickle;
Yet none are cooked quite proper.
You can't expect a man will taste
Good by misuse or senseless waste;
He's like a lukewarm hopper.
If you will get him nicely seated,
And make him think he's rightly treated,
He's apt to keep his flavor
Delicious to the taste and touch.
Of course, we can't expect too much
Of earth he may oft' savor.
To choose a man, I would advise
You to take one of the medium size;
Don't pick a golden salmon,
Nor don't get one of silvery rays
Like mackerel, you won't like his ways
I'm sure he'd prove a mammon,
And don't take one packed with crushed ice;
A man that's cold is none too nice;
You'd never get to feel him.
You may get one that uses snuff,
And if you find he is too tough
Perhaps you'd better peel him.
To trim him use a tongue that's sharp
And keep him still, don't let him harp,
For then he'd grow auspicious;
But if you soak him well, just as I say,
He really is delicious.
And let me tell you this, my girl—
You may think that you'd like a pearl,
So choose him all yourself,
For tastes oft' differ, it is said.
Let none else choose the man you wed,
Don't trust a kindred elf,
And then to cook your manly dear
You'll have to wrap him well, I fear,
In snow-white spotless linen,
And then you tie him in the pot
With cords called love, pale blue, or not,
And set your fire to spinnin';
Use kindlings split from off content,
Don't wait to ask for his consent;
Nor cook him to a shrivel.
Don't let your fire burn up too hot,
For if he scorches to the pot
He'll sputter like the devil;
But watch him close and let him stew,
For, since like crabs and lobsters too,
You cook them while alive.
You add a little sugar sweet
To season and preserve his meat,
Some spice will oft' revive;
No vinegar or pepper use,
For then you'd all your labor lose,
Nor stick him with sharp slivers.
You cannot fail to know just when
You've cooked him to a turn, and then
You keep him full of quivers.
You'll always feel you are quite free
And I am sure that you'll quite agree
The children he'll not scold;
You'll keep him well through martial's place,
Unless you put him in a place
That is too very cold.

DEAFNESS CANNOT BE CURED

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by Catarrh, which is nothing but an inflamed condititon of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

ARABIC WAS BIGGEST MUNITIONS CARRIER; ESCAPED FORMER PLOT

New York, Aug. 20.—In shipping circles yesterday no doubt was entertained that the White Star liner Arabic was torpedoed because for the last three or four months she had been the heaviest carrier of munitions of war for the Allies.

On each of her last three eastward voyages the ship carried an average of $1,000,000 worth of war supplies. Each time her great cargo facilities, approximately 16,000 tons, were taxed to the utmost, and on her last trip, leaving here July 28, her sailing was delayed several hours to stow the biggest cargo of war munitions that ever left this port.

Twice before an atempt was made to destroy the Arabic. A cable message from London on March 27 said the Arabic had been pursued by a German submarine in the Irish sea on the voyage ended that day. The message related that a periscope had been sighted at the entrance to St. George's Channel. The Arabic put on full steam and escaped. The second attempt was not known here until August 6, a day after the Arabic arrived in Liverpool on her last voyage from this port.

It was then announced that two days before the Whte Star liner left here two sticks of dynamite in what Combustibles Inspector Owen Eagan described as an 'advanced state of deterioration and therefore easy to explode," were found in a room on B deck. Inspector Eagan said a jar might have set the dynamite off and destroyed the ship and her "biggest cargo of munitions."

No fuse, detonator or wiring were found connected with the sticks of dynamite, which were concealed under a settee in the women's parlor. A thorough search of the liner was made on the day the Arabic sailed.

According to the most authentic information obtainable last night the Arabic had not been armed on any of her voyages from this port. Examination was made by Collecter Malone's neutrality squad before each eastward voyage. The nearest approach to arming the liner was the organization of part of her crew into a rifle club, which practiced firing at a raft off the stern of the ship. On recent trips she carried fewer passengers. Among the 105 in the cabin and eighty in the steerage on her last voyage to Liverpool five were Americans. Before that voyage the liner was painted a slate color and her wheelhouse was banked with sand bags to protect her steerage apparatus from damage by shell fire.

Since the Arabic was transferred from the Boston-Mediterranean service to the New York-Liverpool service she had made a round trip about every five weeks.

MALT MEAD SALE WAS NOT STOPPED

An Oswego paper yesterday printed a report that three men had been arrested by the Fulton police for selling a malt extract drink at the fair grounds, in violation of the state excise laws. The report stated that the men had been held in $1,000 bail each, for action of the Grand Jury.

When questioned this morning regarding the report, Chief Edward Dyer said the Oswego papers had been misinformed and that no one had been arrested at the fair grounds on that charge. The Chief admitted that several men were selling a malt extract product known as "Malt Mead" on the grounds and that he, in company with District Attorney Culkin, had spoken to some of the venders about the drink. One of the men became frightened and stopped the sale immediately, but two others, both of them Fultonians, are still selling the drink, and will no doubt do so without interference from him, Chief Dyer asserts.

The Chief said several arrests had been made in other cities because fair venders sold the same product and that in each instance the venders had won the cases after a chemical analysis had been made of the drink. Rather than bring a test case, which would involve some expense, the Chief has decided to take the results in other cities as sufficient and the venders of the product will not be interfered with.

According to the Oswego account a local minister was responsible for the reported arrest of the men and had brought the matter to the attention of the authorities after a personal invesigation.

STEVENSON SAYS CANADIANS ARE LOYAL

Philip Stevenson returned to this city yesterday after a two months' trip through Canada and New England. He relates several interesting anecdotes regarding the enlistment of Canadians in the British army and says the Dominion men are responding nobly to the calls of the mother country for men.

RUNAWAY CAR AT FAIRGROUNDS

William Hayes, of the West River road, a student at Syracuse University, forgot to take his automobile out of gear when he stopped the car at the fair grounds enclosure yesterday noon. Later in the afternoon Mr. Hayes and his party were ready to leave the grounds and after three of his friends seated themselves in the auto, Mr. Hayes went to the front of the car to crank up. The engine at once started on only a half turn, and with a large supply of gas turned on the car started moving and nearly ran Mr. Hayes down. Gathering speed as it ran along the car became unmanageable and headed for the rail fence at the edge of the race track. Mr. Hayes managed to grasp the side of the car and, pulling himself into the driver's seat, threw out the clutch and pulled on the emergency brake just before the car hit the rail.

His companions were badly frightened and unnerved and Mr. Hayes was excited only for a few seconds. Several people who stood in the path of the car narrowly escaped being run down, but no one was injured.

Later in the afternoon as Gertrude Murphy, ten years old, daughter of Mr. and Mrs. Joseph Murphy, of 251 South 6th st., was leaving the fair grounds with her mother, an automobile driven by an unknown man came out of the main gate suddenly and narrowly escaped hitting the little girl, who was walking several feet in advance of her mother. Thec hild jumped back, but not before the front wheel of the car had passed over her foot, which was painfully injured. The man in the car did not stop to ascertain the extent of the child's injuries and no one in the crowd had enough presence of mind to take his number. Myron Stranahan happened along and took Mrs. Murphy and the injured child to her home, where Dr. Gladman attended her.

WEATHER FORECAST.

Rain tonight and Saturday; increasing east to northeast winds.

RUNNING A CITY LIKE A BUSINESS

No. 1---The Story of the Aldermen's Brass Plate and the End of a Score of Soft Jobs

The Evening Times has secured from the S. S. McClure Syndicate a series of ten articles for publication bearing the above heading. The writing of M. M. Wilmer are in demand everywhere, by people interested in better municipal government and the first of the series appears today, to be followed by No. 2 on Monday.

(By M. M. Wilmer..)

Recently the aldermen of Buffalo voted to have their names inscribed on a brass tablet to become a permanent ornament of the wall of the council chamber. It was to be done at the city's expense, of course. The newspapers jeered and the men on the street corners said sarcastic things. The board of councilmen, which constitutes the upper branch of the present bicameral city legislature, rejected the proposition with the remark by a learned member, "De mortuis nil nisi bonum." So ended ignobly an attempt to perpetuate the fame of the last men to represent an era in the city's history.

SWEEPING AWAY SOFT JOBS

The reason why these aldermen thought that a brass tablet in their memory would be appropriate was that, after December 31 next, aldermen in Buffalo will be no more. The city will no longer hire twenty-seven men at $1,000 a year each to represent its twenty-seven wards and incidentally to spend the money of all the taxpayers as well as of a few who have a chance to vote for them. Neither will the city continue to support, as it now does, a board of nine councilmen to act as a check and balance upon the lower branch. Furthermore, it will have no more police commissioners, no more fire commissioners, no more park commissioners and no comptroller. It never has had a board of health or a board of education.

Buffalo has made a fairly clean sweep of its higher officials. It has voted some forty-eight of them out of existence, and it expects that, beginning with January 1 next, five men shall do the work for which the forty-eight have been employed. That is the meaning of commission government in Buffalo as the crude and hard-hearted average taxpayer understands it.

MAYOR MUST GO TO WORK.

The only higher official who has been allowed to hold on is the mayor, and he is one of the comparatively few for whom every voter in the city had a chance to vote. But the mayor will have to go to work. He is to become superintendent of thedepartment of public safety, which will include the police, fire and health departments, In other words, he will be police commission, fire commission and what in most cities is board of health, all in his own person.

The four other commissioners will each have substantially the same power as the mayor, though none of them will have the dignity of the title which he is allowed to retain. One will be head of the department of finance and accounts, one will be head of the department of public affairs, which includes principally the schools; one will be head of the department of public works and one will be head of the department of parks and buildings.

FIVE TO DO WORK OF MANY.

But in addition to all this executive work, these five men are also going to be the aldermen of the city—the entire common council, in fact, or the municipal assembly, as New York calls the institution. They are going to vote the appropriations and they are going to supervise the spending of the money. They will both make and enforce the ordinances.

They have all the power that it was possible for an ambitious city to wring from a reluctant state legislature. And the voters, every one of whom will have a voice in the election of each of these commissioners, are expected to hold them strictly accountable for their acts.

Buffalo believes that the plan will work well, as it has n many western cities. Buffalo's experience will be worth watching.

No. 2 of this series will be published Monday.

(Copyright, 1915, by S. S. McClure.)

ANOTHER BIG DAY AT THE PUBLIC MARKET

Auburn, Aug. 20.—The first sickle pares of the season were on hand at the Public Market yesterday and sold readily for 50 cents per bushel. The suuply was not equal by any means to the demand, and a large number of orders for Saturday were taken by thep roducers.

Market Master Charles Miskell also disposed of a ton of wheat straw for a producer, getting a buyer by means of telephone. The straw sold for $7.

Tomatoes and green corn were among the most popular articles on the market. The former sold generally at two quarts for 15 cents or 80 centsp er half bushel basket, although a few were sold for five cents a quart or 60 cents per half bushel. Corn dropped in price to 12 cents per dozen ears and large quantities were sold at this price. One or two producers sold their supply for 15 cents per dozen.

INDEPENDNTS TO PLAY AT PULASKI TOMORROW

The Independents of this city will journey to Pulaski tomorrow to meet the Pulaski Athletics. The local team will make the trip by automobile and expect to leave this city about 12:30.

The locals suffered a defeat at the hands of the much-padded Pulaski aggregation some weeks ago, but in spite of that fact the Fultonians are confident they can trim the county seaters.

MRS. HYDE'S WRITES SONG; ON SALE

Mrs. I. E. Hyde of this city, whose writings in verse and prose appear in this newspaper, occasionally has composed a song, "Mother's Absence." The words have been set to music and copies may be had now at Bogne's Music store. Mrs. Hyde is to be congratulated on her accomplishments as she now has qualified to enter the local Hall of Fame.

Fair Crowds Break Record; Local Horse Wins 2.20 Pace

Yesterday was the big day at the Oswego County Fair, and the fair association reports place the attendance at 10,000 people, including representations from all over the state. Automobiles were closely parked in the race track enclosure and within and outside the grounds in large numbers. The midway and the exhibits were well filled with people all day long and the grand stand at the race track seated a capacity crowd during the races in the afternoon, when for the first time since the opening of the fair a Fulton-owned horse carried off first honors.

Early yesterday morning the large crowds in attendance and the perfect weather indicated that records would be smashed before the day was out, and concession operators hastily stocked up with fresh supplies in readiness to meet the throngs which crowded the grounds later in the day. They were not disappointed, for tuuring cars, rigs, trolley cars and the railroad trains discharged their passengers at the gates in great numbers and the show owners and booth workers heaved sighs of happiness and relief at sundown last night.

Athletic Contests Well Attended.

Although the exhibits drew their quota of the crowd, the race track grand stand was easily the center of attraction for most of the pleasure-seekers, for the racing card was a good one, and the athletic contests open to public school boys also drew very man enthusiasts. The athletic contests in charge of Francis Murphy of this city, a senior at Mercersburg Academy, and Glenn Ryther, also of this city, were close and interestin from start to finish. Every youthful contender had his following of partisans and each was roundly cheered as he participated in the games.

The high jump developed the keenest rivalry between schoolmates Reginald Orvis, son of the well known high jumper of that name, and Lloyd Chase, both students of Mexico High school, showed form and ability seldom seen outside of metropolitan circles. Orvis, in the high jump, cleared notch after notch without effort, and Chase, while lacking the form of his older competitor, also showed class until he cleared the bar at 4 feet 10 and slipped upon his back. Badly shaken up, he was in no condition to give Orvis a battle and that lad took first honors at 5 feet 1 inch although he showed ability to better that mark in competition.

The pole vault was won by Lewis Parmiter, with a mark of 8 feet 6 inches. Ralph Stevens and Mark Love finished second and third.

With a jump of 8 feet 6 inches, Orvis won the running broad, and in this event also Chase was his closest competitor.

The results of the contest follow:

Running broad jump—Reginald Orvis, Mexico High school, first; Lloyd Chase, Mexico High school, second; Harold Chase, Mexico High school, third. Distance, 18 feet 6 inches.

100 yard dash—Harold Chase, first; Robert Young, second; Orvis, third. Time, 12 seconds.

50 yard dash—Robert Young, first; Harold Chase; second; Ralph Stevens, third.

220 yard run—Young, first; Chase, second; Stevens, third.

Local Horse Wins 2:28 Pace.

Florence L., a bay mare, dam Edgewood, sire unknown, recent purchase of John W. Stevenson, walked away from the field in the 2:28 pace and won the race in straight heats. Driven by George Dubois, the mare, who was considered an unknown quantity because she had no mark, won easily, in spite of the fact that she was badly bunched at the start in all three heats.

In the first heat Florence L. flashed past the stand among the last three when Starter Thompson sent the horses off, but before the back stretch was reached the mare had overhauled all but Princess Nellie, and on the lower turn she swung into the lead. Dubois never was obliged to use the whip and the mare finished two lengths ahead of Princess Nellie.

The second heat was even more of a walkover for Florence L., but some keen driving by Ralph brought Noble Wilkes into second place by a nose over Princess Nellie, who seemed to tire in the stretch. The last heat plainly showed the superiority of the Stevenson entry and Noble Wilkes once more trailed, taking second place in the race.

This is the first horse entered by Mr. Stevenson in several years and local followers of racing are hailing his return to the turf with delight. Another Stevenson entry, Michigan King, will race today, and is expected to show his heels to the out of town steppers.

The results of yesterday's races follow:

2:14 Trot and 2:16 Pace; Purse, $250.

Woodlawn Girl, b. m., Erino, unknown (Jones)	1	1	1
Jubilee, b. g., (Clark)	2	2	3
Anna Mills (Howe)	3	3	2
Harry C. (Peckman)	4	4	4

Time—2:20 1-4, 2:18 1-4, 2:19 1-4.

2:28 Pace; Purse, $200.

Florence L., b. m., Edgewood unknown (Dubois)	1	1	1
Noble Wilkes jr., b. m., (Ralph)	4	2	2
Princess Nellie, b. m. (Jones)	2	3	3
Fidol Pateh, g.m. (Hutchins)	3	4	4
Ripple Audubon, b. g. (Turner)	5	5	5
Clarence B., br. g. (Battle)	7	7	6
Krista B., ch. m. (Bradt)	8	6	7
Lady Grattan, chfl m. (Philburn)	6	8	8

Time—2:22 1-4, 2:25 1-4, 2:22 1-4.

Premiums Awarded Yesterday.

D. H. Townsend won first ribbons with his exhibits of Merino sheep, Southdowns, Dorset Horns, Cotswold, Leicesters and swine. Fred Moore took second prizes for Merinos, South downs, and won first ribbons with his Shropshires, Hampshires, Oxfords, Cheviots, Lincolns, Ramboilets and De laines. He also won an award with his swine.

Ralph Owens won first prizes with a showing of Tunis.

In the flower exhibits George Perkins, Thomas O'Brien and George Dumas took first ribbons for professionals, while Mrs. William Hinsdale, Mrs. Charles Dolbear, Mrs. Davenport and Rosa Foederer won in the amateur classes.

The first prize of dairy exhibits was won by the Oswego County Home of Mexico. F. E. Thomas and C. W. Blanchard also won first awards in thisc lass.

The big spelling bee today and the fine racing card are expected to draw the largest crowd of the season. Several free-for-all athletic contests also promise some interest and the fine weather and the attendance at noon today presage a record crowd this afternoon.

A LOCAL FIGHT CLUB TO BE FORMED HERE

"Young" Taylor of Syracuse and "Red" Mack of Albany, furnish the main go of six rounds in the Ryan A. C. program tonight at the Arena. Eighto ther bouts are scheduled, all of which will prove interesting from the fact that the past few weeks' shows have shown that Tommy Ryan has a line on practically all the amateurs now and is able to match them up according to ability. Heretofore, on account of the short time in which amateurs have taken part in the weekly fights it has been impossible to do other than match the pugilists up according to weight.

While the local fighters have entirely fallen out of the program of the Ryan A. C. lately, the announcement during the past week that Tommy Ryan will establish a club in Fulton will revive interest in the fifht game and the near future should see most of the local aspirants for pugilistic honors back in training harness.

HORSE DRIVEN BY LOCAL MAN FRIGHTENED

This afternoon at 1 o'clock a horse attached to a carriage and driven by William Blodgett of this city, became frightened near the fair grounds and could not be controlled, [redacted]

The horse made for the entrance gate but collided with the fence. The wagon was overturned and Mr. Blodgett and a friend who accompanied him were thrown to the ground. Neither was injured, but the shafts on the wagon were broken. The horse also escaped serious injury.

KAISER'S 16-IN. GUNS WIN NEW DAY AT KOVNO

Grand Duke Nicholas Extricates Army From Fallen City and Makes Orderly Retreat.

London, Aug. 19.—German 16-inch guns have won another victory in the destruction and capture of the Russian fortress of Kovno. Following the occupation of one of the forts on Monday, Field Marshal Von Hindenburg ordered his siege howitzers and storming parties into the breach, and at the end of twenty-four hours the entire fortress position, with the exception of the fort at Jesia, two and a half miles south of Kovno, was won.

Kovno, one of the most vital points in the Russian defense system, barred the road in the north to the Warsaw-Vilna-Petrograd railway and formed the northern extremity of the Brest Litovsk fortifications.

South of Ossowetz they are being pressed hard by Generals von Schalz and von Gallwitz, who were in charge of the sanguinary operations in the Narew sector. These two German commands are moving now in a northeasterly direction, aiming generally at Vilna. Prince Leopold of Bavaria is approaching the Brest-Litovsk-Bialystok railway east of the Bug river and Field Marshal von Mackensen, who is astride the Bug below Brest-Litovsk, has forced the Russians into the outer defenses of the fortress.

Russia Fortified Positions.

North of BrestLitovsk the only fortified positions remaining in possession of Grand Duke Nichols are Grodno, Ossowetz and Bialystock. South of Brest-Iitovsk, Kovel is held by the Russians, but an Austro-German army from Vlaidmir-Volynsky is menacing it.

Brest-Litovsk is under bombardment now from the northwest, west and the southwest. East of it, for more than fifty miles, stretch the vast Pripet marshes, traversed by one railroad, but devoid of highways of the least military value. Its position on the edge of the marsh district makes the situation of the army defending it particularly grave, observers say, if its forts should be unable to withstand the battering the Austro-German guns will subject them to.

For the first time since he began his retirement from Western Galicia in May, Grand Duke Nichols, in the opinion of military writers here, finds part of his army in serious danger of envelopment. The writers express curiosity regarding how he will extricate it.

The Russian commander continues an orderly retreat, as is evidenced by the fact that outside of the guns taken with the fortress of Kovno or captured in the forts of Novo-Georgevsk, two more of which have fallen, the Germans make no mention of the capture of artillery.

It would appear also that few prisoners have been taken, which doubtless means that a considerable part of the Austro-Germans in their most recent advance have met with no serious fighting.

With Kovno in German hands and Prince Leopold and iFeld aMrshal von Mackensen across the Bug, a speedy exit from Brest-Iitovsk, according to London observers, is the only safe one for the Russians if they are to escape before the second set of pincers prepared for them are closed.

Thomas to Race Plant of Boston At Fair Grounds

James Thomas of this city, owner of a 90 horse-power Palmer-Singer racer, has announced his intention of entering his car in the automobile races at the fair grounds Saturday if any purse is posted for the racing, or if he can arrange a side bet with the Boston racing men who will drive in the meet. Thomas wired the Goodyear factory at Akron, O., last night and was notified today that a complete set of racing tires have been shipped by fast express and will reach this city tomorrow.

According to Thomas he offered to post a side bet with the National racing team which will appear at the local meet and the out-of-town men backed down. He intends to try to arrange a bet with one of the other combinations. Thomas' car is capable of 90 miles an hour, but he does not believe the local track can be covered in fast time because of the absence of banks and the short turns. He was on the track early this morning and made several circuits in order to familiarize himself with the track.

Alderman and His Two Companions Were Shaken Up

Aldermen William Sullivan and John Bresnahan were badly cut and George Lehman and Edward Lum, all of this city, were severely shaken up when a touring car owned and driven by Mr. Lehman left the road at the top of Crosby Hill yesterday evening and crashed into a ditch. Alderman Sullivan was riding on the front seat with Mr. Lehman, while the other members of the party were seated in the rear of the car.

When the car reached the top of Crosby Hill, bound for this city, and had just started the descent, Mr. Lehman's hat blew off and as he clutched for it he temporarily relaxed his grip on the steering wheel and took his eyes from the road. The car hit a large stone and swerved to the left side of the road and into a ditch, finally bringing up against the low-hanging branch of a tree which swung into the windshield, completely wrecking it, and then whipped Mr. Bresnahan across the face, cutting his mouth. Mr. Lehman escaped the shower of glass, but Alderman Sullivan was cut about the wrists and arms. Dr. Fox was hurriedly called and he dressed the wounds of Alderman Sullivan and Mr. Bresnahan. Beyond a broken windshield the car was not damaged.

FULTON MAN KILLED IN BALDWINSVILLE

Gokob Sushko, a Russian, 20 years old, whose home was at 309 West 2nd st., this city, was instantly killed by a fast D. L. & W. train at Baldwinsville yesterday morning about six o'clock. Papers in Polish found upon the body served to identify the man.

The day previous the man had been seen in Baldwinsville and at nightfall he built a fire near the tracks. In the morning when Leon Dexter of Baldwinsville, upon his arrival for work in a coal yard located near the tracks, found the man asleep in a shed. He woke him up and the stranger left the coal yard.

The man went onto the tracks as the freight was approaching. Oliver Strong of Baldwinsville was nearby. He said that as the train was speeding by the man leaped for the grab handle of one of the cars.

He was thrown high into the air, striking the ground headforemost near the tracks. His body fell between the tracks, the wheels of the cars passing over his legs.

Coroner Crane, who was notified, decided an autopsy unnecessary, but has begun an investigation into the case.

RED SOX AGGREGATION TO PLAY IN OSWEGO

The Havana Red Sox, an aggregation of colored-baseball players, who have made themselves famous during the last few years by defeating some of the best baseball teams in the United States, are scheduled for a game in Oswego Sunday with the Roman Stars, a team made up of the best players in Oswego.

At the time the Havana Red Sox launched its first trip through the eastern states under the direction of a syndicate, the team attracted much attention. Originally the players were all collected in the South and toured the United States, but this year hte team has been permanently located at Watertown, making side trips from that place to nearby towns.

FIRST ACCIDENT THIS YEAR AT DANGEROUS POINT; CAR WRECKED

Miller Beardsley, who is associated with W. J. Sharp in the ice business, miraculously escaped serious injury yesterday afternoon when he drove his auto into the side wall of the Henderson & Thompson company's building at the west end of the lower bridge, almost demolishing the Ford car which he was driving. From the appearance of the front end of the car it is considered remarkable that Mr. Beardsley escaped being catapulted through the wind shield. In giving his version of the accident to a Times reporter immediately after the accident, Mr. Beardsley stated that he had driven west across the bridge and was in the middle of the small hill in Schenck street, on the right side, when, without any warning, a large touring car, the occupants of which he did not know but whom he recognized as Fultonians, swerved into his path. The large car was running north in 1st st. before it turned the corner, and on account of its speed was unable to take to the right side of the road. The incident happened so quickly that Mr. Beardsley was unable to do anything but instinctively try to avoid a collision. He therefore switched his car to the left, but in an instant had jumped the curb and crashed into the building at right angles. The crash was heard for a considerable distance, but when people reached the scene they found Mr. Beardsley uninjured.

An idea of the force of the collision can be gained from the fact that the whole four tires, front and rear, were knocked off, the right wheel totally demolished as well as the two front wheels, and the front of the car, including the mud guards, radiator, crank, lamps and other equipment stove in flat.

The wrecked automobile was taken to Palmer's garage in Worth street. The large touring car, which Mr. Beardsley blames for the accident, left the scene without the occupants giving their names.

The spot where the accident occurred has long been considered dangerous and a large four-foot sign in red is attached to a post on the corner of Schenck and West 1st sts. cautioning safety.

ELKS' ORCHESTRA PLEASED DANCERS

Last Night's Fine Performance to Be Followed by Lengthy Program Tonight in First Street.

Despite the cool weather a large crowd enjoyed the concert given last night at the Elks' club by the Elks' band of thirty pieces. The program was well balanced and several request numbers were played.

The weather had a slight effect upon the receipts of the ice cream festival, but the "hot-dog" venders in the rear of the grounds did a thriving business, more than making up the deficit of the ice cream stands. The ice cream tables on the lawn were well filled all evening, but members of the committee seem to think many people are afraid to enter the club grounds for some unknown reasons and wish to announce that the tables are at the service of the public at all times, and older people are especially invited to use the chairs on the lawns at any time.

Tickets were sold on the grounds last night for a dance in the ballroom after the concert, and more than 100 couples danced until 1 o'clock to the strains of the Elks' Imperial orchestra. The modern dances were the most popular but several of the more familiar numbers were also keenly appreciated.

Tonight the Elks will give another concert, festival and dance. The concert will begin promptly at 8 o'clock and the dancing will commence at 10 o'clock. The program for tonight's concert follows:

March—Fort Popham .... Hall
Selection—Little Cafe .... Caryll
Waltz—Cecile .... McKee
Overture—Fest .... Leutner
Popular Hits:
(a) When It's Tulip Time in Holland .... Remick
(b) Operatic Rag
Medley Overture—Remicks' Hits 1915 .... Remick
Selection—Maritana .... Wallace
Trombone Solo—Vale of Dreams ... . Remick
F. Jess Newton
Selection—High Jinks .... Friml
March—Ye Ancients .... Reeves
March—The Big Elk .... Newton

WEATHER FORECAST.

Gentle to variable winds; fair tonight and Friday.

Lee Model Kitchen at People's Hardware Booth, Fair Grounds. adv

TOOK SHOES FROM MAN HE KNEW

Two Oswegonians, Supplied With Liquor, Begged for Money, Got It; Merchant Got Ingratitude.

Frank Keeliher and William Gibbs, both of Oswego, returned evil for good yesterday and will therefore be allowed to meditate on their misdeeds for the next six months in the Oswego County Jail. Both men landed in this city yesterday morning without any money. Gibbs is a cripple and he went to a local merchant here whom he knew slightly, explained that he was without funds, and asked the man to lend him some money. The local man generously gave Gibbs some money and then walked to the back of his establishment. As Gibbs left the front door, however, he picked up a pair of shoes valued at 3.50 and made off. The merchant saw the man steal the shoes and trailed him to Hart's coal yard in Wall st., where Gibbs rejoined Keeliher and they had a good laugh at what they considered a smart trick. The business man came upon them while they were debating the disposal of the shoes and he discovered that the men were plentifully supplied with whiskey in spite of the fact that they had no money.

He ordered them to accompany him to the Police Station and they reluctantly followed him. They were charged with public intoxication.

This morning Judge Wilson used short, crisp words in condemning their act, and before sentencing them the culprits asked about their records. Gibbs confessed that he had served two years in Auburn prison for stealing copper wire and Keeliher has also served one year and three months in Auburn on a charge of attempted burglary. Judge Wilson has been lenient with both men when they were arraigned before on charges of drunkenness, but this morning he told them he would exert every effort to keep them out of Fulton and he gave them the limit sentence of six months in Oswego Jail.

PARKER GOES TO REJOIN COMPANY OF MINSTRELS

William Parker, solo trombonist of the Elks' band, severed his connection with that organization after last night's concert, and left today for Columbus, Ohio, where he will join Vogel's minstrels. This will be Mr. Parker's fifth season with the minstrels and in five years he has traversed every state in the Union, Cuba, Mexico and Jamaica with that company. His loss will be greatly felt by the Elks' band, as he is a musician of unusual ability and experience.

COLD STORAGE MAN TO TALK HERE SOON

The Agricultural Division of the Chamber of Commerce received word this morning from Dwight S. Beckwith of Albion, stating that he would speak at an open meeting of the Chamber conducted by the Division of Agriculture on Monday evening, August 30th.

Mr. Beckwith, who is an extensive dealer in apples, potatoes and cabbages, hash ad a good deal of experience with cold storage plants and his talk on operation should be exceedingly interesting.

The Agricultural Division is making arrangements with persons familiar with the construction of cold storage plants for the same evening, so that members of the Chamber may hear both phases of the cold storage proposition discussed.

Arrangements have been made to hold the meeting at the City Hall on Monday, August 30th, at 8 p. m.

Bracey, "Bike Wagon" Rider, Is Fined $10

George Brown, arrested by Patrolman Pare yesterday afternoon, was fined $5 or five days in Oswego jail this morning by Judge Wilson. Brown was charged with public intoxication and plead guilty.

Chene Bracey of Mexico and Mrs. Ruth Preman of the same place, who were arrested yesterday noon by Patrolman Pare, charged with driving while intoxicated, were given a hearing yesterday afternoon. Bracey was fined $10, which he paid, and Mrs. Preman was discharged.

The couple were riding through Cayuga st. yesterday morning in a "bike" wagon with only one seat. Bracey was holding Mrs. Preman on his knees and she was driving one of Bracey's high-spirited horses.

Bracey seemed to be very gay and Mrs. Preman appeared to be in slight difficulty also. Officer Pare stopped them after they had disregarded his traffic orders and, perceiving that they were intoxicated, took them to headquarters. Mrs. Preman was very indignant and refused all offers of assistance, but Bracey was unable to navigate and had to be helped up the stairs of the City Hall. He was able to talk, however, and begged the officers to call up several men at the fair grounds and ask them if he "wasn't all right?" He indignantly denied being intoxicated but when brought before Judge Wilson he changed his mind and entered a plea of guilty.

GALVESTON SEA WALL SAVES THOUSANDS

Dallas, Texas, Aug. 19.—Blowing at even a greater velocity than the storm of 1900, when 8,000 lives were lost in Galveston, the hurricane that swept over that region Monday morning until Tuesday took a surprisingly small toll of life, but did a larger damage to property.

The great sea wall, built by the government after the storm of 1900, saved the city from being destroyed again and kept the death list down to comparatively small numbers. But this storm, fiercer than that of 1900, tore away 1,000 feet of the sea wall and let through a flood that caused tremendous damage to property and to shipping.

GERMAN ALLIES LOST 470,000 IN POLAND

Petrograd, Aug. 18.—The Germans by their operations in the Kovno region hope to circumvent the Russions who are reconcentrating upon Brest Litovsk.

The bombardment of the western forts of Kovno greatly increased after the first charges failed, and the Germans now are restoring to a torrent of shells from large calibre guns.

A Russian military expert calculates the German losses, including the Bavarian, Saxon, Wurtenberg and fleet casualties to total 350,000 to which must now be added the 120,000 lost by the Prussians in recent battles.

FAIR HAS LOST NONE OF OLD TIME PRESTIGE

Racing Warmly Contested and Midway Shows Yesterday Drew Admiring, Eager Crowds---Plenty of Music.

"Wal. Hiram, what d'ye think of it?" asked an urbane old farmer of his companion at the fair grounds yesterday afternoon about 3 o'clock.

"In my opinion, Riah," said the other, "it's a hum-dinger!"

And this was the prevailing opinion not only among those farmers who seldom see the midways, the elephants and the tango girls, except in pictures, but also of their more blase city brethren, who see those things every day—in the movies. The fair is a success and cold, hard facts, secured from the box office, plainly show that the event which has made the county famous has lost none of its attractions for the people. Some five thousand paid admissions were recorded during the day, over and above the numerous passes to concession operators, the members of the press and a few other favored ones. From early in the morning until late in the afternoon the sight-seers poured into the grounds and the venders and show owners reaped a golden harvest, smiling broadly the while. Good fellowship and happiness prevailed and the crowd was the best ordered, according to the police in charge, that has ever attended a local fair. No arrests were made during the day and only legitimate concessions attempted to operate.

The plan of the midway differs very slightly from that of previous years. Coming in the main gate, the Suffrage booth is the first on the right and the stands of local and outside confectioners line along past the main building until the flower building is reached. Photographers' galleries and a sideshow on which boasts Charley Chaplin and other unusual attractions are also on the right. Opposite, other candy, ice cream and hot-dog booths are lined up, and near the merry-go-round a show which houses a working world in miniature is pitched. Further down the midway there are several small booths, a palmist or two, a whip vender, who handed out a very smooth line of comedy patter, raking in the dollars meanwhile, and a large show in which are displayed several wonderful phenomena of the natural world. Further down, before the race track is reached is the balloon enclosure, where stands Monsieur Hammond's large hot-air balloon which carried a suffrage banner, "Votes for Women," aloft into the skies yesterday afternoon, amid

(Continued on Page Four)

Early Closing of Trolley Station Is Condemned

Because the agent in charge of the trolley station at the time had a pressing engagement elsewhere, a score of people, many of them tired after traversing the city and fair grounds all day, were obliged to stand on the pavement in the chill of the evening last night while waiting for local and the through cars shortly after 10 o'clock. The agent, in answer to inquiries, after he had locked the door at 10:05, replied that the station was supposed to close at 10:17. He refused to allow admittance to several passengers who wished to sit down while they waited for the 10:17 car, however.

The practice of closing the local station shortly after 10 o'clock has been justly condemned by many residents and visitors to the city who have to stand and wait for cars after that hour, no matter what the weather conditions are. Even outside the city in the small stations along the track, passengers can find a resting place and shelter late at night, but the company makes little effort to please the local patronage. The closing of the stations often costs passengers excess fare, also, when they wish to buy return tickets and are only allowed to purchase tickets one way on thec ars. There is said to be a state law which requires the company to keep the stations open as long as any trains stop.

Opinions

Military Education.

It is said that a feeling is gaining ground in Washington that we shall have to come to compulsory military education. That probably means in Washington civil official life, for it is well known that there has always obtained in Washington Military and naval life the view that we should have a vast standing army and as many battleships as any two or three European powers combined.

Whether the civil side of our government is beginning to harbor the militaristic view or not, we are unable to say. But the matter has been discussed in a desultory manner in private and in the press for several months, and the curious feature of the discussion is that in private conversation our German-American citizens are most free to discuss it and most emphatic in its condemnation. The reason for their latter attitude is that many thousands of them fled to the United States to escape that very thing, and if one proposes the adoption of the German system here they are quick to protest.

Their objection is a very good one too. In Germany the boy is appreticed to a trade as soon as he reaches a stated age, for which his parents are obliged to pay, besides supporting him during the four years of his apprenticeship. As soon as his trade is learned, the army grabs him for the military service which is exacted of all males. Thus the boy is nonproductive so far as income to his parents is concerned, for a period of seven or eight years.

The chief value of military training lies in the motion of discipline which it instills in the mind of youth. That is something our schools should teach, independent of military purposes, and something which parents should practice in the home, but don't. The Boy Scout fad ought to have some influence, but as yet it is more apparent than real.

However, if we want to go into the scheme of military training we need not adopt the German system, to the cost of four years of the formative period of the young man's life. If it is necessary to require every youngster upon attaining a stated age to enter the military, it might be done without sacrificing any of his time which is necessary to his support or that of his parents. Upon joining the state militia for necessary training, an occasional evening, now spent at lakeside recorts or city amusements of an unprofitable character, with a couple of weeks in the vacation season, would be sufficient to acquaint him with thed iscipline required of the country's defenders. Not being a military nation, and never having been a military nation—though giving a good account of itself in an emergency—that would be sufficient for present purposes we should think.

Fighting Booze With Meals.

A spectacular conflict between sobriety and the Demon Rum has been going on in the great industrial center of South Chicago. The fight was started by the Illinois Steel Company. It opened a general campaign against alcohol, and displayed signs and posters in all parts of its plants depicting the evils of strong drink. The propaganda began to have effect.

Naturally, the trade of the saloons in the vicinity of theh plants fell off Thereupon the saloon keepers started a counter attack. They established elaborate free lunches in their barrooms, and posted up placards in imitation of the anti-booze signs, telling the workmen how bad it was for them to eat cold lunches. "Don't come in to drink," they urged. "Come in and eat."

The appeal worked so well that soon the men were eating their lunches in the saloons—and naturally drinking again. So the steel company was driven to new tactics.

It proceeded to open a restaurant in the plant so that the men would have no excuse for going to the saloons. Here is a sample menu: Bowl of soup, two cents; roast beef and potatoes, five cents; tomato, one cent; coffee, two cents; ham sandwich, two cents; beans, two cents; ice cream, two cents.

There was nothing beating that. It kept the men healthy and efficient since it kept them away from the bars and saved them money.

Maybe there's a useful lesson in it. Why, indeed—even aside from the li- and factories provide good, cheap quor question—shouldn't big mills and factories provide good, cheap lunching accommodations for their employes?—Elmira Star—Gazette.

Lee Model Kitchen at People's Hardware Booth, Fair Grounds. adv

THIS MEANS FULTON

The Smith-Hughes Bill now before Congress providing federal aid to Vocational Training should receive the support of every real citizen of Fulton who is interested in our own boys and girls.

Vocational Training is needed to meet the increasing demand for trained workmen. When we train our boys and girls to be useful in some definite way the "bread line" in big cities will be wonderfully shortened. The greatest of our natural resources are our human resources.

Vocational training is needed to offset the increased cost of living. Life for millions of people has become narrowed and submerged by the fact that the cost of life's necessities has increased more rapidly in their earning powers. Vocational expertness and efficiency will be promoted through education.

Vocational training is necessary to conserve and develop our natural resources. Successful competition with foreign countries in the future will depend upon our ability "to sell more brains and less material."

The Smith-Hughes Bill for National Aid to Vocational education provides:

1. National grants to be given to states for stimulating vocational education in agriculture, and in the trades and industries.
2. The grants to be given in two forms:
   a. For the training of teachers of agriculture, trade and industrial; and home economic subjects.
   b. For the paying of part of the salaries of teachers, supervisors and directors of agricultural subjects and of teachers of trade and industrial subjects.
3. Appropriations to be made to a federal board for making studies and investigations which shall be of use in vocational schools.

To help in this nation-wide problem Fulton people, who are awake to the value of vocational training, should arouse interest by discussion of this topic wherever possible. The Educational department of the Chamber of Commerce should work through the public for aroused interest on this topic.

Our nation is young in education, but it is a great and glorious thing to take a hand in building the big things for one's country, as well as one's own community.

To polish plough shares is better than to sharpen swords. This applies to Fulton as well as Oskosh or Hong Kong.

Congressman Mott should receive messages from several Fulton people commendatory of the Smith-Hughes Bill.

"BOOSTING" IN BUSINESS

The rough and ready psychologists of the street have evolved a maxim: "Boost; don't knock!" An interesting example of the highly profitable application of that principle is reported by the Pennsylvania Railroad. One of its division superintendents believed that if he posted each month the names of employes who had given especially meritorious service—an "honor list"—instead of posting the names of men punished for violating the regulations or other demerits, there would be general improvement. He made the experiment. After six months' trial hef ound that there was 62 per cent decrease in cases requiring discipline; there was 71 per cent decrease in the total of days' suspension of workers, and there was 72 per cent decrease in wages thus lost to employes. No change whatever had beenm ade in the rules of the division or the methods of administration.

It seems to be human nature—American human nature, at least—to do better work through hope than through fear of punishment. Americans are prone to admire and support, even to emulate, the man who is doing something, who is obtaining something desirable as a result of his efforts; whereas, the threat of discipline, of punishment, not only does not awe them overmuch, but sometimes acts directly as a challenge. That division superintendent recognized the play of all these mixed motives in the mass of men under him, and turned his knowledge of psychology practically to account, for his company's profit and the men's. Wise executives these days are applying the maxim "Boost; don't knock!" in many ways which increase the efficiency of the men under them, and so benefit directly both employer and employe. It is good business as well as good pragmatic philosophy.—N. Y. Tribune.

OUR WASHINGTON CORRESPONDENCE

News Mostly of a Political Nature From the Nation's Seat of Government for Times' Readers.

Washington, Aug. 18.—Certain localities continue to receive the stimulus of war orders. Pittsburgh's recent share of contracts aggregates $80,000,000, virtually all for railway equipment. Secretary Nordman of the Pittsburgh Foreign Trade Commission states that he has turned over to firms in other cities several large orders for munitions, such as rifles and cartridges, which are not manufactured in the Pittsburgh district. A $25,000,000 contract for rifles, accoutrements and ammunition is to be let among Denver manufacturers, provided they can handle such a large order. The Newhouse mills in New York City have received a contract from the Italian government for blankets, the majority of them to be 8 1-2 pounds weight, 500,000 to be delivered in October. The American Woolen Company has also received a large order for blankets from the same government. Orders such as this account largely for the high prices of wool. Efforts of the Allies to place a $29,400,000 order for picric acid in St. Louis have failed because of inability of manufacturers there to supply such a demand, but several of the St. Louisians are contemplating the establishment of a picric acid plant in New Jersey. Picric acid sells at $1.50 a pound, an advance of one dollar since the war.

Some practitioners, administer strong stimulants to their patients in the belief that the artificial strength thus derived will enable them to tide over a crisis. It is hoped that war orders will act in like manner on our national industries, that they may pass through the crisis of a Democratic administration.

* * *

"When the war ends, all European countries will be organized on a syndicate basis. Their industries will be more centrally located. They must get on their feet as soon as possible. Foreign trade will be needed more than ever and it must be secured at the least possible expense."

This is a statement made in the Manufacturers' News by a western man who stands high in the business world. Mr. J. Pierpont Morgan, Jr., recently returned from abroad, declares that the European war cannot last more than a year longer. Considering these two statements, where will this country "get off" at under a Democratic tariff for revenue only? A Republican protective tariff law will be required to hold back the flood of foreign-made, — syndicate-selling goods. Remember that on election day, 1915.

* * *

Mr. Redfield says he is going to investigate the steamboat inspection service for the last fifteen years. We imagine that the kind of steamboat inspection in vogue in 1900 will be fascinating information for survivors of the Eastland horror. The kind of inspection in vogue on the Great Lakes in 1915 will be much more interesting—even though it is embarrassing to Mr. Rerfield.

* * *

The Colonel declares that he will enroll with his party. But his party is not rushing to enroll with him. It is enrolling in the Republican registration.

* * *

"Dry" states are reported to be puzzled what constitutes "near-beer." May we aid them? "Near-beer" bears the same relation to the beverage as ordinarily brewed that Secretary Redfield's "prosperity" does to the real article.

* * *

The month of July, noted, among other things, for marvelous "prosperity," especially in "war order" lines, managed, nevertheless, to produce a fruitage of 1,739 commercial failures, with liabilities of more than $18,000,000. This was 300 more failures than were reported in July, 1914.

* * *

Secretary Redfield's antics in Chicago will have one tendency which he hardly looked for. They will solidify that Republican majority of 150,000 which was developed at the last municipal election.

CENSUS FINDS BROOKLYN WOMAN 115 YEARS OLD

Albany, Aug. 18.—The State census enumeration has revealed a woman who lays claim to being 115 years of age. She is Mrs. Susan Gillis, colored, of No. 571 Classon avenue, Brooklyn, Moreover, she has a daughter 84 years of age, a granddaughter 42 years of age, not to mention a great grandson of 18 years and a great granddaughter of 17. Mrs. Gillis has the distinction of being the oldest person in the Empire state.

Unable to believe his own eyes, the cleek who first came across the name of Mrs. Gillis and noted the woman's extreme age, took a second glance on the enumerator's sheet. He saw the name of the daughter. Her age had been jotted down as 84 years, opposite the names of each appeared the words "no occupation," but that would be expected when a person arrives at the decidedly ripe old age of 115 years or even of 84.

While Mrs. Gillis carries off the honors in the longevity class, the census sheets show a Mrs. Nancy Sweeet of Oswego who is 102 years of age. Miss Mary Hare of Johnstown observed her 101st birthday anniversary on December 10th last, and while unable to get about without assistance, she is mentally keen and takes an interest in present day events in Europe.

Up in Watertown there is a woman 98 years of age whos trenuously objected to being enumerated as being "without occupation." I have always done my housework," said the woman, and while I may not be as spry as in years past, and now require a little help, I don't want to be listed as one who is without anything at which to busy their hands, opposite the woman's name the census sheet gives the word "housework."

MRS. MORA JOSEPH TO SET ASIDE VERDICT

The Oswego Times of yesterday says:

Alleging that deeds were given in order to avoid payment of a judgment for $8,000 in her favor, Mrs. Mora Joseph of Fulton has begun a action in Supreme Court against Mrs. Mary J. Rogers, Dora Campbell and J. W. Campbell, to set aside these transfers as null and void.

The judgment was rendered in Supreme Court in May, 1914, at Pulaski, in a suit for alienation of thhe affections of plaintiff's husband. There was no defense and the court decided a verdict of $8,000. The full amount of theh judgment thereafter filed was $8,093.43.

The complaint alleges that on April 17, 1914, Mrs. Rogers transferred the property by deed to her daughter, Mrs. Campbell, in order to defraud the plaintiff. On the same day it is alleged that Mrs. Campbell gave a mortgage for $3,000 to her husband John W. Campbell, as security for an alleged loan. It is claimed by the plaintiff, through her attorney, Thomas L. McKay, of Oswego, that these transfers were fraudulent and for the sole purpose of defrauding plaintiff. The property involved is said to have a value of approximately $8000.

The Campbells live in Mt. Vernon, N. Y., and service of the papers was made on them through the sheriff of Westchester county.

THE QUIRK

Manager Darleigh announces the arrival here for Friday's presentation of the film, Oswego in the Movies. Concerning this feature the Palladium says:

Oswego shows up well in picture, and many prominent and leading citizens are on the screen, among them being Mayor Hennessey, F. B. Shepherd, T. P. Kingsford, G. W. Richards Chief Richardson, Chief Blackburn, A. Cooper and others. Mme. Heineman and Mrs. Eddy, as Misses Prosperity and Progress, give life to the numerous reproductions, and many views are presented of the daily business life of the city.

As the various people appear in the picture they are given as warm a reception by the audiences as if they were there in person. There are many amusing scenes in the picture, and they are so well presented that the exhibition does not tire.

Mme. Sara Heineman sang a number of selections last evening, which were finely rendered. Her voice is a full-toned mezzo soprano, which she used with skill. She was accompanied by George Roberts on the piano.

BETHLEHEM STEEL CO. GIVES $17,000 INCREASE

New York, Aug. 18.—About 17,000 employes of the Bethlehem Steel Compny, including those at the Lehigh, Saucon and Redington, Pa., plants, have just received an increase in wages, approximating 110 per cent union officials here announced yesterday.

Several other munitions plants at Philadelphia and Buffalo have announced a similar increase.

Give The Evening Times a trial. It has all the news about all the people you know, and then some more. adv

"SUFFRAGE" TORCH LOST IN NEW JERSEY WILDS

New York, Aug. 18.—"Lost, strayed or stolen from an automobile—the Suffrage Torch, which had been in New Jersey only ten days. Reward of $50 for its return to Mrs. Mina C. Van Winkle, of Newark, State President of the Woman's Political Union."

The whole State of New Jersey is in darkness—as regards suffragism—as indicated by the foregoing announcement, made yesterday. The announcement followed a conference hurriedly called between Mrs. Henry O. Havenmeyer, Mrs. Harriet Stanton Blatch of New York, president of the Union, and Mrs. Van Winkle.

"It isn't lost—it was stolen—" mourned one of the young suffragists who was last to see the missing emblem.

The torch was passed by Mrs. Havemeyer, on one tug boat, to Mrs. Van Winkle, on another, in the middle of the Hudson river, on August 7, and was last held aloft at a street meeting at Atlantic Highlands by Miss Alyce Gregory, of Long Branch.

It was put in an automobile while Misss Gregory and other speaker went into a drug store to clear their throats with chocolate sundaes; and when they returned the torch was gone!

SEVEN COUNTRIES DETERMINED TO RESTORE PEACE IN MEXICO

South and Central American Diplomats Give Valuable Aid to the Administration.

Something About the Men and Plans to Bring a Speedy End to Reign of Anarchy.

WATCHFUL waiting in Mexico is no more. The last rites over this policy were said at the conferences between the Latin American diplomats and Secretary Lansing, at which it was decided that the United States, with the moral support and co-operation of Central and South American republics, should restore peace in that country, which has been robbed and looted by the various leaders who have been in power from time to time since the overthrow of Diaz.

The calling in of the South and Central American diplomats was lauded on all sides, but this was not the first time the United States had requested them to aid in Mexico. When our troops had been landed at Vera Cruz, with a large fleet in the harbor, and when the city had been put under military government the A. B. C. mediators at the meeting at Niagara Falls smoothed over the difficulties, and the policy of watchful waiting was resumed.

Conditions failed to improve, and the United States with the other republics on this continent has outlined a method of procedure which, briefly stated, follows:

First.—An appeal was made to the Mexican factions to compose their differences in a convention or by such other means as they may regard as practicable.

Second.—If any faction fails to observe this injunction the other factions will be expected to set up a government, which in due season will be recognized by the United States, the republics of South America and the powers of Europe and the far east.

Photo by American Press Association.

SENOR DA GAMA OF BRAZIL.

Photo by American Press Association.

SENOR ROMULO S. NAON OF ARGENTINA.

Third.—The faction that refuses to support the plan will be barred from the privilege heretofore exercised of obtaining support of any kind from either the United States or South America. This means that the opposing faction will be unable to get equipment for military forces or funds to further military operations.

Fourth.—With a full understanding of the purposes of the United States and Latin America influential leaders in Mexico will proceed to the establishment of a provisional government. This government will at once be recognized by the United States and the other great powers.

Fifth.—A plan will be devised to finance the new government of Mexico.

The Appeal Is Sent.

The joint appeal—intended as a final warning before intervention—was signed by Secretary of State Lansing, by the ambassadors of Argentina, Brazil and Chile and the ministers of Bolivia, Uruguay and Guatamala. The minister of Peru pledged his government to support the action taken by the conference, and John Barrett, director general of the Pan-American union, assured the conference that the remaining countries of South and Central America would undoubtedly indorse its action.

After the conference Secretary Lansing made the following announcement:

"We agreed or assented to a proposition that a communication be addressed to the different factions in Mexico urging them to compose their differences, and we also agreed on the form which we will recommend to our governments with reference to the recognition of a government in Mexico."

Explains Sailing of Warships.

At the outset Secretary Lansing was asked to explain the sending of American warships to Vera Cruz. Several of the conferees felt that the dispatch of the battleships Louisiana and New Hampshire [illegible] pledging the conference to an indorsement of armed intervention in Mexico. But any misgivings that may have existed were quieted by the secretary of state's explanation—afterward characterized by one of the conferees as "too delightfully simple"—that one of the warships was being sent down to take the place of that which is bringing the Brazilian minister up to the United States and that the other was merely moved as a matter of navy department routine.

The Latin American conferees appeared to have very little hope that the joint appeal would be effective in bringing about a solution of the Mexican problem, and nothing less than a flatfooted rejection of the peace proposal is expected from Carranza, who admittedly has obtained the upper hand in Mexico.

May Act as In Cuba.

After the invitation had been extended to the Latin American republics to assist the United States in a final effort to bring about peace in Mexico and arrive at a composition of the differences now existing between the various revolutionary factions President Wilson had decided that if this effort failed the United States would go into Mexico and restore peace in exactly the same way as in Cuba.

Photo by American Press Association.

SENOR EDUARDO SUAREZ MUJICA, AMBASSADOR FROM CHILE.

When this decision was reached, however, the situation south of the Rio Grande was different from what it is today. Carranza had not then obtained the upper hand.

The joint appeal embodies the recommendations made by Paul Fuller, President Wilson's confidential investigator, who has all along opposed the recognition of Carranza.

May Recognize Carranza.

Among the large number of Mexicans and Latin Americans in this country there is a very strong current of opinion that only two courses are now open to the United States. One is armed intervention in Mexico and the other the recognition of Carranza. In view of the fact that all of the Latin American republics are opposed to armed interventon, which they fear would establish a dangerous precedent in case Mexican conditions were repeated in their own country, they believe that the United States will finally recognize Carranza.

It is not thought any direct action will be taken for another month or six weeks, but if in that time Carranza has consolidated his position and established a government in Mexico City they think that recognition could not be withheld from the "first chief," without placing the United States in the position of attempting to dictate a form of government for Mexico.

Optimistic Feeling Prevails.

The feeling of optimism is shared in by all the South Americans who attended the conference. Representatives of Argentina, Brazil, Chile, Bolivia, Uruguay, Peru and Guatemala were present. These ambassadors were armed with the support of their respective countries.

But the only threatening feature to the policy is the actions of the Mexican bandits who are operating on the Texas border. Several Americans have recently been killed, and requests have been made for additional troops there. Major General Hugh L. Scott was sent to Mexico by the president to endeavor to preserve peace during the negotiations pending the foundation of the new government. He is holding frequent conferences with the leaders and looking after American interests during the proceedings.

Something about the South American diplomats who are aiding is interesting at this time. Right from the start there was no quibbling, no hesitating over details. To those who believe that Latin America is still under the influence of the manana ("tomorrow") spirit the conferences have been a revelation. If it is the American custom to get down at once, on anything, to "brass tacks," so is it now apparently the South American custom as well. The plans are going ahead on a basis of pure business.

Da Gama a Hustler.

For this, it is asserted, due credit must be given to Ambassador da Gama. If there ever was a being to whom the term of "hustler" might be truly applied it is surely due to this quiet, forceful looking man from Brazil. A few inches under the average height, just a trifle inclined to stoutness, dignified in his every move, with a countenance that bespeaks a kindly shrewdness and with eyes that are constantly alert, he seems more the ideal American business type than the diplomat. Trained at the feet of one of the world's greatest diplomats of the modern school, Rio Branco, in whose suit he first came to the United States in 1895, when Branco solved the territorial dispute that involved Argentina, Bolivia and Brazil, Da Gama has apparently brought to himself all the keenness that distinguished his great master and has, besides, schooled himself to a capacity for work that is amazing.

Photo by American Press Association.

SENOR F. A. PEZET OF PERU.

Photo by American Press Association.

SENOR IGNACIO CALDERON OF BOLIVIA.

This view of the Brazilian ambassador is only one of many similar expressions, and its counterpart is found in the assertion that to his excellency Dr. Romulo S. Naon, the minister of Argentina, must be awarded the title for suavity, while to his excellency Senor Eduardo Suarez Mujica, the minister of Chile, is given credit for the most pronounced manifestation of the true Latin spirit.

Men of Different Types.

These three ministers are as different in type as are the Mexican factions. While Da Gama seems to embody a combination of the best ideals of his own country with the distinguishing characteristics of the American business man, Naon is apparently entirely American and Mujica entirely French. If one did not know the last named as a Chilean he would be put down at once as the personification of all that bespeaks the true Frenchman. Distinguished by a beard that makes his face the easiest remembered of any one at the conferences, the Chilean minister, in both walk and speech, looks very much the Parisian boulevardier and is a person to be approached with awe and tremulation.

The other South American diplomats are equally well known and able men. They are as determined to have lasting peace in Mexico. All are men of action, and their governments are fully as anxious to see an end to the reign of chaos as the United States. No drastic action is likely for a few weeks yet, but when it does come it will mean a good government there.

One Drunk a Year Allowed.

One drunk a year is not too much for a man, Jamaica (N. Y.) magistrate told culprit who swore that was his limit, but warned him to remember that he had had this year's spree.

BRIEF BITS OF LIVE WAR NEWS

American Red Cross May Withdraw Doctors and Nurses.

FUNDS NEARLY EXHAUSTED.

Statistics Show How Much Medicine Was Used in Cleaning Up Servia. Canada Lowers Her Recruiting Standard in Order to Increase Enlistments—Other Interesting Items.

American Red Cross doctors and nurses will be withdrawn from the battlefields of Europe on Oct. 1 because of a lack of funds to keep them there longer, according to a statement made at Washington by Miss Mabel T. Boardman, chairman of the Red Cross relief commission.

It is possible that the two units in Belgium, where the greatest need exists, will be continued, but the other fourteen detachments will be recalled on the date mentioned, when the American fund of $1,560,000 will be exhausted. In the work of cleaning up Servia the Red Cross has used 858,783 pounds of sulphur, 700,000 bichloride tablets, 7,000 gallons of kerosene oil, 5,600 pounds of formaldehyde, 12,200 doses of cholera vaccine, 500 whitewash brushes, 70 bathtubs, 50 stepladders and 11 automobile trucks.

In order to increase her enlistments Canada has lowerd the recruiting standard. Men five feet two inches in height may now become Canadian soldiers. Hitherto the minimum height has been five feet three inches. The minimum chest measurement is now thirty-three inches for those thirty years old or under, the former minimum having been thirty-three and one-half inches.

Marconi, who is a lieutenant of engineers in the Italian army, has been in London buying war supplies for his nation. He expresses confidence in Italy's ability to defeat Austria and says that Italy is well supplied with ammunition, her factories working at high pressure day and night turning out shells. Italy, he says, is particularly well equipped with dirigibles and aeroplanes.

Since the outbreak of the war the Swedish army has been almost doubled. It now has a total of 540,000 trained men, 360,000 of which are troops of the first line, the remainder being landsturm. New training schools for noncommissioned officers have been established since last August, in which 60,000 noncoms have been trained.

The French government has conferred the military cross upon Professor Richard Norton, founder of the American volunteer ambulance corps, which is the chief Red Cross unit in the Second French army. With the decoration the government sent Professor Norton a letter warmly praising the work of the corps.

Regret has been expressed by the British government to the Norwegian government because of the violation of Norwegian territorial waters by British warships, particularly the seizure of a German steamer inside the three mile limit. The note was cordial and was in reply to a protest by Norway.

Several Americans were in Rheims recently during a heavy bombardment. The party took refuge in a cellar for an hour. On reaching Paris they said that on the day they were in Rheims between 500 and 600 large caliber shells were dropped on the city.

Typhus has practically been wiped out in Servia. The Servian army is reported to be in good condition and probably better equipped than ever before. It is mobilized around the frontiers, ready to move at any point at any moment.

Ten more large national munitions factories are to be established in England, in addition to the sixteen huge national plants now in operation, according to a statement made by Lloyd-George, minister of munitions.

Captain H. A. Tomkinson of the British Royal dragoons has been promoted to the rank of major. He played No. 1 on the polo team which took back the international polo cup to England last year from the United States.

The sultan of Turkey has decorated three American officials of the Standard Oil company at Constantinople for their humanitarian services. Those decorated are W. E. Bemis, Oscar Gunkel and L. I. Thomas.

Gabriele d'Annunzio flew over Trieste a few days ago in the aeroplane of Lieutenant Miraglia. The lieutenant dropped bombs on the city, while the poet threw down poetic messages.

The Austrian government has agreed to spare Italian churches and monuments in Italian coast towns provided the Italians do not use them for military purposes.

A convention ceding to Bulgaria the Turkish portion of the Dedegatch railway has been signed in Constantinople.

22 PRISONERS PUT TO DEATH BY VILLA

El Paso, Texas, Aug. 18.—Twenty-two Mexican political prisons, some of them high officials, were put to death Sunday in Chihuahua by General Francisco Villa. This was the information brought here tonight by Mexicans arriving from the State Capital.

Most of the firing squad victims were accused of disloyalty to Villa and attempting to leave the country without his permission. Among them were Guillermo Terrazas, grandson of General Luis Terrazas, millionaire land baron; Perchez Enriques, formerly Villa purchasing agent on the border; General Delposo, a brigade commander; Aureliano Monzales, former Secretary of State; Sylvester Terrazas, state official; Enrique Garcia, Secretary to the Mayor of Chihuahua.

HAS CITIZENSHIP A VALUE?

CITIZENSHIP has a definite value. This value cannot be computed in dollars and cents, but it is worth fighting for.

Citizenship grows out of communities. Were there no communities there would be no citizens. We would then be merely unprotected individuals—entirely at the mercy of all other individuals who might wish to destroy any weaker or less ferocious one.

By dwelling in communities we have many advantages. Some of us value and appreciate these advantages while others selfishly accept the advantages but refuse to do their share toward maintaining the community.

Laws have been enacted to compel us to pay taxes—used for the financial support of communities for our protection.

BUT THERE ARE NO LAWS WHICH COMPEL THE MEMBER OF ANY COMMUNITY TO SHOW APPRECIATION OF THE BENEFITS DERIVED FROM LIVING IN A COMMUNITY.

One of the benefits of living in a community is the opportunity furnished us to buy merchandise required for our comfort and indulgence, right here in our own town. This facility permits us to buy what we need when we need it. We can step into a store, lay down a dollar and buy a dollar's worth of goods. Perhaps we can get the goods without paying the dollar down in cash—that is, if we have the credit.

What a genuine benefit it is to be able to do this. In the olden days our forefathers were compelled to drive many miles to a store where the merchandise might be obtained. Large quantities were bought at a time because the trip to the store could not be made at frequent intervals.

As our citizens increased in numbers and gathered into communities, stores were established at the various centers of the increasing population until now we can buy, right at home, our necessities and luxuries.

That which we value we endeavor to protect. If we value the facility for purchasing goods at home we should protect it.

The best way to protect it is to make it possible for the storekeepers to continue to do business. If we do not help them to continue to do business here in our community the natural consequence will be for them to close up their stores and go out of business.

If we buy from our local storekeepers only such merchandise as we cannot buy conveniently elsewhere, we will soon discover that the stores will carry only such restricted lines of goods as are in demand by the people who live here.

Then we will find out that we are not much better off than our forefathers were. We must send away for such merchandise as we require. We must wait until the order has been received in the mail order house and filled in the due course of time by the employes of the concern we are patronizing.

There are many disadvantages in this method. We do not fully realize them now. But they will come home to us when conditions arrive which compel us to buy everything by mail—if such a time does come. However, if we look at the matter in the right light we will not permit such a contingency to arrive.

Why should we be deluded into sending our money away from home because of the fulsome and flattering descriptions in a mail order catalogue? Why should we prefer the questionable qualities in merchandise as exploited by a catalogue writer to the honest, dependable goods which we can see before us in our own local stores?

Do we save money by buying from the mail order houses? When the matter of freight and express charges have been figured out, when the question of delays, unsatisfactory shipments, breakage, damaged goods, etc., have been answered, where is the profit, if any?

ON THE OTHER HAND, THE LOCAL MERCHANT IS ALWAYS RESPONSIBLE FOR ANYTHING HE SELLS. The purchaser can examine any article for sale in the local store and buy only that which is satisfactory. It will be delivered without delay. If there is any imperfection it will be quickly remedied. If there is any shortage in the delivery it will be supplied at once. A personal call or a telephone message will arrange everything quickly.

And when it comes to prices you will always get full value for your money when dealing with the local storekeeper. He buys his merchandise in the market and he sells it at a profit to us. He asks only a modest profit and he is entitled to it. We should be perfectly willing to pay him a profit for his investment, for his labor and for his ability to save us time, trouble and money.

IF WE ARE NOT WILLING TO DO THIS, WE SHOULD BE HEARTILY ASHAMED OF OURSELVES. AND WE WOULD NOT BE ENTITLED TO THE ADVANTAGES AFFORDED BY HIS STORE.

CONTEST FAVORS MRS. J. FOLEY

Mrs. John Foley, with 24,799,320 votes, won the Panama-Pacific Exposition contest which closed August 15, in place of the trip to San Francisco, however, Mrs. Foley selected a $350 Whitmore piano as her reward. The contest was close until the last week of ballotting, when Mrs. Foley's friends rallied to her support and cast thousands of votes for their favorite. Miss Leila Church, who ran second, with 14,445,015 votes, was a close contender until the last few days of the voting.

The contestants in the order of the awards and the prizes they received follow:

Mrs. John Foley, 24,799,320—$350 piano.

Miss Leila Church, 14,445,015—$50 diamond ring.

Mrs. M. E. Reynolds, 14,323,235—$16.50 gold watch.

Mrs. Ray Crandall, 7,656,195—Rogers' silverware set, $15.

Miss Alberta Howard, 7,156,270—Toilet set, $12.50.

Mrs. Isaac Chapman, 6,881,755—gold handled umbrella, $10.

Miss Marion Lake, 6,403,360—Locket and chain, $10.

Miss Florence Moody, 6,098,375—Manicure set, $10.

Miss Rose Tilden, 6,017,595—Carving set, $8.50.

Miss Alice M. Smith—5,982,245—Necklace, $6.50.

Votes were procurable from the following merchants: Wm. C. Morgan, Setz & McCormick, Roberts & Wood, Hart Coal Co., Van Wagenen, Inc., Buell Bros., LaPorte's Grocery, Bort's Bakery, W. H. Patterson, A. M. Druse & Co., The Observer, C. A. Beckwith and the Fulton Cash Market.

FAIR HAS NOT LOST PRESTIGE

(Continued from Page One)

cries of pleasure and appreciation from the suffragists, who were present in large numbers.

Tango Girls Winners.

The show that coined the money yesterday, or, to use a "grafter's" term, "made money faster'n you can manufacture it," was the Tango girls. Seven young ladies, not all beautiful, but attractive and lively, appeared before the tent for the "bally-hoo" and to say the men in the crowd walked in in large numbers is putting it mildly. From all accounts the show is well worth the price of admission.

One gaunt, bronzed farmer was standing before the Tango tent yesterday afternoon, blissfully unconscious of impending danger, when his wife, whom he thought to be in Buffalo at the time, happened along, and saw her husband. What was more to the point, she saw two beautiful damsels clinging to his arms and with one fell sweep she was upon him. For a church member she did very well and, while the two girls slipped off in the crowd, she read him the riot act in several languages. Then tightly grasping his coat with her left hand she led him firmly and swiftly toward his farm wagon and shortly left the grounds.

High School Exhibit.

The horse racing which began at 3 o'clock, developed some spirited competition and excitement among the several hundred lovers of the sport who thronged the grandstand. The rail along the home stretch was also well populated when the first heat of the 2:28 trot and pace was called.

Mary Ellen, the elephant that is almost human, entertained every little child and many of the grown-ups between the races in an enclosure roped off for her directly opposite the grandstand. With her keeper and two little fox terriers, who assisted in the act, the elephant made a triumphant entry about 3:30, closely followed by hundreds of children, who dragged their more sedate parents along hurriedly in an effort to get as near the animal as possible. Mary Ellen's act is one of unusual merit and she was vigorously applauded. The elephant plays a mouth organ, lights a fire in a kitchen stove, waltzes, impersonates a vender of fruit and performs countless other feats with an intelligence that is amazing.

The exhibits are unusually good, although fewer in number than last year. The Forestry exhibit and the exhibit of manual training by Fulton High school and grade students, are particularly worthy of mention. The bee display of L. M. Yandoh of Walradt st., also attracted many farmers and their wives, who raise bees and hundreds of city people who had never seen bees in the hive before.

The stock enthusiasts were present in large numbers and the judging contests at the stock pens were well attended. Three Mexico boys carried off the honors in the Jersey and Guernsey stock judging contest. Fred Coe, Arthur Love, brother of Charles Love, of this city, and Tad Jones of Mexico, tied for first place. Claude Pullen of Oswego and Austin Bakus of Mexico tied for second place.

Good Trots Today.

W. F. Foster of this city showed the best three-year-old gelding in the horse show, and F. W. Pendergast of Phoenix won the class for year-olds. Soningburg Bros.' entries were first in the draft horse class, and F. W. Pendergast's entries were second. In the class for colts, Norman Harding of this city, took first with one of his entries, and in the stallion class, the entry of E. B. Tucker of Hannibal was first, and that of Bert Ware of this city, second.

Today's crowd is expected to break all records. Comparisons with yesterday's attendance at 10 o'clock this morning point to a big increase and the warmer weather is also expected to make a difference with the crowd.

Several good trotting races are slated for today and the free acts will also take place promptly. The Elks' band will play every afternoon during the fair.

Clare Gentry, a bay mare, property of Edward Moore of Canastota, and driven by Ernie Jones of this city, won the 2:20 pace and trot, with Baron Gay, place, and Shamrock, show. The Canastota entry had a walkaway in one heat but was given a hard battle for honors in two heats by Baron Gay, who broke badly in the first heat but came back for second place in the next two brushes.

Moxie C., bay mare, property of Dr. S. T. Barton, won the 2:28 pace after a close skirmish with Audubon Belle, owned by S. K. Bresee of Syracuse. The Syracuse entry fought with the winner from the start in the first and last heats, but a mixup in the second heat shortly after the start threw the Syracuse horse into sixth place.

A 2:28 pace for a purse of $250 and a 2:14 trot and a 2:16 pace for a purse of $250 are the attractions for today. Several Fulton horses are expected to show up well today.

ASSUMED NAMES ARE CONTRARY

Wholesale changes in the names of business firms, hotels, restaurants and cafes throughout the state will be made necessary by the law effective Sept. 1, providing that no corporation can do business under an assumed name, excepting that of its proprietor, unless permission is first obtained from the person whose name is taken. The meaning of the law is so broad that it will prevent the adoption of any name by a corporation other than that of one of the persons who is identified with the business. Many of the business houses and firms have used a name for years and have built up a clientele under the old name and it is expected that the necessity of making a change may prove a hardship to them.

In many instances business changes are made with the understanding that the business is to be conducted under the name of the preceding proprietor and in such cases the firm name is not affected by the new law. Several of the leading families of New York are said to have been instrumental in bringing about the change in the law. In New York and in other cities of the state, for instance, there are many corporations which have adopted the Astor, Vanderbilt, Morgan, Belmont and Waldorf names, much to the displeasure of the families who are recognized as the heads of these old families in the United States.

This law will not be effective against corporations which have chosen the names of cities in assuming a name under which business has been transacted. In every city of consequence in the state various corporations have taken such names as Boston, New York and Baltimore and they will not be forced to change them.

43,972 TOTAL LOSSES OF GERMAN OFFICERS

Basel, Aug. 18.—Germany has lost 43,972 officers since the war began, according to figures from German official sources.

The dead total 113,803; the wounded 26,827; the missing, 2349; while 993 are numbered as prisoners. Included in the total are 123 generals.

I. O. O. F. ELECT GEO. E. JUDGE

Buffalo Man Chosen As Grand Master of State Odd Fellows. 6000 in the Street Parade Wednesday.

Syracuse, Aug. 19.—Geo. E. Judge of Buffalo was unanimously chosen grand master of the State Odd Fellows, in convention here at a business session of the order held in the auditorium of the First Baptist church on Tuesday. Over 7,500 votes were cast, ballotting being by mail and opened at the meeting. In all cases but one the election was unanimous, the exception being the office of grand warden, for which there were six contestants, of which James Wingate of Schenectady polled over 5,000 votes of the total number cast.

Lyman J. Cheney of Salmanaca will succeed Mr. Judge as deputy grand master. Harry Walker of Brooklyn was re-elected grand treasurer and John F. Bellenkamp will be grand treasurer for the nineteenth consecutive year. Henry V. Borst of Amsterdam was rteurned as grand representative.

Big Parade.

Six thousand New York state Odd Fellows and Rebekahs last night marched in one of the most spectacular parades ever seen in Syracuse, it being the climax to the Grand Lodge meeting, which closes here today.

The parade was nearly two miles long and consumed nearly an hour and a half in passing the reviewing stand at the Wieting opera house. Nearly every city in New York state was represented in the line of march, and there were large delegations from cities and villages in Central New York.

Although no announcement was made last night of the award of prizes it was generally agreed that the Oswego delegation of Odd Fellows was entitled to a place near the top. Almost 400 men, wearing straw sailor hats, black coats and white trousers, were in line. Each man had a small electric light as a button hole bouquet. The Oswego division was preceded by a band, which came to this city with the delegation.

The 1916 meeting of the New York State Grand Lodge of the Independent Order of Odd Fellows will be held in Buffalo. The choice was made yesterday at the business meeting of the Grand Lodge in this city.

Buffalo Next eYar.

The retiring grand master, Thomas W. McKnight, has recommended that the Grand Lodge of this state take over the four corporation-owned homes and orphanages in this jurisdiction. His suggestion found favor among members of the Grand Lodge, and a committee of five was appointed to investigate the proposition. The committee will report to the Grand Lodge officers June 1, 1916, and the question will be decided at the next convention.

Rebekahs and Odd Fellows were entertained yesterday by Syracuse members fo the order. There were automobile trips and street car rides to places of interest. After the parade last night there was a band concert in Billings Park, a reception to visiting Rebekahs and dancing in the Temple.

KENYON WILL NOT OPPOSE CONGRESSMAN MOTT

Adams, N. Y., Aug. 19.—Friends of Frank S. Kenyon of this place deny the reports that their favorite will enter the campaign next year in opposition to Congressman Mott.

It is known, however, that representatives of the organization that is fighting the saloons, and advocating local option for cities, have been to both Mr. Kenyon, and to former Lieutenant Governor George H. Cobb and endeavored to have them get into the race on an anti-saloon platform. Mr. Cobb refused to do so, and the friends of Mr. Kenyon also say that he would not consent to oppose Congressman Mott, who has a strong following in Oswego and Madison counties as well as in Jefferson and Lewis.

COAL PRICES TO SOAR IN APRIL

Demands Made by Miners' Convention Would Indicate Suspension of Operations After April 1.

If present indications do not indicate the advisability of stocking up the cellar coal bin then the predictions of coal dealers are wrong. In many cities coal dealers are advising their customers to lay in all of the coal they can carry at present prices in protection of themselves should the miners declare a strike next April, when the present working agreement between the operators and miners expires. Coal dealers everywhere predict that should there be a strike, coal prices will be skyhigh soon after April 1, 1916. These predictions are based on circulars containing the demands of the miners' convention held in July. The circulars embrace the demands made upon the operators and are for an eight-hour day and an increase of pay for all mine workers of 25 per cent.—all in all twenty demands are made by the union. The demands of the miners' union ar made to include both anthracite and bituminous miners, and, while, the recent decision of thei nterstate commerce commission does compel a reduction in freight rates from the anthracite regions amounting to about 50 cents a ton to this city, it is fully expected here that the consumer will have to pay just as high a price for coal as he is now paying, plus the monthly advance of ten cents a ton on September 1. It is plain to be seen that even though the reduction in freight rates is effective a strike will send coal prices so high that operators must offset the decrease in rates.

The circulars received by the dealers in other cities advise the latter to lay in all of the anthracite they can possibly store, at once.

If these demands are granted, the mine owners claim that prices of hard coal will have to go up, and the cost of production will not only be increased, but that the amount of produced will be diminished.

Another circular states that the miners always reduce the production of hard coal during the several months preceding the termination of a labor agreement, so that in case of a strike the owners will have no surplus, and will be compelled to come to terms. The letter states that from past experience it is safe to assume that there will not be enough coal produced during the next few months to supply the demand, and, therefore, the dealers are warned to lay in a big surplus in view of a possible strike on April 1.

The Sterling Range

A Good and Faithful Servant

MAKES HOUSEWORK EASIER
WE MAKE IT POSSIBLE FOR YOU

During the heated summer, more than at any other time, you need a range in your kitchen that is the last word in convenience and fuel economy—a range that will make your housework easier, instead of adding to your labor.

That range is the Sterling—for twenty years supreme among all other ranges. It is the Range with the bother left out—baking, cooking, boiling, roasting, broiling, and heating water, with the least possible annoyance, and the greatest economy of fuel. It is the range that bakes a barrel of flour with one hod of coal—no other range has ever equalled this record which the Sterling has made in more than a thousand public demonstrations. The Sterling polished top does away with the blacking nuisance. The Sterling flue system makes your baking perfect—there are more than twenty other unique features.

Here is the whole story in a nutshell.

For three days, and three days only, Aug. 18, 19, 20, we will sell you a Sterling Range of any kind you desire—and you can get a Sterling of any type you have in mind—*and we will allow you to pay for the range on your own terms.* Use the range all summer; pay us as though you had purchased in the fall.

Then, when you buy your range, we will give you, absolutely free, a beautiful Saxony Axminster Rug, 36x72, that retails for $5 to $6—you can see these rugs on display at our store, and judge their value for yourself. Your own choice of color and design.

Put one of these Sterlings into your kitchen during this sale—prompt action means money-saving for you.

REMEMBER THESE DATES AUGUST 18th, 19th, 20th

They are the only days on which this offer will be good.

Angel Food, Sponge Cake, Crullers and Pies at Keller & Wilson's. adtf

MISS LOUISA VAN WAGENEN TO ACT IN "GRUMPY"

It is always pleasing to Fulton people to learn of the success in the outside world of a son or daughter of someone whose home was at one time or is now here. In this connection one of the latest successes to be recorded is that of Miss Louisa Van Wagenen, daughter of Mrs. Eleanor Van Wagenen, whose home is now in New York City.

Miss Van Wagenen is engaged to act during the entire season in the company headed by Cyrel Maude, the play being "Grumpy," which promises a most successful career.

Concerning Miss Van Wagenen's stage work last season a New York City newspaper says:

"Most notable in sincerity of feeling and most effective was Louise Van Wagenen, in the part of Creusa, the tender, innocent princess, newly beloved by Jason. She maintained her standard set in last season's work with Margaret Anglin."

The above quotation refers to Miss Van Wagenen's work in "Medea," a play now running in New York, whose company is headed by the Roumanian actress, Agathe Barescu.

Bread as sweet as the "kind your mother used to bake," is the people's verdict applied to Black company's bread. adv

No Home too Old For Electric Wiring

of recent years houses that were built back in the days when tallow dips were the prevailing source of illumination, have been successfully wired for Electric Lights. So expert are wiremen nowadays and so efficient are the tools with which they work, that the finished job looks as if the fixtures had been installed when the house was being built. The modern way of wiring does not deface walls and does not disarrange the ordinary routine of the home while being done. There is no dirt, disorder or trouble.

Let us tell you how little it will cost to wire YOUR HOUSE.

Prepared Especially For This Newspaper by Pictorial Review

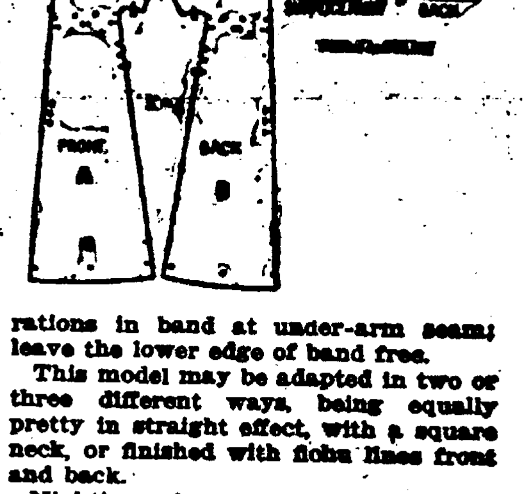
PRETTY NIGHT GOWN IN KIMONO STYLE.

A novel design for a nightgown. It is made in kimono effect and gathered into a band at Empire waist-line, with a straight ruffle.

It has become quite the perfunctory thing for lingerie to be fashioned after outer garments, hence the introduction of the peplum effect upon this kimono nightgown of fine nainsook. The neck is finished in round outline, eyelets being embroidered below the band for the accommodation of narrow ribbon. This treatment is repeated on the short sleeves. The embroidery on the front of the gown is done in eyelet and satin stitch.

To make the gown for a person of average size requires $4\frac{1}{4}$ yards 36-inch material, with $1\frac{1}{4}$ yard beading for the waist, 2 yards of $1\frac{1}{2}$-inch wide ribbon and 4 yards of $\frac{1}{2}$-inch wide ribbon.

The kimono effect is exceedingly simple to cary out, and the home dressmaker will be delighted at the quickness with which it can be put together. First close, the under-arm, sleeve and shoulder seams as notched. Turn hem at lower edge on small "o" perforations. Gather on crosslines of single small "o" perforations. The large "O" perforations in ruffle indicate front edge. Close back seams of ruffle and band; gather upper edge of ruffle between double "TT" perforations. Sew ruffle to band, center-back seams even, and bring front edges of ruffle together at center-front. Adjust band to position, stitching the upper edge of band over gathers in front and back, center-fronts and center-backs even, small "o" perforations in band at under-arm seams; leave the lower edge of band free.



This model may be adapted in two or three different ways, being equally pretty in straight effect, with a square neck, or finished with fichu lines front and back.

Nighties show many innovations. Ruffled shoulder capes are among the most unusual.

Pictorial Review Nightgown No. 6371. Sizes 32, 34, 36, 38, 40, 42, 44 and 46 inches bust. Price, 15 cents.

NATIONAL NEED OF STRONG MEN

What Constitutes Preparedness For Defense.

VIGOR OF RANK AND FILE.

A Citizenship That Has Not Been Weakened by Excessive Toil and Low Working Conditions Can Stand the Test of War When Occasion Demands—Unions Should Be Fostered.

Now that men's minds are naturally directed toward national preparedness for self-defense it is most fitting to consider conditions which concern national health, vigor and development. There come to all nations, whether suddenly or with warning, those tests which prove the spirit—the power of endurance of the people.

No nation can possess endurance whose citizens bear the inevitable consequences of sweatshop labor, long workdays, low wages, insanitary conditions. Physical health and vigor affect progress along all other lines. Those who toil with their hands constitute the rank and file of the citizenship of nations. If they are underfed, partly clothed, physically stunted, their condition is a menace to the nation, whether in peace or in war. When the citizens deteriorate physically the nation will decline. War may reveal unsuspected weakness, but that weakness will manifest itself under conditions of peace, though somewhat more slowly or, worse still, less observably.

That nation whose industries exploit human workers during times of peace will be burdened by a mass of unemployable, discarded workers and in times of war will find its existence threatened because of inability to produce supplies and because of dearth of fit soldiers.

Those policies and those institutions which conserve human life and which afford opportunities for the development of every citizen constitute the greatest safeguard of the nation. The citizens must be protected, but that protection must come through their own educated initiative, so that the nation shall consist of men and women conscious of their own dignity and importance, aware of their own powers and intelligently following a course of action to promote their best interests.

Individual initiative and resourcefulness are the most valuable qualities of a nation. They must not be subordinated to the outward forms of national welfare, but rather must they be the ultimate ideals of all conservation policies.

To realize these ideals the children of the nation must be assured the right to be well born, to grow and to play. Real educational opportunities must be accessible for all and must meet the needs of all.

When maturity is reached the individual citizens must have the right to a voice in determining the conditions under which they shall live and work, and they must be assured the right to organize, to express their wills in these matters. This means that society and all its agencies must put an end to all tactics that obstruct the progress and welfare of the workers instead of outlawing or ostracizing labor organizations or punishing efforts of wage earners to participate in determining conditions of work.

In wartime every nation expects loyal support for its wage earners. It expects organized co-operation in defense on the battlefield and in making munitions of war; it expects understanding of the national interests and needs. These things are equally necessary in time of peace and must be developed in times of peace. They cannot be called into existence suddenly. During times of peace workers have long demanded that their physical well being and their labor power should be conserved and that they should be granted real freedom to organize to make these demands effective. There is not a single nation that has generously and unreservedly granted these rights to the wage earners. By such a policy every nation assumes responsibility for national peril and foregoes its right to full and free patriotic sacrifices from its citizens.

A nation which fails to stimulate and to develop qualities which work for voluntary associated effort for the common welfare condemns its citizens to stultifying practices and effects of compulsion. Preparedness in national resources, whether for war or peace, is secondary to the development of national characteristics which underlie fundamental preparedness for life and growth. There must be some strong force dedicated to the cause of humanity that shall compel the incorporation of these truths in national policy—there must be industrial and humanitarian statesmanship as well as political. Even now the great industrial interests are planning to protect themselves in the convulsive shock that will come at the end of the present European war, when present currents of industry and commerce will be suddenly changed.

The citizen wage earners of our country will be in as great need of protection as industries and commerce. Methods and policies must be devised in advance. The wage earners are entitled to participate in determining these matters which so vitally concern them.—American Federationist.

HOPE FOR AGREEMENT.

United Mine Workers Not Preparing For a Strike Next Spring.

President John P. White of the United Mine Workers of America recently gave out a statement in which he declared that the miners of the anthracite fields were not preparing for a strike at the expiration of the present agreement. His statement follows:

Articles appearing in certain newspapers during the last few days, for the most part published a great distance from the anthracite industry, containing the information that the anthracite mine workers are making huge preparations for a big strike at the expiration of the present agreement, March 21, 1916, are absolutely unfounded.

The campaign now being conducted in the anthracite region is for the sole purpose of uniting the men of the mines as members of the United Mine Workers of America. When the anthracite miners have perfected their organization I am of the belief that the union will be sufficiently strong and efficient to command the respect and recognition it deserves.

I have every reason to feel assured that the operators, like the miners, want to be fair, and consequently I am at a loss to understand why the attempt in some quarters is being made to misrepresent the real purpose of our present membership campaign.

The international officials nor district officials have formulated any plans that contemplate a strike at the expiration of the agreement. We are, on the other hand, hopeful that we will enjoy the opportunity to meet the operators in conference and reach a fair agreement, embracing needed reforms and betterments that we feel quite confident the general condition of the industry will permit. The public should not become alarmed at the stories of a strike nature, for the mission of the United Mine Workers is one of peace, and I predict that such will be the outcome of our negotiations when we meet the operators.

WEAVERS GET RAISE.

Seven Thousand Carpet Workers Receive a 10 Per Cent Boost.

The 7,000 employees in the mills of the Alexander Smith & Sons Carpet company at Yonkers, N. Y., were agreeably surprised when they received their pay envelopes on July 29 to find in them slips announcing a 10 per cent increase in wages. The increase aggregates $8,000 a week and brings the company's weekly payroll up to about $90,000. The mills have been running only four days a week for some time, but it is expected that full time operation will soon be resumed.

The increase is said to have been ordered by Alexander Smith Cochran, well known in yachting circles, who is the controlling director. He has been participating more actively in the affairs of the company of late. The increase restores a wage scale which existed up to two years ago, when it was announced that general business conditions necessitated a cut.

Part time operation of the mills had been caused to some extent by inability to get enough dyestuffs after the foreign supply was shut off by the war. This situation has been largely remedied.

Du Pont Increases Wages.

Employees of the Brandywine (Del.) shops of the Du Pont Powder company were notified that from Aug. 1 eight hours would constitute a day's work and that the workmen would receive ten hours' pay for the shorter day. Eleven hundred men were affected by the new order. They include every class of workman, from the skilled mechanic to the laborers. The eight hour day was granted voluntarily and without any request from the workmen. At the Brandywine shops machinery and equipment for the company's powder plants are manufactured.

Copper Men Get Bonus.

The Wolverene and Mohawk Copper Mining companies, Calumet, Mich., in paying their 1,200 employees on July 31 included an extra check for 5 per cent of the total wages of June as a bonus because of the high price at which copper is selling. It came as a surprise to the men. It was unofficially announced that the two companies might continue to pay the same bonus every month while copper remains at 20 cents a pound or better. It was said that several other mining companies will follow this example.

More Pay For Rural Teachers.

The Wisconsin state legislature has passed a bill increasing wages of rural schoolteachers $5 to $25 a month, according to qualifications and terms of service. There are about 7,000 rural teachers in the state.

OF INTEREST TO LABOR.

Trade unionism is the one protection in which the workers can put their trust.

The Danbury hatters have been served with foreclosure writs on their property.

Trade unionism has been the great revolutionizing force for industrial betterment and progress.

More than 200,000 machinists have received the eight hour day with advanced or no reduction of wages.

Conditions in the labor market for the month of July, as viewed from the City of New York public employment bureau, are encouraging, especially in the large number of orders for skilled help.

UNIONISM THE WORKERS' HOPE

Labor Forward Movement Pushing Steadily Ahead.

AN IRRESISTIBLE FORCE.

When Working People Realize Their Power and Make It Effective by Organization They Will Have Gone Far on the Way Toward a Higher and Better Civilization.

By SAMUEL GOMPERS.

The working people have within their hands an irresistible force. Let them learn to use that force for their own welfare and the benefits that will come to human life are beyond conception. That force is their power to produce. Without the working people all civilization would come to a standstill. There is only one way by which the workers can make that force effective—organized intelligent control over their power to produce.

Organization is the one way by which they can enter into greater freedom and widest opportunities to live and to advance from one ideal to another still higher and better.

Application of this truth is the reason for all efforts to spread the gospel of unionism among those still unorganized and to strengthen existing organizations by increasing numbers and by stimulating and reviving the idealism that gives unionism life, purpose and effectiveness. This is the purpose of the many labor forward movements that are now being conducted in many industrial communities. Reports of organizers tell of the success that is attending some of these efforts.

Meriden, Conn., is about to start a movement that will be in commemoration of the New England labor movement and will inaugurate efforts for new growth and new progress. Organized labor of Arkansas intends to devote the week beginning with Labor day to a state wide campaign for organization.

One of the most important campaigns for increasing organization is that recently inaugurated by the United Mine Workers of America among the anthracite coal workers of Pennsylvania. The contract of the mine workers will expire April 1, 1916, and it is the purpose of the United Mine Workers of America to secure a 100 per cent organization among the anthracite coal miners in order that they may be in a position to demand and to secure better terms for their contract and also to secure recognition of the union.

The campaign will extend over a period of sixty days. Wherever meetings are held the miners are showing intense interest in this campaign. The mines are closed down on days when meetings are held, and membership committees of the local unions make a house to house canvass in order to secure new members. All interests seem to recognize the fact that the success of this campaign will determine in a large measure whether or not there will arise the necessity for a suspension of work when the new miners' contract is under consideration for 1916.

Results of these labor forward movements are incalculable. The movement begun in Philadelphia over a year ago is still in progress with the unalterable purpose of organizing all the workers in the city.

These special efforts for organization are necessary to sustain the spirit of organization and to quicken the sense of responsibility and duty that inspires men and women to the best that is in them. They are necessary to keep before people the meaning of the duties of daily life, lest petty details shut them off from the vision of big realities.

Success is always attended with great danger. There is danger of underestimating opposition, danger of forgetting the sleepless vigilance and the constant exertion that lead to success, danger of contentment that hides the pathways to larger growth and greater attainments.

As the trade union movement of America has won victory after victory and has passed beyond that period when the world's treatment of its members created and stimulated a spirit of inspiration and idealism, it has now reached that period when enthusiasm and ideals are not inspired by opposition and persecution, but must be the result of conviction based upon understanding and visions of future possibilities.

The revolutionary fire and energy of the pioneers of the labor movement must be followed by practical idealism that is born of human needs and that manifests constructive result by building up the agencies of human welfare.

The success of each labor forward movement is conditioned by the spirit and the understanding of the individual members of organized labor. With them lies the decision whether these movements shall be regenerating forces in the lives of fellow workers. Indeed, each union member must constitute in himself a labor forward movement, necessary to great progress.

Workers Get Legacy.

Ninety-six employees of the wholesale drug firm of Lehn & Fink of New York will share in $50,000 bequeathed to them by Albert Plaut, a member of the firm. The employees who share [illegible] the firm's service more [illegible]

FOREIGN NOTE IN FASHIONS

The Italian Military Fashion-ing In Color and Design Will Be Used in Autumn.

New York, Aug. 18.—It was a safe guess that when Italy entered the war her popularity with the French would lead them to view everything pertaining to the country with favor, and that the Italian note would make itself manifest in French fashions. Lewis, the well known Parisian milliner, was first in this field with his Bersaglieri hat modeled on the hat worn by the Italian infantry. This is a jaunty affair with a crown of green coque feathers that sweep over the side and brush the cheek. Not much in line it would seem with Victorian fashions, tight basques and ruffled skirts, though more in harmony with the redingote styles that are approaching, we hear.

Italian Green.

The green of the Italian flag is another note in the same scale, and no doubt before long we will see a revival of other Italian fashions. Coral jewelry, Venetian laces, the rainbow ribbons of Naples, laced basques of black velvet, and striped skirts in wool similar to the cotton ones we have had this summer. There is a perfect mine of such material to draw upon, and we will have a revival of bead embroideries, as well as ecclesiastical motifs, gold on velvet, and all the detail that marks early Italian art. Genoa and Milan hve al-

McCall Design

redy been drawn upon for velvets, silks and ribbons and many other beautiful fabrics that her mills have been producing while other countries were paralyzed with the war.

Sleeve Vagaries.

Sleeves have been rioting for some time and have assumed such various forms that it is impossible to account for their vagaries. What they will do next no one knows, but the transparent long sleeves of this summer have been a happy solution for comfort and appearance. How the men must have envied us when the mercury climbed unbearably, with their arms swathed in at least two thicknesses of material. So good looking has been this modest Bishop sleeve, with its fullness confined at the wrist by a bracelet of silk, or a cuff of it, that the shape is likely to continue for some time as the conservative note in sleeve fashions.

Bell shaped sleeves are gaining ground and some of the best types have the bell only a short way below the elbow and beneath it a puff of some transparent fabric. The newer way, also Italian in motif, is to cover the lower arm with a long tight cuff of lace that extends from the elbow well down over the hand.

English Woolens Promised.

English woolens are promised much favor, and English homespuns, friezes, tweeds and the like are being imported in quantities for plain tailored costumes. The smoother surfaced cloths, and velvet surfaced ones, such as velours, duvetyn and zibaline are ready in beautiful dyes, and will surely share with broadcloth and velvet the honors for more elegant street costumes.

Braid Trimmings.

Braid trimmings are used effectively on silk crepes and chiffon cloth, carrying out the fad for the combination of heavy and light materials. Braid bindings are notable not only in tailored wear but on lighter dresses.

Where combinations of two fabrics are employed, buttons covered with one of them aterials are an important trimming note. Jet buttons are increasingly favored, and silk bindings and cordings are an important part of the garniture of most fussy frocks. In fact, this season must be reckoned as pre-eminently a silk season, and the popularity of this class of fabrics bids fair to continue.

Cane Bottom Straws and Velvet Hats

Very pretty, if a bit overdone, is the fancy for the open weave straw hats that suggest the cane weaving in a chair seat. These show the hair to advantage, or conceal it with linings of tulle or chiffon, and their trimming is usually flowers of some sort. Velvet hats have come in as usual when the Dogstar reigns, and are on the whole rather attractive as a contrast with a filmy gown if worn at the shore, or somewhere where the thickness of their fabric does not seem oppressive. They are decidedly in lines with the summer furs that one sees everywhere and nearly as incongruous. • Verona Clarke.

LOVE LINKED WITH DEATH.

Where Women Propose and if Rejected Must Kill Themselves.

In the Pacific ocean, between Fiji, New Guinea, New Caledonia and the continent of Australia, lies the Melanesian group of islands, where head hunters and cannibals abound. Strange and grewsome as are many of the customs of the tribes, there are some that are most romantic. For instance, on the island of Tucopia the women propose marriage instead of the men.

When a girl of Tucopia sees a man whom she thinks she would like to have for her husband she does not rush up to him and ask him to marry her. On the contrary, she gives the subject deep thought and often the man a most careful investigation before she "pops the question." The reason is that his answer spells life or death to her.

It is a tribal law that any woman who has been refused must forthwith kill herself. Therefore a woman asks a man's hand only when she feels sure that his answer will be the happy one.

Many are the strange and seemingly inexplicable questions with which the women of Tucopia ply the stranger who cannot realize the personal motive back of the solicitude of the dusky belles who inquire if he is married or not and the state of his wife's health. Romances are consequently very apt to turn out in happy marriage.

But there have been innumerable instances when a poor girl, smitten by the newcomer's charms, has been compelled to kill herself because the man with whom she has fallen in love has had to refuse to marry her.

Baldness with the women of Tucopia is a sign of beauty, and never until she is bald does a Tucopia woman become fully convinced that she is really lovely.

But, bald or not, she takes great care whom she asks to marry her, for the tribal law has never been known to fail. If a rejected woman does not kill herself she is executed under the most dishonorable conditions by the leaders of the tribe.—Buffalo News.

His Qualities.

"What makes you think Dauber will succeed as a painter?"

"He has the soul of an artist and the perseverance of a book agent."—Philadelphia Ledger.

Woman's Tact.

Rev. Mr. Gassington—Honestly, Miss Deering, do you think my sermons are too long? Miss Deering—Oh, dear, no! I merely think that life is too short.—Puck.

Is It Worth While?

Is it worth while that we jostle a brother
 Bearing his load on the rough road of life?
Is it worth while that we jest at each other
 In blackness of heart—that we war to the knife?
 God pity us in our pitiful strife.

God pity us all as we jostle each other;
 God pardon us all for the triumphs we feel
When a fellow goes down; poor heart-broken brother,
 Pierced to the heart; words are keener than steel,
 And mightier far for woe or for weal.

Were it not well in this brief little journey,
 On over the isthmus, down into the tide,
That we give him a fish instead of a serpent
 Ere folding the hands to be and abide
 For ever and aye in dust at his side.

Look at the roses saluting each other;
 Look at the herds all at peace on the plain,
Man, and man only, makes war on his brother,
 And dotes in his heart on his peril and pain—
 Shamed by the brutes that go down on the plain.

—Joaquin Miller.

Easy & Practical Home Dress Making Lessons

Prepared Especially For This Newspaper by Pictorial Review

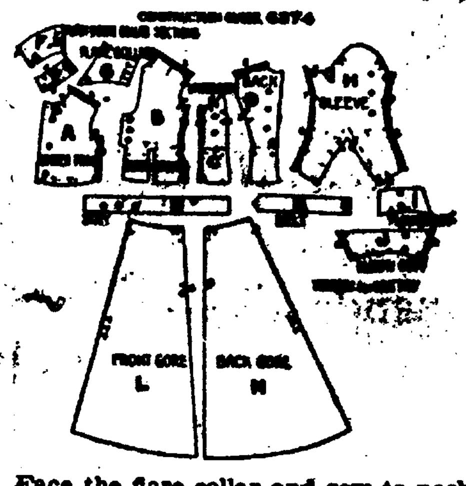
JUNIOR MODEL IN CLOTH AND VELVET.

6374

Blue cloth and velvet costume for youthful figures, showing a waist with the lower edge finished with square, silk-bound scallops.

This semi-tailored costume for youthful figures shows the unusual retentiveness of the vogue for combinations. In medium size the model calls for 2½ yards 54-inch broadcloth and 3¼ yards 40-inch velvet, with ¾ yard 27-inch contrasting material for the vest and collar.

In making, the preliminary step is to pleat the lower edge of front, as creased, then tack pleats into position, after which the hem can be turned into the front at notches. Follow this by gathering the outer front at shoulder on crosslines of small "o" perforations. Pleat, bringing "T" to corresponding double "oo" perforations near lower edge and tack. Arrange on under front, corresponding edges and center-fronts even (large "O" perforations indicate center-front), and stitch gathers to position. Close seams as notched and close center-back seam, leaving



Face the flare collar and sew to neck edge, having the large "O" perforations in front and center-backs even. Then crease the sleeve on line of slot perforations, lap folded edge to line of small "o" perforations, notches even, and stitch. Close remaining seam as notched. Gather upper edge between double "TT" perforations. Face lower cuff, sew to long sleeve, notches even, small "o" perforation in cuff at sleeve seam. Sew sleeve in armhole as notched.
